He should know. He and Claytor have been close friends since 1939, when the two shared a house in Washington as they embarked on legal careers.

For a while, it looked as if the two careers were stamped from the same mold. Van Allen and Claytor were at Harvard Law School together (although they didn't know each other then), they entered the Navy together. Each commanded submarine chasers and destroyer escorts, and each returned to law practice in Washington after the war.

Van Allen left Washington in 1950 for Charlotte, and Claytor stayed, practicing law until 1967, when he became president of Southern Railway. He stepped up to chairman nine years later.

As Southern's head, Van Allen said, Claytor oversaw major investment by the railroad in downtown Charlotte and Atlanta. The North Carolina National Bank computer center was built on Southern land at 2nd and College streets.

VOCATIONAL EDUCATION AMENDMENTS

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. PERKINS. Mr. Speaker, I am today introducing, with the cosponsorship of Congressman AL QUIE, a bill to make various technical and miscellaneous amendment to those portions of the Education Amendments of 1976 which affect federally supported vocational education programs.

We have drafted this bill because various relatively minor problems have been brought to our attention during the course of the last few months as the Office of Education has tried to implement the new amendments. This bill will assure that the Office of Education drafts the regulations in true conformity with the law.

The only important area which these amendments affect is that involving State and local administration of vocational education programs. The new law, which is to take effect October 1, 1977, provides that not more than $25 million may be appropriated under the act for the support of State administration and that no funds under the act may be used for the support of local administration.

The bill we are introducing today places State administration in the block grant and therefore would permit more than $25 million to be used for that purpose. The bill does not deal with the question of local administration.

The Subcommittee on Elementary, Secondary, and Vocational Education has scheduled a hearing on February 17 to receive testimony on this bill; and at that hearing we will focus on various alternatives to find the best manner to provide some Federal assistance for local administration. Congressman QUIE and I do want to make clear, however, that we support the use of some Federal money for local administration; but we are not ready today to endorse any particular method of providing that assistance.

The reason for our present reluctance is that we have found from data submitted to us by the American Vocational Association that the use of Federal funds for local administration varies very greatly among the States. Some States such as my own State of Kentucky use no Federal funds for this purpose while other States such as my neighboring State of Ohio use 18 percent of their Federal funds for this purpose. I believe we must receive expert testimony on this question before we can fashion the best alternative.

I welcome the testimony of any Members who may wish to testify that day. We have already scheduled testimony from the American Vocational Association.

ONE HUNDRED AND TWELFTH ANNIVERSARY OF THE FOUNDING OF THE AMERICAN SOKOL ORGANIZATION

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANNUNZIO. Mr. Speaker, the first American Sokol unit was founded on Feb. 15, 1865, by a group of Czech immigrants in St. Louis, Mo. In my own city of Chicago on Oct. 30, 1892, the first Slovak Sokol Society was formed.

The members of the American Sokol Organization—Czech—and Sokol USA—Slovak—as well as the Catholic Sokols, practice a system of physical fitness through a series of calisthenics and activities which are all encompassing, with

the realization that to maintain a free nation, its people must be physically and morally strong.

Sokol, which is a Czechoslovak word meaning falcon, symbolizes well the ideals of the Sokol organizations, because the falcon is a bird that has a love of freedom as well as strength, courage, and agility. The Sokol organization was founded in Czechoslovakia in 1862 by Dr. Miroslav Tyrs (1832–84), a professor of history and esthetics at Charles University in Prague, and by Jindrich Fuegner (1822–65), who was a businessman and a lover of the arts and music. These two men perfected a system of physical fitness through a series of calesthenics and other activities, based on the idea that each individual was important and could and should progress to the ultimate peak of physical fitness. Their motto was "A sound mind in a healthy body."

Sokol is a fraternal body whose members vary in age from small children to senior citizens, and the organization strives for the development of physical, spiritual, moral, and cultural enlightenment. The physical education program stresses individual initiative, creativity, as well as self-discipline, which is a basic requirement for personal achievement enabling the gymnast to become a cohesive and cooperative member of American society. In uniting Czechoslovak culture, the American heritage, and Sokol ideals, the organization contributes greatly to the welfare, safety, and freedom of the United States.

Mr. Speaker, I am proud to join with Sokol members in the 11th Congressional District of Illinois, which I am honored to represent, in the city of Chicago, and all over our Nation as they celebrate this anniversary.

A TRIBUTE TO THE VIGILANT FIREFIGHTERS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WOLFF. Mr. Speaker, it is not often that we have the privilege of honoring the many individuals who ably and unselfishly serve and protect our communities. Therefore, it was with great pleasure that I attended the 72d annual dinner and dance of the Vigilant Engine & Hook & Ladder Co. of Great Neck, N.Y., where I joined with many others in paying tribute to the valiant firemen of that community.

Among those being toasted were several individuals who have distinguished themselves in their service to Great Neck and their fellow-firefighters. I would like to bring to the attention of my colleagues the names of these men so that they may receive the recognition which they so richly deserve: In appreciation for ambulance service—Richard Boorstein, John Lyons, Bryan Weisman, and Glenn Zagoren; fireman of the year, awarded for active devotion to duty beyond the normal requirements—James B. Dunn; tenure awards: 20 years of active service—Michael Okon; 30 years of active service—Jules Santagata; 40 years of active service—Robert Lincoln, Sr.

The work of a firefighter often places him in danger as he serves his community, and I believe it is appropriate at this time to offer a prayer for firemen, that they may ever be watched over:

O God, in Thy bountiful mercy, bestow Thy provident blessing upon all valiant Self-Sacrificing Firemen in the performance of their duty.

Grant O Lord, we beseech Thee, the grace of Thy constant protection to those who are exposed to great peril in their constant efforts to safeguard persons and properties from the ravages of fire.

As Thou, Dear Lord, didst deliver of old the three young men from the fiery furnace, so guide these men through their trials of life that they may be delivered both from bodily injury and from all dangers to eternal salvation, through Christ Our Lord. Amen.

In addition, I would like to mention the names of the officers who were kind enough to invite me to this gathering and provide me with the opportunity to honor the Vigilant Engine & Hook & Ladder Co.: Ralph Fliedner, Jr., president of the company, Chief Frank Gilliar, Jr., 1st Asst. Chief Robert Lincoln, Jr., 2d Asst. Chief Edward Canfield, Capt. Leo Flook and Lee Ielpi, 1st Lt. Dennis Hill, and 2d Lt. Richard Boorstein.

COMBAT VIOLENT CRIME

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GRADISON. Mr. Speaker, the latest crime statistics released by the Federal Bureau of Investigation include some alarming figures. The number of violent crimes is increasing, as is the number of career criminals, who have been arrested two or more times.

From 1970 to 1975, violent crime increased by 39 percent, and the murder rate alone increased by 28 percent. Of these crimes, a frightening 25 percent of aggravated assaults were committed with a firearm in 1975. Worse, a gun was used in nearly 66 percent of all murders in the same year.

Career criminals committed 64 percent of the violent crimes between 1970 and 1975. These criminals trade on the public's fear, and it is time for the Federal Government to aid the public by cracking down on criminals. For this reason, I introduced H.R. 909, which requires stiff, additional prison sentences for anyone committing a felony involving the use of a gun.

Under this bill, anyone who commits a felony with a firearm would receive a mandatory sentence of 5 to 10 years for a first offense. Although this mandatory sentence can be lessened by a judge for a first offense, he must state in writing why the additional sentence was not imposed. For a second conviction, the additional penalty would range from 10 to 30 years. The mandatory sentence for second convictions could not be lessened by the judge.

H.R. 909 does not restrict the rights of law-abiding citizens, such as sportsmen, in their legitimate use of a firearm. Instead, it is designed to protect the American public by putting the criminal on notice that he will be severely punished for the unlawful use of a gun.

We all agree that something must be done to curb the criminal use of firearms. A stiff, mandatory sentence for a person committing a felony with a firearm is an effective weapon against crime, and it is aimed at criminals, not law-abiding citizens. I urge all Members of the House to support this legislation.

A NEW LOOK AT THE INAUGURATION

HON. LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. VAN DEERLIN. Mr. Speaker, I am especially proud of one of my constituents, Lloyd B. Ostrander, of Chula Vista, Calif. Among other distinctions, Mr. Ostrander holds the Medal of Freedom for his part in teaching literally hundreds of thousands of young American GI's to swim during World War II.

A native of Minnesota, he feels a special kinship with our new Vice President, and so it was most appropriate that he and his wife, Mildred, were able to come to Washington for Inaugural Week and take part in many of the events that surrounded the swearing-in of President Carter and WALTER MONDALE.

On his return home, Mr. Ostrander composed a short report on his experiences at the inauguration. It is a fresh look at a major national experience, and I am pleased to include a portion of Mr. Ostrander's statement at this point as an extension of my own remarks:

STATEMENT OF LLOYD B. OSTRANDER

Perhaps the most memorable incident occurred while we were waiting with other friends of the Mondales. The famous Marine Corps Band had been assembled in the reception hall, and when Fritz and Joan Mondale arrived to receive us, the band burst into the Minnesota football rouser. That stirring music recalled the years of successive stadium victories back in Minnesota during Mondale's school days at the University of Minnesota—a winning streak that Fritz himself is still riding.

Another dramatic moment came when the Carters arrived at the Visitor's Center Section of the Inaugural Ball, where an estimated 10,000 couples were struggling for dancing space on three floors, each larger than a football playing field.

We had inadvertently found sitting room with about five formally dressed, yet fun-loving young couples who told us they had crossed the Delaware with a few pints of high quality Scotch unavailable elsewhere. When the Carters arrived, these belles made Mrs. Ostrander the guardian of their bulging purses, mink capes and ermine stoles. They asked me to guard their Scotch, while moving toward the Presidential couple. But I also took flight, hoping in vain to dance with Rosalynn Carter!

When the Carters had departed, and things

began to quiet down, our fellow merrymakers returned for their fur coats and purses. To lighten their load, we finished the Scotch with them.

They invited us to another after-the-Ball party. But, having previous commitments with our California friends bivouacked with us at our hotel just across the Potomac, we reluctantly declined and headed for our two a.m. breakfast date. It was a fitting end to a wideawake night.

The confidence and trust that Carter-Mondale supporters have in each other is indicative of what we can expect in our new government.

WHAT ENERGY PROBLEM?

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BAUMAN. Mr. Speaker, there is only one point on which everyone concerned about our Federal energy policy is agreed, and that is that there is no comprehensive policy. No one seriously believes that turning down our thermostats to just above freezing and shutting down our schools and offices will be enough of a solution, much less a proper one.

Louis Rukeyser, columnist as well as accomplished economist, explains what a genuine energy policy must entail in an article which appeared in the Baltimore Evening Sun of February 7. As he notes, we are not only faced with our short-term problems of fuel shortages and increasing gasoline prices. We are also faced with grave energy problems which pose risks to the survival of our communities and the Nation itself, in the not too distant future, yet they are problems which must be solved now. Mr. Rukeyser's views call attention to choices facing this Congress in the next 12 months, and they deserve reflection and demand resolution:

TIME TO LOOK AT COLD FACTS ABOUT OUR ENERGY POLICIES

(By Louis Rukeyser)

The theme song of the American people apparently is supposed to be, "Baby, It's Cold Inside." Instead of the Eisenhower jacket or the Jacqueline Kennedy pillbox hat, this era seems destined to be remembered for the Carter long johns. Patriotism is to be measured not by raising the flag but by lowering the thermostat.

Well, pardon me if I enter one small, mild dissent. We are in danger of being swept away, in an orgy of uncomfortable—but smug—self-denial, into thinking that just because we're suffering we are finally coming to grips with our chilly problem. Sorry, but that kind of comfort is cold, too.

What we are being asked to do, in essence, is to deal with what is, by far, the less important part of the energy equation. Conservation is splendid, and in many areas overdue. It has the additional economic benefit of saving money—a point that surely has not escaped the many hotels, restaurants and other business establishments that keep urging us to cooperate while on their premises.

We have, indeed, been wasteful, and we must, indeed, conserve. It did not take the current cruel winter to validate the necessity for restraining U.S. energy consumption.

But let us try to see the picture whole. Conservation alone will never move us toward three essential energy goals: keeping our families warm in winter, avoiding blackmail in foreign affairs and providing the jobs for those who need them. All those goals, in the end, require action on the supply side.

Yet despite all the jokes about Mrs. Carter's tears, and the self-righteous scanning of one another's thermostats, we continue to ignore this more vital part of the answer to the crisis. No leader in either party has had the courage to say plainly that we are going to have to compromise some of the dreams for ecological perfection now—that we are going to have to get moving on new energy production, and that this is indisputably going to have to mean some compromises on the environmental side.

For starters, we are going to have to expedite the flow of oil from Alaska. We're going to have to proceed with the safe development of nuclear power—an area where the U.S. pioneered in war, but has lagged behind many of its competitors in peace. We're going to have to encourage the development of more desirable alternative sources for the future, such as solar power. Most urgently and most immediately, we are going to have to start making far better use of this nation's huge—and internationally unique—reservoirs of coal.

We're not out of energy, but we do seem to be awfully short on guts. What we need is not more sweaters but more sense. We certainly don't need a massive new government spending program—but we do need, openly and honestly, to assign a premier national priority to increasing our own energy resources. We have gabbed about this for the three and a half years since the Arabs stuck their finger in our eye, but we have disgracefully failed to do it.

Just as we have to have the courage to recognize the necessity for environmental compromise—in all our interests, including those of future generations—so we have to stop talking political malarkey and start talking economic sense on such issues as finally removing the controls on natural gas prices, and allowing the market-price system (which is, quite simply, the best tool we have) to get us the energy and other resources that an expanding economy will need.

We're in a jam now, and it is to a distasteful extent our own fault. Instead of moving to encourage energy production, we have twice since the embargo penalized the energy industry with new taxation. Instead of moving boldly to develop our own resources, we have temporized with every pressure group on the political scene. Now we're freezing, and worried, and we're going to have to lower our thermostats, but the real tragedy would be if we once again failed to look at the cold facts behind our self-induced crisis.

FUTURE HOMEMAKERS OF AMERICA WEEK

HON. DAVID W. EVANS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. EVANS of Indiana. Mr. Speaker, it has come to my attention that many people throughout our country will be observing Future Homemakers of America Week during February 6–12.

Future Homemakers of America is one of six vocational agencies. It is part of the junior and senior high school home economic curriculum that provides meaning and motivation for our youth to reach out beyond the classroom environment. Rather than be structured in teaching the domestic necessities, the organization provides unique opportunities for our young people to develop citizenship and leadership qualities and helps them to deal with the role of both wage earner and homemaker.

There are 199 chapters in the State of Indiana which all work toward bettering their own lives as well as their fellow citizens. They have worked on pertinent projects such as with the National Foundation of March of Dimes to stress the importance of peer-group education of birth defects and the dangers of teenage pregnancy.

Mr. Speaker, the Future Homemakers of America has inspired our youth to assert renewed pride and self-respect through their potential. I want to share these fine qualities of this organization with my colleagues. I also want to extend my best wishes to members within my own State of Indiana and to those throughout our Nation.

ALASKAN NATURAL GAS

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MURTHA. Mr. Speaker, among many important energy decisions Congress will make this year, a vital one will decide by what route to bring Alaskan natural gas to the United States.

I support the El-Paso All-American line which will bring the gas through a pipeline parallel to the Alaskan oil line, then ship it by LNG tanker to California. I favor this plan over the idea of a trans-Canadian pipeline because I think it is better for the U.S. economy, safer environmentally, enhances U.S. energy independence, and will bring the gas to the United States sooner.

I would urge my colleagues to study the issue carefully. The decision's importance is shown by the fact that once completely finished the Alaskan gas will supply enough fuel to heat 24 million homes a month or protect 1 million jobs a month. I will insert a news release I issued last week following a decision by a Federal Power Commission law judge favoring the trans-Canadian line.

I would also ask any Member interested in the pipeline decision to contact my office for further information on the El-Paso All-American route. Also of interest are the February 2 CONGRESSIONAL RECORD comments of Senator YOUNG who was kind enough to add some of my earlier remarks on this subject to his own.

The article follows:

WASHINGTON, FEBRUARY 1.—The decision by a Federal Power Commission Administrative Law Judge on development of Alaskan natural gas reserves was sharply criticized today by U.S. Congressman John P. Murtha who said the decision would delay vital natural gas reserves for the United States.

"The judge's decision could delay delivery of Alaskan natural gas to the lower U.S. by a minimum of 1½ years and as much as 3

to 5 years," Murtha said. "This cold weather emphasizes the need for gas as quickly as possible."

FPC Judge Nathum Litt approved a Trans-Canadian project to build a pipeline through Alaska and Canada to the Midwest United States. Congressman Murtha favors the El-Paso proposal which would build a pipeline paralleling the Alaskan oil line and deliver gas by tanker to California ports.

"Besides the delay in the Canadian route, the Alaskan route would produce more U.S. tax revenue, more jobs for Americans, and do less environmental damage to the northern wilderness," said Murtha who is a member of the House Interior Subcommittee of Appropriations which oversees most federal energy spending.

"Very importantly, the Alaskan project is controlled totally by the U.S. and state of Alaska. The Canadian route requires approval and possible financing from Canadian national and provincial authorities.

"The Alaskan line is quicker, better for the U.S. economy, and moves us closer to energy independence. I am hopeful President Carter and Congress will reverse this decision."

Murtha said he based delay estimates on problems of winter construction in new arctic regions, required approval by the Canadian government and its provinces, and settlement of native claims disputes (already cleared in Alaska but unsettled in Canada.)

Even the quicker El-Paso route would not get any gas to the U.S. before 1982. Following final FPC approval the President and Congress must review and approve any decision.

ENERGY CONSERVATION

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. STOCKMAN. Mr. Speaker, in the wake of the most devastating winter in the history of southern Michigan, where subzero temperatures have been endured for several days, where working men and women have been temporarily released from their jobs, and where voluntary energy conservation is a way of life, I must commend the board of education of the Lawton Community School District for their approval of a resolution to reduce the use of energy in the schools so that life may return to normal in this snow and ice bound region.

Superintendent Ray Bandlow has set a fine example that I trust will be followed by many public school administrators across the country. Efforts being made by this Congress are not enough to ease the shortages that exist in the Midwest and Northeastern States. Voluntary energy conservation initiated on the local level is a major step to recovery, more potent than any legislation we may adopt.

Mr. Speaker, I urge all my colleagues as they return to their home districts this week, to stress the importance of voluntary energy conservation and to push for approval by all public school systems the following resolution:

Whereas the United States is engulfed in an energy crisis of great magnitude, and

Whereas millions of American workers face lay-off due to this national emergency, and

Whereas schools and industries in many neighboring States have ceased operation due to an energy shortage, and

Whereas governmental agencies at all levels have not sufficiently addressed themselves to the energy crisis;

Therefore, be it resolved that the superintendent is directed to take steps to reduce our consumption of energy, including, but not limited to, the reduction of building temperatures, and

Therefore, be it further resolved that the local, State and Federal governments are encouraged to strive towards preventing future energy shortages by immediately taking action to encourage the development of our natural resources and the long range development of energies other than from natural gas, petroleum, and coal.

A MODEL EXAMPLE OF ENERGY CONSERVATION

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, in the first of a series of promised "fireside chats," President Carter asked for a commitment from the American people—to conserve energy. He admitted the energy shortage is not short lived, but a continuing problem that would not be solved unless we develop a national energy policy and take energy conservation seriously.

It has been over 2 years since this country experienced the long lines at the gas station. But in this instance, we cannot blame an Arab oil embargo for our problems. Experts tell us there has been a natural gas shortage since 1971—but it did not cause any crisis since many industries experiencing a service cutoff switched to other fuels and the United States has had relatively mild winters for the past several years. This winter there just was not enough gas to go around and industries depending on natural gas shut down and workers went home. The severity of the problem startled everyone when schools had to close and it was feared there was not enough gas to supply residential and other high priority users.

To deal with this immediate problem, President Carter sent to Congress an emergency natural gas bill which gives the President authority to divert natural gas to areas hardest hit by shortages. I am happy to report I voted for this bill which is now public law. But the long-range solution to alleviate shortages depends upon whether we can adopt sound conservation measures and stick to them.

It has been brought to my attention that there is a company in my 31st District of California that is voluntarily doing just that. The Northrop Corp. aircraft group in Hawthorne, Calif., has instituted a energy conservation program that has already saved the local aircraft manufacturer more than 100 million cubic feet of natural gas annually. Northrop was honored last week by the Hawthorne Chamber of Commerce and the local Kiwanis Club as part of their Energy Conservation Month where local industries and businesses are encouraged to participate in energy conservation activities. When a natural gas shortage was not a topic of national concern in 1974, Northrop started their 10-month survey by maintenance and company technicians of all gas-burning equipment. The purpose was to determine whether any adjustments had to be made for peak operating efficiency in any of the heaters, water heaters, boilers and ovens in the plant. Northrop engineers have estimated the survey has cut down on the plant's use of gas significantly. In fact, it is estimated the gas they saved would supply approximately 12,000 Hawthorne homes with gas for a normal month.

The example set by the community of Hawthorne and the Northrop Corp. is a model for all of us. On their own initiative, they are doing exactly what the President asked and they are doing it voluntarily. Since the plant is located in southern California, they do not have to be afraid severe weather will cut off their natural gas supply, but they realized energy conservation is not a regional matter. If natural gas has to be redistributed, then we should all be trying to save so there is enough to go around. Also, I think it is significant they instituted this program long before a crisis hit us.

I wanted to bring this matter to the attention of my colleagues and urge them to adopt similar measures in their own communities. The city of Hawthorne and the Northrop Corp. are to be highly commended and congratulated for demonstrating this type of national awareness and community concern.

SISTER JOAN KISTER HONORED WITH HEART MEDAL FOR THE ADVANCEMENT OF HEALTH

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WOLFF. Mr. Speaker, it is often the case that those who deserve the most credit seek the least recognition, and display only modesty for their achievements. This is precisely the manner in which Sister Joan Kister behaves, and it was not until I read an article in Newsday that I became aware of Sister Joan's recent accomplishments.

Sister Joan is unique in that her activities extend into a variety of areas beyond that of her commitment to the Franciscan Missionaries of Mary. When one speaks of Sister Joan, reference must also be made of her work as a construction planner and registered nurse.

Sister Joan's interest in drafting began 37 years ago, when she took an after-school course in drafting at St. Mark's High School in St. Louis, Mo. Since that time, Sister Joan has used the combination of her drafting techniques and her nursing degree to supervise and expand hospitals around the world. In 1957, she set off to perform these duties for a hospital in Pondoland, South Africa, and was so successful that she was sent to supervise the expansion of hospitals on Reunion Island in the Indian Ocean and in Petaling, Malaysia.

Sister Joan has been tireless in her ef-

forts and has continued to use her multitude of skills to benefit us all. In 1970, Sister Joan took over the coordination of a 210-bed expansion project at St. Francis Hospital in Roslyn. It was at this time that she earned her nickname, "the hard-hatted nun," for Sister Joan did not supervise from behind her drawing board, but rather, she ventured out to the construction site daily, donning the traditional workman's hard-hat. Her ingenuity in ordering an advanced building method for the project has been credited by hospital officials with saving months of work and millions of dollars. The "hard-hatted nun" and her project found their way into numerous newspapers here and abroad and after the expansion, the hospital changed its name to St. Francis Hospital and Heart Center.

Sister Joan, who holds a master's degree in health services administration, was made executive director of the hospital in 1973. On February 18, she will receive the Heart Medal for the Advancement of Health given by the hospital's board of directors. I would like to offer Sister Joan my personal congratulations for an honor richly deserved.

I consider my constituents and I to be particularly fortunate to have Sister Joan working in our district, but I believe that we can all be thankful for her unending devotion to the improvement of health facilities and her outstanding accomplishments in this field.

ALTON LOCK AND DAM 26

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. FINDLEY. Mr. Speaker, Locks and Dam No. 26 at Alton, Ill., is perhaps the most important link in our Nation's waterway transportation system. Located just below the confluence of the upper Mississippi and Illinois Rivers, the 600-foot long lock must handle twice as many barges as any other 600-foot lock in the Mississippi River system. The current facility is inadequate and continually causes delays in moving vital fuel to the upper Midwest and grain to export markets. Moreover, it is deteriorating.

The House Public Works Committee has promised speedy consideration of a bill authorizing construction of a new facility with a single 1,200-foot lock. Action this year is of the utmost importance. Congress must guarantee that there will be no interruption of commerce which would adversely affect the entire Midwest's economy. Past delays have already needlessly cost consumers millions of dollars. The new, larger lock will greatly reduce this waste of time and money.

The bill I am introducing today with Congressman PRICE authorizes immediate construction of a new dam with one 1,200-foot lock, as recommended last fall by the administration, and calls for a complete study of the Midwest's future transportation and ecological needs. I hope Congress will act speedily on my bill.

BANKS AND UNIONS: UNEQUAL BEDFELLOWS

HON. THEODORE S. WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WEISS. Mr. Speaker, Sunday's New York Daily News contained an article by Victor Gotbaum, executive director of District Council 37, American Federation of State, County and Municipal Employees and Edward Handman, the council's director of public relations, which I would like to share with my colleagues.

There has been much discussion regarding the role of the banks and the unions in the city's fiscal crisis. This article sets forth some of the important contributions made by the unions:

THE BANKS AND UNIONS: UNEQUAL BEDFELLOWS

(By Victor Gotbaum and Edward Handman)

For a couple of weeks now, the mayor of New York has been meeting with the banks to discuss the banks' request for "outside controls" over the city budget. The banks have been telling his honor that before they will agree to stretch out payments due them on MAC bonds they hold, they want to make certain that New York City will be run under the supervision of some kind of "outside controls." What the mayor has yet to make clear to the people of this city is exactly what kind of "outside controls" the banks propose.

First, they suggested an outside commission to "monitor and control the budgeting and financing of New York City and its covered agencies." That's all, just control over the budgets for schools, police, hospitals, fire, libraries—you name it. The last word on what New York City will or will not do for its citizens will rest in a "commission."

The mayor hasn't mentioned yet, either, how long the banks feel these "outside controls" should go on. Take a guess. But remember, think like a banker. The bankers feel a reasonable time for an outside commission to monitor and control New York City would be 20 years.

Another little zinger the banks slipped in is that in any year the city would be prohibited from increasing its budget appropriations more than 5% over the year before. If the cost of living goes up 7% one year, and chalk, oil, asphalt, hospital supplies, all go up an average of 7%, we will just have to cut back more services to meet the commission's 5% ceiling.

The banks have been asked to defer payments on the principal on MAC bonds. They'll still collect the interest, but if the city could put off paying the principal it can save $105 million in cash this year. The banks also thought it would be nice, then, if the interest on their MAC bonds could be raised a little, or a lot.

The city asked the pension funds of the municipal unions to do the same thing, defer payments on the principal of their MAC bonds. The unions agreed and put no conditions on the money.

We hear a lot about how the unions and the banks have bailed out the city together. It hasn't been quite 50–50 between them, however. Right now, the banks hold 1.4 billion dollars in city and MAC securities. The unions hold 2.1 billion, 50% more. The unions have committed themselves to buy another 1.6 billion before June 30, 1978. The banks have committed nothing. The banks haven't put any money in the city since September 30, 1975.

What if union leaders thought like bankers. Suppose Gotbaum, Maye and all those other heavies told the city, "You want us to defer payments? Okay, but first you have to raise the interest you're paying us now. Second, we want 20-year-controls on the city to see that we have no layoffs and no cuts in salaries, fringes or pensions for the next 20 years."

The attack on the unions would come from every paper, every station, every politician and would-be politician who ever woke up in the morning wondering how to get his name in the papers that day. But when such an idea comes from the banks, our mayor doesn't even bother to tell us about it and our media-mavens don't think it's worth discussing. Except, of course, for the paper in your hand right now. One of the surprises of the fiscal crisis is that the municipal unions and The News actually found something they could agree on: that this city can't turn its back on its banks.

Lately, the banks sound like they're ready to settle for less. But from their point of view it doesn't hurt to ask, they don't get embarrassed by asking for too much. They've learned that, to paraphrase that popular line of a few years ago, "Being rich means never having to say you're sorry."

SAVE THE "LUCKY LOU"

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. PICKLE. Mr. Speaker, I would be remiss not to mention to my colleagues the growing campaign to save the U.S.S. *St. Louis* from the scrap heap.

Why save the *St. Louis*, or "Lucky Lou" as she is so affectionately known? Because this ship represents the spirit that brought together the peoples of our Nation in those dark early days of World War II. This is the spirit that President Carter referred in his first fireside chat.

For the U.S.S. *St. Louis* was the only large warship to get underway during the attack on Pearl Harbor. For Americans in that dark December it was a stirring site to see this proud ship steaming ahead, flags flying, guns blazing, while other mighty ships were crippled in their berths in the harbor. This picture proved that the U.S. Navy might be down for an 8 count, but the count of 9 and 10 would be a long time coming.

But the U.S.S. *St. Louis* did not rest, for on February 1, 1942, the *St. Louis* took part in the hit-and-run raid on the Marshall-Gilbert Islands. This was the Navy's first offensive action in World War II. To our people, the going on the offensive was a great morale builder.

The "Lucky Lou" was hit and rehit by enemy bombs and torpedoes. It always managed to stay in action.

I was on board during the Battle of Kulu Gulf on July 3, 1943, when we took torpedo hits.

Now, however, luck may be running out unless the crew rallies to save the U.S.S. *St. Louis*. In 1951, "Lucky Lou" was sold to the Brazilian Navy. In 1976, she was decommissioned and is scheduled for scrap.

"All hands" are hearing the campaign to save the "Lucky Lou," and are responding.

It is being conducted by Al Seton of Staten Island, N.Y. 10306. Al was the editor and publisher of the ship's newspaper, the Hubble Bubble.

Mr. Speaker, in order to detail the "Save Lucky Lou" campaign at greater length, I ask the following articles be placed in the RECORD. These articles and letters are from the St. Louis Post-Dispatch, the Arizona Republic, and the Staten Island Advance.

The articles follow:

CRUISER ST. LOUIS, WORLD WAR II'S "LUCKY LOU," AWAITS SCRAP HEAP

(By L. J. Millner)

Luck is running out fast for the lady known as "Lucky Lou."

"Lucky Lou"—once carried on the United States Navy register as the light cruiser USS St. Louis—survived the inferno of Pearl Harbor, slugged it out with Japanese surface craft, submarines, aircraft and shore batteries and absorbed nature's worst in the shape of Aleutian gales, all with a comparatively low loss of life.

The St. Louis was decommissioned in 1946, sold to Brazil in 1951 and renamed the Almirante Tamandare.

Brazil, modernizing its navy with fast, modern frigates, has decommissioned the Tamandare. Now, the salt-encrusted 38-year-old veteran awaits the end at the hand of the shipwreckers—to be sold for scrap.

The St. Louis saw World War II combat service at Pearl Harbor, the Gilbert and Marshall Islands, the Aleutian Islands, the Solomons, the Marianas, Leyte and Okinawa. It was credited with sinking seven Japanese warships and it earned 11 battle stars.

It was christened April 15, 1938, by Miss Nancy Lee Morrill of Ladue, the 1937 Veiled Prophet Queen.

Mindful of the traditions that bad luck haunts a ship unless the bottle of champagne is broken on the first swing, Miss Morrill swung with gusto—and success. (Miss Morrill now Mrs. Robert Brookings Smith, still lives in Ladue.)

"Lucky Lou" was the fourth American ship and the last combat vessel to bear the name St. Louis. Another USS St. Louis, an amphibious cargo ship, was launched in 1969.

On that Sunday morning of Dec. 7, 1941, the "Lucky Lou" was berthed at a pier near Battleship Row, the prime target of the Japanese.

The vessel had docked at Pearl Harbor on Nov. 28 to be fitted with radar. Two of the ship's eight boilers were out of service, as were most of its eight five-inch guns of the secondary battery. Fifteen six-inch guns made up the 10,000-ton cruiser's main battery.

The St. Louis escaped undamaged in the hail of bombs and torpedoes that capsized the battleship Oklahoma and blew up the Arizona.

Crewmen hastily fired the two boilers and manned the five-inchers, and the ship began shooting back. The St. Louis was credited with downing three aircraft.

Under the command of Capt. George A. Rood, the St. Louis backed away from its berth at 9:31 a.m., a little more than an hour and a half after the attack began. It headed down the narrow channel for the open sea at 20 knots—well above the normal speed of eight knots.

Good luck for "Lucky Lou" began at the channel's exit. A Japanese midget submarine fired two torpedoes, but both went astray.

Then followed the grim days in which the St. Louis earned its 11 combat stars.

On Feb. 1, 1942, the St. Louis participated in the Navy's first attack operation in the war—a raid on Japanese bases in the Gilbert and Marshall Islands.

Then, in an abrupt change of climate, the St. Louis steamed to the Aleutians in the North Pacific and bombarded the island of Kiska.

The vessel's luck held against natural disasters. Off Kodiak, a gale parted a link in one of its two anchor chains. Had the other chain parted, the vessel would have been blown ashore.

Returning to the South Pacific, the St. Louis joined the group of outnumbered, outgunned and outweighed American ships in the "Slot" between Bougainville and the Guadalcanal Islands in daily battles with the Imperial Japanese Navy's "Tokyo Express."

The cruiser maintained its reputation of "Lucky Lou" when bombarding the island of Kolombangara from Kula Gulf. The ship was hit in its bow by a torpedo, which caused extensive damage, but no loss of life.

The St. Louis returned to the Mare Island, Calif., Navy Yard for repairs. Here, the ship finally unloaded articles not needed for combat, including a 25-piece silver set donated by the people of St. Louis. Unfortunately, the service has not been seen by authorities since.

In the Green Islands north of Bougainville, the ship's luck finally ran out, when a Japanese bomb killed 23 men.

The St. Louis participated in 1944 in landings in the Marianas and on Leyte in The Philippines. In the Gulf of Leyte, the St. Louis first encountered the Japanese kamikaze, or suicide pilots.

The ship was refueling on Nov. 27, 1944, when it was attacked by 10 planes, five of them kamikazes. In a 40-minute engagement the St. Louis's gunners downed six planes. But it lost 15 men and suffered serious damage.

On April 1, 1945, the St. Louis poured 1450 rounds onto Okinawa. This was part of the record salvos of 26,265 five and six-inch rounds fired in the Ryukyus campaign.

What now for "Lucky Lou"?

A. I. Seton of Staten Island, N.Y., is attempting to set up a USS St. Louis Association. He suggests that if the vessel cannot be spared from the welder's torch, at least its main mast can be brought to St. Louis.

And he's even thinking of having the ship towed up the Mississippi to St. Louis—despite its 23-foot draft and the river's nine-foot channel. Seton thinks it could be accomplished by stripping the vessel of guns and other equipment and bringing it upriver in the spring, when the Mississippi is often swollen.

Those interested in Seton's effort can reach him at 220 Otis Avenue, Staten Island, N.Y. 10306.

[From the Arizona Republic, Nov. 4, 1976]

BRAZIL NAVY SCRAPPING LUCKY U.S.S. "ST. LOUIS"

RIO DE JANIERO.—The U.S.S. St. Louis, the first ship to escape from Pearl Harbor under her own power in the Japanese attack in 1941, has come to rest in her last harbor near Rio de Janiero.

The lean gray cruiser, which became known as the "Lucky Lou" because of a series of dramatic escapes during World War II, has been decommissioned from the Brazilian navy, which bought her 25 years ago. She is anchored in Guanabara Bay awaiting sale for scrap.

The ship, which once carried crews of up to 1,000 men, is almost deserted. Twenty-three Brazilian seamen are removing her guns, equipment and valuable metal before the Brazilian navy auctions off the hulk.

The St. Louis, the only ship to reach the open sea during the Pearl Harbor attack, was sold to Brazil in 1951 and given one of the most honored names the Brazilians could bestow—that of Joaquin Marques Lisboa, the marquis of Tamandare, father of the Brazilian navy.

"The Tamandare was our second largest ship for many years," said Capt. Mario Ramiro da Silva, who is supervising the stripping operations. "Only the Minas Gerais, an aircraft carrier purchased from Britain, is larger."

Da Silva recalled that the good fortune that saved the Lucky Lou from Japanese bombs also saved her from hostile fire in a Brazilian coup.

The incident took place Nov. 11, 1955, and was the only time in the ship's 25 years of Brazilian service that it saw military action. Carlos Coimbra da Luz, then interim president of Brazil, got into a dispute with his war minister, Gen. Henrique Teixeira Lott.

Lott and the Brazilian army took control of Rio de Janeiro. Lutz and his followers, including Carlos Lacerda, Brazilian editor and politician, fled aboard the Tamandare in an unsuccessful attempt to stay in power by sailing to the Port of Santos and then establishing the government in Sao Paulo.

The Tamandare had been under repair and only two of her eight boilers were functioning. The ship's progress during the escape was much slower than usual, making it an apparently easy target as she steamed past Ft. Copacabana on the point between the fashionable Rio districts of Copacabana and Ipanema.

Capt. Silvio Heck wrote in the ship's log. "Fort Copacabana opened string fire against the Tamandare and the situation became critical . . . Using the great volume of fire I had at my disposal we probably could have silenced the fort in a few minutes but it would have been very dangerous to the densely inhabited Copacabana area."

The captain held his fire and the Lucky Lou escaped despite 22 minutes of cannon fire from the fort at surprisingly close range.

Fourteen years earlier, the St. Louis had put into Pearl Harbor for installation of radar equipment. This time, six of her eight boilers were operating, although most of the eight five-inch second battery guns were not. The ship had 15 six-inch guns in her main battery.

On Sunday, Dec. 7, 1941, Japanese planes attacked the harbor, blowing up the battleship Arizona and rolling the Oklahoma over on her side. The St. Louis, under the command of Capt. George A. Rood, was undamaged. She was credited with shooting down three Japanese planes.

An hour and a half after the attack began, the St. Louis headed for open sea—this time at 20 knots, well above the normal 8-knot speed. Lou's luck continued as a Japanese submarine fired two torpedoes at the ship and missed.

The 10,000-ton cruiser was awarded 11 combat stars for service in World War II. The ship fought in the first Navy attack on Japanese forces in the Gilbert and Marshall islands. She participated in daily actions against the Japanese navy's "Tokyo Express" between Bougainville and the Guadalcanal islands.

She was hit once by a torpedo when bombarding the island of Kolombangara from Kula Gulf. The torpedo heavily damaged the ship's bow, but not one of the Lucky Lou's crew was killed. The St. Louis also fought in landings in the Marianas and Leyte and was used for troop transport as the war ended.

The St. Louis was launched in Newport News, Va., in April, 1938. Nancy Lee Morrill, a debutante from the St. Louis suburb of Ladue, christened the ship.

The ship's first commanding officer was Capt. Charles H. Morrison, a native of Norfolk, Va., where the cruiser was commissioned in May 1939. The cruiser's last skipper in the Brazilian navy was Capt. Hugo Stoffel.

Da Silva said the ship was decommissioned because Brazil is modernizing its naval forces. The process of removing all valuable metal

and equipment began in June and may take another six months, da Silva said.

[From the Staten Island Advance]

RECESS WITH REYCRAFT

A campaign to save the USS St. Louis, the light cruiser which was the only major warship to get underway and gain the open sea during the Japanese attack on Pearl Harbor Dec. 7, 1941, is under way by Al (New Dorp) Seton, who served aboard the ship as an enlisted man and then an officer for two and a half years. He has gained the support of four retired admirals who were also officers on the St. Louis, which was sold to the Brazilian navy in 1951 and decommissioned by that country this year. The plan is to establish a fund to "Save Lucky Lou" from the scrap heap and return it to this country, as a monument to its service. Right now it's anchored near Rio de Janeiro. Within an hour after the Japanese attack, Al says, the cruiser downed three enemy planes and scored a hit on a miniature submarine.

BACKS CAMPAIGN TO SAVE CRUISER

How delighted I was to read in Jack Reycraft's Column recently of the plan Al Seton of New Dorp has put into motion for a campaign to save the United States cruiser St. Louis from "the scrap heap!"

My brother, Frank Ambler, was another Staten Islander aboard the USS St. Louis when the Japanese attacked Pearl Harbor, Dec. 7, 1941. She was the only warship to break through "The Holocaust"—heading out to the open sea in search of the enemy ("a one-ship task force*").

After serving aboard the USS St. Louis three years, my brother was assigned shore duty on the West Coast. One day while reading the local newspaper he was startled to see pictures of his ship. The caption above the article read, "The Unsinkable Lucky Lou." "The Lucky Lou" had been damaged three times during the Pacific War. (This picture was taken the moment she was hit by a Japanese suicide bomber. She survived all attacks and is still there punching!" Enclosing the news account, he sent home the following letter:

"As I read and saw the pictures of my Old Girl" a chill went up my spine, and I was filled with mixed emotions: Pride for I had served aboard The Lucky Lou during some of her most troublesome times. (She won 11 battle stars, numerous unit citations, is additionally credited with having sunk seven enemy warships.

"The St. Louis men didn't like to talk about it but in one night's engagement "in-the-slot" she and two other cruisers sank 13 enemy ships among them!

"Anxious in the thought my many close friends have been (and still are) going through very rugged times! Envious of their kind of people—people only found on a ship where the crew have been through what those boys have! Sorrow for the boys who were less fortunate than myself and are not living today to read about the exploits of 'The Lucky Lou!' When a crew can survive three times, then nickname their ship "The Lucky Lou," they are indeed philosophical."

My hope is to read more about the development of the campaign to save and memorialize this great ship—and the valiant crew who manned her throughout the war in the Pacific. Because of them—this old sister "Remembers Pearl Harbor" every Thanksgiving Day!—BETTY WILBUR, Stapleton.

GRATEFUL FOR LETTER ON SAVING WARSHIP

As spokesman for the officers and men of the USS St. Louis during her lifetime in the United States Navy, I should like to thank Betty Wilbur for her appeal to "Save Lucky Lou" published in the Advance recently.

We are trying to do what the Smithsonian Institution wants to do, thinks should be done, but can't do for lack of funds.

The USS St. Louis is a museum piece in every sense of the term. Slim, fast and beautiful, she is the last of the world's true gunships and considered by many to be the finest cruiser ever built. Built on a 10 to 1 ratio of length to beam, she is slimmer than even some destroyers. Designed to battle it out in surprise gun duels under cover of darkness or low visibility with enemy ships of larger tonnage, heavier guns and longer range, she mounts a forest of turrets and mounts bristling with guns.

The United States has preserved very little of its technical history and paid less attention to its engineers. The St. Louis represented the latest technical advances of the '30s and had many unusual pieces of hardware that were engineering marvels of their time.

How well the St. Louis performed is a matter of record and a legend in the Navy. There are some who think her record equals at least those exploits of any ship since our nation began.

Ironically, if she ends up in the scrap heap in a foreign port, it will happen during America's Bicentennial Year after all the parades and speeches, flag waving and picture taking.

What a way for the Lady to go!— AL SETON, New Dorp.

FUTURE ENERGY DEMAND

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BROWN of California. Mr. Speaker, I have been greatly impressed with the recent transformation in our perceptions of future energy growth. Several expert studies completed in 1976 have predicted a much lower total energy consumption between now and the year 2000 than was once thought. In order to explore the assumptions behind these new projections and the former higher ones, I am chairing a briefing by the Environmental Study Conference on Wednesday, February 16, from 2 to 4 p.m. tentatively in room 1310 Longworth. I invite everyone interested in our national energy policy to attend.

The four speakers at the briefing have been chosen to represent a wide range of predictions of future energy demand. They will be: Mr. Edward J. Hanrahan, Director of Analysis at ERDA; Dr. Alvin Weinberg of the Institute of Energy Analysis at Oak Ridge; Dr. Robert Williams of the Center for Environmental Studies at Princeton University; and Mr. Jack Schenck of the Edison Electric Institute.

Mr. Hanrahan represents the office at ERDA which has made detailed projections of future energy growth in terms of various scenarios. The favored version at present, which is lower than their earlier projections, has in the year 2000 total demand around 144 quads and nuclear capacity around 510 gigawatts. Mr. Schenck represents the Edison Electric Institute, which as the spokesman for the Nation's utilities has predicted future electrical growth near 6 percent, close to the historical rate of doubling every 10 years.

Last August, the Institute of Energy Analysis at Oak Ridge headed by Dr. Alvin Weinberg submitted its draft version of an ERDA funded study entitled "U.S. Energy and Economic Growth: 1975–2010". The key finding of their study is a projection of energy demand which is much lower than most previous estimates, especially those of ERDA. There are two scenarios, a low at 101 quads and a high at 126 quads in the year 2000. Approximately one-half of the primary energy goes to electricity generation because of the expected higher price rises for oil and gas compared to coal and nuclear. As they conclude, their estimates are a projection of what is likely to happen in a "surprise-free world" with no drastic changes in life styles and with conservative estimates of the rate of introduction of new technologies and the degree of conservation.

Two important factors in the reduced energy demand are a projected slower rise in real GNP—2.5 percent to 3 percent average annual growth for the next 35 years compared to 3.4 percent since 1940—and gradually increasing real fuel prices. The lower GNP growth is due primarily to demographic trends especially in the fertility rate. In general, the authors have tried to bias their assumptions towards the high side; for example, per capita GNP increases faster than the historical rate and unemployment is low.

Another recent study, entitled "Energy Waste and Nuclear Power Growth," which was undertaken by the Center for Environmental Studies at Princeton University and funded by the Ford Foundation, examines the ERDA–48 energy scenarios and concludes that the end uses of electricity contain considerable waste of both energy and economic resources. Consequently, efficiency improvements which are economically justified by the expected increase in the real price for electricity—opposite to the preembargo trend—can result in a considerable reduction in ERDA's projections. Even the "combination of all technologies" scenario—COAT—which supposedly contains intensive energy conservation, contains so much waste according to the Princeton group that it really represents an upper bound on the U.S. electricity consumption in the year 2000 provided cost-effective efficiency improvements are implemented.

The mix of fuels which supply the electricity is also criticized. The Princeton study claims that the ERDA bias for fission overlooks one very efficient decentralized coal competitor to central station power—industrial cogeneration plants which produce both electricity and steam on site—the latter from waste heat. Assuming the demand in the year 2000 as in the COAT scenario, they estimate that 30 percent of the electricity budget could be supplied by cogeneration, thus halving the number of required nuclear generating plants.

The latter two studies are somewhat complementary, the one concentrating on total demand, with intentional emphasis toward the high side, and the other on electricity supply, with significantly in-

creased emphasis on conservation. Both imply greatly reduced consumption relative to ERDA's past projections.

Even more recently, the massive National Research Council Committee on Nuclear and Alternative Energy Systems—CONAES—has issued their interim report which also sees a slackening of the energy growth rate.

In brief, the committee finds:

A number of factors make it likely that total demand for energy will grow at a lower rate in the future than the historical rate, and that such lower growth is desirable and possible without detriment to other possible goals.

The committee also came to an agreement that there may well be considerable leeway, over the long term, in the amount of end-use energy required for a given amount of growth in the gross national product.

As I am sure you know, projections of energy demand have been used both as a driving force and as a justification for energy supply strategies and timetables. The implications of these low energy growth projections are significant especially regarding the budget priorities for such ERDA programs as the breeder, plutonium recycle, conservation, and alternative energy sources.

Again, I invite everyone interested to attend the briefing on Wednesday, February 16, between 2 and 4 p.m.

OUTSTANDING CONTRIBUTION

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. APPLEGATE. Mr. Speaker, it gives me a great deal of pleasure to recognize the outstanding contribution to my district by the Mingo Junction Msgr. Dooley Council 4361 of the Knights of Columbus. This is their 20th anniversary and that means 20 years of service to the community.

The members of the Knights of Columbus, utilizing their individual skills as craftsmen, built the Knights of Columbus Hall in Mingo Junction; it serves the entire community and is utilized for a multitude of purposes by individuals and community groups. The whole community benefits from this fine complex.

This council, with a sense of dedication to education of young people in the community, has long sponsored the district's Cub and Boy Scouts. This council provides financial support to St. Agnes Elementary School and Catholic Central High School in Steubenville, as well as supporting the local public high school in various ways.

Mr. Speaker, I consider it a privilege to congratulate all the members of the Knights of Columbus on their 20th anniversary, for their work in educating young people and their service to the community. They have been fortunate to have had the leadership of a truly fine man, Bishop John King Mussio. I look forward to this council's continued leadership in the community.

A NATURAL GAS CRISIS? WHO KNOWS?

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HUGHES. Mr. Speaker, in the 2 years that I have been in Congress arguments rage unabated as to whether or not there is a natural gas shortage or whether it is a price shortage.

The Interstate and Foreign Commerce Committee, to its credit, last year and this year initiated inquiries to determine whether or not producers are producing at maximum efficiency and opening up as quickly as possible new fields on Federal lands, especially in our offshore waters.

However, we still principally depend on unaudited and unchecked figures supplied by the industry itself on estimates of reserves and efforts being made to bring new gas supplies on line. The industry, Mr. Speaker, continues to lobby hard for deregulation and thus has a clear conflict of interest in the supplying of accurate information in my opinion.

That is why I am soliciting support from my colleagues for the creation of a National Commission on Natural Gas Reserves with responsibility for auditing the Nation's gas reserves, undertaking economic studies, and making recommendations for future Federal policy toward natural gas production.

I envision a commission that will be composed of Members of Congress, high level Federal energy officials, and private citizens appointed by the President who have expertise in the field of natural gas, representing the interest of both consumers and producers.

I solicit the support of my colleagues for this legislation. We will never be able to develop a coherent energy policy, let alone a natural gas policy, unless we have reliable information on which to make recommendations. That would be the mandate of the Commission I propose.

I am inserting at this point in the RECORD a copy of the colleague letter that I have sent outlining the objectives of the Commission:

HOUSE OF REPRESENTATIVES,
Washington, D.C., February 4, 1977.

Re Natural gas.

DEAR COLLEAGUE: In the near future, I will be introducing legislation to establish a National Commission on Natural Gas Reserves, with responsibility for auditing the nation's gas reserves, undertaking economic studies, and making recommendations for future Federal policy toward natural gas production.

The legislation is still being drafted, but it will provide that the Commission be composed of Members of Congress, high-level Federal energy officials, and private citizens appointed by the President who have expertise in the field of natural gas, representing the interests of both consumers and producers.

As we well know, there have been numerous charges and countercharges as to the true availability of natural gas, and the level of prices reasonably necessary to encourage exploration and development of gas reserves. There are many well respected individuals who are contending that the shortage has been contrived in order to force deregulation of gas prices and win even larger profits.

The Subcommittees on Energy and Power, and Oversight and Investigation of the House Interstate and Foreign Commerce Committee have conducted inquiries that indicate there is a real need for a comprehensive, independent audit of the nation's gas reserves. At present, the reserve information government must depend upon to evaluate the crisis is supplied solely by the gas-producing industry, which can be said to have a vested interest in higher prices through deregulation.

The Commission I am proposing would develop reserve information independently of any group with a vested interest. Hopefully, on the basis of the Commission's findings and recommendations, we will be able to settle once and for all whether the shortage is contrived, the product of unrealistically low prices, or due to other reasons.

I feel that the time is long overdue for settling the maze of questions that has surrounded the natural gas shortage for the past five years, and the Commission I am proposing would provide us with the answers. If you would like to cosponsor this proposal, please notify Jonathan Spear of my staff, on extension 5-6572, on or before February 10.

Sincerely,

WILLIAM J. HUGHES,
Member of Congress.

NEIGHBORHOOD POLICY ACT

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GEPHARDT. Mr. Speaker, I am introducing today the Neighborhood Policy Act. This legislation addresses the need for developing a comprehensive and coordinated policy on neighborhoods. It seeks to establish the Commission on Neighborhoods which would be charged with evaluating the impact of public policies and programs on neighborhoods.

Despite the concerted efforts of many private individuals in the last several years to save inner city neighborhoods of our major cities such as St. Louis, legislation is necessary at the Federal level to demonstrate our commitment to saving neighborhoods as viable places to live and to work. This bill will seek to reverse the present trends of Federal subsidies that encourage new construction but also tolerate if not promote deterioration and demolition of existing, sound, housing stock. We need a comprehensive review of existing laws, policies, and programs which affect neighborhoods and to assess their impact on neighborhoods and recommend modification where necessary.

In the play "Coriolanus" William Shakepeare used the following phrase: "What is the city but the people?" Shakespeare's words are still true today. America's cities, large and small, have lost their people as they have taken an age and the fiscal result has been devastating. The city of St. Louis is a prime example of what happens when the people leave. St. Louis has lost more population over the past 20 years than any

city in the United States. The result has been a continuing local fiscal crisis that seems to defy solution.

The cycle of out migration from older cities is caused, in part, by our rejection of anything old, our desire for anything new, and our propensity to dispose of things after we have used things for a time. It has also been documented that the policies of the Federal Government toward housing has encouraged out migration from our cities.

The significant fact today, however, is that some people's attitudes about our older cities and neighborhoods is changing. Today many young people seek out older homes because of their substantial construction and interesting design. Today many young people seek out older neighborhoods because they are located nearer their employment or because they offer certain amenities that cannot be found elsewhere or because they offer homes that they can afford to purchase.

It is this change in attitude by a significant portion of our population that offers the best hope for the future of our cities. It should be Government's role to encourage and support this new trend as much as possible because the prospect of having hundreds of small and large cities across this Nation that are devoid of people and vast wastelands of empty, deteriorated buildings is unthinkable. Losing our cities means more than losing some important architectural history—it also means the destruction of untold billions of national wealth.

I believe the Congress should declare a national commitment to saving our older cities and neighborhoods. To realize this commitment the Congress should draw and advocate a battle plan to save our cities and neighborhoods which should contain the following:

First, an analysis of the impact of existing Federal, State, and local policies, programs, and laws on neighborhood survival;

Second, an analysis of the patterns and trends of public and private investment in urban areas and the impact of such patterns and trends on the decline or revitalization of neighborhoods;

Third, an assessment of local and regional development plans and their impact on neighborhoods; and

Fourth, an evaluation of existing citizen-initiated neighborhood revitalization efforts and a determination of how public policy can best support such efforts.

The Commission should make specific recommendations for changes in Federal, State, and local laws, policies, and programs to facilitate neighborhood conservation. Such recommendations may include:

First, new mechanisms to promote reinvestment in existing city neighborhoods;

Second, more effective means of community participation in local governance;

Third, policies to prevent such destructive practices as blockbusting, redlining, speculation in reviving neighborhoods, and to promote homeownership in urban communities;

Fourth, policies to encourage better maintenance and management of existing rental housing;

Fifth, policies to make maintenance and rehabilitation of existing structures at least as attractive from a tax viewpoint as demolition and development of new structures;

Sixth, modification in local zoning and tax policies to facilitate preservation and revitalization of existing neighborhoods; and

Seventh, reorientation of existing housing and community development programs and other tax and subsidy policies that affect neighborhoods, to better support neighborhood preservation efforts.

VOLUNTARY CITIZEN EFFORTS ENCOURAGED

It is important that we keep in mind that while Federal help is necessary to enable neighborhoods to create comprehensive and more effective policies, the most important element in the resurgence for cities is the voluntary effort of our urban citizens. The voluntary efforts of neighborhood organizations in St. Louis have been more significant than anything Government can do. However, government should encourage and support the voluntary citizen effort in any way possible. The Federal Government has already discovered, through some of its low-income housing projects, that communities cannot be created by Government but that a community is a place created by people due to the desire to live and work there.

JOSEPH WEINTRAUB

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. RODINO. Mr. Speaker, Joseph Weintraub, retired chief justice of the New Jersey Supreme Court, died last Sunday.

From 1965 until 1973, Mr. Justice Weintraub presided over the court as it handed down some of its most significant and far-reaching decisions.

For many of these he authored the opinions, setting forth in his own courageous way the decision that the system of financing for the New Jersey public schools was inequitable and unconstitutional; upholding the rights of consumers and expanding the civil liberties of all.

Mr. Justice Weintraub combined a firm belief in human liberty with a remarkable ability to preserve the rights of the individual without interfering with the best interests of society.

Often his decisions at the State level set the standard for future rulings by the Supreme Court of the United States.

Mr. Speaker, Joseph Weintraub was a man of great character and integrity. He graced the court with his presence, and he dignified his fellow citizens with his work.

Our State and our system of justice will miss his wisdom and his sense of justice. Those of us honored to call him our friend will never forget his special talent for enriching our lives.

NEW HOPE IN CYPRUS?

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. FASCELL. Mr. Speaker, the Washington Post of February 6 contained a particularly discerning editorial on the Cyprus crisis. I commend it to the attention of the House:

NEW HOPE IN CYPRUS?

What is unique about the Cyprus crisis is the extent to which it is bound up with the diplomatic and political style of one man, Henry Kissinger. This is said not to initiate a round of recrimination, which nobody needs, but rather in the spirit of a remark made many years ago by Henry Stimson, when he was asked, "How on earth can we ever bring peace to the world?" He replied: "You begin by bringing to Washington a small handful of able men who believe that the achievement of peace is possible. You work them to the bone until they no longer believe that it is possible. And then you throw them out and bring in a new bunch who believe that it is possible." Leaving aside how applicable it may be to Mr. Kissinger's frame of mind when he left office, Mr. Stimson's prescription may well be relevant to any number of international disputes and conflicts now seemingly deadlocked. For today, it is enough to note that no sooner had a "new bunch" moved in than, suddenly, the prospects for some movement on Cyprus started looking up. A new American initiative has been launched, with the naming of a special emissary, Clark Clifford, to explore the opportunities for settlement. Almost overnight, the Greek Cypriot majority, huddled in the South, and the Turkish Cypriot minority, settled behind the Turkish occupying army in the North, have started recalculating their odds. So have their patrons in Greece and Turkey. The upshot is that a situation that looked virtually incurable and fraught with peril only a month ago has about it a cast of cautious hope today.

The key has always been in Ankara. As long as Turkey saw that the United States was tying the full resumption of U.S.-Turkish military cooperation to renewed American access to Turkish bases, rather than to progress on healing the Turkish-inflicted wound on Cyprus, then things only got worse. Congress, controlled by forces demanding a rollback of the Turkish occupation of Cyprus, defied Mr. Kissinger on arms and aid for Turkey. The Turks responded by closing bases used by the United States and by edging toward the NATO exit door. Efforts to promote talks on the island got nowhere.

But Mr. Carter said during the campaign, and Secretary of State Cyrus Vance has just restated, that progress on Cyprus must be made before questions of arms and aid can be addressed. Obviously with this in mind, Turkey on Jan. 27 allowed the leader of the Turkish Cypriot minority, Rauf Denktash, to meet with the Greek Cypriot president, Archbishop Makarios. It was the first such meeting in 13 years, and another is planned on Feb. 12. Various compromise formulas are being discussed to allow the two communities to live side by side in peace under the same governmental roof. The Turkish political opposition is no doubt tempted, as usual, to denounce any display of moderation as a sellout. But there are signs, small but prom-

ising, that the Turks realize that the wind from Washington has shifted and that this may be the time to cut the appalling losses in international prestige, in defense readiness and in access to the European economy that their Cyprus policy has inflicted upon them.

The Cyprus crisis is often perceived as the product of profound ethnic rivalries, which are also held accountable for the host of other problems that have rent Greek-Turkish relations and decimated the eastern Mediterranean corner of NATO in recent years. One does not want to dismiss the ethnic factor: Without it there would have been no crisis. But the proximate cause of the crisis was a flawed American policy, and its solution became hopelessly ensnarled in executive-congressional combat. This makes it easier, not harder, to try to fix now. A sensible policy is not only likely to untangle Greeks and Turks but to dissolve the executive-congressional snarl. It is a time for quiet diplomacy and meaningful consultation with Congress. Unlike, let us say, the Arab-Israeli conflict, the Cyprus dispute, for all the bitterness that has compounded it in the past, may not be quite as intractible as it has sometimes been seen—or made—to be.

OUR FREEDOM TO ACCEPT RESPONSIBILITY

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CHAPPELL. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD a speech delivered by Mr. John E. Evans, of WESH Television to the Kiwanis Club of Daytona Beach, Fla., on July 21, 1976.

The theme of Mr. Evans' speech deals with "Our Freedom To Accept Responsibility." While the speech was delivered last year during our Nation's Bicentennial celebrations, I am bringing it to the attention of my colleagues because it concerns a subject that we should always be thinking about—the need to continue and increase public participation in the affairs of our Nation. As the speech by Mr. Evans points out, we have the freedom to participate and it is our obligation as free citizens to participate in the affairs of our Government and community life.

The speech by Mr. Evans follows:

OUR FREEDOM TO ACCEPT RESPONSIBILITY

(By John F. Evans)

I am honored to take part in your month-long series of programs celebrating the Bicentennial, to be numbered among speakers like Reverend Smith and Dr. Malone, and Reverend Mosley who will be with you next week.

You are fortunate that in Art Zimmet you have the consummate program chairman, he not only calls on potential speakers and flatters them into acceptance, but then thoughtfully provides them with the basis for their talk—or at least he did me, by sending to me a copy of one of Herbert Davidson's daily "Memo from the Editor" items from the Daytona Beach News-Journal which Arthur said he hoped would provide me with a theme for today. In it Mr. Davidson quoted James Reston of the New York Times who quoted a speech from Kingman Brewster, President of Yale, who said that in his view the first stage of our history was concerned with political freedom, the second phase was concerned with economic freedom, freedom from scarcity, freedom from want. Now, perhaps in 1976, he suggested, there was a chance to reach out to a more positive ideal, to achieve a society of mutual helpfulness, whose greatest aspiration is to give all its members a chance to make a constructive difference in each others' lives.

I am not entirely certain how President Brewster would flesh out these concepts of interpersonal interplay or whether the more conservative among us would react favorably to the sort of society that Herbert Davidson and Scotty Reston might envision arising from Dr. Brewster's concept, but I do welcome the opportunity to talk a little with you about freedoms in our society and about the part that we all, as individuals, play in preserving and expanding them.

It is too easy in this hectic society of ours, and too often in our personal lives, that we are able to ignore or to brush aside with catch phrases or easy labels important elements of the freedoms which have been so much a topic of the oratory which has accompanied this national Bicentennial binge we've embarked upon this year.

In order to talk about our freedoms, past present and future, it is important to look at the system under which they have grown, now flourish and hopefully will be preserved. I've been a little disappointed in many of the Bicentennial dwellings on the Declaration of Independence and the government it spawned, because they've not gone on to connect up that government with our concept of capitalism and the free enterprise system it sustains.

To me, the interrelationship seems clear, for when we talk of capitalism and free enterprise we're talking about:

A system that has made us the most powerful and emulated nation in the world.

A system that assures for each individual a marketplace for his ideas.

A system based on the highest ethical standards of any in the world.

A system which is the backbone for a method of government which more than any other provides the maximum freedoms for all those it seeks to serve.

You may be familiar with a popular comparison of capitalism with other isms of our times—a comparison which uses the ownership of two cows as its basis . . .

Under socialism—you have two cows and you give one to your neighbor.

Under communism—you have two cows, the government takes both and gives you the milk.

Under fascism—you have two cows, the government takes both and sells you the milk.

Under nazism—you have two cows. The government takes both and shoots you.

Under capitalism—you have two cows. You sell one and buy a bull. It is too seldom we stop to think that this capitalistic system of ours, for all the faults we find with it and for all the complaining we do about it gives to us six times as many necessities, comforts and luxuries of life as any other people in the world possess.

And why?

Because we have the freedom to work—to choose our occupations and our place of work.

Because we have the freedom to dream—goals, aims, purposes and desires . . . those of individuals and of groups are an important part of our basic concept of freedom, of our American system.

Under that system it is the total brain power of all the people which benefits the nation.

This is the freedom that permitted Henry Ford to envision cheap, mass production of automobiles.

This is the freedom that permitted Edison to create the electric light bulb, and this is the freedom that challenges all people to dream, and thus to create, produce and to build.

Hand in hand and equally important is our freedom to compete:

The dreamer has no monopoly on producing things in our society.

The manufacturer must constantly seek ways to make his product better, because if he does not, someone else will market an improved product and his business will fail.

We have the freedom to advance.

Each person is free to improve his position.

Leaders in every field rise to their posts of leadership through the ranks. And it is through this combination of freedoms that our free enterprise system generates its own incentive for the development which must constantly go on to sustain it.

It is through this combination of freedoms that progress is achieved. . . .

That the work week of the average employee has been reduced almost one half in the last hundred years.

That employees wages buy today almost seven times as much as they bought 100 years ago.

That 100 years ago animals did 75% of the production work of the nation, men did 15% and machines did only 10%, whereas today machines do more than 95% of our production work, men less than five.

And so our system has flourished, we have come a long way. We have seen our people largely freed from want, poverty, disease and fear. We have seen the level of illiteracy decline, and we have seen our system forged and defended by brave men and true who laid their principles and their lives on the line at places like Bunker Hill, Gettysburg, The Alamo, The Argonne, Iwo Jima, Heartbreak Ridge and the Mekong Delta. And this is good, for who can quarrel with the importance of being free from want and free from fear?

And yet, despite all this, we stand today, in our Bicentennial year, facing a great challenge which I think President Brewster had in mind and which it seems to me is not so much to our system as to ourselves as individuals, as citizens and as participants in this noble experiment of 200 years duration we call America.

The reason for this challenge is understandable. It is very natural, in an age as scientifically sophisticated and as prosperous as this, that our leaders, political, scientific, yes and even spiritual, should begin to dangle before a dazzled populace another freedom, and that is the freedom from responsibility.

This is a freedom, if we think about it, that none of us really wants. In recorded history there have been many great societies, but that of ancient Greece, of Athens, is probably the best known . . . literate, cultured, happy, peaceful, rich . . . nobody starved. And finally they achieved that last great freedom, freedom from responsibility. And the great society of Athens was no more.

History suggests that the Athenians were not alone, and that in fact nations seem to go through cycles—from slavery to hope, from hope to courage, and from courage to freedom, from freedom to abundance, from abundance to apathy, and from apathy back again to slavery. But all these steps depend on the people who take them. Certainly they are not foreordained.

Greatness in our society stems from individuals achieving to the maximum of their ability and accepting the responsibility to perform in their chosen fields . . . be they housewife, lawyer, salesman, religious leader, educator or whatever—but accepting that responsibility, not abdicating it.

You today, gathered here as participants in the civic life of this community, are rep-

resentative of thousands of others, here and throughout this state and nation who are the key to the preservation of whatever greatness our society has achieved and whatever potential it has for the attainment of further greatness, because the mark of a free people is their involvement.

People all over the world, less fortunate than we, would just love to be able to be involved, but they can't. They are free from responsibility. They don't even have to decide who is going to run the country, or the state or the city. No the mark of a free people is participation, and anytime anybody involves themselves in anything in this society, they are defending freedom.

Freedoms, you know, are lost only through disuse. No people ever lost their freedoms when they exercised them. One of the great things about our society that comes into play this election year is that we don't have to vote. We don't have to vote in one party or the other. We don't have to vote at all. A lot of people worried over this in the beginning. How could you make a democracy work without the compulsion implicit in older forms of society? Wise men like Franklin and Jefferson and others decided that in a free society with a well informed, literate electorate, there was hope for a new kind of society—democracy—a republic—a voluntary political society.

This freedom has been lost in other countries because people failed to accept and exercise it. Don't think that because we have in this area an active democratic organization or an aggressive republican organization that this is answer enough.

I don't mean to knock the politicians, for if they didn't exist we'd have to invent them to run our government. But in direct proportion, as we volunteer to work for better government, to participate in the selection and nomination for good men for public office, so do we defend our freedom to choose those who govern us and reject those who should not.

Freedom of worship is voluntary. We are very fortunate that somebody 200 years ago decided that we were not going to have any state religion. This, too, became a matter of the volunteer. The great creeds, Jewish, Catholic, Protestant, that guard the moral and spiritual character of our communities and this country, depend on individual involvement.

In many other countries, church people abdicated this responsibility. The effectiveness of the church in making its contributions has declined, and in some cases disappeared entirely. If we are to protect this freedom, then we must exercise it. We must work and worship in the church of our choice, not merely give money. The parishes that contribute most to the spiritual and moral character of the community are those where they have the maximum number of people supporting the priests, rabbis and the ministers in carrying on this great Christian idea.

In fact, this Judean-Christian idea came into being and survived only because of people involvement. Until the advent of Jesus Christ, state religions were the practice. The state paid for the temples, hired the priests and paid for the festivals.

The people came, looked in awe and enjoyed them. The discovery of the Dead Sea Scrolls revealed that others had even before Jesus advanced the concept he embodied. But nobody had volunteered to make it real, to make it live, to make it valid, to make it survive against the kind of statism in religion that existed.

Red Motley, Publisher of Parade, gives a great speech from which I have liberally borrowed, in which he points up how the Apostles were the first volunteers in this great Judean-Christian movement. Without them Jesus, whether you regard him as great prophet or Son of God, could not have made this idea survive to become the hope of peace for millions of people. They were volunteers against great odds. If you read many of the passages of the Bible about the trials and tribulations of the Apostles which are often omitted from Sunday School Lessons and Scripture Readings, you'll see a picture of toughness on the part of Christ and his Apostles. They had to be tough. He had to be tough to sweep the money changers out of the Temple and to go on foot up and down the narrow breadth of that land in the Near East, being spat upon and stoned and in Christ's case, later crucified.

As we celebrate this 200th anniversary of America, we should be mindful that there exists a direct link between the service we render today and those who laid the foundations of the society we enjoy and must preserve.

Those volunteers who stood at Lexington and Concord made this country possible.

They were outnumbered, too; not only outnumbered by the British, but by their friends and neighbors who didn't go along with the idea of fighting for freedom, against the principle of taxation without representation. If they had looked around them and said, "I don't think I'm going to go along with this because there are so many more people that are against it then are for it," we would still be a colony of Great Britain.

That we are today a free society. That in the eyes of many we are a great society is because from the beginning people volunteered to make an untried political system function reasonably well; to build a God fearing solid people with the church completely free. That we remain so is in large measure because a lot of people like you continue to participate, an act which is in a very real way the highest expression of a free society. Not freedom from responsibility, but the freedom and the willingess to accept responsibility, even though you don't have to do it.

Some of my old cracker friends tell me that if a frog is dropped into a pan of boiling water, he will react so quickly that he will jump out without injury, but that if you take that same frog and put him in a pan of cool water, then place the pan on the fire and bring the water slowly to a boil, that poor frog just won't be able to make his mind to jump until it's too late.

I'm afraid that there are a lot of us today who are like that frog. We've proven time and again that when our freedoms are attacked suddenly and violently, we react swiftly and with righteous indignation. But when the foundation stones of our heritage are slowly chipped away, as many seem to be today, we watch and wait and wonder, and if we're not careful we'll wait until it is simply too late.

It is not hard to be pessimistic about the future of our freedoms and the affairs of our nation. We have seen and heard so much in the last few years, both at the national and state levels of the abuse of power; of immorality in government; or misplaced priorities; of an inflationary economy; of a weakened defense posture and of pressures on the small businessman so varied and so great as to threaten his vital role in our free enterprise system. It would be little wonder if people were turned off by government and overwhelmed by the problems of our times.

And yet they are not . . . and therein lies the optimism with which I hope to leave you today. I suspect that the trauma of Watergate and the other political horrors of these times have, in fact, turned people on to the needs of involvement in government. At the Democratic convention last week, we were treated to a parade of new faces of leadership—more I think than we have seen at any convention of recent memory. In looking over the list of candidates who qualified for various offices around Central Florida before yesterday's deadline, I was impressed with the number of new names and the variety of business backgrounds that composed that list.

In our newsrooms we are seeing stories of more and more efforts by more and more people to take a hand in the shaping of their destiny. We are hearing from more and more civic clubs about their concern in the nitty gritty of government and seeing more and more involve themselves with the nuts and bolts issues of their communities and state. The work of your own Ron Johnson and his public and business affairs committee is a texbook example of this beneficial and encouraging involvement in the leadership you exerted in seeking and obtaining new judges for the county court. You have but to listen to President Bill's announcement for other good examples.

And so I think we are moving in this Bicentennial Year of 1976, perhaps more rapidly than we realize, toward that society Kingman Brewster envisions, which will be based on mutual helpfulness. What's required to accelerate our movement in that direction is, of course, personal commitment by us all to make a conscious effort to give meaning to our role in this new, third century America.

Have you ever stopped to realize that there were about three million people who lived in the colonies at the time of the Revolution. Yet they could get only 56 people to sign the Declaration of Independence. And it took a lot of courage for those 56 because they knew that if it failed, they would surely end up dangling at the end of King George's rope.

And so we became a free people, enjoying a great heritage, because there were those 56 who, on behalf of the other colonists and indeed on behalf of us their descendants and inheritors of freedom, were willing to pledge their lives, their fortunes and their sacred honor to this cause.

It is trite, but true, to note that freedom as we know and enjoy it in America demands the acceptance by citizens of the responsibility of citizenship; requires the greatest attainable degree of involvement by us all in the affairs of our government. In your bulletin the other week Bob Montgomery included a quote from Henrik Ibsen noting that "a community is like a ship. Everyone ought to be prepared to take the helm." How many of us would be ready if called upon to take the helm?

Some years ago I clipped a creed published by the National Small Business Association, and on occasions such as this I like to haul it out and reread it. And I would like to leave it with you today as a thought for this Bicentennial month and, if not as a challenge to you in the exercise of your individual rights of citizenship, perhaps as a reminder of the opportunities we all share as Americans. It goes like this:

I do not choose to be a common man. It is my right to be uncommon—if I can. I seek opportunity—not security. I do not wish to be a kept citizen, humbled and dulled by having the state look after me. I want to take the calculated risk; to dream and to build, to fail and to succeed. I refuse to barter incentive for a dole. I prefer the challenges of life to the guaranteed existence; the thrill of fulfillment to the calm state of utopia. I will not trade freedom for beneficence, nor my dignity for a handout. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid; to think and act for myself, enjoy the benefit of my creations and to face the world boldly and say: This I have done . . . all this is what it means to be an American.

HOUSE SHOULD VOTE ON ITS OWN PAY; COMMISSION RECOMMISSIONS SHOULD BE REJECTED

HON. J. DANFORTH QUAYLE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. QUAYLE. Mr. Speaker, earlier this week I appeared before the House Ad Hoc Subcommittee on Presidential Pay Recommendations, Committee on Post Office and Civil Service, to testify in strong opposition to the proposed pay increases. I was afforded the opportunity of stating my views but it is obvious that the Members of the House will not have the chance to vote either "yea" or "nay" because the leadership will not allow a resolution of disapproval to come to the floor for a vote. Time is running out, and our constituents watch with amazement and disappointment.

During the so-called district work period, better known as the Lincoln Day recess, I will have more to say on this issue to the people of the Fourth District of Indiana.

However, under the leave to extend my remarks in the RECORD, I include the statement made by me to the subcommittee on Monday, February 7, 1977.

The statement follows:

Mr. Chairman and Members of the Subcommittee: Thank you for this opportunity to make this statement of opposition to the recommendations for pay increases as recommended by President Ford, with the support of President Carter, and the Quadrennial Pay Commission.

The House has the opportunity to disapprove this ill-timed and inflationary recommendation for exorbitant pay increases for Members of Congress and other high government officials. From reports it is apparent that the House will never have the opportunity to vote for or against this pay increase.

Nonetheless, I sincerely hope that this Subcommittee will bring the resolution of disapproval to the Floor so that all members of the House can go on record, as they should, on this matter of our own pay. Without having a vote on the pay increase matter, the hypocrites of the House will be able to travel home and tell their constituents they were really opposed to the increase but will accept the increase because they don't want to be paid lower than their fellow colleagues.

Hypocrisy like this gives credibility to the low respect our American citizens have for the U.S. Congress.

Today I received a letter from a constituent from Rome City, Indiana, who lamented that 75 percent of the teaching staff receives less than the pay increase which is $12,900. We are not simply talking about a 28.9 per cent, and almost $13,000, pay increase for Congress, federal judges and cabinet members. Once this pay increase goes into effect all the bureaucrats will clamor for more money "to keep up with the example Congress has set." This will literally cost billions of dollars.

It is of concern to me that the Congress as an institution continues to rate so low in the eyes of the people of this country. It is beyond me how we can give away to a Commission the responsibility of establishing salaries and not face the issue ourselves. How can we insulate ourselves against inflation without even being required to vote, while our constituents are wrestling every day with high prices and shrinking pocketbooks.

I am opposed to this pay increase for Members of Congress for several reasons. We accepted our positions as Congressmen knowing what our salary would be. Indeed, we campaigned for the job, asked for it, knowing that we would earn a specific amount. I think it is strikingly inappropriate to begin complaining about our salaries and allow a raise in these salaries scarcely weeks after we begin the jobs we worked so hard to get.

Our founding fathers discussed the issue of revising our own salaries during our present term. There was consideration of incorporating into the original Bill of Rights an amendment precluding a pay increase during the term of the sitting Congress. Any pay increase would apply to the next session. Our founders saw the temptation of increasing our pay but rejected the limitations I assume in anticipation of having a Congress interested in serving the people rather than serving themselves.

I believe Congress should decide on its own salaries, but any increase or decrease should take effect only in the term following the passage of such change. This will protect Members of Congress both from those who might try to line their own pockets at taxpayers' expense, and from those who might try to penalize certain factions of this body through a sudden decrease in salary.

It is not only this pay raise which concerns me. The automatic cost-of-living increase is still law and will occur in October if action is not taken.

I am somewhat amazed that we, the highest legislative body of this land, can sit here and pass inflationary spending measures which fall hard upon the taxpayers of this nation, and then promptly arrange it so that we are cushioned against this very inflation.

I do not argue this issue on the basis of need; I argue it on the basis of respect for what used to be an august body. In the early days of the nation, it was an inconvenience bordering on hardship to serve as Congressman—to leave one's family and travel great distances, to maintain both private business and public office, to spend large amounts of time representing the people and never be fully materially compensated for one's efforts. But people were proud to serve as legislators and made these sacrifices because they were more concerned with the welfare of the nation rather than their pay scale.

I was not elected to insure my financial future; I was elected to seek the best interests of the people I represent. This increase is definitely not in their best interest.

If not for this simple reasoning, then for the sake of the reputation of this body, I ask you to vote against these increases . . . by voting out a resolution of disapproval.

PRESIDENTIAL CLASSROOM PROGRAM

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. LOTT. Mr. Speaker, I would like to take this opportunity to recognize two outstanding young people, Becky Jo Tedford, of Waveland, Miss., and Tammy Faulkner, of Lucedale, Miss., who were here in Washington last week to participate in the 1977 Presidential Classroom for Young Americans.

It was my pleasure to discuss the operations of our Federal Government with these young ladies, as well as with the entire first class of the Presidential classroom program.

I am impressed by the perception Miss Faulkner, Miss Tedford, and their colleagues displayed toward our Nation's destiny, and I commend these young Americans on their selection to participate in this program.

WOMEN'S AIR FORCES SERVICE PILOTS

HON. LINDY BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mrs. BOGGS. Mr. Speaker, I rise today to ask the support of my colleagues for legislation I introduced to grant veterans benefits to former members of the Women's Air Forces Service Pilots—WASP's—for their service to their country during World War II.

As many of you may already know, the WASP's served as ferry pilots during the war and many of these brave women suffered death or injury during their service to their country. However, promises to make the WASP's an official part of the military establishment and thereby eligible for veterans benefits were never fulfilled after the emergency of the war subsided. As a result, many of the surviving pilots—approximately 800 are living today—have not been served by the Veterans' Administration as they should have been.

This legislation was originally sponsored in the House during the 94th Congress by our colleague, Representative Patsy Mink. In the Senate, an identical bill has already been introduced by Senator BARRY GOLDWATER. Last year, the Senate amended a veterans health bill, H.R. 71, to provide certain health and hospital services to the living WASPs; however, the House disagreed to the Senate amendment and the proposal was eliminated from the final version of the legislation.

Because the Ford administration and the Veterans' Administration had opposed previous proposals to grant veterans benefits to the WASP's, many Members of the House were rightly concerned about the possibility of a Presidential veto of the entire veterans health bill (H.R. 71) if the WASP amendment were to be attached. I firmly believe, however, that we can expect a more favorable hearing this year. Consequently, I am hopeful that the House Veterans' Affairs Committee will agree to conduct a hearing on this proposal to grant veterans benefits to the WASP's so that committee members and all our colleagues in the House can be fully aware of the justice of this request.

For the information of my colleagues I am pleased to provide the following background on the WASP's and this legislation:

FACTS ABOUT WASP'S

WASPs served in uniform as part of the Air Corps from September 1942 to December 1944.

WASPs who graduated from Air Corps pilot training and flew with the Air Corps: 1,070.

WASPs who died while in service with the Air Corps: 38.

WASPs known to be living at this time (approximately): 800.

WASPs who had additional military service after World War II: 25.

Unofficially we have been informed that the recent decision to admit women pilots into training with the Air Force was based in part on the *favorable* experience the Air Corps had with the WASPs during World War II.

Duties performed by the WASPs while in the service:

Towing targets for gunnery practice.

Towing gliders for combat glider pilots.

Test flying aircraft as to aircraft and instruments performance.

Flying aircraft in the prescribed manner after overhauls.

Flying ground personnel where necessary.

Utility piloting.

Ferrying aircraft from factory or from airport to airport.

It is to be noted that the WASPs flew every type of aircraft manufactured for World War II from the B-19 down to Primary Trainers.

As an indication of the success of the WASP program and in order to discount erroneous claims that WASPs were not top flight pilots, there are two documented cases where WASPs were utilized to prove airworthiness of aircraft which male pilots had considered unsafe:

1. In the ferrying command many male pilots were crashing the P-39 fighter to the point that the plane received the name of "Flying Coffin." To restore the image of the aircraft, General Tunner assigned some of the WASPs the job of ferrying the P-39s, which they did with a perfect flight record. There were no more complaints from the male pilots. (Reference: "Over the Hump" by Wm. H. Tunner; Duell, Sloan, and Pearce, N.Y.: 1964)

2. In the training command during World War II, the male pilots became afraid of the B-26, one of the most difficult aircraft to fly at the time. Again the WASPs were assigned to the training program. They not only flew the B-26 but did it with no fatalities and with fewer "washouts" than the male pilots. The men soon forgot their fear of the aircraft and returned to flying it with great success in combat. (Reference: "Interview with Jacqueline Cochran" by Dr. Murray Green, Office of Historian, USAF, February 25, 1970.)

WASP: MILITARIZATION

It was initially intended that the WASPs would become an active part of the Army Air Forces (AAF), but both the AAF and the WASP Director, Miss Jacquline Cochran, felt that the program should be observed for a period of time before this move was made. In June of 1943, Miss Cochran approached Colonel O. C. Hobby, Commanding Officer of the WAC, concerning militarization. It was Miss Cochran's approach that a pilot should command the WASPs and not a person unschooled in aircraft or flying, such as Mrs. Hobby. She supported her argument for commissioning WASPs directly into the AAF by referencing a precedent which provided for the appointment of women physicians directly into the Medical Corps of the Army and not into the WAC. Both the Commanding General of the Flying Training Command and the Commanding General of the AAF supported her position.

Colonel T. C. Odum, Deputy Air Inspector, AAF, was given the job by General Arnold to investigate the militarization of the WASPs. His study dated 5 August 1943 recommended that the WASPs be left on civil service status for a 90-day period of observation, during which time the women would be utilized in military pilot's duties in addition to ferrying aircraft. In July of 1943, WASPs were assigned to tow target squadrons at Camp Davis, North Carolina.

The Air Transport Command in the meantime discovered that Army regulations did not state specifically that an officer had to be male. They therefore considered giving the WASPs direct commission. This plan was killed in the General Staff.

In September of 1943, Representative John M. Costello of California, introduced a bill, H.R. 3358, which provided for the militarization of the WASPs by commissioning them directly into the AAF. The women would be retained until six months after the end of the war. This bill had the complete approval of the Chief of the AAF (General Arnold) and the Secretary of War (Honorable Henry L. Stimson), who submitted a special letter of endorsement of the bill to the Chairman of the Committee on Military Affairs.[1] H.R. 3358, as amended and resubmitted as H.R. 4219, was reported out of Committee on 22 March 1944.

In the meantime, flying training for male pilots was being curtailed. Many civilian contract flight schools using civilian male instructors were being closed down. These men, through the period of emergency, remained at the flying schools, received much better pay, and escaped the dangers of war. Now, they were unemployed. They resented the WASPs flying for the military and brought extreme political pressure to bear on the militarization of the WASPs. The Ramspeck Committee (House Committee on Civil Service) was in sympathy with the male civilian pilots and reported out of Committee a report which was unfavorable to the WASPs.[2]

On the floor of the House, the WASP bill had very poor treatment. Mr. Ramspeck was in the Speaker's Chair and allowed the debate to degenerate into the discussion of the plight of the male instructor pilots. Various amendments were introduced and passed which weakened the WASP position, and finally, the bill was defeated on the floor. In the meanwhile on the Senate side, Senator Hill introduced a bill with exactly the same wording as H.R. 3358, but after the debacle on the House side, the Senate bill was never brought out of Committee.

It is obvious from the above that it was the intention of the Secretary of War and the Commanding General of the AAF, as well as the House Armed Services Committee (then the Committee on Military Affairs), that the members of the WASP be integated into the military service. The fact that the bill failed can be only blamed upon the activities of certain lobbyists who played upon the lack of knowledge of the subject in Congress, which action allowed interest groups to defeat the bill.

It is interesting to note that during the hearings of the Military Affairs Committee, certain Committee members questioned General Arnold about the male civilian pilots who previously had been happy in waiting out the war with good salaries in the U.S., but now who were complaining to the members of Congress about the fact that the WASPs were to be included in the service.[3] General Arnold stated emphatically that no male civilian pilot would be denied a commission in the Air Forces as long as he could meet the requirements (which the women pilots had met), but this was not enough for those supporting the male pilots. The House somehow failed to understand that (although no injustice had been done to the men) by supporting the men, a great injustice would be done to these women pilots.

THE TAX SYSTEM

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. VANDER JAGT. Mr. Speaker, a fair, equitable, sound tax system is critical to the economic wellbeing of the Nation. One very important element in our tax structure relates to inheritance taxes. A recent article on this subject by Dr. Peter Gutmann, chairman of the Department of Economics and Finance at the City University of New York, appeared in the Washington Star. I commend this thought-provoking article to the attention of Members of the House:

U.S. NEEDS MORE PEOPLE GOING FROM RICHES TO RAGS (AND VICE VERSA)

(By Peter M. Gutmann)

It is too easy to stay rich and too difficult to get rich. That, to put it bluntly, is what's the matter with the tax system.

The tax system is creating a class system. It establishes a solid barrier to social and economic mobility, upward and downward. Those who aspire to rise in society through work, savings and capital accumulation have much, indeed, most of it taxed away; they have a tough time rising. Simultaneously, those who are already among the top of the heap find it easy to stay there. The tax system keeps those who are down, down, and keeps those who are up, up.

Thus the tax system is a solid bastion of conservatism. It is heavily biased towards the success of past generations. Those whose ancestors became rich, stay rich. Those whose ancestors did not, cannot.

Many draw the conclusion that the solution lies in an ever more egalitarian income distribution. But such is not the case, as many another country has discovered; witness England, not to mention the Swedes who have just cast out their Socialist government after 44 years.

Egalitarian income distribution founders on two rocks. First, substantial problems develop with incentives, productivity and social dissatisfaction. Second, egalitarian income distribution is essentially incompatible with private enterprise, since the public obviously must have the funds to own the country's capital.

The solution is different. In a nutshell, every pauper should have a much-improved chance to become a millionaire, and every millionaire (and his children) should have a much-improved chance to become paupers. Each generation should stand on its own feet.

What does this mean for the tax system? First, it means very high effective estate and gift taxes, but with no tax, or very little tax, for amounts below a certain minimum. The operative principle should be this: No man should be allowed to give another (including his children) enough to permit him a free economic ride at the top of the heap for his lifetime.

Thus, if a billionaire wants to give his offspring his billion dollars, it should be

largely taxed away. If he wants to distribute it equally to 10,000 people, let him. Estate and gift taxes should be levied not on the giver, but on the recipient. If each of 1,000 people wish to give a million dollars to the same individual, it should be largely taxed away. Inheritance and gift taxes should allow downward mobility from one generation to the next.

Second, income taxes should be reduced, not only on the income levels below the median income, or on the income levels of the middle class however defined, but at all levels of income, including upper incomes. This is designed to allow rapid upward mobility within a generation.

The net effect is the stimulation of economic and social mobility, with room at the top of the heap for new blood and room at the bottom for old blood. Men and women of energy could have the opportunity to rise swiftly within their lifetimes, and their children could have the chance to fall equally swiftly. The old adage, "From shirtsleeves to shirtsleeves in three generations" can be cut to two.

Who would benefit? Society would benefit through much greater social and economic mobility. The economy would benefit through greater incentives and output. The typical individual, who today pays taxes to government but receives few desired services, would benefit as his income taxes dropped relative to government services received. Any slack in tax collections could be taken up by inheritance and gift taxes.

This proposal would also give the offspring of the rich a chance to prove themselves, unimpeded by the modern guilt feelings created by inherited wealth.

Tax revisions must meet one criterion: Maintenance of sufficient capital in the hands of the public to own private enterprise. But there would be drastic differences in ownership interests. Under the current tax system, much ownership remains in the same families from generation to generation. Under the new system, ownership would shift to different families from one generation to the next.

The present tax system is an incredible mish-mash. It is neither moral nor immoral, ethical nor unethical, fair nor unfair; it is simply legal. It reflects the accretion of several generations of infighting interest groups. It satisfies no one and probably commands less and less respect. The trouble is that no one considers the tax system just, and probably no one ever will, no matter how often it is revised.

The public seems to agree on only two things: A dollar spent by government for the benefit of a taxpayer is worth less than that dollar spent by taxpayer directly. And a dollar spent by the government for the benefit of a taxpayer (or non-taxpayer) is worth having if someone else pays the taxes. Practically, this means that those who are on the receiving end of income redistribution like it, others don't—hardly a surprising conclusion. Since more are on the giving end than on the receiving end, dissatisfaction is bound to be rife.

It is lucky that the U.S. doesn't have popular votes (like a Swiss referendum) on major expenditures programs tied to the required tax-raising revenue. If it did, few programs would survive. We need only look at the rejection rate of school budgets to recognize this verity. Local school expenditures are certainly among the most popular expenditure programs. From there on, it is almost all downhill.

Congress recently passed an enormous, complex tax revision bill. It is hard to discern any overriding philosophy in this bill, unless it be the plugging of "loopholes," something that means different things to different people. In any case, new "loopholes" seem to be created as rapidly as old ones disappear. It is likely that this bill will prove little more satisfactory than the tax code it replaces. Indeed, the president-elect has promised yet more tax revisions.

What we need is a philosophy of taxation with some clear objectives. These should include: (1) Social and economic mobility. Let everyone have the opportunity to move rapidly upwards and downwards through the social and economic spectrum. (2) Equality as between generations. Let the offspring of the rich start out afresh. (3) Inequality within each generation. Let everyone reap more of the fruits of his own efforts. (4) Private enterprise. Let the tax system keep ownership of U.S. enterprise in private hands.

(5) Proper incentives. Let no one suffer the negative impact of substantial inherited wealth on incentives to work; let everyone be offered incentives to work for economic rewards. (6) Minimum standards. Let no one sink below a socially acceptable economic norm. (7) Government expenditures. Let the benefit of each government program be related to its cost. Let the total magnitude of government outlays for all programs be related not only to the total magnitude of tax receipts required to finance these outlays, but also to the impact of this total magnitude on the objectives of the tax system. Obviously, we cannot run every conceivable government expenditure program without running up taxes to unacceptable levels.

Without a vision clearer than that embodied in our latest tax legislation, public discontent, disrespect, and distrust will continue to grow. It is time to re-think our tax system.

CONTINUE BROADCASTING IN CLEVELAND

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Ms. OAKAR. Mr. Speaker, Cleveland, Ohio, has often been recognized as one of the ethnic capitals of America. Within the boundaries of my congressional district are representatives of just about every nationality and ethnic group that built this country to what it is today, and these people take a special pride in their ethnic heritage. It is for this reason that I was extremely disappointed with the recent announcement of the Booth Broadcasting Co., which owns WXEN-FM, one of the two ethnic stations in the Greater Cleveland area, of its intention to change the format of the station to contemporary music.

Along with numerous other Clevelanders, I have written to Booth urging that nationality programing be continued, and we intend to pursue whatever other avenues that may be open to us to retain this broadcasting in Cleveland. For the information of my colleagues, I would now like to insert into the RECORD a copy of the letter I sent, and an article from the Cleveland Plain Dealer which describes a huge rally that was held in Cleveland last Sunday to protest this elimination by WXEN of its ethnic programs:

CLEVELAND, OHIO, *February 3, 1977.*

Mr. JOHN L. BOOTH,
President, Booth Broadcasting Co.,
Detroit, Mich.

DEAR MR. BOOTH: As an individual who was born and raised in the City of Cleveland, I am greatly disturbed to learn of the decision made by Booth Broadcasting to change the programming policy from "nationality broadcasting" to "top 40 music."

The loss to the ethnic community in particular, and to the Greater Cleveland area in general, will be immeasurable. The sharing of cultures is the foundation of this city, and of many others which are fortunate enough to have people of diverse ethnic backgrounds. This must be preserved in Greater Cleveland.

To so drastically eliminate what has almost become traditional is very difficult to accept.

I find it ironic that your decision should come at a time when the national network, ABC, was willing to gamble programming style and ratings because it realized that the "Roots" of people and their pride far surpass typical business decisions.

Since there is only one other ethnic station in Cleveland and innumerable contemporary ones, it would seem that building on the uniqueness of an already-established format with already-established listeners, embellishing it thus engendering more listeners, would be of a greater service to yourself and the community than to do an almost complete turnaround and to jump into an already-crowded field.

Therefore, I strongly urge you to reconsider your policy change.

Sincerely,

MARY ROSE OAKAR,
Member of Congress.

[From the Cleveland Plain Dealer, Feb. 7, 1977]

ETHNIC-POWER RADIO RALLY ATTRACTS 2,000 DOWNTOWN

(By Robert Dolgan)

Chanting "ethnic power" and carrying signs, about 2,000 people rallied yesterday in Public Music Hall against WXEN-FM radio's decision to abandon nationality music in favor of soft rock.

A movement to acquire a new radio station for ethnics was quickly begun. It was sparked by remarks from Tony Petkovsek and Vincent Cardarelli, two of the 21 WXEN disc jockeys and producers to be lopped off the payroll March 12.

The meeting was called by the Nationality Broadcasters Association last week after Booth American Co., owner of WXEN, announced on Jan. 29 that it was changing its format.

"We built WXEN when FM was nothing," said Petkovsek, who has had a Slovenian program since the station was formed in 1961. Now they tell us we're nothing. Let's look into buying a new station or a subchannel."

Said Cardarelli, host of the Italian program, "Cleveland could have the first station owned by its listeners. If each listener pledged a dollar a month we could do it."

The idea was enthusiastically embraced by the audience and by Mayor Ralph J. Perk, one of a platoon of local and suburban politicians at the rally.

Six persons, including Rep. Mary Rose Oakar, D-20; County Commissioner George Voinovich; Utilities Director Raymond Kudukis; and Euclid Councilman Edward Eckart, pledged $100 each toward the proposed drive.

"This isn't a wake," said Henry Broze, a WXEN disc jockey who has been in ethnic radio since 1933. "It's a rebirth."

Petkovsek, probably the most influential of the WXEN disc jockeys, said in an interview that it would cost from $100,000 to $200,000 to start a new station. He said he thought he could raise $100,000 from his listeners.

He has conducted radiothons for a Slovenian old age home for several years, raising as much as $22,000 in one day, he said.

Voinovich cautioned it might be difficult to get another station, and suggested another talk with WXEN owners to try to change their minds.

"If they don't change, hit them in the belly," said Voinovich. "Boycott their new advertisers and make it hurt."

Perk said, "If you in this audience ever decided to boycott a business that was discriminating against you, it could not survive. We too shall overcome."

Miss Oakar said she has had more complaints from constituents about the WXEN change than she has had on any issue since she went to Congress.

Officials of WZAK-FM, another nationality program outlet, have said they will hire some of the disc jockeys.

RECONSIDERATION OF THE COAL SLURRY PIPELINE BILL, H.R. 1609

HON. AUSTIN J. MURPHY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MURPHY of Pennsylvania. Mr. Speaker, earlier this month, I asked to be a cosponsor to Mr. ECKHARDT's Coal Pipeline Act of 1977, the purpose of which is to facilitate the development of coal slurry pipelines for the transport of coal to certain markets.

Since that time, I have exhaustively reviewed and analyzed H.R. 1609, and upon reconsideration of the measure have concluded that as this measure is presently written I must withdraw my support.

Mr. ECKHARDT's bill would provide for the construction of long-distance coal slurry pipelines which would be interstate in nature and would provide for the granting of eminent domain privileges to the owners/operators of such pipelines.

While the concept of coal slurry pipelines merits serious consideration, I believe that the construction and length of such pipelines should be restricted to established regional resource-based boundaries and that further restrictions should be imposed limiting coal slurry pipelines to areas in which adequate transportation facilities are not available, and to areas where the construction and maintenance of a transportation infrastructure as an alternative to pipelines is not feasible. If H.R. 1609 does come up for consideration in the Interior Committee, I plan to introduce amending language to encompass these restrictions.

Furthermore, I hope that the House Interior Committee will not begin serious consideration of Mr. ECKHARDT's bill until the Congressional Office of Technology Assessment—OTA—completes its study of the coal slurry transportation system later this year.

The major economic impact of the present bill would be the transport of western coal via pipeline to eastern markets. This may have a serious impact on the expansion of eastern deep mines and would tend to favor the development of western strip mines, at a time when the Nation's energy policy and needs dictate extensive utilization of deep mined eastern coals.

Coal slurry pipelines used on a restricted basis however could supplement existing transportation facilities without being competitive or detrimental. Limitations could be designed to keep these pipelines within the same functional limitations as existing conveyor systems. By keeping the pipelines in a noncompetitive position, the major carriers such as barges, railroads, and similar carriers would not lose revenues but encourage expansion of service to coal fields. Short-distance restrictions and pipelines would protect regional coal fields and producers from unfair competition by producers from other regions, thereby encouraging full production and full employment within each coal-producing region.

In addition, this would effectively reduce the inefficiency of moving coal into areas already providing adequate supplies to their respective region. Long-distance, large-volume coal slurry pipelines would work at cross purposes with congressional efforts to improve the rail system. A large part of congressional hope for the economic security of the Conrail system is based on the expected revenues from coal hauled to Northeast utilities.

Finally, a cost-benefit analysis of long-distance coal slurry pipelines versus railroad transport indicates that the material costs for upgrading railroads are less than that for a new pipeline; that railroads are more energy efficient than long-distance pipelines, and that railroads are more labor-intensive than pipelines, an important factor, considering congressional efforts to sponsor productive work projects to reduce unemployment.

Mr. Speaker, I urge my colleagues to take a very close look at the costs and impacts involved before making any final decision regarding coal slurry pipelines.

ICHORD PROPOSES BOUNDARY FENCE AND WEED CONTROL REFORMS

HON. RICHARD H. ICHORD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ICHORD. Mr. Speaker, many of the Members may have received numerous complaints, as I have, from farmers who live adjacent to National Forest Service lands about the failure of the Federal Government to participate in the cost and maintenance of boundary fences as well as cooperative programs for the eradication and control of noxious weeds. Farmers are now compelled to bear all the cost of such division fences and the cost of eradication programs.

In an effort to alleviate the unfair burden of such farmers, I am today joined by several Members in introducing a bill to provide for cooperative construction of such boundary fences and control of noxious weeds. There is clear and convincing evidence that activities on national forest lands have contributed to the need for a joint weed control project. Under this proposal, the Federal contribution to such a cost-share agreement would not exceed 50 percent of the cost of construction and maintenance of fences and eradication of noxious weeds.

I urge my colleagues to support this legislation.

TRIBUTE TO WILLIAM R. ROBERTSON

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANDERSON of California. Mr. Speaker, on February 12, a testimonial dinner will be held in Los Angeles to honor a man who has made many important contributions to our community through years of dedicated service. Both management and labor will join in saluting William R. Robertson, executive secretary-treasurer of the Los Angeles County Federation of Labor, AFL-CIO. All proceeds from the affair will be donated to the Kidney Foundation of Southern California—a very fitting gesture on behalf of a man who has never hesitated to involve himself in community affairs.

Born in St. Paul, Minn., on April 4, 1917, Bill Robertson received his education from the St. Paul public school system. His varied background and experience is reflected in the many labor organizations he was affiliated with over the years—including the Mattress Workers, United Auto Workers, Packing House Workers, Hod Carriers and Laborers, Marine Electricians, and the Los Angeles Newspaper Guild.

Bill, as he is known to his many friends, has been a labor leader for 20 years. In 1957, shortly after becoming a California resident, he was elected to head the Hotel, Restaurant and Bartenders Union Local 694 in the San Fernando Valley. Robertson held that post for a highly successful 10 years before joining the staff of the Los Angeles County Federation of Labor, AFL-CIO, in 1967.

In his 10 years with the County Federation of Labor, Robertson has earned a highly respected reputation as a skillful and reasonable negotiator. He was assistant executive secretary when, late in 1975, former Executive Secretary-Treasurer Sigmund Arywitz passed away.

Bill Robertson stepped in, and has more than continued the good work he participated in under Arywitz's leadership. That he is widely respected in his own right, and that the Los Angeles County Federation of Labor is as strong and vital a force as ever, are tributes to Bill's competence, leadership, and ability.

By his own example, Bill Robertson has shown that labor is a strong and vital force that can and should be used for the good of the public. He is a for-

mer member of both the Los Angeles Public Library Commission, and the Environmental Quality Commission. He currently belongs to the Los Angeles city ad hoc committee on energy conservation, and the Los Angeles County economic development program. He is also active in charitable causes, serving as vice chairman of the United Crusade, vice president of the United Way, and is a member of the board of directors of Aid-United Givers.

Mr. Speaker, William R. Robertson exemplifies the belief that organized labor exists for the benefit of all segments of the community. His many activities only demonstrate the fact that he has chosen to become as involved as possible. Currently, two of his major concerns are the relationship between labor and public employees, and the future of California's energy supplies—both issues of obvious importance to southern California and the Los Angeles metropolitan area.

My wife, Lee, joins me in congratulating Bill on his many outstanding accomplishment and good works, and we wish him the best of good fortune as he continues as executive secretary-treasurer of the Los Angeles County Federation of Labor, AFL–CIO.

COMMUNIST ACTIVITIES IN CAMBODIA

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. LOTT. Mr. Speaker, please permit me to call to the attention of my colleagues and other responsible Americans a letter which I have recently received. I have read the article cited in this correspondence and think that it is worthy of note. Therefore, in lieu of entering the entire commentary, I am taking this means of sharing the concerns of my constituents about the activities of the Communists in Cambodia:

KEESLER AFB, MISS.,
January 24, 1977.

HON. TRENT LOTT,
U.S. House of Representatives,
Washington, D.C.

SIR: Respectfully request that you read into the Congressional Record the article, "Murder of a Gentle Land", in the February 1977 Reader's Digest. The American people and especially our elected leadership need to be profoundly aware of the consequences when we as the strongest free nation on earth fail in our moral and leadership responsibilities. It is always unfortunate that others less fortunate than ourselves must pay for our mistakes. Should we fail to stand by all free peoples in their hour of need, then we have ultimately failed not only ourselves but all future generations of Americans.

Very truly yours,

William P. Saunders, Jr., Victoria K. Byron, Charles D. Fleck, John G. Keilholz, Edward P. Lapham III, William R. Lemaster, David C. MacDonald, Mary E. Martin, Francis P. McNeil, Sr., Stephen F. Sorensen.

THE BLACK ELECTORATE, A CONTINUING STRUGGLE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. RANGEL. Mr. Speaker, it may be ascertained that the election victory of Jimmy Carter in November is due primarily to the tremendous support given him by the various minorities, particularly the black minority. It was the overwhelming black voter turnout in various key States that gave President Carter his winning margin.

This support reflects the trust placed in Mr. Carter's ability to fight unemployment, provide adequate housing, and help secure a meaningful and productive lifestyle in America. The right to vote which so many of us struggled in the 1960's to obtain has now become an exercise in the search for a promise of the future. We believe that Mr. Carter is our promise for the future—a promise of greater equality and opportunity, of less discrimination and injustices. Myself and other blacks have banned together to make every effort to continue in this struggle. That the black people should elect a man from the Deep South to our Nation's highest office is reflective of the distances we have traveled to overcome the barriers of the past.

I would like to submit, Mr. Speaker, the following article taken from the editorial page of the Crisis, December 1976 issue, which details the role played by blacks in the November election. I hope it will serve to illustrate the important contribution blacks played in helping to shape the mandates President Carter will use in the future. The editorial is as follows:

THE BLACK VOTE: BALANCE OF POWER

Next month, Jimmy Carter will become the 39th President of the United States. It is generally conceded by both major political parties and by an assortment of pollsters and pundits that he owes his election to the nearly total support given to him by black voters across the nation. In so favoring Mr. Carter, black people were expressing their belief that this man from the South possessed an awareness and concern for the problems of black and other minority people.

No Southerner has been President since before the Civil War. The reason seems to have been that the major portion of the country viewed the postbellum South as slow, backward, unenlightened, inflexible, prejudiced, impoverished, ignorant, and possessing few redemptive qualities, and no potential Presidential candidate could come out of such an environment.

The beginning of a change came with the altered status of the Negro which began with the Supreme Court decision of 1954 in *Brown v. Topeka Board of Education* which overturned the separate but equal doctrine of the land.

Nearly two decades of massive civil rights activity followed—sit-ins, freedom rides, civil disobedience, direct action, passive resistance, and freedom marches, culminating in the magnificent March on Washington of 1963 for jobs and freedom, the 1964 Civil Rights Act, the Voting Rights Act of 1965, and the Fair Housing Act of 1968. In the interim, the old South died, slowly and sometimes painfully. Yet the desegregation which occurred in the process became more complete and more sincere, in some instances, than that which was taking place during the same period in the North.

A new South was born—one in which black and white children attended public school together, one in which black citizens began to be elected to public positions at all levels of government, and one in which the historic familiarity between black and white people began to turn into a relationship of mutual respect.

Mr. Carter is of that new South, and black folk all over this nation knew it. Because of their conviction that this former Georgia governor would be a President who would do something about the concerns of minority people, black voters provided him with a margin of victory in several key states. In Pennsylvania, for example, Mr. Carter received 90.5 per cent of the black vote; in Ohio, 91.5; in Texas, 96.9; in Missouri, 90.8; in Maryland, 91.7; in Louisiana, 93.4; in Mississippi, 91.7 per cent. And in New York, where the upstate vote favored Mr. Ford, the overwhelming minority vote cast for Mr. Carter in New York City provided the margin of victory. In the city, 94 per cent of the black vote went to Mr. Carter.

It is obvious that black voters, in this election, have placed their trust in the integrity and commitment of Mr. Carter. It is equally obvious that they expect him to keep his commitment to attack the high rate of unemployment which pervades the country generally and Negro communities disproportionately. It is obvious, too, that they expect him to foster the construction of low- and middle-income housing, counteracting particularly the blight and desolation of urban centers.

"So black people are justifiably proud," Vernon Jordan, executive director of the National Urban League, has said. "They elected a President, made use of the previous right to vote that was bought so dearly in the struggles of the 1960s, and used that right with skill and comprehension."

Mr. Jordan went on to say: "It is one thing to get elected, and quite another to govern. We must concern ourselves with governance. No matter how personally concerned about race relations the President-elect may be, once he gets to Washington and faces the political pressures of the office and the necessary compromises that are part of the democratic process, he may find it expedient to defer those programs of vital importance to black people."

We agree with Mr. Jordan that "we must not allow this." Without reservation, we agree.

There is a realism, however, which we must keep in mind if, as black people, we are not to permit high expectations to become exaggerated out of proportion. What we expect of Mr. Carter is that he will use the full weight of his office to provide equal rights for black citizens in his government, in employment generally, in housing, in education, and in each of the areas where black citizens previously have been given short shrift. But he will be President of all the people and realism dictates that he can do these things only as part of governing the total country. While Mr. Carter carries a heavy obligation to black Americans, he must repay that obligation at the same time he reaches for the general welfare.

There is an undeniable bond between Jimmy Carter and black people. And it is a fascinating twist of fate that these black people, who once had been enslaved so cruelly by whites of the South, should today select a latter-day Southerner in whom to place their faith, with a totality never accorded any recent Presidential candidate. The magnitude of that support puts Mr. Carter in the position of being the first President to owe so much to a single minority. An irrevocable partnership has been

formed. Mr. Carter must support that partnership from the vantage point of the White House. We must support it from our various civilian positions with all the energy, imagination and clout that we can muster.

NAACP Administrator Gloster B. Current credited the victory of Mr. Carter, in the Presidential election, to the "overwhelming support he received from black and lower-income voters."

Mr. Current noted that the NAACP, through its 1,700 local units, conducted nonpartisan voter education campaigns to get out the vote. In his statement on the election, he said:

"The victory of Gov. Jimmy Carter, in the Presidential election, was achieved with the overwhelming support he received from black and lower-income voters. No Presidential candidate in recent memory owes as much to these particular groups of voters for their election as does President-elect Carter.

"The NAACP, as a non-partisan organization, did not endorse any candidates in the national elections. Nevertheless, the NAACP did present its official positions on the many critical social issues with which the nation was faced before the platform committees of both party conventions. NAACP members throughout 1,700 local units and youth chapters were well aware of these positions and advised to vote for those candidates whose positions most closely matched the civil rights organization's.

"As the results in the Presidential election showed, black voters will respond and turn out at the polls when they feel there is a clear choice between candidates. They were presented with a clear choice on November 2, 1976, and they acted accordingly.

"The heavy turnout of black Americans at the polls November 2 again points up the importance of stepping up our registration and voting efforts because both parties have to be reminded constantly that their interest in minority communities is best served by dealing with the economic problems of the poor, the disadvantaged and the citizens who are affected by the decline and fall of the economy."

In the final debate between the two Presidential candidates, on October 22, Mr. Carter stated:

"I think the greatest thing that ever happened to the South was the passage of the civil rights act(s) and the opening up of opportunities to black people—to have a chance to vote, to hold a job, to buy a house, to go to school, and to participate in public affairs. It not only liberated black people, but it also liberated the whites."

We heartily agree.

IDAHO LEGISLATURE RESCINDS ERA

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SYMMS. Mr. Speaker, I am pleased to announce to my colleagues in the Congress that on Tuesday February 8, 1977, the Legislature of the State of Idaho voted to rescind its previous ratification of the proposed equal rights amendment to the U.S. Constitution. This action by the Idaho Legislature is a victory for the women of America, for if the ERA should become operative women in our society would in all likelihood be reduced to the same status as men.

VFW VOICE OF DEMOCRACY ESSAY WINNERS

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HYDE. Mr. Speaker, I was honored last month to participate in the awards presentation in my district for local winners in the Veterans of Foreign War's annual Voice of Democracy contest. I take great pleasure in announcing that the first place winners in that competiton were Miss Margaret M. Brassil of Immaculate Heart of Mary High School and Miss April Hochevar of Proviso West High School.

This competition was cosponsored locally by the Bellwood Memorial Post 5081 and Ladies Auxiliary; Riverside-North Riverside Post 6868 and Ladies Auxiliary; Grant/Parkholm, Cicero, Post 9115; Westchester Post 1249 and Ladies Auxiliary; Hillside Memorial Post 3590 and Ladies Auxiliary; and the Ding-A-Ling Pup Tent No. 71 Military Order of Cooties.

I commend Miss Brassil and Miss Hochevar for their first place winning essays, and I take great pleasure in sharing their thoughts on "What America Means to Me" with my colleagues:

WHAT AMERICA MEANS TO ME

(By Margaret M. Brassil, Immaculate Heart of Mary High School)

There is one dominating force that has shaped the course of events of American history. At the beginning of our nation this force caused our founding fathers to resist the tyrannies they had experienced under the King of England. This force fired the shots at Lexington and Concord. Next, this force wrote the Declaration of Independence and the Constitution of the United States. Two hundred years later, this force caused a President and most powerful man in the world to resign from office. This force is the American people!

In 1776 the people created this new nation out of the desire for freedom and liberty. Since then Americans are born with a special spirit and sense of the power of the people and a feeling for the beauty of our country. In the 18th Century, St. John de Crevecoeur wrote of Americans as being a new breed of Men. He wrote of the nation as a melting pot of all races and creeds, a nation in which the combinations of the world come together as one.

We are a special breed, for we realize our strength as a people and without knowing it, without ever even thinking about it, we express this in classrooms, at rallies, in newspapers, in speeches and in common day conversation with people. America is the strength of all that is good in her people. For from the beginning, from those first immortal words—"We the People"—it was the people who decided their nation's fate. They built her up and created her laws, they defined the dictators and power-seekers, and, they shunned anyone who tried to take away their rights.

America's ideals of Freedom, Liberty and Equality stand for nothing, if they are not strengthened and made visible by the people. For America is not simply mountains and fields and forests. She is not just clear skies, sparkling water or rich soil. America is the people—the businessmen, clerks, politicians, entertainers, educators, students, housewives, shopkeepers and the people from every strata of life, from cities, farms and villages, factories, fields and shops; with the right to express themselves in their religion, speech, press and assemblies.

America is what her people desire her to be—Free and Independent. Through all the troubled times and the good times we continue to grow, to build, to share, to ensure the Rights of Life, Liberty and the Pursuit of Happiness for our fellowman and all future Americans.

WHAT AMERICA MEANS TO ME

(By April Hochevar, Proviso West High School)

America—What Is America? What does she really stand for? Is she, like many Americans believe, a land of big business and industry? Is she a land where violence and injustice dominate society? Or is she the physical image of our Forefathers' dream of a land of equality and brotherhood?

America was founded on the strong convictions and ideals of our Forefathers who believed that all men should live in freedom. But what does freedom really mean? Is it merely being independent from an oppressive government? Surely it is more than this. Freedom is the right of a man for self-expression and self-achievement. Every man should have the opportunity to reach his goals and to fufill his dreams. On the other hand, his goals will only be achieved by the amount of effort he exerts. The poverty-stricken need the opportunity to rise above their impoverished conditions. Those socially discriminated against need encouragement to reach their goals in life through self-determination.

Although the Constitution guarantees inalienable rights to its citizens, it is up to us, the people of America, to make certain that this document is a statement of fact, and not just eloquent, meaningless words. America has faced and dealt with many problems in the past 200 years. America has always had enemies within the world. But perhaps her most dangerous enemy is herself. The words of Abraham Lincoln seem to echo quietly in the back of our minds, "a house divided against itself cannot stand." These words, although stated many decades ago, should alert us to the dangers we could face.

America, even at the beginning of her establishment, dealt with inner conflicts. The first colonies in America wanted to become 13 individual nations, rather than the United States. Yet, as the months passed, it became obvious that in order to survive and to remain free, the 13 colonies had to unite into one nation. A nation with many different voices, but always with the same goal—freedom.

America today speaks with many different voices, but is her main goal still freedom? Have we become so involved with ourselves as individuals that we can no longer unite as one? Have we lost sight of what freedom really means? Perhaps because most of us have lived in America all of our lives, we take for granted the privileges that should be so dear to us. We tend to look at all the bad aspects of our society, without realizing that good things do exist. Perhaps it would benefit all Americans to look at their country through the eyes of a new comer—an immigrant. The immigrant has come here because he has heard that in America there is hope—hope for a man and a woman, and a future for their children. The time has come for America to wake up. The minutemen of the American Revolution rode through the country alerting the people of the approaching enemy—the British. Perhaps today we need minutemen to ride through the country and alert us of a more frightening enemy—the apathy of our own people.

Now is the time for each American to open his eyes and to be realistic about his country. America is not a perfect country. And

yet her basic foundations were adorned with two interweaving concepts—freedom and hope. We stand as a guiding light to all those seeking a land where they can work towards their goals and dreams. America is a land of beginnings, and with each beginning there is hope. We have the chance now to rekindle the torch of freedom and to carry it onward. Liberty welcomes the tired, the poor, the huddled masses yearning to be free. To the poor and oppressed people of the world, America is the burning torch of freedom. To me, America is hope. If we can rekindle the flame of hope in every American's heart, then we will have a rebirth of freedom. The eyes of the world will behold America, a glorious land of freedom and hope.

AMERICAN DOUBLE STANDARDS ON AFRICAN ISSUES AT THE U.N.

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, I take this opportunity to bring to the attention of my distinguished colleagues a penetrating analysis of the espousal by African nations of what are frequently pointed to by outsiders as conflicting economic and political goals. Printed January 22, 1977, in the New York Times under the authorship of James H. Mittelman, assistant professor in the Columbia University Department of Political Science, the following article focuses on the need for the United States to understand why African nations must fight their battles for independence on two seemingly contradictory fronts: Continuing to trade with countries practicing apartheid while denouncing these countries through the United Nations forum.

If this situation appears hypocritical to my colleagues, I call their attention to the delicate balance in existent U.S. foreign policy involving our importation of Rhodesian chrome and our simultaneous negotiation to levy economic sanctions against South Africa.

The following article explains this double standard in African policy. I believe the understanding of both historical and current African problems expressed herein is of inestimable value to all who are interested in improving the quality of U.S. relations with the people of Africa:

[From the New York Times, Jan. 22, 1977]

AMERICAN DOUBLE STANDARDS ON AFRICAN ISSUES AT THE U.N.

(By James H. Mittelman)

Americans have had a shortsighted view of African issues at the United Nations. Our ambassadors have contended that it is hypocritical for Africans to attack South Africa's policy of apartheid while committing genocide in their own countries. As evidence of double standards, Mozambique is often mentioned as a prime example of a country that condemns apartheid and continues to trade with South Africa. Though superficially correct, this argument lacks historical perspective and misconceives the challenges facing the international organization.

It is true that violence is widespread south of the Sahara, and several African countries' dealings with South Africa are flourishing. But the important question is, why?

To protect their interests in Africa late in the colonial period, Western powers bolstered privileged classes and select ethnic groups. After the accession to political independence, representatives of these same groups have been responsible for making the decisions to maintain ties with South Africa.

The "haves" oppress the "have-nots" at home, and frequently derive support from multinational corporations, aid programs and international monetary institutions. At the same time, the rich and the powerful seek to establish credentials with their own people by using anti-imperialist rhetoric and calling for forceful measures against white-minority regimes.

Unlike many countries in Africa that became politically independent through a constitutional conference or referendum, Mozambique did not accede to statehood by accommodation. Rather, the Mozambique Liberation Front waged guerrilla warfare for a decade against the longest-lived fascist regime in history. After 500 years of Portuguese colonialism, Mozambique won independence on June 25, 1975.

Contemporary patterns of economic dependence, such as the convention (first signed in 1909) providing for a minimum of 100,000 laborers to work in South African mines every year, were forged by the colonial state, not by the Government of Mozambique. The legacy of colonialism was an economy in shambles, including a deficit in balance of payments in 1974 that had deteriorated to the extent that imports could only be assured for seven days.

Despite the critical state of the economy, in March 1976 the Mozambique Liberation Front closed the border with Rhodesia, 60 percent of whose foreign trade was routed through Mozambique's ports. The direct loss to Mozambique in rail and port revenues is estimated at $165 million for the first 12 months.

While Mozambique would also like to cut its ties to South Africa, economic realities do not allow that option. For a country that derives nearly 50 percent of its foreign-exchange earnings from South Africa, such a move would be suicidal. Economic relationships established over centuries of colonialism cannot be changed overnight.

Like Mozambique, other African countries do not have the strength to rectify the situation in Southern Africa. Hence, they rely on their aggregate voting power in the United Nations General Assembly.

To those who bemoan the gap between General Assembly resolutions and their implementation, a partial answer is that international institutions are intended to distort the status quo. If they merely mirrored the distribution of power among member states, there would be little need for them. The key question—and a contentious one—is whether decisions made in the United Nations affect existing differences positively or negatively.

The claim that the gulf between resolutions and effective implementation is due to automatic voting majorities underplays the responsibility of individual member states to honor the expressed will of the world body.

It is not only those resolutions adopted at the behest of small states contrary to the intentions of the great powers that remain unimplemented. In the case of United Nations action against Rhodesia, for example, in 1968 the Security Council unanimously adopted Resolution 253 calling for mandatory sanctions. Yet the United States, a permanent member of the Security Council, and hence with primary responsibility for the maintenance of international peace and security, has wilfully violated sanctions by importing chrome.

The implication of the double-standards argument are unclear. Would the United Nations be in a better position if it did not take a stand on burning social issues? The response of the majority of member states is that certain affronts to human dignity—namely, colonialism and apartheid—are so fundamental that the United Nations must seek to establish a climate of opinion favoring change, even if it is unable to provide a solution.

Insofar as there are double standards, the worst offenders are those who fail to distinguish causes and effects. Understanding history is the first step toward revamping our foreign policy.

CHARTER 77

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. DERWINSKI. Mr. Speaker, recently over 200 Czech citizens signed their names to an important document entitled, "Charter 77." This statement, calling for the extension of human rights in Czechoslovakia, also symbolizes the struggle of other nations under Soviet domination, who wish to regain their freedoms.

However, the issuance of this document did not meet with the approval of the Government of Czechoslovakia, and it has been reported that the signers of this charter would be punished by imprisonment or deportation.

As we recess today to pay tribute to the memory of a great American, Abraham Lincoln, who wanted freedom for all people, I believe it is especially important that we direct our attention to this recent violation of human rights.

AFL–CIO President George Meany issued a press release in protest to the unfair harassment of the individuals involved in the signing of the charter. I insert it in the RECORD at this time for the Members' attention:

STATEMENT BY GEORGE MEANY, AFL–CIO PRESIDENT

AFL-CIO President George Meany today issued the following statement urging the government of the United States to press in the United Nations a motion of censure and expulsion of Czechoslovakia for human rights violations:

The vicious persecution of Czechoslovakian citizens for no crime other than an appeal to their government to live up to its laws and treaty obligations and to cease its gross and cruel violations of the most fundamental human rights warrants the condemnation of the civilized world.

A manifesto entitled "Charter 77", signed by 257 courageous and eminent Czech citizens, was delivered to the communist authorities in Prague on January 6, 1977. It carefully documents, with facts and cases, the systematic pattern of oppression and fear which rules that country. It measures those tyrannical practices, not against abstract or visionary ideals or goals, but against the precise terms of the Czechoslovak Collection of Laws, which includes the text of the International Covenant on Civil and Political Rights, and the International Covenant on Economic, Social and Cultural Rights, signed by Czechoslovakia in 1968 and confirmed at the 1975 Helsinki Conference.

Charter 77 establishes beyond a doubt that Czechoslovakia today is not a civilized nation governed by law, but one great concentration camp for the punishment of in-

nocents, run by the criminals at the point of Soviet guns.

If basic human rights mean anything at all to the United Nations, Czechoslovakia must be called to account before the General Assembly, and the public testimony of the gallant signers of Charter 77 must be heard in that world tribunal.

The AFL-CIO calls upon the government of the United States to offer and press a motion of censure and expulsion of Czechoslovakia so that its shocking offenses against its own laws and its solemn commitments to the laws of man may be pursued and subjected to that due process which it so flagrantly denies its citizens.

FEDERAL AID TO ELEMENTARY EDUCATION MEANS FEDERAL CONTROL AND FRUSTRATING THE EXPRESSION OF DIVERSE LOCAL VALUES

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. TREEN. Mr. Speaker, this Congress will consider the extension of the Elementary and Secondary Education Act and the National Education Association's efforts to increase the level of Federal assistance to one-third of the total cost of elementary and secondary education. I think this is a matter that deserves very careful study by the Congress.

I would like to begin the congressional dialog on this subject by bringing to the attention of my colleagues articles by men who very rarely agree. One is Albert Shanker, president of United Federation of Teachers, who in the attached column of March 24, 1974, stated:

While fear of losing federal dollars silences protests, it is too early to tell who were right in their historic debate—the liberals or the conservatives. If timid acquiescence continues, those who feared that federal aid means federal control will have been proven right.

The other is the editor of National Review, the conservative biweekly, who in its January 7, 1977, issue suggests that increasing Federal assistance at a time taxpayers are turning down bond issues for schools will frustrate the attempts by the public to bring public education into line with the values of the general population.

[Paid advertisement from the New York Times, Mar. 24, 1974]

MUST FEDERAL AID TO EDUCATION MEAN FEDERAL CONTROL?

(By Albert Shanker, President, United Federation of Teachers)

In the period extending from the end of World War II until legislation providing federal aid to education was finally passed during the administration of President Lyndon B. Johnson, the American people witnessed a lively debate on the aid-to-education philosophy. The debate involved many different issues, prominent among them being aid to private and parochial schools and to segregated schools and districts. But the basic conflict was between "liberals" and "conservatives" over the issue of whether federal aid would lead to federal control of schools.

Liberals generally argued that federal aid would not lead to such control or, to the extent that the federal power of the purse was exerted, it would be used to promote beneficial national educational objectives that would supplant discriminatory and parochial local interests. As we look back at that debate from the vantage point of 1974, it would seem that the old conservatives were not far off base.

In the last few years, in the course of conflicts over a number of issues, federal agencies have threatened to cut off funds, and have actually done so, in some instances.

Universities are threatened with a loss of federal funds unless they employ staff on the basis of racial minority quotas.

School districts are threatened with the loss of funds unless they administer tests requiring children to respond to racially inflammatory questions such as, "Do you think black [or 'brown' or 'white'] students in this school cause more trouble than other kinds of students?"

School districts are threatened with loss of federal monies if they fail to cooperate in the development of reading and mathematics tests which would set racially separate learning standards.

The U.S. Department of Health, Education, and Welfare threatened New York City with a loss of $200,000,000 in federal aid if it refused to cooperate in its most recent research project in which 100,000 New York City students would have been individually identified in a vast computerized data bank storing educational, ethnic and family information.

NEW YORK'S FIGHT AGAINST FEDERAL IMPROPRIETY NEEDS ALLIES

Most colleges, universities and school districts have quietly submitted to these federal pressures, thus tending to confirm the conservative prediction of eventual federal control.

Fortunately, there has been one exception: New York City. The City's Central Board of Education and a number of its decentralized community school districts have demonstrated that one can—and should—fight against unreasonable demands from Washington.

The New York City Board of Education and Community School Board No. 19 sued the Department of HEW in federal court on the issue of the racist questionnaire. The result: HEW bowed to the objections and withdrew the questionnaire—not only in New York but all across the United States.

Similarly, because of defiance by the New York City Board of Education and by District 19 and District 12, plans to develop racially separate reading and math standards have been dropped.

The New York City Board of Education refused to allow individual students to be identified in the federal computer data bank. Board President Seymour Lachman contended that the federal demand for pupils' names "violated the confidentiality of student records . . . these kids could have been categorized, codified and stereotyped for life on the basis of information put on tape while they were in elementary school." Board member Joseph Monserrat pointed out that the school system welcomed federal research, but "if the Government wants to do research to see how our programs are working or what our weak points are—and they should—they do not need the names of actual pupils, just the pertinent data." And once again, HEW backed down, saying, "It was all a misunderstanding. Perhaps it was our fault." [Even with pupils' names deleted, the proposed study is designed to make the schools the target of blame, since it will include data on race, achievements, school groupings, and school facilities, but will not include data on family status, family income, mobility and other non-school factors which relate to achievement.]

New York City's school people have acted with courage; they have shown that resistance to improper federal interference can be successful. But why must New York stand alone in this fight? Where are the protests from other cities, school districts, Boards of Education, teachers, parents, supervisors, and superintendents? While fear of losing federal dollars silences protests, it is too early to tell who were right in their historic debate—the liberals or the conservatives. If timid acquiescence continues, those who feared that federal aid means federal control will have been proven right.

New York has shown that this need not be so. Let us hope that some new improper action by federal agencies will not find New York City carrying on the good fight alone. It is time for the rest of the nation to join in.

[From National Review, Jan. 7, 1977]

DE-SCHOOLING AMERICA

So far schools have actually been shut down only in Oregon and Ohio, but elsewhere the signals are only slightly less auspicious. New York and New Jersey saw school budgets defeated in record numbers this year wherever the voters had a say (29 per cent rejection by voters in New York, 58 per cent in New Jersey). Other states—Washington, California, Michigan, Missouri—show a similar pattern emerging. Early in December, the schools in the Toledo, Ohio district, with a total of 56,000 pupils, ran out of money and had to close up shop until the new year. For the last eight years Toledo voters have been rejecting tax increases designed to meet rising costs of education.

No doubt these votes indicate a general resentment of ever higher taxes, but they also seem to reflect a widespread perception of the way in which the schools have been aggrandizing their role in American life. It has amounted to a culturally imperial thrust. The schools have moved in the direction of the claim that all of life falls within their purview, not only offering instruction in the usual academic subjects—with decreasing effectiveness—but reaching out to embrace sex education, driver training, vast athletic programs, artistic experiences of all kinds, alleged solutions to racial problems, free lunch, medical care, liberation of the self in various directions, attitudes toward current events, and so forth.

The schools have not only extended themselves laterally, into all areas of the culture, but they have been pressing back the chronological boundaries as well, school from cradle to grave—"pre-school" education (in school, of course), adult education, and even the geriatric curriculum.

Not infrequently, moreover, the attitudes represented in the schools have been at odds with the values of the general population—as in the extrusion of even voluntary prayer, the banning of Christmas carols, the requirement of "value neutral" sex education, busing, and so forth.

Recent votes on the subject indicate that the citizens are beginning to stand athwart this entire process and say "Enough," and even "Too much." No doubt the Education interest will attempt to shake the local dust from its feet and betake itself to the federal treasury. Stay tuned for the coming phases of this struggle.

LOWENSTEIN APPOINTMENT AUGURS WELL FOR HUMAN RIGHTS PRIORITY

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WALGREN. Mr. Speaker, one of the great lessons of the past decade has

been the need to bring American foreign policy clearly into line with the principles and ideals on which this Nation was founded. Wrote de Tocqueville:

America is great, because America is good. When America ceases to be good, America will cease to be great.

The belief that we should stand for certain moral and spiritual values around the world is a source not of weakness, but, ultimately, of the deepest kind of strength.

During his campaign last fall, President Carter spoke this message forcefully and well. Its realization now depends largely on the quality and character of the men chosen to direct our foreign policy. That is why events like the appointment of Andrew Young add so much to the hope for more promising directions in international cooperation.

On Monday I joined many of my colleagues in attending the swearing-in of a man who symbolizes as much as anyone those qualities which the United States should represent around the world. I speak of former Congressman Al Lowenstein, who is now en route to Geneva, to head the U.S. delegation to the United Nations Commission on Human Rights. That a man of such stature and brilliance was selected for this position bodes well for the administration's intention to give questions of human rights the priority they deserve.

Al Lowenstein brings to this post a record almost unparalleled in the selfless and effective pursuit of social justice. His leadership in the movement for civil rights was early and sustained. His eloquence and conviction on behalf of the cause of peace won him respect, around the country and here on the floor of this House, even from those who disagreed with him. His devotion to fairness and decency in public life has led him into battles against very long odds.

This record of commitment has encompassed international as well as domestic issues, including diplomatic and United Nations concerns.

As a leader of American students in the early 1950's, Lowenstein was an effective and independent voice for democratic values, then under attack by Communists in international student organizations. Later he worked closely with Eleanor Roosevelt in her activities with the U.N. At the end of that decade, he traveled to South Africa and Namibia, at considerable risk, to report on native conditions concealed from the outside world. He and his party were the first Americans ever to address the U.N. Fourth Committee on behalf of a colonial people, and his prophetic book, "Brutal Mandate," forecast the dangers presently unfolding in Southern Africa.

During the 91st Congress, Lowenstein traveled at his own expense during congressional recesses to many countries where popular aspirations had been suppressed. Whether in the Mideast or Spain, Moscow or the Dominican Republic, his commitment to fairness and human dignity has convinced many of the promise of the United States.

The issues with which the Human Rights Commission will deal this year are not simple, nor can they be solved with good motives alone. The choice of Al Lowenstein as our spokesman at these talks has added a force of tough-mindedness and insight. Few men have shown greater capacity for working constructively with people of different viewpoints, and this quality also should prove of no small value in Geneva.

By adding men like Al Lowenstein and Andrew Young to the counsels of foreign policy, the new administration deepens our confidence in both the direction and tone of our international effort. The same may be said of the Vice President's recent trip and the enlistment of his perspective in foreign policy deliberations.

I hope very much that these men will be included not only in policy administration, but also in its formulation. That will help us combine the realism and sophistication necessary in foreign affairs with the initiative and moral force which will best serve our real interests and those of the rest of mankind.

THE CASE AGAINST COMPREHENSIVE GUN CONTROL

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SYMMS. Mr. Speaker, one of the most stalwart defenders of the right to own and use firearms by American citizens is my good friend and colleague, JOHN M. ASHBROOK. He has written an article entitled "Against Comprehensive Gun Control" which appears in the July/August 1976, issue of Current History. Arguing the other side of the issue is Senator KENNEDY.

At this point I include the text of Mr. ASHBROOK's article in the RECORD and commend it to the attention of my colleagues:

AGAINST COMPREHENSIVE GUN CONTROL

(By John M. Ashbrook)

"Most Americans believe that laws that prohibit concealed weapons are fair. . . . This is not what the advocates of gun control legislation mean. . . . They advocate the registration and the eventual confiscation of firearms."

Every few years there is a renewed call for legislation dealing with firearms. Often the proposed legislation would further restrict the right of law-abiding American citizens to own and use firearms. Such legislation is usually proposed in the hope that it will help put an end to violent crime; so-called gun control is viewed as crime control. But it is a serious mistake to confuse the two.

Let us define the terms. The sloganeers throw the words "gun control" around as if everybody knows what they mean—as if good citizens are for gun control and bad citizens are against it. In fact, every American I know is for some form of gun control. No one favors allowing people to walk the streets with Thompson submachine guns. Nor does the average citizen need a howitzer or an antitank bazooka. Most Americans believe that laws that prohibit concealed weapons are fair. The list could go on and on. This is not what the advocates of gun control legislation mean, however. They advocate the registration and the eventual confiscation of firearms.

The right (and in some societies, the duty) of citizens to own arms is of long standing. As early as the thirteenth century, the English Parliament upheld the right of Englishmen to keep and bear arms.

In his *Commentaries*, an important basis for our founding fathers' understanding of English law, William Blackstone, the English jurist, pointed to the importance of the right to keep and bear arms, a right that is the final recourse of free men against tyranny.

This right, of course, played an important role in the American Revolution. In his book, *Our Vanishing Freedom*, James B. Whisker writes, "the first clash between Colonists and British forces came about as a result of Americans' defense of their right to keep and bear arms."[1] It was British General Thomas Gage's attempt to remove military supplies kept by the colonial militia that helped start the American Revolution.

The second amendment to the United States Constitution speaks of the right of the people to keep and bear arms. Constitutions of the original 13 states also recognized the right. During the nation's westward expansion, the right to own firearms was well recognized.[2]

In addition to the provisions of the U.S. constitution, constitutions of over 7 percent of the states recognize an individual's right to keep and bear arms.

Gun control is frequently advocated as a means of reducing crime. Certainly, almost every American would like to reduce the amount of criminal activity in this country. There is no reason to believe, however, that gun control will result in crime control.

There are already more than 20,000 gun laws in existence at the federal, state and local levels. Many of these laws have been enacted in the last few years in an effort to bring crime under control. Despite all these laws, the crime rate has continued to escalate.

In fact, proponents of gun control legislation cannot point to any city or state that has reduced crime by adopting a gun law, regardless of the many gun laws on the books. It is interesting to note that, according to Federal Bureau of Investigation crime reports, approximately 20 percent of all the murders in the United States take place in New York City, Chicago, Detroit and Washington, D.C. Each of these cities has very stringent firearms laws. Why has gun control failed in those cities?

Gun control advocates respond that either the laws are not strong enough or that weak laws in surrounding jurisdictions make it easy to get around the laws. But New York City, for example, has one of the strongest gun control laws in the nation. There is a virtual handgun prohibition; only some 500 handgun permits are issued to persons not involved in law enforcement. Nevertheless, in 1973, New York City had almost twice as many murders with handguns and more than four times as many robberies with handguns as the rest of the country, on a per capita basis.

Proponents of gun control blame Ohio and other states with minimal gun laws for the high crime rates in New York City and Detroit. They believe that the availability of firearms causes crime. If this were the case, a state like Ohio, with minimal firearms laws, would have a far higher crime rate than states where guns can be obtained only by illegal purchases. In actuality, however, Ohio has a far lower murder and robbery rate than either New York or Michigan.

The excuse that guns from areas with weak laws account for the failure of New York City's firearms laws collapses on other grounds. It should be kept in mind that it is a violation of federal law for a person to buy a handgun outside his state of residence or for a person to sell a gun to a non-resi-

---

Footnotes at end of article.

dent. In addition, it is a violation of state law for any New Yorker to import, carry or possess an unlicensed gun. Why will another federal law be obeyed when all the others have not?

The truth of the matter is that people who commit crimes like murder and robbery are not going to worry about a gun-licensing or registration law. Criminally minded individuals will always be able to procure guns—regardless of firearm laws. It is the law-abiding citizens who will lose their right to gun ownership. And it is the law-abiding citizens who are not going to commit murder and bank robbery anyway.

Charles Lee Howard, who has been serving time in the Ohio State Penitentiary, might well be called an expert on this subject. Howard has written:

It's baffling that the people who want to prevent criminals like me from getting hold of guns expect to accomplish this by passing new laws. Do they forget that the criminal makes a business of breaking laws? No criminal would obey a gun law while committing a crime of equal or greater seriousness.[3]

The lesson of Charles Lee Howard should be clear to everyone. Any person willing to risk the penalties for murder, burglary or assault is not going to worry about the penalty for possessing an unauthorized weapon.

In short, it is naive to think that legislation to register or otherwise make it difficult to acquire firearms for legitimate purposes would in any way impede the unlawful conduct of the criminal or would prevent him from securing a gun. This position is backed by the California Peace Officers Association, which in 1969 stated:

We have been unable to discover any evidence which would indicate that there is any direct relationship between the registration of firearms or the licensing of gun owners and the reduction in crime committed by the use of firearms.[4]

It is also supported by the National Sheriffs' Association, which has said:

There is no valid evidence whatsoever to indicate that depriving law-abiding American citizens of the right to own arms would in any way lessen crime or criminal activity. . . . The National Sheriffs' Association unequivocally opposes any legislation that has as its intent the confiscation of firearms . . . or the taking away from law-abiding American citizens their right to purchase, own and keep arms.[5]

Other police officials have also made statements on the issue. The chief of police of Los Angeles, California, had the following to say on more firearm legislation:

My views on gun control and the rights of individual gun ownership are well known. Some people seem to believe that if you legislate against handguns you will reduce murders and other gun-related crimes. That whole idea is absurd. We have legal restrictions in guns right now, but that doesn't stop the Arthur Bremers from receiving $50 fines or probation.

New York is a good example of a city that has restrictions on handgun ownership. The Sullivan Law has been in effect for several years. Yet, this law seems to only have an impact on the people who are generally law-abiding. The criminals sure don't have any difficulty getting guns.[6]

Chief James Rochford of the Chicago Police Department takes an opposite viewpoint. He favors not only the registration but the outright confiscation of firearms. However, the policemen beneath him differ drastically. A poll of Chicago policemen indicated that 73.5 percent believe that current gun laws are adequate; they do not favor extending gun control laws despite the position of their chief.

In the central portion of Ohio, I took a survey of law enforcement officers. There was overwhelming opposition to the federal registration or confiscation of all firearms. When the question was federal registration of all handguns, there was still overwhelming opposition. By almost a three-to-one margin these officials felt that, if there were to be any more laws dealing with firearms, they should be at the state level rather than at the federal level.

These statements are supported in a comprehensive study prepared by Alan S. Krug, an economist at Pennsylvania State University. His study, which related FBI crime statistics to state firearms laws, concluded that "there is no statistically significant difference in crime rates between states that have firearms licensing laws and those that do not."[7]

Another myth is the theory that most handgun murders are unpremeditated, spontaneous crimes primarily resulting from family or romantic quarrels. Such killings are frequently labeled "crimes of passion."

A recent study in New York City conducted by the Rand Institute indicates that this is a myth. The study revealed that an upsurge in deliberate murders was responsible for most of the 60 percent increase in homicide in New York City from 1968 to 1974. During that period, homicides rose from 968 a year to 1,554.

The Rand study emphasized that in most murder cases there was no longer a close relationship between the victim and the killer. At most, one out of five involved family members or close friends. The report declared that "We find that the major part of the citywide rise in homicides since 1968 seems to be in deliberate killings."[8]

No one can doubt that crime is a growing industry in the United States. The number of crimes committed in the United States is growing astronomically; since 1960 the crime rate has more than doubled. From 1973 to 1974, there was the largest annual increase—17 percent—in serious crime in the history of our country. According to the latest FBI figures, serious crime increased another 9 percent in 1975. Serious crime includes murder, rape, robbery, aggravated assault, burglary, larceny and auto theft. It is estimated that if unreported crimes were included the total might be three to five times higher in a number of cities.

Terrorism continues to be a threat. We read of terrorist bombings in London and other cities overseas. While not receiving as much media attention, terrorist activities are also continuing in the United States. During 1975, there was an increase in bombings in this country. Sixty-nine people were killed, and 326 were injured. Property damage was over $26 million.

Gun control is indeed needed to control criminals. I have introduced legislation that would make a prison sentence mandatory for anyone convicted of committing a crime in which he used a gun. To quote the chief of the Los Angeles Police Department:

If we really want to reduce gun-related crimes, all we have to do is require judges to impose an additional penalty on those individuals using guns during crimes. This has a dramatic deterrent effect on other gun-carrying criminals. Your average criminal on the street knows just what society will tolerate. He knows that his sentence will not be any greater, under current judicial practices, if he "packs a piece."[9]

Police officials do not confuse gun control with crime control. The American people have expressed similar views. Decision Making Information, a firm based in Santa Ana, California, recently completed a comprehensive public opinion survey on the issue of gun control.[10] This poll, conducted during September and October, 1975, is based on interviews with more than 1,500 registered voters from all regions of the country.

According to the DMI survey, almost three out of every four Americans feel that crime would not be reduced if Congress forced the people to turn in their guns. Instead, they recommend harsher punishment of criminals as the best way of cutting back on crime.

The survey found that fully 73 percent of the public do not believe that a federal law requiring all guns to be turned in would be effective in reducing crime. When asked to suggest ways to reduce crime, only 11 percent volunteered gun control as a solution. In contrast, by far the most popular suggestion was more severe punishment of criminals (33 percent). Only 1 percent mentioned the registration of firearms, and less than .5 percent suggested a ban on so-called "Saturday night specials."

In addition, 78 percent of the public feel that neither of the two recent attempts to assassinate President Gerald Ford could have been prevented by a national handgun registration law, and 71 percent reject the idea that assassination attempts on public officials could be avoided by banning the private ownership of handguns.

In conclusion, let us look at one of the causes of crime. In my opinion, a major problem is the decline of one of the basic tenets of this country—individual responsibility. Our forefathers believed that a person was responsible for his actions. If a person committed a crime, he should pay the price.

In recent years, some sociologists and other social scientists have advanced the view that individuals are not responsible for their actions. On the contrary, individuals are supposedly the products of their environment. The result has been the decline of individual responsibility and a rise in crime.

Nevertheless, attempts to ignore the facts of life have not negated those facts. Human beings are responsible for their actions. A return to this basic view will help to deter and punish criminals.

A NEW START ON CYPRUS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ROSENTHAL. Mr. Speaker, the new administration has decided to approach the problem of Cyprus, which

confounded its predecessor, with a new team and a new goal. The team is headed by Clark Clifford, a distinguished public servant who leaves next week for Greece, Turkey, and Cyprus. The new goal: To take advantage of the change in Washington by encouraging the principals to negotiate, something they have not been able to do for 30 months.

The Washington Post, in an excellent editorial, supports this mission and this goal, as I do. The dual hostilities—between Greece and Turkey, and between the executive branch and the Congress—can now be ended and the Clifford mission is the way to start.

The editorial follows:

NEW HOPE IN CYPRUS?

What is unique about the Cyprus crisis is the extent to which it is bound up with the diplomatic and political style of one man, Henry Kissinger. This is said not to initiate a round of recrimination, which nobody needs, but rather in the spirit of a remark made many years ago by Henry Stimson, when he was asked, "How on earth can we ever bring peace to the world?" He replied: "You begin by bringing to Washington a small handful of able men who believe that the achievement of peace is possible. You work them to the bone until they no longer believe that it is possible. And then you throw them out and bring in a new bunch who believe that it is possible." Leaving aside how applicable it may be to Mr. Kissinger's frame of mind when he left office, Mr. Stimson's prescription may well be relevant to any number of international disputes and conflicts now seemingly deadlocked. For today, it is enough to note that no sooner had a "new bunch" moved in than, suddenly, the prospects for some movement on Cyprus started looking up. A new American initiative has been launched, with the naming of a special emissary, Clark Clifford, to explore the opportunities for settlement. Almost overnight, the Greek Cypriot majority, huddled in the South, and the Turkish Cypriot minority, settled behind the Turkish occupying army in the North, have started recalculating their odds. So have their patrons in Greece and Turkey. The upshot is that a situation that looked virtually incurable and fraught with peril only a month ago has about it a cast of cautious hope today.

The key has always been in Ankara. As long as Turkey saw that the United States was tying the full resumption of U.S.-Turkish military cooperation to renewed American access to Turkish bases, rather than to progress on healing the Turkish-inflicted wound on Cyprus, then things only got worse. Congress, controlled by forces demanding a rollback of the Turkish occupation of Cyprus, defied Mr. Kissinger on arms and aid for Turkey. The Turks responded by closing bases used by the United States and by edging toward the NATO exit door. Efforts to promote talks on the island got nowhere.

But Mr. Carter said during the campaign, and Secretary of State Cyrus Vance has just restated, that progress on Cyprus must be made before questions of arms and aid can be addressed. Obviously with this in mind, Turkey on Jan. 27 allowed the leader of the Turkish Cypriot minority, Rauf Denktash, to meet with the Greek Cypriot president, Archbishop Makarios. It was the first such meeting in 13 years, and another is planned on Feb. 12. Various compromise formulas are being discussed to allow the two communities to live side by side in peace under the same governmental roof. The Turkish political opposition is no doubt tempted, as usual, to denounce any display of moderation as a sellout. But there are signs, small but promising, that the Turks realize that the wind from Washington has shifted and that this may be the time to cut the appalling losses in international prestige, in defense readiness and in access to the European economy that their Cyprus policy has inflicted upon them.

The Cyprus crisis is often perceived as the product of profound ethnic rivalries, which are also held accountable for the host of other problems that have rent Greek-Turkish relations and decimated the eastern Mediterannean corner of NATO in recent years. One does not want to dismiss the ethnic factor: Without it there would have been no crisis. But the proximate cause of the crisis was a flawed American policy, and its solution became hopelessly ensnarled in executive-congressional combat. This makes it easier, not harder, to try to fix now. A sensible policy is not only likely to untangle Greeks and Turks but to dissolve the executive-congressional snarl. It is a time for quiet diplomacy and meaningful consultation with Congress. Unlike, let us say, the Arab-Israeli conflict, the Cyprus dispute, for all the bitterness that has compounded it in the past, may not be quite as intractible as it has sometimes been seen—or made—to be.

PUBLIC WORKS LEGISLATION: 10 SUGGESTED REFORMS

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HUGHES. Mr. Speaker, on February 2, I had the privilege of appearing before Chairman ROBERT A. ROE'S Public Works Subcommittee on Economic Development to make suggestions on how to improve the competition for and the delivery of public works funds. It is important that we make these improvements in light of the fact that the legislation, of which I am 1 of more than 200 cosponsors, calls for a $4 billion commitment in public works funds—twice as much as were distributed last year.

Putting Americans back to work is the most important domestic problem we face. The public works bill will not by itself be the answer but it can provide a very important stimulus to rejuvenate our economy, particularly in the construction trades.

My recommendations on how to improve the effectiveness of the program was made after a very detailed inquiry into the regulations and selection process adopted by the U.S. Economic Development Administration in December 1976.

My principal recommendation is that a two-tier review system be established so that no longer will a computer select projects without any subjective review being considered in the process.

At this point, I insert the text of my statement in full for the consideration of those who, like me, hold great hope for this program and want to see it succeed:

STATEMENT OF THE HONORABLE WILLIAM J. HUGHES

Mr. Chairman, good afternoon. My name is William J. Hughes, a Member of Congress representing New Jersey's Second Congressional District. I have the privilege today of introducing three public officials from my area who share at least one thing in common. They represent constituencies in Cumberland County, which despite the second highest unemployment rate in the State of New Jersey, failed to receive a nickel of Public Works funds. After reviewing the selection process established by the Economic Development Administration for the award of Local Public Works Capital Development and Investment Act funds, I believe I now have a better idea of how this happened. It is my intention today to make suggestions that will improve this program to insure that it does not happen again in areas of the nation such as Cumberland County which desperately need Federal assistance to put unemployed Americans back to work.

I know that the Chairman already knows the gentlemen at the table with me, but permit me to introduce to the other Members of the Subcommittee, Mayor Patrick Fiorilli of Vineland, and Freeholders Ed Salmon and Henry Ricci. Chairman Roe has personally gone out of his way to assist them and other public officials in my area in attempting to understand the objectives of the Subcommittee. Permit me again Chairman Roe, to thank you and your fine staff.

Bob Roe knows my District well. For the benefit of the others on the Subcommittee, let me generalize by saying it is the area of New Jersey most associated with our slogan: "Garden State."

In land area, the Second Congressional District comprises more than a quarter of the State's geography and an even greater percentage of its beaches, bays and scenic countryside.

Its two major industries are tourism and manufacturing and each is suffering from the consequences of a fuel shortage, the most severe winter in decades, and an unemployment rate that in many areas far exceeds the state and national averages.

Naturally, when my municipalities learned last year of the Local Public Works legislation contemplated by Congress, there was much interest and excitement generated at the prospect of receiving 100 percent Federal funds for long delayed Public Works construction.

No one, however, anticipated the volume of applications that would be submitted to the EDA for consideration. More than 1,000 projects seeking $2 Billion in funds were ranked within our State in competition for what turned out to be slightly less than $100 million allotted to New Jersey.

It seems likely that the disappointment of many communities could have been mitigated if it were not for the fact that the computerized ranking system developed by EDA seemed to many totally irrational. In fact, however, it might have been as rational as a computer can make it. And that's my main criticism of the program—there simply was no real subjective judgment as to the relative value and merits of competing projects. This, I believe, can be avoided in the next round of funding should this Committee adopt some recommendations I am making after having reviewed the selection process. I am also submitting with my testimony an analysis of where the funds were committed in New Jersey to support my contention that changes are needed in the legislation.

EDA officials advise me that the lack of any subjective judgment was primarily due to a lack of manpower and the time restraints under which they were working. I do not find the argument convincing. My inquiry determined that at a minimum they could have involved local economic development representatives in the decision-making process. They did not, choosing instead to permit selections to be made solely by computer. Accordingly, I would respectfully make the following recommendations to the Subcommittee:

1. Two-tier Review. There must be an opportunity to subjectively review projects

ranked by the computer so that a special effort can be made to pick those which will have a long-term, positive effect on continuing employment in the community or provide special services by meeting special community needs. Mayor Fiorilli, for example, was seeking funds for an extension of the stack of the City's utility generating station which not only would have had a positive effect on reducing unemployemnt in the construction trades, but result as well in a savings of $150,000 a month to consumers through lower utility charges; Bridgeton officials made an excellent case for long-term benefits by extending their water system; and Mayor Salmon intends to address benefits of the proposals submitted by Millville and the county that went beyond the benefits of facility construction.

The problem, it seems to be, occurred when EDA made the policy decision to select only those projects which scored highest within georgraphic benchmark areas in a given state. This meant that in New Jersey, for example, 56 projects were selected with no value judgment as to their relative merit when stacked up against other that attained nearly identical rankings.

My suggestion is that the EDA subject the top 25 percent of the projects ranked within a state to subsequent review that would involve local EDA representatives and public officials. Had this been done in New Jersey, the EDA would have had the opportunity to review some 250 projects in the 70 percent funding category before narrowing the list down to an amount equal to the sum allotted to the State.

While I recognize that one of the main goals is to get people back to work and not bog the program down in endless paperwork, I believe that such a second tier review process could be completed within 60 days following the ranking by computer.

I would therefore further suggest that under the point system adopted by EDA that those dealing with long-term effects be deleted from the initial computer ranking process and reserved instead for the second stage review.

2. Eliminate 70/30 Funding. There seems to be universal agreement that the 70/30 split funding formula was a serious mistake. Its intention was good—to insure that areas with unemployment exceeding 6.5 percent, yet below the national average, receive some commitment of funds.

As we all know, what happened between the passage of the Local Public Works Capital Development and Investment Act and its implementation, the national rate of unemployment dropped significantly statistically. This compressed eligibility in the 30 percent category to a relatively small number of communities, some of which were relatively affluent. In New Jersey, the practical application was that communities with extremely high rates and numbers of unemployed could only apply for the 70 percent funding pool and had a one in eleven chance of success. Those communities whose unemployment rate was between 6.5 percent and the then national average of 7.37 percent had one chance in five of funding under the 30 percent category.

In my District, this resulted in an unfortunate and incredibly unfair situation in which not a single project was funded in Salem County. The county's unemployment rate according to the Bureau of Labor Statistics was set at 7.91 percent. This made the county and the townships and municipalities therein too far down the list to compete for funds in the 70 percent category. Yet the rate was just over the national average to prevent competition for 30 percent funding. A review of projects funded in the latter category reveal that each and every one had an unemployment rate less than that experienced in Salem County. This, Mr. Chairman, simply cannot be tolerated in this new round of funding. My suggestion is that the split funding be eliminated entirely.

3. Local Commitment. In my opinion, Mr. Chairman, some communities were "wish-tricking" through the submission of projects that never would have been submitted had a local commitment even as low as 10 percent been required. I think the communities should demonstrate local support by agreeing to put up a minimum of 10 percent of the money.

4. Benchmarks. EDA officials attempted to give geographical allocations by establishing benchmark figures for labor market areas within the state. They were quick to point out that this was not an entitlement but a system devised for spreading the money out. And this is where Cumberland County lost out. Though it had a benchmark of 1.5 percent of the state unemployed, it did not receive the minimum $1.5 million it would have received had that benchmark been an entitlement. This is because the EDA decided to move from one benchmark area to another as benchmark allocations were exceeded. It would seem a rather simple and fair thing to do to require that funds be allocated in a fashion so as not to exceed the benchmark for a given labor market area. Had that been followed, we would have at least seen some funds allocated to Cumberland County, Salem County, Middlesex County and other areas overlooked. In this regard, I strongly recommend that in the new round of funding we begin where we left off. That is to say, we begin allocating the new money set aside for New Jersey to benchmark areas left out last time.

5. Statistics. My area of southern New Jersey like other areas of the country relies heavily on a seasonal economy. Millions of visitors come to our beaches each year. Thousands of jobs are created. Yet with the Fall and Winter, we see pockets of unemployment approaching a quarter to a third of the available work force.

Areas which depend on a seasonal economy should be permitted to take the highest three-month unemployment period (consecutive) rather than necessarily the most recent three months following authorization of the legislation. I realize that we must have some time constraints and suggest that the three months be drawn from seasonally adjusted figures. These are readily available in the State of New Jersey.

6. Priority Ranking. A number of communities in my District and throughout the State submitted more than one application. Using the computer system, we face the real possibility that since they come from the same geographical area and will likely accrue the same or similar ranking, that a project of considerably less priority within the community could be funded. It is my suggestion, therefore, that officials be asked to rank their proposals by priority which will be of most benefit should a review system as I suggested earlier be adopted.

7. Local Workers. One of our objectives is to stimulate employment within the project area. I think this objective could be achieved by requiring on the application a statement that no less than 25 percent of the workers would be hired from the project area. If this were to create special problems that might inordinately delay the processing of applications, I would suggest a modification in which extra points are awarded to applicants which indicate that 25 percent or more of the workers would be hired from the project area. While this is not standard practice in awarding of federal contracts, this is not a standard program. The point of this legislation is to put people to work, within areas of high unemployment. Such a requirement would put local construction workers in contact with representatives of local governments seeking project funds.

8. Minimum Unemployment. There has been considerable criticism generated from the first round of Local Public Works financing because several very affluent areas succeeded in obtaining Public Works funds. This was only partially due to the 30 percent funding category from which they benefited. Another problem was that local areas were permitted to submit not their own rate of unemployment but that of a given labor market area. In some cases these embraced communities with very high unemployment rates. This could be corrected, in my opinion, by requiring that the applicant have within its own geographical boundary an unemployment rate of at least 6.5 percent.

9. Waivers. Several very good projects were denied waivers in New Jersey because they exceeded a $5 million cap mandated by the EDA. I recognize that when you are dealing with $100 million for the entire state, a project in excess of $5 million could severely deplete the funds and work adversely against geographical distribution. However, some of these larger projects had the potential for generating considerable numbers of jobs and leaving behind facilities of long-term benefit. I know of several within my Congressional District. I would suggest that there be no cap put on the amount of funds being requested for any one project so that it might be scored with all of the other submissions. Should it make the list of the top 25 percent, as I suggested earlier, it could then be reviewed subjectively with the other proposed projects. At that time, grounds for rejection could certainly be that to award the funds for the project would unfairly deprive other areas of Public Works funds.

10. Resubmission. As I am sure you have heard, some applicant communities were outraged when poor mail service exacerbated by a strike of United Parcel Service prevented their timely resubmission of projects returned on minor technical grounds. In some cases, applicants were asked to resubmit the proposal by a deadline date that preceded the arrival of their resubmission notification. Again, Mr. Chairman, if we have a two-tier review process which would include a minimum of one week to resubmit applications, these situations could be eliminated.

To conclude and summarize, it is my belief that we should take just an extra bit of time to introduce some subjective analysis of projects in this second round of Public Works funding. Construction is due to begin soon on projects selected in the first round. That stimulus will be felt in the next few weeks and months. Meanwhile we can improve upon and contemplate this effort through improvements to H.R. 11.

Let us commit, Mr. Chairman, to a goal of not only putting Americans back to work in useful and needed Public Works projects, but select the choicest of them to fund. Immediate benefits will then become long-term benefits as well and be remembered as a positive contribution to the needs of local communities for years to come.

Thank you for permitting me to testify before your Subcommittee.

SOVIET TREATMENT OF AMERICAN TOURISTS

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. LEHMAN. Mr. Speaker, I recently met with Louis Berlin, a young Ameri-

can who had just returned from the Soviet Union. Mr. Berlin traveled with a letter of introduction from myself to the American Ambassador in Moscow. This letter and others were confiscated by Soviet authorities who warned Mr. Berlin not to notify the Embassy of the incident, in violation of the Consular Convention and Protocol, article 12, sections 2 and 3.

The following is a detailed account of the improper treatment of Louis Berlin by Soviet authorities. I suggest to my colleagues that the action taken against Mr. Berlin, and other cases like this during recent months, reflect the current Soviet attitude toward American tourists:

SOVIET TREATMENT OF AMERICAN TOURISTS

(By Louis H. Berlin)

On January 4, 1977, I arrived at the Moscow airport for the purpose of tourism. My bags were searched by customs officials, and several books relating to Jewish history and culture were removed. I was taken to a room off the main lobby, the door was locked, and I was ordered to empty my pockets. I stated that I refused to be searched without a warrant, demanded that an Embassy official be present if a search was to be conducted, and insisted that the Embassy be notified of my detention at once. My statements were ignored, and I was again ordered to empty my pockets. I refused, and the police were called in. The police, numbering at least three, grabbed my arm and roughly twisted it behind my back in an uncomfortable but not painful manner. At no time during this process did I offer any physical resistance. As I was held in this position, my clothing was gone through, and my coat, jacket, sweater, shoes, socks, and boots were searched thoroughly and removed. My pockets were emptied, and I was brusqely and thoroughly frisked.

The police left and the custom officials meticulously went through the contents of my pockets, examining everything, especially papers and personal notes, in detail. I was ordered to write a statement explaining where I had obtained the books and papers I had brought with me. My protests about the illegality of the whole procedure were useless, so I complied in an effort to speed up the process. My statement was translated, and I was ordered to sign it and write down my parents' names and places of employment. I was also ordered to sign what appeared to be a receipt for books, personal papers, and personal notes that were to be confiscated, as well as a form filled out entirely in Russian. I protested that I knew no Russian, and since no translation was proferred, and since they were insistent on having my signature, I signed.

Confiscated were several books, personal papers, and a letter of introduction from my Congressman, Mr. Lehman, to the American Ambassador in Moscow. None of the materials were anti-Soviet in nature. Indeed, nothing referred to the Soviet Union at all. All materials were confiscated in violation of the Helsinki agreement and Russian law, and in a manner contrary to the Helsinki agreement and consular agreement. Requests for copies of the documents I signed were ignored. I was warned not to notify the Embassy of the incident, and cautioned not to engage in anti-Soviet behavior. I was then taken to my hotel. Elapsed time was four hours.

On January 11, I arrived at Leningrad airport, where I experienced no difficulty going through passport and customs control. While waiting for boarding in a lounge, I was summoned by an Intourist official to return with him to an office upstairs. My hand luggage and coat were searched thoroughly, and I was asked to empty my pockets. Deciding that it would be easier if I did, I complied. I was then searched for further materials, and my papers were examined closely, as were all my personal belongings. I was asked questions which were designed to implicate myself in illegal activities. I was warned against bringing in materials on future visits, and an attempt was made to frighten me from encouraging other persons to do the same. I was then taken to board the airplane.

At no time during my visit did I do anything illegal. I made no anti-Soviet statements, nor possessed anti-Soviet documents. I did visit with Soviet Jews who have been denied exit visas in violation of the Helsinki agreement. My treatment by Soviet authorities was illegal and in violation of the Helsinki agreement. The Soviet government has by its actions indicated that it intends to violate the law and the Helsinki agreement. I believe that a directive should be issued requiring American consular officials to be present at the arrival and departure of all vehicles carrying American citizens across Soviet borders until the Soviet government changes its behavior.

ATMOSPHERIC RESEARCH AND GLOBAL ENVIRONMENTAL MONITORING

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BROWN of California. Mr. Speaker, the last few months and particularly in the last few days I have tried, with unexpected and dramatic help from the weather, to direct attention to the need for coordinated, long-range climate research and environmental monitoring. The Subcommittee on the Environment and the Atmosphere, which I chair, focused last Congress on these matters, particularly national efforts concerned with inadvertent modification of the upper atmosphere, the costs and effects of exposure to low-level pollutants in the environment, and research related to sulfates in the atmosphere.

Two important observations have become manifest. First, present national efforts to monitor pollutants in the environment are fragmented and narrow in scope. Second, the most effective monitoring has been that of the atmosphere.

Looking ahead, the Environment and Atmosphere Subcommittee will work early this spring on the National Climate Program Act of 1977, H.R. 783, for which we are now seeking additional cosponsors. In conjunction with the development of this climate research bill, or soon thereafter, I hope we can focus hard on present capabilities for global environmental monitoring, perhaps beginning with the atmospheric aspects of major global cycles—of the element carbon, for example, or sulfur or nitrogen.

Four recent articles, which I ask to be inserted here in the RECORD, detail the present state of international monitoring efforts. They highlight both hopeful signs and serious problems, and provide a very appropriate backdrop for deliberation on climate research and useful, cost-effective environmental monitoring networks. The articles follow:

[From the San Bernadino Sun, October 13, 1976]

WORLDWIDE SCIENCE GROUP URGES GLOBAL MONITORING

(By Walter Sullivan)

WASHINGTON.—During the next two centuries increasing industrial activity is expected to raise the carbon dioxide content of the atmosphere at least fourfold and possibly eightfold, according to a report presented Tuesday to the International Council of Scientific Unions.

Since this could bring about major climate changes it was termed "rather alarming" in the report, prepared by the council's Scientific Committee on Problems of the Environment (SCOPE).

The council, representing all the specialized scientific unions, is holding its general assembly at the National Academy of Sciences here.

The report, entitled Environmental Issues 1976, notes that little has been done to implement the proposal for a Global Environmental Monitoring System (GEMS). The latter was endorsed by the United Nations Conference on the Human Environment, held in Stockholm in 1972.

While analyzing the probable reasons for this failure the report also examines possible long-term threats to the environment from human production of phosphorus, sulfur, mercury, and nitrogen compounds. It recommends, as well, as a wide range of programs to reveal which threats are real.

"It is difficult to see how best to improve the environment," says the report, "without first establishing fundamental facts; such facts will also serve to offset the interminable speculation passing for knowledge."

With regard to global monitoring it says: "Some of the proposed schemes are ambitious, idealistic, and very comprehensive." The hope repeatedly expressed at the Stockholm conference was that there be an international watch of the earth on the land, air and water to spot ominous changes.

The proposals include monitoring select species of plants and animals sensitive to subtle changes in the environment, much as miners once carried canaries to warn them when odorless "fire damp" (chiefly methane gas) appeared.

The delay in implementation, says the report, may be linked to "deficiences in our basic understanding of how to go about monitoring and hence how to build a comprehensive global monitoring system." A number of the report recommendations are designed to correct such deficiences.

The 296-page report was prepared under Prof. Victor A. Kovda, a specialist in child development at the University of Moscow, as the president of SCOPE, and his successor Prof. Gilbert F. White, director of the Institute of Behavioral Science at the University of Colorado in Boulder.

Both men spoke at Tuesday's meeting as did SCOPE members from five other countries.

Monitoring needs are listed in four categories:

1. Measuring levels of potentially harmful or beneficial substances not only in air, land and water but in living organisms "including man and his food."

2. Measuring such variables (or possible variables) as solar output, air transparency and soil chemistry.

3. Recording the extent of beneficial and harmful effects on life of the factors listed in the first two categories as well as effects of such factors as crowding, disease and genetic variations.

4. Keeping inventory of such indices of climate change as ice cap area, glacier size

and sea level, as well as effects of deforestation, agriculture, urbanization and energy use.

The most effective monitoring has been that of the atmosphere and this, the report says, has clearly shown the rise in carbon dioxide due to fuel burning. Carbon dioxide, it is feared, can act like the glass in a greenhouse, heating up the climate. Much, however, remains to be learned as to the extent to which oceans and the biosphere—all living organisms—absorb the added carbon dioxide. Such research is described as "a matter of urgency."

So rapid has been the increase in carbon dioxide production that in the decade ending in 1969, according to the report, the rise amounted to 50 per cent of the entire increase since the industrial revolution.

A special challenge, says the report, is to identify those threats to the environment that, once they become obvious, have reached an irreversible stage. An example cited is the fear that fluorocarbons, widely marketed as Freons, will deplete the protective ozone of the stratosphere.

"Managament actions" were initiated, it says, "based on models predicting the consequences of specific levels of emission, rather than waiting until such consequences were detected." Freons are used both as refrigerants and as propellants in some spray cans. A ban on their use for the latter purpose now seems likely.

"It is interesting to point out here," the report continues, "that this ability to respond arose from an existing, long series of environmental studies into the atmospheric transport of radioactivity, carbon dioxide and particulates, and into the effects of supersonic aircraft on the stratosphere.

While some fear that human activity may be altering the climate in "irreversible and possibly harmful ways," this, says the report, is "'difficult to refute or accept without a deeper understanding of the nature of climate. What are the causes of climate fluctuations? Are future climates predictable, and if so, in what sense?"

With regard to introduction into the environment of added nitrogen compounds, phosphorus and sulfur, the report says inventories are needed—particularly in soils—to allow future determination of trends.

[From Interdependent, December 1976]

IS EARTHWATCH WATCHING ANYTHING?

(By Elizabeth Sullivan)

Four years after the widely praised UN Environment Conference in Stockholm, the special program it created to look after the world's environmental health and the global monitoring system it was supposed to set up both could use a lot of help.

The program, UNEP (UN Environment Program), and the system, Earthwatch, are both threatened by a combination of global indifference, institutional indecision and political pressure linked to the omnipresent North/South dialogue.

Earthwatch presently has four components: the Global Environmental Monitoring System (GEMS), its central monitoring, research and evaluation network which is still fragmented and ill-defined; the International Referral Service (IRS), an international directory of environmental reference sources which, though operating, has drawn little response from the developing nations expected to use it; the International Registry of Potentially Toxic Chemicals (IRPTC); and an "Outer Limits" program designed to find out just how much pollution this planet can stand.

Though national self-interest has hampered Earthwatch's progress, UNEP officials feel they've finally come up with an acceptable and workable solution that will satisfy everyone, according to Jean-Claude Faby of UNEP's New York liaison office. For the developing countries, who want to keep the focus on local problems, UNEP will conduct tropical forest and soil quality analysis while meeting the rich countries' interest in overall global health by monitoring chemical pollutants and keeping an eye on the oceans.

But whether these moves will really help is open to doubt and some environmental experts argue that lack of support, particularly from the U.S., may have already doomed UNEP.

But others place the blame squarely on UNEP itself. "UNEP has never really developed a comprehensive strategy," asserts Walter Telesetsky of the National Oceanic and Atmospheric Administration (NOAA) and a member of the UN delegation to UNEP's last Governing Council meeting this March and April. "There has been no major, concerted effort, so far as I know, to develop and define short term and long range goals for GEMS programs, or to develop a plan with explicit priority areas."

Scientists also argue that Earthwatch, responding to the political tug-of-war between developed and developing countries, has generally ignored objective scientific knowhow in establishing its priorities. A recent report by an international group of scientists discussing GEMS' failure noted that a great deal of relevant data is still untapped and the US National Academy of Sciences (NAS) in a recently published "Early Action" plan for GEMS urged that it start with "what is most scientifically advanced—air pollution," as NAS' Melinda Cain put it. She also termed the already existing IRS "fairly useless" because the sources aren't evaluated but said that, "Governments think it's great. It's something they can point at and say 'Look what we've done.' "

Though the need for international environmental cooperation is widely acknowledged, Earthwatch has already been damaged as everyone follows their own national line. Meanwhile, all the environmental problems discussed at Stockholm are still around and unless UNEP gets into gear soon, the industrialized world may push ahead on its own to solve them, and leave the developing countries to fend for themselves.

[From the Los Angeles Times, Dec. 19, 1976]

DÉTENTE THRIVING IN ENVIRONMENTAL AREA: PROGRAM BEING EXPANDED TO COVER 40 U.S.-SOVIET PROJECTS

(By Peter J. Bernstein)

WASHINGTON.—Détente between the United States and the Soviet Union is flourishing in at least one area of mutual interest—environmental protection.

From Maine to Minsk, environmental exchanges are on the rise. Now entering its fifth year, the bilateral program of monitoring and research is being expanded to cover 40 projects involving hundreds of U.S. and Soviet scientists.

"This is a much bigger undertaking than many people seem to realize," said William A. Brown, executive secretary of the U.S.-U.S.S.R. Joint Environmental Committee.

Interviewed in his office at the Environmental Protection Agency, Brown, who coordinates the U.S. role in the program, said that this year alone there were more than 100 meetings of U.S. and Soviet scientists on projects covering air and water pollution control, farm pesticides, urban enhancement, wildlife and nature preserves, ocean dumping, biological and genetic changes, climate modification, earthquake prediction and legal aspects of environmental protection.

"In general, the Soviets have gotten more out of the bilateral program than we," Brown, a Foreign Service officer on loan to the environmental agency, said. "But we stand to benefit in the long run to the extent that our pollution control technology enables the Russians to reduce their impact on the global environment."

U.S. firms have jumped at the chance to sell environmental equipment to the Russians. Last February, at a clean-air exhibit in Moscow, the Russians bought every U.S. air pollution monitoring device. A second environmental exhibit—this time of water pollution monitoring equipment—is planned for March. "We expect comparable results," Brown said.

Earthquake prediction is considered the exchange program of greatest importance to U.S. scientists. Using computer models devised in the Soviet Union, U.S. seismologists two years ago successfully predicted small earthquakes for the first time in New York and Southern California.

Currently, U.S. seismologists looking for new earthquake clues are monitoring construction of the world's largest hydroelectric dam at Tadzhikistan in Soviet Asia. Excavation for the Nurek dam and reservoir, which required mammoth earthmoving operations, caused some seismic effects, Brown said. The monitoring results, he added, could prove of "tremendous importance" in selecting future hydroelectric sites in other regions.

Wildlife protection and research have received considerable attention in the environmental exchange, beginning with the shipment of rare Alaska musk oxen to Siberia last year. The Russians will shortly be sending Siberian crane eggs to the United States in hopes they will hatch at a research station in Wisconsin. The cranes, long-legged black-and-white birds that stand five feet tall, are regarded by many naturalists as among the most beautiful in the world.

Soviet and U.S. officials meeting in Moscow last month signed a bilateral convention for the protection of migratory birds such as snow geese and swans which migrate every year from Siberia over the Arctic to California. The treaty, which is subject to Senate ratification, was signed by environmental agency Administrator Russell E. Train and Yuri A. Izrael, chief of the Hydrometeorological Service and head of the Soviet air and water pollution control program.

As in previous years, top officials from half a dozen U.S. agencies attended the meeting in Moscow. Because Congress had appropriated no money specifically for the bilateral environmental exchange, each agency has contributed to its cost. U.S. government expenses, including the cost of interpreters, run $1.5 to $2 million a year, Brown said. Additional funds are provided by universities and private industry.

U.S. environmental officials are hoping to control the growth of the bilateral program. But with the addition of four new projects at last month's meeting—Arctic mammal preservation, pollution control in steel plants, environmental education and migratory birds—that goal is proving elusive.

The Russians apparently mean business on matters concerning the environment. At a big Communist Party congress last month, Soviet Communist Party chief Leonid I. Brezhnev underscored the increased priority of environmental spending by announcing a five-year budget of some 66 billion rubles to be spent mostly on air and water pollution control, which still is substantially less than U.S. environmental outlays but reflects changes in Soviet priorities brought about at least in part by exchanges with the United States.

[From the New York Times, Jan. 25, 1977]

MASSIVE EFFORT TO IDENTIFY BIOLOGICAL AREAS STARTS

(By Bayard Webster)

A program aimed at identifying and delineating the world's different kinds of biological areas ranging from Alaska's tundra to Africa's deserts has gotten underway in the United States and other countries.

According to a report in the current issue of the journal, Science, the program, sponsored by the United Nations, the United States and the Soviet Union, is the first stage of a three-part project that will select sites for environmental monitoring and research in the different types of areas and then will use the research data to implement ecologically sound land-use practices in those regions.

The biosphere reserves program, as it is generally known, as a collective international effort sponsored by the United Nations Educational, Scientific and Cultural Organization (UNESCO), the National Science Foundation and the U.S.-U.S.S.R. Environmental Agreement, a compact calling for cooperative environmental research by the two countries.

"Our main aim is to protect the different biological regions, to see that we don't lose the plant and animal life—and their genes—in them, and to use them for ecological research, education and recreation according to their value for each of these activities," said Dr. Jerry F. Franklin, author of the Science report and head of the United States biospheres reserve program.

Dr. Franklin's report focuses on the major extensive ecologically homogeneous areas, known as biomes, that are under study. These include such biological regions as the desert-sagebrush areas of Arizona, Mexico and California; the Douglas fir, cedar and hemlock forests of the Northwest, the swamp and marshlands of the South, the tropical rain forests of the tropics and the taigas—the coniferous forests of North America and Asia.

At the present stage of the biosphere reserves program in the United States, two dozen different major biomes have been identified in which there are approximately 30 specific areas that have been or are being considered as protected biological preserves.

The program, though overlapping many areas that are now Federal wilderness preserves, refuges or parks, does not conflict with such designations, Dr. Franklin said, because the cooperation of Federal and state governments will be essential in implementing the program.

The principal environmental and ecological research will be done in the designated areas, once Federal and state approval of the proposed area designation and study programs is given. Such research will consist of scientific monitoring of land, vegetation, water and air for pollutants that are contaminating or could contaminate the area to the point where it would lose its value for whatever purpose it was originally dedicated.

There are already in the nation more than a dozen experimental ecological preserves under intensive scientific scrutiny. They are already considered as part of the biosphere reserves program. One of these is a 15,000-acre forest in the Western Cascade Range of Oregon.

This area, populated by fir and hemlock, is being studied for the effect of logging on the quality of water, the effect of pesticides on ecosystems and the causes for fluctuations in small animal populations.

A similar project is being conducted in New Hampshire at the Hubbard Brook Experimental Forest, where monitoring of stream water quality, precipitation, soil composition and the effect on a watershed of clear-cutting operations are being studied.

According to the National Science Foundation, which has made a study of experimental ecological reserves in the country, such areas also serve to perpetuate a large variety of plants and animals, maintaining gene pools of native species that could help develop new strains.

Existing strains of food, fiber and wood plants, the foundation points out, often come under pressure from fast-evolving diseases and pests, from short- and long-term changes in weather and climate and from advancing urbanization.

FINANCIAL STATEMENT OF HON. JAMES L. OBERSTAR

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. OBERSTAR. Mr. Speaker. Today I submitted a statement to the Task Force on Financial Accountability of the House Commission on Administrative Review in which I presented my views on standards for financial disclosure by Members of Congress. As part of that statement, I included my own financial disclosure report.

I would like to submit the recommendations which I made to the task force to the House for consideration by all my colleagues.

I also include my financial statement:

STATEMENT OF HON. JAMES L. OBERSTAR

I urge the task force to devise uniform, unequivocal, and exacting standards for reporting the financial condition and interests of Members of Congress in order to inform the public about actual or potential conflicts of interest between a Member's financial holdings and his or her public position. Such reporting should be mandatory.

Public financial accountability is the key to public confidence in elected officials. Financial disclosure rules now in effect for Members of Congress do not provide the kind of information needed to determine whether a Member has a present or potential conflict of interest. The recommendations I am proposing, together with others this Task Force has suggested, will achieve that goal.

I believe that the rules must require public disclosure of net worth of Members of Congress and sources of income other than salary. Members should also release the following tax information: gross income, taxable income, federal and state income tax paid.

Furthermore, strict limits should be placed on the amount of outside income that a Member of Congress may earn. I would set that figure at $5,000 rather than at a percentage of salary. That is an amount small enough to be earned responsibly in honoraria from speeches and published articles but not large enough to involve the Member in commitments which would detract from the performance of his or her official duties. I would further limit individual honoraria to $500.

In the interest of simplicity, I would suggest that April 30 be set as the deadline for filing disclosure statements; that is two weeks after the deadline for filing income tax returns. Most of the data required for such returns would also be required for financial disclosure statements.

I believe the financial disclosure statements of both the Member and the Member's spouse should reflect the following information:

1. Income (including honoraria): sources and amounts aggregating more than $100 from any individual source.

2. Income tax paid: both Federal and state.

3. Gifts: source and value of lodging, food, or entertainment, of $250 or more from any one source. Sources and value of other gifts worth in excess of $100 from any one source.

I would exempt the following from disclosure requirements:

a. Gifts from relatives.

b. Gifts valued less than $25.00.

c. Gifts of personal hospitality.

4. Reimbursements: aggregating $250 or more from any individual source.

5. Holdings: the identity and value of any property held, directly or indirectly, in a trade or business or for investment purposes or the production of income, and which has a fair market value of at least $1,000 as of the close of the preceding calendar year.

6. Debts: the identity and value of each liability owed, directly or indirectly, which is in excess of $1,000 as of the close of the preceding calendar year, excluding "pledges" to charitable or tax exempt organizations.

7. Securities and Transactions: identity, value and date of any transaction, directly or indirectly, in securities or commodities futures during the preceding year which exceeds $1,000 except for transactions donating such securities to charitable or tax-exempt organizations.

8. Real Estate: the identity and value of any purchase or sale, directly or indirectly, of any real property or of any interest therein, during the preceding calendar year and which exceeds $1,000 in value as of the date of such purchase or sale.

I support provisions for criminal and civil penalties for willful falsification of a financial disclosure statement. I also believe requirements for disclosure should apply to both Members of Congress and candidates for Congress.

I am submitting with this statement a copy of my own financial disclosure report which a Certified Public Accountant has reviewed and verified. I would recommend that the Task Force adopt this format for financial disclosure by Members of Congress.

Personal financial statement of James L. and Marilynn G. Oberstar and children

ASSETS

Cash:	
Savings account	$9,500
Checking account	500
Paid into House pension fund	6,693
Life insurance (estimated cash value)	1,600
Securities (20 shares Eastman Kodak—estimated market value)	1,400
Subtotal	19,693
Real estate and personal property—	
House, Bethesda, Md. (estimated current market value)	[1] 105,000
Household goods	5,000
Autos (estimated retail value):	
1974 Buick station wagon	3,925
1975 Buick Apollo 4-door	2,925
Subtotal	116,850
Total assets	136,543

LIABILITIES

Home mortgage	36,000
Insurance premiums payable (including: life, health, auto, home)	2,570
Property taxes payable	2,022
Loans payable	12,700
Auto loan—wagon	1,450
Auto loan—Apollo	2,689
N.Y. Life Insurance Co	2,000
Metropolitan Life Insurance Co	3,561
Various consumer installment loans bills	3,000
Total liabilities	53,292
Net worth	83,251

[1] NOTE.—1966 original purchase price: $53,000.

Statement of income and taxes paid, 1975—James L. and Marilynn G. Oberstar

Gross income	$45,179.90
Salary	39,072.08
Allowance for official office supply and district office expense	[1] 3,646.15
Honoraria:	
American Road Builders	750.00
Minnesota Banking Association	1,000.00
Colorado Right to Life Committee	250.00
Interest/dividends	380.91
Tax refund	80.76
Taxable income	26,807.01
Federal tax	6,328.28
State tax (Minnesota)	3,552.00
Total State and Federal taxes paid	9,880.28

[1] This is an allowance to Members of Congress for official office expenses. Under regulations in effect during the 94th Congress, the allowance is chargeable to new Members as "income". Reforms adopted in 1976 change that procedure so that, in the future, such items will be paid against signed vouchers, and not treated or available as income to Members of Congress.

NOTE.—Statement of 1976 income and taxes will be released after it has been submitted to IRS.

INCOME TAX OVERPAYMENT PROTECTION FOR OLDER AMERICANS

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WYDLER. Mr. Speaker, Congress has passed special tax relief provisions intended to insure that certain segments of our society, especially our older Americans, do not bear an unfair portion of the tax burden.

Because many of those who could benefit most from these provisions are either unaware of them or unable to apply them to their own situation, a special checklist has been designed. This checklist covers everything from medical and insurance expenses and theft losses, to the simplified "tax credit for the elderly," and is designed to help our senior citizens to avoid overpayment of income taxes.

I would like to enter this checklist so that my constituents in the "Fabulous Fifth" Congressional District may fully avail themselves of the tax relief measures due them:

PROTECTING OLDER AMERICANS AGAINST OVERPAYMENT OF INCOME TAXES (A REVISED CHECKLIST OF ITEMIZED DEDUCTIONS FOR USE IN TAXABLE YEAR 1976).

MEDICAL AND DENTAL EXPENSES

Medical and dental expenses (unreimbursed by insurance or otherwise) are deductible to the extent that they exceed 3 percent of a taxpayer's adjusted gross income (line 15c, Form 1040).

INSURANCE PREMIUMS

One-half of medical, hospital or health insurance premiums are deductible (up to $150) without regard to the 3 percent limitation for other medical expenses. The remainder of these premiums can be deducted, but is subject to the 3 percent rule.

DRUGS AND MEDICINES

Included in medical expenses (subject to 3% rule) but only to extent exceeding 1% of adjusted gross income (line 15c, Form 1040).

OTHER MEDICAL EXPENSES

Other allowable medical and dental expenses (subject to 3% limitation):

Abdominal supports (prescribed by a doctor)
Acupuncture services
Ambulance hire
Anesthetist
Arch supports (prescribed by a doctor)
Artificial limbs and teeth
Back supports (prescribed by a doctor)
Braces
Capital expenditures for medical purposes (e.g., elevator for persons with a heart ailment)—deductible to the extent that the cost of the capital expenditure exceeds the increase in value to your home because of the capital expenditure. Taxpayer should have an independent appraisal made to reflect clearly the increase in value.
Cardiographs
Chiropodist
Chiropractor
Christian Science practitioner, authorized
Convalescent home (for medical treatment only)
Crutches
Dental services (e.g., cleaning, X-ray, filling teeth)
Dentures
Dermatologist
Eyeglasses
Food or beverages specially prescribed by a physician (for treatment of illness, and in addition to, not as substitute for, regular diet; physician's statement needed)
Gynecologist
Hearing aids and batteries
Home health services
Hospital expenses
Insulin treatment
Invalid chair
Lab tests
Lipreading lessons (designed to overcome a handicap)
Neurologist
Nursing services (for medical care, including nurse's board paid by you)
Occupational therapist
Ophthalmologist
Optician
Optometrist
Oral surgery
Osteopath, licensed
Pediatrician
Physical examinations
Physical therapist
Physician
Podiatrist
Psychiatrist
Psychoanalyst
Psychologist
Psychotherapy
Radium therapy
Sacroiliac belt (prescribed by a doctor)
Seeing-eye dog and maintenance
Speech therapist
Splints
Supplementary medical insurance (Part B) under Medicare
Surgeon
Telephone/teletype special communications equipment for the deaf
Transportation expenses for medical purposes (7¢ per mile plus parking and tolls or actual fares for taxi, buses, etc.)
Vaccines
Vitamins prescribed by a doctor (but not taken as a food supplement or to preserve general health)
Wheelchairs
Whirlpool baths for medical purposes
X-rays

TAXES

Real estate
State and local gasoline
General sales
State and local income
Personal property

If sales tax tables are used in arriving at your deduction, you may add to the amount shown in the tax tables only the sales tax paid on the purchase of five classes of items: automobiles, airplanes, boats, mobile homes, and materials used to build a new home when you are your own contractor.

When using the sales tax tables, add to your adjusted gross income any nontaxable income (e.g., Social Security, Veterans' pensions or compensation payments, Railroad Retirement annuities, workmen's compensation, untaxed portion of long-term capital gains, recovery of pension costs, dividends untaxed under the dividend exclusion, interest on municipal bonds, unemployment compensation and public assistance payments).

CONTRIBUTIONS

In general, contributions may be deducted up to 50 percent of your adjusted gross income (line 15c, Form 1040). However, contributions to certain nonprofit foundations, veterans organizations, or fraternal societies are limited to 20% of adjusted gross income.

Cash contributions to qualified organizations for (1) religious, charitable, scientific, literary or educational purposes, (2) prevention of cruelty to children or animals, or (3) Federal, State or local governmental units (tuition for children attending parochial schools is not deductible). Fair market value of property (e.g., clothing, books, equipment, furniture) for charitable purposes. (For gifts of appreciated property, special rules apply. Contact local IRS office.)

Travel expenses (actual or 7c per mile plus parking and tolls) for charitable purposes (may not deduct insurance or depreciation in either case).

Cost and upkeep of uniforms used in charitable activities (e.g., scoutmaster).

Purchase of goods or tickets from charitable organizations (excess of amount paid over the fair market value of the goods or services).

Out-of-pocket expenses (e.g., postage, stationery, phone calls) while rendering services for charitable organizations.

Care of unrelated student in taxpayer's home under a written agreement with a qualifying organization (deduction is limited to $50 per month).

INTEREST

Home mortgage.
Auto loan.
Installment purchases (television, washer, dryer, etc.).
Bank credit card—can deduct the finance charge as interest if no part is for service charges, loan fees, credit investigation fees, or similar charges.

Points—deductible as interest by buyer where financing agreement provides that they are to be paid for use of lender's money. Not deductible if points represent charges for services rendered by the lending institution (e.g., VA loan points are service charges and are not deductible as interest). Not deductible if paid by seller (are treated as selling expenses and represent a reduction of amount realized).

Penalty for prepayment of a mortgage—deductible as interest.

Revolving charge accounts—may deduct the "finance charge" if the charges are based on your unpaid balance and computed monthly.

Other charge accounts for installment purchases—may deduct the lesser of (1) 6% of the average monthly balance (average monthly balance equals the total of the unpaid balances for all 12 months, divided by

12) or (2) the portion of the total fee or service charge allocable to the year.

CASUALTY OR THEFT LOSSES

Casualty (e.g., tornado, flood, storm, fire, or auto accident provided not caused by a willful act or willful negligence) or theft losses to nonbusiness property—the amount of your casualty loss deduction is generally the lesser of (1) the decrease in fair market value of the property as a result of the casualty, or (2) your adjusted basis in the property. This amount must be further reduced by any insurance or other recovery, and, in the case of property held for personal use, by the $100 limitation. You may use Form 4684 for computing your personal casualty loss.

CREDIT FOR CHILD AND DEPENDENT CARE EXPENSES

Certain payments made for child and dependent care may now be claimed as a credit against tax instead of as an itemized deduction.

If a taxpayer maintained a household that included a child under age 15 or a dependent or spouse incapable of self-care, a taxpayer may be allowed a 20% credit for employment related expenses. These expenses must have been paid during the taxable year in order to enable the taxpayer to work either full or part time.

For detailed information, see the instructions for Form 2441 on page 17.

MISCELLANEOUS

Alimony and separate maintenance (periodic payments).

Appraisal fees for casualty loss or to determine the fair market value of charitable contributions.

Union dues.

Cost of preparation of income tax return.

Cost of tools for employee (depreciated over the useful life of the tools).

Dues for Chamber of Commerce (if as a business expense).

Rental cost of a safe-deposit box for income-producing property.

Fees paid to investment counselors.

Subscriptions to business publications.

Telephone and postage in connection with investments.

Uniforms required for employment and not generally wearable off the job.

Maintenance of uniforms required for employment.

Special safety apparel (e.g., steel toe safety shoes or helmets worn by construction workers; special masks worn by welders).

Business entertainment expenses.

Business gift expenses not exceeding $25 per recipient.

Employment agency fees under certain circumstances.

Cost of a periodic physical examination if required by employer.

Cost of installation and maintenance of a telephone required by the taxpayer's employment (deduction based on business use).

Cost of bond if required for employment.

Expenses of an office in your home if employment requires it.

Payments made by a teacher to a substitute.

Educational expense required by your employer to maintain your position or for maintaining or sharpening your skills for your employment.

Political Campaign Contributions.—Taxpayers may now claim either a deduction (line 32, Schedule A, Form 1040) or a credit (line 52, Form 1040), for campaign contributions to an individual who is a candidate for nomination or election to any Federal, State, or local office in any primary, general or special election. The deduction or credit is also applicable for any (1) committee supporting a candidate for Federal, State, or local elective public office, (2) national committee of a national political party, (3) State committee of a national political party, or (4) local committee of a national political party. The maximum deduction is $100 ($200 for couples filing jointly). The amount of the tax credit is one-half of the political contribution, with a $25 ceiling ($50 for couples filing jointly).

Presidential Election Campaign Fund.—Additionally, taxpayers may voluntarily earmark $1 of their taxes ($2 on joint returns) for the Presidential Election Campaign Fund.

For any questions concerning any of these items, contact your local IRS office. You may also obtain helpful publications and additional forms by contacting your local IRS office.

OTHER TAX RELIEF MEASURES

Filing status	*Required to file a tax return if gross income is at least—*
Single (under age 65)	$2,450
Single (age 65 or older)	3,200
Qualifying widow(er) under 65 with dependent child	2,850
Qualifying widow(er) 65 or older with dependent child	3,600
Married couple (both spouses under 65) filing jointly	3,600
Married couple (1 spouse 65 or older) filing jointly	4,350
Married couple (both spouses 65 or older) filing jointly	5,100
Married filing separately	750

Additional Personal Exemption for Age.—Besides the regular $750 exemption allowed a taxpayer, a husband and wife who are 65 or older on the last day of the taxable year are each entitled to an additional exemption of $750 because of age. You are considered 65 on the day before your 65th birthday. Thus, if your 65th birthday is on January 1, 1977, you will be entitled to the additional $750 personal exemption because of age for your 1976 Federal income tax return.

General Tax Credit.—A new general tax credit is available. For this credit, the taxpayer may claim the greater of (1) $35 per exemption shown on line 6d, Form 1040A or Form 1040, or (2) 2 percent of taxable income (line 15, Form 1040A or line 47, Form 1040) but not more than $180 ($90, if married, filing separately).

Multiple Support Agreements.—In general, a person may be claimed as a dependent of another taxpayer, provided five tests are met: (1) Support, (2) gross income, (3) member of household or relationship, (4) citizenship, and (5) separate return. But in some cases, two or more individuals provide support for an individual, and no one has contributed more than half the person's support. However, it still may be possible for one of the individuals to be entitled to a $750 dependency deduction if the following requirements are met for multiple support:

1. Two or more persons—any one of whom could claim the person as a dependent if it were not for the support test—together contribute more than half of the dependent's support.

2. Any one of those who individually contribute more than 10% of the mutual dependent's support, *but only one of them,* may claim the dependency deduction.

3. Each of the others must file a written statement that he will not claim the dependency deduction for that year. The statement must be filed with the income tax return of the person who claims the dependency deduction. Form 2120 (Multiple Support Declaration) may be used for this purpose.

Sale of Personal Residence by Elderly Taxpayers.—A taxpayer may elect to exclude from gross income part or, under certain circumstances, all of the gain from the sale of his personal residence, provided:

1. He was 65 or older before the date of the sale, and

2. He owned and occupied the property as his personal residence for a period totaling at least 5 years within the 8-year period ending on the date of the sale.

Taxpayers meeting these two requirements may elect to exclude the entire gain from gross income if the adjusted sales price of their residence is $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976) or less. (This election can only be made once during a taxpayer's lifetime.) If the adjusted sales price exceeds $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976), an election may be made to exclude part of the gain based on a ratio of $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976) over the adjusted sales price of the residence. Form 2119 (Sale or Exchange of Personal Residence) is helpful in determining what gain, if any, may be excluded by an elderly taxpayer when he sells his home.

Additionally, a taxpayer may elect to defer reporting the gain on the sale of his personal residence if within 18 months before or 18 months after the sale he buys and occupies another residence, the cost of which equals or exceeds the adjusted sales price of the old residence. Additional time is allowed if (1) you construct the new residence or (2) you were on active duty in the U.S. Armed Forces. Publication 523 (Tax Information on Selling Your Home) may also be helpful.

Credit for the Elderly.—A new, expanded, and simplified credit for the elderly has replaced the former more complex retirement income credit.

A taxpayer may be able to claim this credit and reduce taxes by as much as $375 (if single), or $562.50 (if married filing jointly), if the taxpayer is:

(1) Age 65 or older, or

(2) Under age 65 and retired under a public retirement system.

To be eligible for this credit, taxpayers no longer have to meet the income requirement of having received over $600 of earned income during each of any 10 years before this year.

For more information, see instructions for Schedules R and RP.

Earned Income Credit.—A taxpayer who maintains a household for a child who is under age 19, or is a student, or is a disabled dependent, may be entitled to a special payment or credit of up to $400. This is called the earned income credit. It may come as a refund check or be applied against any taxes owed. Generally, if a taxpayer reported earned income and had adjusted gross income (line 15c, Form 1040) of less than $8,000, the taxpayer may be able to claim the credit.

Earned income means wages, salaries, tips, other employee compensation, and net earnings from self-employment (generally amount shown on Schedule SE (Form 1040) line 13). A married couple must file a joint return to be eligible for the credit. Certain married persons living apart with a dependent child may also be eligible to claim the credit.

For more information, see instructions for Form 1040 or 1040A.

AuCOIN—AN OUTSTANDING YOUNG MAN

HON. JIM SANTINI

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SANTINI. Mr. Speaker, I wanted to take this time to share with my colleagues the impressive attainment and

poignant achievement of one of our hearty band.

On January 16, 1977, in Las Vegas, Nev., I had the privilege of participating in the U.S. Jaycees' recognition of Congressman LES AUCOIN as one of our Nation's 10 outstanding young men of 1976. LES' richly deserved attainment certainly enhances our collective public perceptions.

LES is in distinguished company as a TOYM Award recipient. This year's winners include Steve Garvey, an infield for the Los Angeles Dodgers; Wayne Newton, of Las Vegas entertainment fame; Dr. David W. Hartman, a blind physician; Harry Chapin, an entertainer; David Frederickson, a staff assistant to President Ford; Father William Atkinson, a Philadelphia priest; Frank Banks, a prominent black CPS; Dennis Landesman, a top archeologist; and Dr. Grady Stumbo, a rural health care specialist.

The principal ingredient sought in the selection of TOYM recipients is "selfless devotion to the betterment of mankind." Congressman AUCOIN's past record of accomplishments certainly exemplifies this laudible yardstick. LES, at age 34, is the youngest major officeholder and one of the youngest Congressmen in Oregon's history. An award-winning journalist and an intuitive political leader, LES joins the elite ranks of past TOYM winners which include Nelson Rockefeller, Leonard Bernstein, John F. Kennedy, Bud Wilkinson, and Gerald Ford.

With this deserved recognition of our distinguished colleague, I would also like to share with you LES' penetrating and illuminating acceptance speech.

I include his remarks in today's RECORD:

REMARKS OF THE HONORABLE LES AUCOIN BEFORE THE UNITED STATES JAYCEES: "PRIDE IN POLITICS," JANUARY 15, 1977

I thank the Jaycees—and all who have contributed to this program—for this tremendous award. I particularly want to thank the Hillsboro, Oregon, Jaycees for nominating me.

Like the other honorees, in my short 34 years, I've received some recognition. But none means as much to me as this award you've given me this evening.

I say that because I'm a Congressman. Because I'm a politician.

I am proud to be both. But in a time when so many of us have begun to lose confidence in politics, in government—and maybe at times even in ourselves—it means very much to me that you've honored me, a political figure, at this particular time. The truth is, as it always has been: that politics can be what we—you and I—choose to make it.

And so I accept this award not only for myself—but for the hundreds of men and women of good and stout hearts whose good deeds in public office across the country do not always make the headlines, but who are determined to write a decent future for humankind.

Ladies and gentlemen, something happened three years ago that I feel I must share with you tonight. At that time you may remember that a young man stood before the Senate Watergate Committee and said something I regarded as one of the saddest chapters of that tragic episode.

He was asked, after being through all that he had been through, what his advice would be to young people thinking about a career in politics.

His advice was very blunt. He said, "Stay out."

It was then that I vowed to do everything I could as a person to overcome that advice for the sake of all of us. If I have joined other young men and women in succeeding in some small way, then I am pleased.

I have tremendous confidence in this remarkable land of yours and mine. Our generation faces incredible challenges. I'm sure each of us worries about those challenges and who among us tonight does not worry at times about America's resources in the face of those challenges.

But, my friends, there is no question that we can survive and that we can grow for the very simple reason that this land is rich in the greatest resource of all. I'm referring to Human resources. I'm talking about people.

And to accept an award sponsored by an organization of people such as the United States Jaycees will always be one of the proudest events of my life.

I thank you very much.

S. 474, THE EMERGENCY NATURAL GAS ACT OF 1977

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 1, 1977

Mr. MAGUIRE. Mr. Speaker, in response to the current shortages of natural gas, the Congress has enacted the Emergency Natural Gas Act of 1977. It is not a bill of which we should be overly proud.

As the President readily admits, the legislation will not produce even 1 additional cubic foot of gas. Rather, it provides for a national allocation program to protect homeowners from supply interruptions and encourages emergency sales from intrastate sources—at high prices—to gas-short interstate pipelines and local distribution companies. But even as narrowly focused as the emergency program is, it still penalizes consumers of the interstate system while protecting the sacrosanct intrastate market.

Mr. Speaker, virtually every major interstate pipeline is disastrously curtailed. Schools, factories, and businesses are closing, leaving millions out of work. The allocation program promises to do little more than spread the misery of scarcity. If the cold weather continues, there simply will not be enough to go around even to protect homeowners. In New Jersey, instructions on how to close down homes are being printed in local newspapers.

Meanwhile, the "shared sacrifice" spirit of the Emergency Natural Gas Act does not extend to nonessential users of gas in the intrastate market. Producing State representatives argue that their States are entitled to exemption from allocation because they pay higher, unregulated prices. There is no doubt in my mind that the price disparity between the interstate and intrastate markets is the principal reason why more than 90 percent of new gas—other than that found on Federal lands—is dedicated to the intrastate market, contributing to shortages elsewhere. The House tried to correct that disparity last year with the passage of the Smith amendment.

Unfortunately, deregulation advocates blocked that legislation, and threatened to do so with this emergency bill if they were not exempted. The administration, fearing blockage, refrained from asking for an extension of allocation authorities into the intrastate market.

The administration and the Commerce Committee in making that concession, did not see fit to apply the same logic to States whose consumers have for years paid high prices for the availability of synthetic gas supplies. Thus, my amendment to exempt the volumes of synthetic gas from an assessment of a State's supply situation was defeated.

Mr. Speaker, the Energy and Power Subcommittee will be holding hearings on the energy program that President Carter intends to submit in April. I am confident that the President recognizes the need to do away with the existing two-market structure, and at the same time protect consumers from OPEC pricing.

I know that the President shares the concern that all of us have with regard to reserves reporting and other energy-related data. The Oversight and Investigations Subcommittee has uncovered extensive evidence of underreporting and withheld production. In my judgment, too many price hikes have been rationalized with reasons of "incentive." No more must be granted until these vital information-gathering problems are resolved, and the Federal Government has access to reliable, accurate data upon which to base its policies.

Finally, the current natural gas crisis, which has wreaked havoc in spite of our initially large storage inventories, clearly demonstrates the need for tough, mandatory, and nationwide conservation measures. It has been estimated that over half of our current consumption of energy is wasted. It is well within our technical capabilities to develop conservation programs that will not reduce our standard of living, but will reduce our dependence on foreign energy supplies. Mr. Speaker, the current crisis demonstrates that we have no choice but to do so.

YOUTH APPRENTICE TAX CREDIT ACT OF 1977

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CONABLE: Mr. Speaker, on January 26 I introduced H.R. 2404, the Youth Apprentice Tax Credit Act of 1977, to stimulate the hiring of teenagers and youth as apprentices in private industry. As apprentices, young people would have on-the-job training, experience, and skills development opportunities. Although they would initially receive modest apprenticeship stipends, as their experience and competencies accrued their

stipends would also increase. After the end of the first year, no stipend could be less than the current minimum wage.

An article appearing in today's Wall Street Journal explores the negative impact of the minimum wage on teenage employment opportunities and makes the point that many teenagers would not only accept job-learning situations at less than $2.30 an hour but would be eager for such chances.

Next week the Ways and Means Committee will begin markup on the administration's tax stimulus program. I hope that my proposal to encourage the hiring of teenage and youth apprentices will be favorably considered and incorporated into this legislative package.

The article follows:

THE JOBLESS YOUNG: ARE TEENAGERS IDLED BY THE $2.30 PAY FLOOR? SOME YOUTHS THINK SO

(By Alfred L. Malarre, Jr.)

Betty Jackson has a message for the people in Washington who want to raise the nation's minimum wage:

Drop dead.

If you suspect that Betty Jackson is a profit-greedy employer of unskilled workers who toil in some sweatshop for $2.30 an hour—the minimum allowed by federal law—you are wrong. Plump, middle-aged, black, the mother of four ranging from 17 years of age down to 11, she employs no one. She is poor, and she herself is employed, at modest pay, as a social worker by Dade County, Fla. Her job is to try to find work for jobless teenagers in a poverty-ridden area just north of Miami.

"It would be just awful for the kids if they (the federal authorities) raise the minimum wage again," the black woman says. "It's bad enough now, but if the floor goes up again, the kids simply won't ever get hired."

A NEW ATTITUDE

A decade ago, people such as Betty Jackson, working closely with the poor and the unemployed, probably would have talked differently; the prospect of a sharply higher minimum wage would have been heartily welcomed. But no longer. Over the years, teen-age unemployment has mounted even faster than joblessness in general. And, increasingly, some people in the front line of the war against teen-age joblessness single out minimum-wage regulations as a major barrier.

Nevertheless, plans are afoot in both houses of Congress to raise the minimum wage to $3 an hour and to provide automatic living-cost adjustments. The AFL–CIO regards such legislation as a top-priority need that should, the federation says, "benefit the entire economy by generating additional purchasing power and additional jobs." That view is strongly endorsed by F. Ray Marshall, President Carter's Labor Secretary.

Congressional proponents of a higher minimum wage, as well as many labor leaders, firmly oppose suggestions that any exemption be made for teen-age pay. "Teenagers would simply replace older workers if they were exempted," warns Clara F. Schloss, an AFL–CIO economist, taking a view that harks back to the days before child-labor laws were enacted. "Nothing is gained by pitting one age group against another."

And an aide to Rep. John H. Dent (D., Pa.), who plans shortly to introduce the $3-an-hour proposal in the House, declares that "with such high adult unemployment as we have today, we certainly don't want to encourage a substitution of teen-agers for breadwinners."

SCARCITY OF STUDIES

Extensive, impartial studies of the causes of teen-age joblessness are surprisingly scarce, inconclusive and devoid of comment from teen-agers themselves. About seven years ago, the Labor Department issued a 189-page booklet titled "Youth Unemployment and Minimum Wages." The booklet stated that "increases in the level and coverage of the federal minimum wage may have contributed to the employment problems of teen-agers." However, it went on to caution that "it is difficult to disentangle such effects from numerous other influences," such as training programs and schooling.

The booklet didn't address the important question of whether teen-agers might grab jobs from adults. Besides, some observers suspect that it is adults—particularly the women surging into the labor force—who are grabbing unskilled, low-paying jobs from teen-agers. And the competition for entry-level work is rising at a time when an increasingly technological economy may be generating proportionately fewer such jobs.

Betty Jackson, of course, works entirely on teen-agers' problems and not on adult unemployment, which remains about 7% despite nearly two years of economic recovery in the U.S. Accordingly, she cringes at the prospect of a $3 minimum that would include teen-agers. In fact, she is convinced that even the current $2.30 wage floor has tended to increase the teen-age jobless rate, which stands at nearly 20% for all teen-agers and roughly twice that level for black youths.

SURVEYING THE TEEN-AGERS

Many teen-agers themselves share her views, according to a recent survey of more than 100 Dade County youths. Undertaken by the county consumer advocate's office, the survey sought to find out whether rising minimum wages do in fact contribute to teen-age joblessness. Today's $2.30 minimum is up from $1.60 as recently as 1971.

Teen-age unemployment is a severe problem in Dade County, an area with large black and Cuban-refugee populations. Some 40% of the youths interviewed said they were looking for work. The others either held jobs or didn't want one. Nearly half of those looking claimed that they would be willing to work for less than $2.30 an hour. Office work and restaurant jobs were frequently cited as occupations in which minimum-wage rules tend to limit the hiring of youths.

A second, more-comprehensive study into the causes of teen-age unemployment in Dade County is being planned, with graduate students at the University of Miami volunteering to help county officials. But the recent survey leaves little doubt about the impact of minimum-wage rules.

Among the teen-agers surveyed is Maggie Jones, a 17-year-old black. Maggie, who recently gave birth to a boy, is unemployed but wants work. Guided by Dade County social workers, she recently applied for work at enterprises ranging from fast-food chains to department stores. However, she says, the answer that she gets is "always no, there's nothing available just now."

Would she work for less than $2.30 an hour? "You bet I would, but there aren't many jobs like that around," she says.

Jimmy Harris, an 18-year-old black neighbor of Maggie's also wants a job. He had one last year, helping with inventories in a department store; it paid $2.30 an hour, and he says he liked it. But he was laid off on Dec. 20, when the Christmas shopping rush began to subside. Like Maggie, Jimmy claims that he would gladly work for less than $2.30 an hour. But "there's nothing around," he says, although he is a high school graduate.

Leonard Murray, a 17-year-old black, recently had job interviews at Miami branches at two fast-food chains, but he says, "I've had no luck." He had earned $2.60 an hour in a metalworking plant; however, he recently was laid off. "I would have been happy to work there the rest of my life," he says. "It was an eight-hour day, but I really had to work hard only three or four hours." He reckons that "there would be more work if there was no minimum wage" for teen-agers.

Some of the teen-agers interviewed who do hold jobs are working for less than the $2.30 minimum. In some instances, federal law apparently is being violated. No violation of state law is involved because Florida is one of 10 states with no minimum-wage statute of its own.

Deborah Evans, 17 and black, earns $15 a week baby-sitting for a neighbor. The job, which is steady, entails about four hours of work a day, so that on an hourly basis she receives far less than the $2.30 minimum. Neither Deborah nor her neighbor seem aware that a federal regulation is being violated. Although casual baby-sitting for a few hours a week isn't subject to minimum-wage rules, Labor Department officials say a job such as Deborah's, which involves more than 20 hours a week, clearly comes under the regulations.

WOULD JOB "DISAPPEAR"?

In any event, Deborah seems happy with the job. If she were to demand $2.30 an hour, she says, the neighbor simply couldn't afford her services, the job would "disappear" and the neighbor would have to either give up her own job or leave young children alone in the house.

Various estimates indicate that roughly 10 million persons in a nonsupervisory labor force of more than 70 million remain uncovered by the federal law, although many of them are covered by state statutes. Some states' rules are stricter than federal law: Alaska's minimum is $2.80 an hour, and New York's, though $2.30, applies to a wider assortment of jobs than the federal minimum.

To try to enforce the federal minimum-wage regulations, the government employs about 1,000 so-called compliance officers. Complaints from workers also help. In a recent 12-month period, employers paid nearly $71 million to some 447,000 workers who had been receiving less than federal law required. But no one knows how many violations of minimum-wage regulations go on.

Federal officials say enforcement is difficult and will grow even harder if the minimum is raised and coverage expanded again. Over the years, more and more job categories have been brought under the regulations; this year, for example, the law was extended to more than 500,000 workers in certain types of chain-store outlets.

CONCERNED BUSINESSMAN

Among Dade County establishments still exempt from minimum-wage regulations is John Manley's small, stand-up restaurant in a poor, black district in the southern part of Miami. Mr. Manley, a middle-aged black whose menu is limited to 18-inch hot dogs and buns, soft drinks and beer, is deeply distressed by teen-age unemployment in his neighborhood. "I would guess only about 10% of the kids around here have jobs," he says. He employs three teen-agers and pays each $2.25 an hour. If the minimum wage were raised and extended to cover restaurants such as his, would he be able to keep all three? "No way," he says, adding, "If I had to pay them $3 an hour, two would have to go."

Mr. Manley notes that several teen-agers who have worked for him have gone on to better jobs at the minimum wage or higher. One such teen-ager, he says, now holds a "very good job" as a cook in a downtown Miami restaurant.

Mr. Manley sharply criticizes the local school system, which, he says, produces some

"11th graders who can't even change a dollar bill" for a customer. He adds, "They learn more on the job here than at school." Many neighborhood teen-agers are heavily "into drugs," he says, and they wouldn't "work steady if I paid them $5 an hour." He sees a clear connection linking teen-age unemployment, subsequent idleness, drug use and crime to support the drug habit.

A FATHER'S HELP

Among the few working teen-agers interviewed who gets more than the minimum wage is Jose Ortiz, whose family fled to the U.S. from Cuba in 1962. Jose works as a filing clerk at a Miami hospital. The youth has "no strong feelings one way or the other" about minimum-wage rules and frankly concedes that "I got the job because of my father," an administrator at the hospital. Unlike most teen-agers in the Dade County survey, Jose is from a relatively affluent family.

Moreover, most jobless teen-agers who say that they wouldn't work for less than the minimum wage also appear to belong to fairly well-off families. Gregg Greene, a white youth enrolled at a Miami high school, has "never had a job" but, he adds, "I never really needed one." He believes that if he does get one, he should rightfully earn "just as much as any adult."

Some proponents of a lower minimum for teen-agers note that most industrial nations have lower minimums, or none at all, for youths. Yet, it's said unemployment at all age levels in such countries generally is below corresponding U.S. jobless rates.

JOHN O. MARSH, JR.

HON. J. KENNETH ROBINSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ROBINSON. Mr. Speaker, I am sure the many friends and former colleagues of John O. Marsh, Jr., my predecessor as Representative for the Seventh Congressional District of Virginia, will find of interest the account of his plans to reenter the profession of law on completion of his present assignment with former President Ford's transition team which appeared in the Winchester, Va., Evening Star of January 28, 1977, so I include it at this time under leave to extend my remarks, as follows:

MARSH RETURNING TO LAW PRACTICE

(By Lulu Williams)

John O. Marsh, Jr., who helped transfer executive power in the nation in two administrations, is returning to the practice of law.

Marsh announced yesterday that he is joining a Richmond law firm and is opening a Washington office with another attorney.

Until Feb. 14, however, he will continue to be a member of Gerald Ford's transition team, working out of the Ford transition office on Jackson Place.

He had worked in the White House with Jimmy Carter's transition chief, Jack Watson, Jr. in the transfer of power between Carter's election in November and his inauguration last week.

Marsh, who as the representative from the Seventh District had served in Congress with Ford, moved with him to the White House on Nov. 9, 1974, the day Richard Nixon resigned.

He was one of the four men tapped by Ford to help him form an administration in those critical first days after he took office.

He was named again after Gerald Ford lost his bid for election in November.

At that time, Watson said he could "not have been more pleased with the grace and cooperation" he had received.

One of Ford's last acts as President was appointment of Marsh to become chairman of the newly-created President's Advisory Board on International Investment.

Marsh said yesterday he expected that board to meet "several times a year."

He will become a partner in the law firm of Mays, Valentine, Davenport and Moore, about Feb. 14.

He and another Washington attorney, Henry Dudley, will maintain offices at the Barr building at 910 17th St., Washington, D.C.

Dudley also will become a member of the Richmond law firm.

Marsh, who held the title of counselor to the President with cabinet rank, played a major role in many of the President's decisions, ranging from Ford's precedent-breaking testimony before Congress on the Nixon pardon, to the Ford-to-Carter transition.

Perhaps his toughest assignment in the intervening years was as head of the White House task force that coordinated President Ford's reorganization of the nation's intelligence community "including developing safeguards to preclude certain abuses that had brought them under public criticism," his announcement said.

Marsh was also selected to guide Nelson Rockefeller's vice presidential nomination through Congress. As an eight-year veteran of Congress, he worked closely with Congress during the Ford administration.

It was a long way from Strasburg in 1962 when he was tapped to be the Democratic candidate for Congress.

He won by a few hundred votes over Republican J. Kenneth Robinson and served four terms.

During that time, he served on the House Appropriations with then-Congressman Gerald Ford.

After deciding not to seek reelection in 1970, Marsh went back into law practice.

He was named assistant secretary of defense for legislative affairs in 1973 and joined the staff of Vice President Ford in 1974. He was Ford's national security adviser before moving into the White House in August of 1974.

Marsh received his law degree from Washington and Lee in 1952 and practiced law in Strasburg until his election to Congress.

A former paratrooper and World War II veteran, he is a retired lieutenant colonel in the Virginia National Guard and a frequent lecturer at Army command schools.

He and Mrs. Marsh live in Arlington with their three children.

NATURAL GAS: GOVERNMENT REGULATION OR MONOPOLY CONTROL

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MAZZOLI. Mr. Speaker, soon this House will have to vote on several important and controversial natural gas measures including permanent or temporary price deregulation, mandatory conservation policies, and the route for an Alaska natural gas pipeline.

Before these votes are cast, Congress owes it to the American people to develop answers to several questions concerning the natural gas industry.

First and foremost we need to determine whether or not price deregulation would be tantamount to substituting private monopoly control of prices for governmental control of prices.

For example, if a few large natural gas producers and a few natural gas pipelines are powerful enough to control natural gas prices and supplies, then decontrol would be an unfortunate and terribly expensive mistake.

Maybe there is a middle ground between rigid price controls and total relaxation of such controls.

Second, I believe that Congress must act to develop independent data on the extent of the available domestic reserves of natural gas. Presently, the only data on reserves and usage come from the gas industry itself. This could be a dangerous example of the fox being in charge of the henhouse. A solid authoritative study and report by the Congress would go far to assure the American people that the energy sacrifice they may be asked to bear in the future are unavoidable and not the product of market manipulation.

Third, Congress must consider what effect the preliminary Federal Power Commission decision to approve the arctic gas proposal for a pipeline to transport Alaskan natural gas to the "Lower 48" will have on the natural gas picture.

If this preliminary decision becomes final, and the net effect of it is to foster greater market concentration in the energy industry, then a feasible alternative route must be explored.

For my colleague's information, I am extending here two recent articles on this subject by William Raspberry:

[From the Washington Post, Feb. 7, 1977]

GAS SHORTAGE—OR RIPOFF?

(By William Raspberry)

The President has his emergency gas legislation, and we can hope that it will ease this bitterest of winters for some of the hardest-hit sections of the country.

But it won't solve the basic problem. It doesn't even define the basic problem. We still don't know, for instance, whether there is too little natural gas to go around, or only too little effort being made to get it to us.

We don't even know if the suffering of recent weeks is due primarily to the unforeseen harshness of the weather or, in major part, to the avarice of the people who control gas supplies.

The President, in last Wednesday's fireside chat, spoke to the point. "I realize that many of you have not believed that we have an energy problem," he said. "But this winter has made us all realize that we have to act."

But how we act will depend very much upon whether one believes that we were merely caught short or that we are being set up for another ripoff. You don't have to be a cynic to wonder.

Consider this recent statement by Paul E. Reichardt, chairman of the Washington Gas Light Company:

"The gas industry has reserves, proved and potential, to carry it well into the 21st century." The current crisis, he said, "is a shortage of readily available supply."

That answers one question and raises another: Why is there a shortage of readily available supply?

Rep. Clifford Allen (D-Tenn.), in arguing last week for putting all natural gas resources under presidential control, circulated ex-

cerpts from a radio interview with James C. Cotham, executive vice president of the Nashville Gas Company.

Said Cotham: "The producers are withholding gas from the market. There is absolutely no question about it. We have had members of our company in Houston, Dallas, New Orleans, off and on for the past couple of weeks, trying to find gas. And it is the strangest market I have ever seen.

"It is almost impossible to make contact with somebody who has gas to sell. You have to find a gas finder, or a gas broker, and this broker will make contact (and probably with somebody who will make further contact) and eventually you might find somebody who has gas to sell. You have no idea who it is or where it is."

Said Allen, who at age 65 is just beginning his first full term in the House after years of righteous battle against Nashville area utilities, "It sounds like dealing with a gang of illegal traffickers in dope and narcotics, rather than responsible businessmen."

That is precisely what it sound like, and it is hard to draw any other conclusion than that the producers are quite deliberately creating the scarcity in order to drive up the price of gas.

Remember how, after a few weeks of long lines and $3 limits at the gasoline stations, we found ourselves unresistant to paying 70 cents a gallon and more? How many chilly offices, shutdown factories and threats of cold homes will it take before we are ready to accept a major increase in the price of natural gas? Is that what we are being set up for?

And is that what last week's emergency gas legislation encourages? An understanding was reached that the White House or energy czar James Schlesinger would establish a "threshold" price—pegged perhaps at recent intrastate prices—for gas not previously committed for interstate sale. Sales above that level would be subject to presidential review for "fairness and equity," but would not be subject to rollback.

Allen had argued for prior approval by the President for price increases rather than "a mere reviewal by him after the people have already been ripped off to the tune of millions of dollars."

He also argued, unsuccessfully, for presidential authority to compel the release, allocation and sale of all gas "now being withheld from the market by producers who have contrived to manipulate and create this artificial shortage for their own selfish ends."

Allen may not have been able to persuade his colleagues in the House and Senate, but I am glad that there is at least one voice willing to say what so many of us believe: that the gas industry is "essentially a monopoly, controlled by a few rich, 19th century-type robber barons—a monopoly that has no viable competition and permits of no alternative to which the people can turn during these cold winter months."

[From the Washington Post, Feb. 9, 1977]

NATURAL GAS: A CHOICE BETWEEN A CURE AND A DISEASE

(By William Raspberry)

By now, there may be a national consensus that the two-tier price structure for natural gas doesn't make sense, and that it is an important reason for the current fuel crisis.

But a lot of us are afraid that the cure might be worse than the disease.

Gas sold in interstate commerce is subject to Federal Power Commission price controls. Gas sold within the state where it is produced is not subject to such controls. The producer who can sell intrastate at $2 a thousand cubic feet isn't exactly leaping at the chance to sell interstate at, say, 52 cents.

Many of them are preferring simply to leave the stuff in the ground until the combination of closed schools, shutdown factories and galloping pneumonia persuades us of the wisdom of raising interstate rates.

"There's plenty of gas, and the pipelines are there," says Rep. Charles Wilson, whose East Texas district is in a gas-producing area.

"The gas is there, all right, but the drilling is going on only where it is economic to connect to intrastate pipelines. After all, the producers are in business to make money, and if the price structure won't let them make money . . .

The major companies, according to Wilson, are drilling offshore, where all the gas is for interstate sale. Onshore drilling is, for now, the province of the independent companies, and they aren't drilling where they can't tie into intrastate lines, he said.

Wilson gives an example of how some gas gets left in the ground. "Say you've got an oil field with proven reserves that is 200 miles from an intrastate line and 30 miles from an interstate line.

"Well, 200 miles is too far to run a line to hook up with the intrastate line, even though you can get $2 a foot or better for the gas. But the economics aren't there for the 30-mile line, either, because it's interstate and you are regulated at 52 cents a foot. So you leave it in the ground."

It's the only reasonable thing to do, the Texan insists. Residents of Texas, which along with Louisiana has as much gas in proven reserves as anywhere in the nation, has all the gas they can use. And it is consumer-financed by rates of between $2 and $2.25 a foot. To sell outside the state at one-fourth the intrastate price is to have Texans subsidize the rest of us, Wilson argues.

"If intrastate gas had been regulated at 52-cents a foot, Texas would be gas short, too," Wright says.

But how much of a solution is it to take the lid off interstate prices? Suppose the producers could sell as much as they cared to at, say, $4 or $5 a cubic foot. That would ensure enormous profits, all right, but it would also ensure enormous hardship. Too many people simply could not afford the price.

The obvious compromise solution would be a new price ceiling, higher than the present interstate rate but not high enough to pauperize families dependent on gas for cooking and heating.

Surprisingly, Wilson says he'd accept that sort of solution, adding, however, that "most of my constituents wouldn't, and most of the producers certainly wouldn't."

He believes that the present Federal Power Commission proposal of $1.42 for interstate sales might make it economic to get the gas out of the ground. But that price is under litigation now, and the producers are sitting tight.

"If I were king," says Wilson, "I'd deregulate onshore gas immediately, and I'd gradually deregulate offshore gas, keeping all current contracts (most of them 20-year contracts) in effect. That would help avoid sudden jumps in price, as the new gas and the old gas merged.

"Then I'd reserve the right to veto any price that I considered to be too high."

He made clear that he would let the price rise high enough to force conservation since, after all, there isn't as much gas as there used to do.

The problem is that only the producers have any good idea of how much gas there still is, even in the proven reservoirs. The extent of the reserves constitutes a trade secret, they argue, and the FPC has no right to know.

SENATE—*Thursday, February 10, 1977*

(Legislative day of Tuesday, February 1, 1977)

The Senate met at 2 p.m., on the expiration of the recess, and was called to order by the Vice President.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Lord, our God from whom cometh every good and perfect gift, bestow upon all who labor here the gifts of wisdom, patience, and charity. In the face of the needs of the world and despite our diversity, weld us together in a common purpose for the advancement of Thy kingdom.

May the words of our mouths and the meditations of our hearts be acceptable in Thy sight, O Lord our strength and our redeemer. Amen.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Monday, February 7, 1977, be approved.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 1 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 1 p.m. tomorrow.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION FOR COMMITTEE ON BANKING, HOUSING AND URBAN AFFAIRS TO MEET ON FEBRUARY 23, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Banking, Housing and Urban Affairs may be authorized to meet for a markup session on the afternoon of February 23.

The VICE PRESIDENT. Without objection, it is so ordered.

(Later the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order which has just been entered for a meeting of the Committee on Banking, Housing and Urban Affairs on the afternoon of February 23 be vitiated.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. It is my understanding this has not yet been cleared with the other side.

The VICE PRESIDENT. Without objection, it is so ordered.

(Later the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Banking, Housing and Urban Affairs be permitted to meet for the purpose of a markup session on the afternoon of February 23. I understand this request has now been cleared with the minority.

Mr. STEVENS. The Senator is correct.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I reserve the remainder of my time for the moment.

TRANSPORTATION SYSTEM FOR ALASKAN NATURAL GAS

Mr. STEVENS. Mr. President, last week, Judge Nahum Litt issued the FPC's initial decision on a transportation system to bring Prudhoe Bay natural gas to the lower 48 States. My colleagues will recall that the Alaskan Natural Gas Act which we passed last fall requires the FPC to make its final decision by May 1, 1977. The President will make a recommendation to the Congress by September 1, unless he decides that more information is needed. Congress will then approve or disapprove his recommendation.

The natural gas shortages which are being felt all over this country this winter underscore the importance of getting Prudhoe Bay gas to the rest of the Nation as soon as possible. We cannot afford delay.

But Judge Litt's recommendation of the Arctic gas pipeline through Canada ignores the most serious potential for delay. Canada does not feel the urgency we do and she does not have a procedure for expediting the decisions and permits necessary to get that pipeline built.

A pipeline through Canada cannot be built in time to meet our needs unless Canada is willing to waive some of the legal requirements and procedures as we have authorized our President to in the act we passed last fall.

Prime Minister Trudeau will be in Washington to meet with President Carter on February 21 and 22. This could be an excellent opportunity for our two nations to discuss the potential for such cooperation.

Mr. President, earlier today I had a press conference at which I discussed the pending meeting between the Prime Minister of Canada and our President, and called to the attention of the press and, I hope, the Canadian people, the action that was taken by this Congress and this Government last year in which Congress has granted to our President the right to recommend a waiver of any U.S. laws which might impede the construction of the transportation system to bring Alaska's North Slope gas to market.

In this press conference I indicated that because of the fact that the action we have taken will apply to only 195 miles out of the almost 4,200 miles of the Arctic gas pipeline system should that be approved, I believe it is incumbent upon the leaders of our two governments to discuss openly and candidly the question of whether Canada will similarly grant its chief executive officer the power to waive any laws of its government which might impede the construction of our gas pipeline within the time frame that is required to meet the U.S. needs for that gas.

I ask unanimous consent that the remarks I made at the press conference and a table prepared by the Library of Congress, summarizing some of the Canadian legal requirements, be inserted in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PRESS CONFERENCE STATEMENT BY SENATOR STEVENS

Men and women of the press, I have called this press conference to discuss the upcoming visit of Prime Minister Trudeau on February 21st and 22nd. As you know, the Prime Minister will meet with President Carter to discuss future cooperation between Canada and the United States, particularly in regards to future energy development.

Congress will not be in session prior to the Prime Minister's arrival and this is an appropriate time to discuss the Presidential decision on a gas pipeline route from the North Slope of Alaska to deliver the natural gas to the United States. The meeting between the President and the Prime Minister represents a government to government communication at the highest level.

Regarding these discussions, it is important to note that Congress has granted the President the power to waive Federal laws which would otherwise delay the construction of the pipeline. This waiver power was granted solely to facilitate construction of the pipeline. Further, the judicial review of any Federal action necessary to construct and start up the pipeline is restricted.

If this pipeline goes through Canada, our gas can and probably will be delayed by similar Canadian laws and regulations unless the Canadian Parliament grants the Prime Minister similar power to waive such laws and limit judicial review. To my knowledge, that power does not exist and there is no indication from the Prime Minister or the Canadian Parliament that such power will be sought or granted.

Therefore, a gas pipeline route through Canada, although facilitated through the 195 miles in Alaska, could be delayed for 2,035 miles of construction on Canadian soil.

Among the problems which can delay the construction of the pipeline in Canada will be the settlement of Native claims. The Berger report, based on an extensive hearing record, is scheduled to be published next month. It will detail the legal, social, and economic problems which must be overcome to properly extinguish land claims based on aboriginal title. As you know, there are two competing proposals to deliver Mackenzie Delta gas and the staff preparing the Berger report has recommended a ten to fifteen year delay in deciding a route for a gas pipeline in the Canadian Arctic.

The United States had its own land claims settlement which culminated a 15-year process with the passage of the Alaska Native Claims Settlement Act in 1971. Every indication leads me to believe that the Canadian land claims problem is at least as complicated and will take at least as long to settle.

In Canada, the National Energy Board must recommend to the Prime Minister whether or not the construction of a gas pipeline is to be approved. The Board must consider competing projects within Canada and Canada's own energy requirements. The NEB's function is similar to the FPC's and it is reasonable to expect a lengthy decision making process similar to the FPC's. Additionally, there are indications that the NEB will place its highest priority on Canada's national interests, which is logical. But this will not provide any help to facilitate speedy construction of a gas pipeline on Canadian soil.

Among the competing projects that the NEB will consider is the Polar project to transport gas south from the Arctic Islands where exploration has been much more successful than the Mackenzie Delta. The availability of capital in Canada is limited and the NEB may very well decide against permitting a pipeline up the Mackenzie Valley in order to direct capital to the Polar project or any of the other three projects which may provide a larger volume of gas.

The Government-in-Council, a body similar to a Presidential Cabinet, will make the Canadian decision, possibly following debate in the Parliament. Again, there is no specific time frame upon which to rely regarding eventual approval of a pipeline. We simply cannot assume Canadian approval in time to integrate construction with our expedited decision process.

Also, the problem or discriminatory action by a province or a local government remains. The newly-signed Hydrocarbon Treaty prohibits such discrimination, but it still requires an Act of Parliament to make the treaty effective. There is a real difference of opinion whether or not the provinces are prohibited from discriminatory taxation under the British North American Act. That issue is up to the Canadians, not the FPC, our President, or the Congress.

Judge Litt, in his initial decision, suggests that the U.S. could retaliate in kind should Canada take actions of "best self-interest" such as "unilateration abrogation of business contracts, expropriation of one's neighbor's property, discriminatory taxation, confiscation of dividends owed and payable," or others. But retaliation should not be relied upon to plan a project that has to be expedited. The FPC's treatment of the Canada problem is only one of its shortcomings.

But assuming the pipeline is approved, there will still be interminable delays caused by the many laws and regulations which must be complied with prior to and during construction. Without waiver power granted to the Prime Minister, no pipeline can be constructed through Canada in the time frame which Congress contemplated under the Alaska Natural Gas Transportation Act.

In the final analysis, the viability of a gas pipeline through Canada will depend on the power to waive laws which otherwise delay construction. For example, the trans-Alaska oil pipeline was delayed because of the lack of authority to approve a right-of-way wider than 50 feet. It took the TAPS Act to circumvent that statutorily imposed delay.

You don't even have to assume an obstructive attitude on the part of a Canadian jurisdiction to worry about this. All it would take is one upset Canadian citizen or interest group to bring suit against an agency on some technical point—like that 50-foot

right-of-way in the TAPS case—and the project could be delayed months or years.

The whole problem can be summed up in one question: Will Prime Minister Trudeau and the Canadian Parliament commit Canada to a waiver power similar to that granted to the President by Congress?

Obviously, I intend to do all I can do to get the Alaska route approved. But, for now, I believe it is incumbent on the leaders of our two governments to frankly discuss the time frame for Canadian actions required to facilitate the delivery of Alaska gas to markets in the South 48. If that is done, the decision we make will be realistic.

CANADA

Purpose	Authority	Instrument	Agency
Formation of company	Sec. 25(1) [1]	Special act of Parliament	Minister of Consumer and Corporate Affairs upon concurrence of Minister of Energy, and Resources and of Indian Affairs and Northern Development Affairs.
Certificate of public convenience and necessity	Secs. 26(a), 44 [1]	Certificate	National Energy Board.
Opening of pipeline	Sec. 26(b) [1]		Do.
Filing of application and map showing general location of proposed line and any other information considered necessary by the board.	Sec. 23(1) [1]		Do.
Filing of above with attorney general of each concerned province and publication in newspapers.	Sec. 28(2) [1]		
Following certificate being granted by the board, submission of plan, profile and book of reference to the board and submission of certified copies of the same to the registrars of deeds for the involved counties or districts.	Sec. 27 [1]	Leave	Do.
Entering upon land to take it for a fixed period without the consent of the owner	Sec. 31 [1]	Order	Do.
Where more than 60 ft of land needed for the right-of-way of pipeline, application made to board and following hearing, board may grant part or whole of the request.	Secs. 73, 74 [1]	do	Do.
Copies of board's order certified, and plan, profile, and book of reference deposited with registrars of the involved districts or counties.	Sec. 74(5) [1]		
Construction over utility lines upon application accompanied by plans, profiles, and other information required by appropriate authority.	Sec. 76 [1]	Order in whole or part	Minister of Transport, Railway Canada Transport Commission, National Energy Board.
Crossing of pipeline by highway, private road, railway, irrigation ditch, drain, drainage system, sewer, dike, telegraph, telephone line or line for the transmission of hydrocarbons, power or other substance.	Sec. 77 [1]	Order in whole or part or by regulation	National Energy Board.
Acquisition by pipeline company subject to proper terms and conditions of a right-of-way for transmission lines or pipelines through territorial lands together with such other lands as are necessary for stations, station grounds, workshops, buildings, yards, pumps, tanks, reservoirs or other appurtenances in connection therewith.	Secs. 4, 19(f) [3]	Regulation authorizing Minister to sell or lease territorial lands.	Governor in Council.
Construction of pipeline	Sec. 12(k) [3]		Minister of Indian Affairs and Northern Development.
Application for trunk gas pipelines contain: (1) Suitability of 1st trunkline toward routing for oil pipeline in terms of environmental, social and terrain engineering and consequences of other pipeline and combined effect of 2 pipelines. (2) Assessment of the environmental-social impact of both pipelines in nearby settlements or existing or proposed transportation systems. (3) Comparison of proposed routes with other alternative pipeline routes in terms of environmental and social factors, technical and other considerations.	3.708.3 [4]	Permit	Do.
Tenure of land comprising pipeline's right-of-way and other lands	([2])	do	Do.
POWERS OF PIPELINE COMPANIES			
Entering without previous license and surveying crown lands and other lands lying in intended route of the pipeline.	Sec. 62 [1]		
Purchasing land for the construction, maintenance, and operation and selling or disposing of any unnecessary land for the pipeline.	do [1]		
Construction of pipeline across, upon or under land or any person on the located line of the pipeline.	do [1]		
Joining its pipeline with the transmission facilities of any person at any point on its route.	do [1]		
Construction and maintenance of all roads, buildings, wharves, docks, and other structures and constructing, purchasing, and acquiring machinery and other equipment necessary for the construction, maintenance, and operation of the pipeline.	do		
Construction and operation of branch lines	do [1]		
Alteration and repair or discontinuance of works in this section, and substitution of others.	do [1]		
Transmission and regulation of hydrocarbons by pipeline, and setting of tolls	do [1]		
Doing all other acts necessary for the construction, maintenance and operation of the pipeline.	do [1]		
Conveyance, sale or leasing of part or parts of its pipeline capable of being operated as line for the transmission of oil or gas.	Sec. [1]	Leave	National Energy Board.
Purchase or lease of any pipeline from any person	do [1]	do	Do.
Agreement for amalgamation with another company	do [1]	do	Do.
Abandonment of a pipeline	do [1]	do	Do.
Taking or using crown lands, public beach, beds of lakes, rivers or streams, or lands covered by the above necessary for the pipeline construction and use.	Sec. 66 [1]	Consent	Governor in Council.
Taking or using lands in an Indian reserve	Sec. 67 [1]	do	Do.
Location of pipeline causing obstruction or interference with the working of an opened mine.	Sec. 68 [1]	Leave	National Energy Board.
Right to mines and minerals in lands taken under compulsory powers	Sec. 69 [1]	Consent	Owner of the mineral rights.
Drilling or prospecting for minerals within 40 yards of the pipeline	Sec. 70 [1]	Leave	National Energy Board.
Compensation paid to owner or lessee of mines for interference with mining	Sec. 72 [1]	Rate	Do.
Taking of additional land exceeding the 60 ft width allowed for a right-of-way of a pipeline.	Secs. 73, 74 [1]	Leave	Do.
Construction over other utilities other than navigable waters or railways	Sec. 76 [1]	do	National Energy Board, Minister of Transport, Canadian Transport Commission.
OPERATION, MAINTENANCE AND SAFETY PROVISIONS			
Diversions or relocation of pipelines for construction, or reconstruction of a highway, railway or other work affecting a public interest, or prevention of an interference with a drainage system.	Sec. 37 [1]	Order	National Energy Board.
Opening of pipelines for transmission of hydrocarbons	Sec. 38 [1]	Leave	Do.
Repairing, reconstructing or altering pipeline for public safety before pipeline can be used.	Sec. 39 [1]	Order	Do.
Regulations for safety of public and company's employees	Sec. 39 [1]	do	Do.
Inspection of any place or premise used in connection with the transporting of gas in case violations of safety operation cause operation to cease.	Secs. 43–47 [1]	do	Do.
Safety inspection of all operations concerning the transportation of oil and gas and ordering minimum acceptable standards.	Secs. 12 (d), (j), (k), (p) [3]	Regulations	Governor in Council.
ENVIRONMENTAL AND LAND USE			
Construction of pipeline re waste	Sec. 12(l) [3]	Order	Minister authorized by regulations of Governror in Council.
Measures for prevention of pollution of air, land or water resulting from transportation of gas or oil.	Sec. 12(q) [3]	do	Governor in Council.

Footnotes at end of table.

CANADA—Continued

Purpose	Authority	Instrument	Agency
ENVIRONMENTAL AND LAND USE—Continued			
Comprehensive assessment based on documented research of the expected effects upon the environment: (1) Good engineering practice to insure its safety in the interests of good environmental management and reduction of environmental damage. (2) Construction, operation, and abandonment of a pipeline done to avoid or minimize the adverse effects upon the terrain including vegetation and esthetic damage to the landscape. (3) Crossing over or under rivers and other waters accomplished in a manner to minimize environmental disturbance to the waterbody, its beds and banks and to the adjacent land or vegetation during construction, operation, or abandonment of a pipeline. (4) Minimal interference to the river and lake areas, water quality and feeding, reproduction and migrating stages of fish and other aquatic organisms. (5) Construction, operation and abandonment with minimal interference to land and vegetation that serve for feeding, reproduction and migrating areas for wild birds and mammals and maximum protection for rare or endangered species. (6) Adequate provision for disposal of sewage, garbage and various gaseous, liquid and solid wastes and all toxic materials during construction, operation and abandonment. (7) Adequate provision for preservation or salvage-excavation of archaeological and historical sites and minimal damage to such sites. (8) Effective planning for oil leaks, oil spills, pipeline ruptures, fires and other hazards to terrestial, lake, and marine habitats and for adequate restoration and plans for coping with major hazards or critical events. (9) Educational program for field personnel for the implementation of specific environmental safeguards prior to and during construction and operation of the pipelines. (10) Establishment of an effective pipeline performance monitoring system of inspection and instrumentation to insure operational performance in accord with the above stated environmental concerns.	3.712 [4]	Certificate of public convenience and right-of-way.	Minister of National Emergency Board and Minister of Indian Affairs and Northern Development.

Mr. STEVENS. Mr. President, I have had some comments from the Canadian press concerning my prerogative in raising an issue such as this prior to the meetings of the two leaders of our Governments, and the word "protocol" was used.

I see no reason to trust a decision of such magnitiude to the protocol concept as far as raising issues which must be discussed openly between our two Governments before a pipeline system is agreed upon.

Certainly we should not decide upon a system which would require cooperation from Canada before an indication is given clearly and unequivocally that that cooperation would be forthcoming in the same manner in which we have already granted similar powers to our President.

I reserve the remainder of our time.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider four nominations which I will send to the desk and which have been reported unanimously from the Commerce Committee on January 19, and I ask unanimous consent for their immediate consideration.

The VICE PRESIDENT. Without objection, it is so ordered.

The nominations will be stated.

THE DEPARTMENT OF TRANSPORTATION

The legislative clerk read the nominations of Alan A. Butchman, of the District of Columbia, to be Deputy Secretary of Transportation; Terrence L. Bracy, of Virginia, to be an Assistant Secretary of Transportation; Chester Davenport, of Maryland, to be an Assistant Secretary of Transportation; and Linda Kamm, of the District of Columbia, to be General Counsel of the Department of Transportation.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered en bloc and, without objection, they are approved and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President of the United States be immediately notified of the confirmation of the nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER (Mr. MATSUNAGA). Without objection, it is so ordered.

ORDER FOR REFERRALS TO BE MADE IN ACCORDANCE WITH NEW JURISDICTIONS OF COMMITTEES

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that any bills, resolutions, and nominations received today be referred in accordance with the new jurisdictions of committees detailed in Senate Resolution 4 which becomes effective tomorrow. This request is to preclude a possible rereferral on tomorrow.

I understand this request has been cleared with the minority.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER PLACING HOUSE JOINT RESOLUTION 239 ON CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when House Joint Resolution 239 is received from the House it be placed on the calendar. I understand this request has been cleared with the minority.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, do I have any time remaining under the standing order?

The PRESIDING OFFICER. Yes, the Senator has about 5 minutes.

Mr. ROBERT C. BYRD. I thank the Chair. I yield to the distinguished Senator from Rhode Island (Mr. PELL).

The PRESIDING OFFICER. The Senator from Rhode Island.

ORDER PLACING HOUSE JOINT RESOLUTION 240 ON THE CALENDAR

Mr. PELL. Mr. President, I ask unanimous consent that when House Joint Resolution 240 is received from the House it be placed on the calendar.

I add by way of explanation that this is a resolution passed already by the House, which normally would be jointly referred to the Commerce Committee and the Foreign Relations Committee. But in view of the urgency expressed by the administration and in view of their approval of the resolution, both committees have waived their rights to referral. I hope action could be taken now on the floor.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, may I ask the distinguished Senator two questions: One, has this request been cleared by the Committees on Commerce and Foreign Relations?

Mr. MAGNUSON. Mr. President, I can answer that. This has been cleared with the Committee on Commerce. The Senator from Rhode Island has held some discussions and hearings on it. We have previously had long hearings on the subject. It refers to the 200-mile limitation which Congress has passed.

But the effective date of enforcement of this measure is March 1, and we have to proceed with this joint resolution because it deals with what the Senator from Alaska, the Senator from Rhode Island, and I put in the 200-mile limit bill providing for foreign fishing within the 200-mile limit subject to the approval of the district council if the fish is declared to be surplus.

Mr. ROBERT C. BYRD. It has been cleared with Commerce; what about Foreign Relations?

Mr. PELL. It has been specifically cleared with the ranking minority member and the chairman (Mr. SPARKMAN).

Mr. ROBERT C. BYRD. Has it been cleared with the minority?

Mr. STEVENS. Mr. President, reserving the right to object, it has been partially cleared on our side. I would hope the chairman would withhold his request until we touch one more base. We do not believe we will object, but there is one other Senator to check with.

Mr. ROBERT C. BYRD. Will the Senator from Rhode Island withhold his request?

Mr. PELL. Mr. President, I withdraw my request until the appropriate time.

(Later the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I understand that a request that was previously entered by Mr. PELL and was held at the request of the distinguished Republican whip has now been cleared.

Mr. STEVENS. I remove my objection.

Mr. ROBERT C. BYRD. I repeat the request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. How much time do I have remaining, Mr. President?

The PRESIDING OFFICER. The Senator has 3 minutes.

Mr. ROBERT C. BYRD. I yield it to the Senator from Wisconsin.

THE PERILS OF PROLIFERATION

Mr. PROXMIRE. Mr. President, several recent attempts by an employee of the Pakistani Embassy to obtain a paper on how to build a nuclear device from a Princeton engineering student dramatizes the peril of nuclear proliferation.

The sequence of events I am about to relate comes to me from the student involved. He called my office after he became concerned about the possible implications for proliferation of nuclear weapons.

In the spring of 1976 this young engineering student, John Phillips, was enrolled in a Princeton physics course dealing with nuclear weapons and arms control. For his paper, he decided to design a nuclear device—to demonstrate how easy it would be for a terrorist or criminal organization.

Four and one-half months later the submitted paper created a stir among his professors. Soon the New York Times printed a story about the student, who from unclassified sources had constructed a workable nuclear device.

Now here, as they say, the plot thickens. First, the French Embassy in Washington called Mr. Phillips asking for a copy of the paper. Phillips said no.

Then the Pakistani Embassy called the dean of student affairs requesting the report. When denied, the Pakistani Embassy contacted Mr. Phillips directly. Again he refused.

And how did the Pakistani Embassy find its way to John Phillips? Well, first they called the Energy Research and Development Agency—ERDA—which recommended that the Pakistanis call Phillips directly. They said it was an unclassified paper so the Pakistanis could go straight to the author.

So what does this mean? Why are the Pakistanis interested in the Phillips paper? Of course, I do not know.

But it does raise certain questions. If the paper is accurate, if it does approximate a nuclear device, should ERDA be sending foreign embassy personnel over to get copies of it? Should ERDA be sending anyone over to get copies?

Well, we do not know for sure if it is a workable design. And the author is being prudent by not releasing it to anyone. So there is no danger this time. But what about the next time?

We do know that the Pakistanis are interested in buying a French reprocessing facility for their country. A reprocessing facility could be used to covertly develop a bomb.

The U.S. Government has protested this arrangement, but there is no final word that it has been cancelled by either party.

The Pakistanis may want a nuclear capability today to match the Indians on their border. The Indians covertly exploded a bomb on May 18, 1974, possibly to match the nuclear capability of the Peoples Republic of China on their border. The Peoples Republic of China first exploded a bomb on October 16, 1964, probably to match the Russians on their border.

And so it goes. One country after another.

This is the most dangerous threat to world peace, for with each new nuclear power the odds are dramatically increased that in desperation, in panic, in cold calculation, or by accident, these devices will be used.

Mr. President, after John Phillips appealed to my office, we jointly decided that the appropriate government officials should be notified about this interest by foreign embassies.

Therefore, we notified the Arms Control and Disarmament Agency, the State Department, the Federal Bureau of Investigation and the Central Intelligence Agency.

A period of about 2 weeks went by, During that time the FBI checked out the details of the story. They interviewed John Phillips and others involved. Then the FBI informed me that no Federal laws had been broken and no classified data had been disclosed. After consultation with the oher Government bodies and prior notification, I decided to make public this story. John Phillips was in agreement with this plan for, as he put it, this sequence of events demonstrates the need for a public review of the proliferation problem.

Mr. Phillips feels strongly, and I think wisely——

The PRESIDING OFFICER. The time of the Senator from Wisconsin has expired.

Mr. PROXMIRE. Mr. President, I ask for 1 additional minute.

Mr. ROBERT C. BYRD. Mr. President, I would have to object, because that has been the policy all along. If Mr. STEVENS, who still has a little time under the standing order, wishes to yield——

Mr. PROXMIRE. Mr. President, will the Senator from Alaska yield to me 1 additional minute?

Mr. STEVENS. I am happy to do so.

Mr. PROXMIRE. I thank the Senator.

Mr. President, Mr. Phillips takes the position that the important thing to do is to do our very best to see that no enriched uranium or plutonium be disseminated except under the most unusual circumstances. This incident dramatizes that we can no longer depend upon preventing the dissemination of information. This was a good student, an undergraduate of Princeton University, and an extraordinarily bright young man. If he could design such a device on the basis of unclassified information readily available to anyone, who could not do so?

Let me conclude by adding that I think that Mr. Phillips has handled this situation very, very well. From the beginning he has resisted efforts to obtain his paper. And he has repeatedly stated that this paper will not be made available to anyone. That is a wise and prudent decision and I applaud his good sense.

Mr. President, I ask unanimous consent that several newspaper articles dealing with this subject be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 8, 1977]

NATIONS BEAT PATH TO DOOR OF PRINCETON SENIOR FOR HIS ATOM BOMB DESIGN

(By Joseph F. Sullivan)

PRINCETON, N.J.—John A. Phillips's life hasn't been the same since he became Princeton University's Tiger cheerleader, started his own pizza-delivery business and designed an atomic bomb.

The pizza operation is attracting a lot more customers—"there are 14 of us involved in the business," Mr. Phillips says, "and on a good night we can gross $400." Mr. Phillips' physics paper, which first drew public attention in October, is attracting interest, too; officials of both Pakistan and France have asked the lean, dark-haired 21-year-old senior for copies of the report.

The Pakistan caller, Mr. Phillips said, kept talking to me and said it would be a worthwhile thing to do." But Mr. Phillips said, he turned down the request, leaving the caller "upset."

Mr. Phillips, whose report on making a

bomb for $2,000 was based on publicly available information, said he had also rejected the French request.

He said he had reported the call from the Pakistani to Senator William Proxmire, Democrat of Wisconsin, because he respected the Senator, and to the Central Intelligence Agency. The call from the French came three months ago and from the Pakistani on Jan. 18.

Senator Proxmire, who disclosed the episode this week, said it illustrated how desperate some foreign countries were to attain nuclear bomb capabilities.

Iqvas Butt, the Pakistan Information Minister, denied in Washington that his country wanted to build a bomb, and he said contact had been made with Mr. Phillips by a junior embassy official who had obtained his name from the United States Energy Research and Development Administration.

For a time, Mr. Phillips' classmates called him "Shroom"—short for mushroom, which referred both to his pizza business and his physics project. Today he relaxed in white jeans and school sweater at the Ivy Club, a social and eating club on campus, and conducted interviews with reporters when he was not in class.

He recalled that his being the only student who had auditioned for the right to wear the tiger costume and cavort at the football and basketball games last September and his Aristotle Pizza—titled after his middle name—were his chief points of identification on campus.

After the news of his nuclear paper began circulating last fall, the student, who is from North Haven, Conn., became an overnight celebrity.

Mr. Phillips, who is majoring in aerospace science, said the research and writing of his paper had taken five and a half months, and was based on information he had obtained from the school library and public government papers he had got through the mail and during a trip to Washington.

His adviser on the project was Prof. Freeman Dyson, a physicist at the Institute for Advanced Studies who has worked on nuclear projects and who was curious about how Mr. Phillips had obtained all his material.

"I think it was a case of someone without access to classified material guessing correctly at a component known to someone who has security clearance," Mr. Phillips said.

He has been advised by his teachers, who gave him an "A" for the paper, and by agents of the Federal Bureau of Investigation, who visited him after the foreign contacts, not to show his paper to anyone.

Mr. Phillips said the only part of the paper that could be sensitive dealt with how to create a "supercritical mass" in the bomb and set the stage for its explosion. In the bombs that fell on Japan, the component used to trigger the bombs was TNT. Mr. Phillips said his component made his version somewhat more advanced than the first-generation bombs, but not advanced by today's standards.

The success of his school paper has delighted his parents, Prof. and Mrs. Aris Phillips of Yale University. His father teaches mechanical engineering.

Mr. Phillips also has received a number of job offers, and believes he has a manufacturer lined up for a motorcycle safety device he designed.

"It should reduce all major injuries motorcyclists are susceptible to, up to a speed of 40 miles per hour," he said.

He worked on the motorcycle device after crossing the country from Berkeley, Calif., to Princeton over a two-week period last year.

"I really enjoyed the experience, but after I learned more about how dangerous motorcycle accidents can be, I'm amazed at myself," he said.

Mr. Phillips said he had decided to try to design an atomic bomb to test the contention of proponents of easy access to plutonium and uranium that small countries could never design a bomb.

"I think I've demonstrated that it doesn't do any good to prevent dissemination of information, because it's already out," he said. "The only way to stop proliferation of nuclear weapons now is to restrict the distribution of plutonium and uranium."

[From the Princeton Alumni Weekly, Oct. 25, 1976]

ON THE CAMPUS: REINVENTING THE PU-239 BOMB

(By John D. Fox, '77) *

Just as the radioactive fall-out from recent Chinese nuclear tests was settling over the Northeast, Princeton's Physics Department set off its own charge: an undergraduate, relying entirely on documents in the public domain, had designed an atomic bomb with half the power of the model dropped on Hiroshima. According to Frank M. Chilton, a California nuclear physicist who specializes in explosion engineering, the student's scheme for a 125-pound PU^{239} fission device would be "pretty much guaranteed to work."

The bomb, detailed in a 34-page junior independent paper last spring by John Aristotle Phillips '77, could be built for $2,000 (excluding plutonium) and was intended to be "the crudest, cheapest and simplest device possible." Phillips, who doubles as the Tiger mascot on football weekends, denies reports that his creation was unveiled as a new offensive strategy for the Yale game. "The point," he says, "was to show that any undergraduate with a physics background can do it, and therefore that it is reasonable to assume that terrorists could do it, too."

The mustachioed senior, a transfer student from Berkeley, has achieved a quick renown since motorcycling 3,000 miles to Princeton last year. He shows a creative nonchalance toward academics—a trait almost extinct on today's competitive campus. He prefers to "work on something that interests me" rather than hand in regular problem sets: "I don't even know what my grade point average is," he claims. And the thing that really interested him while taking a disarmament and arms control course from the Institute for Advanced Study's Freeman Dyson last term was the threat of nuclear terrorism, and the obstacles facing a group that wants to build an A-bomb.

In acting out the part he thinks any determined criminal organization could play, Phillips sent off $15 to the Government Printing Office for copies of "The Los Alamos Primer" and "Manhattan District History, Project Y," which summarize the problems encountered by and the knowledge available to atomic researchers in 1945. After trying three times, he also enlisted Dyson to approve and advise his project. The professor was reluctant to become involved because if Phillips proved successful, it might appear that Dyson had passed him sensitive data and concepts, thus jeopardizing Dyson's national security clearance.

"It was a strange situation," notes Phillips. "Dyson never told me anything concrete. The entire spring semester was like a *pas de deux* between the two of us. He would tell me when I'd gotten off the track in general terms, but that's all." Between frequent advisory sessions, Phillips holed up in the Ivy Club library with his reference books and calculations, ignoring all his classes except those bearing on the project. After four months' work the determined son of a Yale engineering professor was stumped by the problem of how to design the high-explosive component needed to trigger the bomb's atomic reaction. Days before his May deadline, he "had a flash" and made a "conceptual guess" about the puzzle in front of him. "Once you get the outline and know what pieces are missing, you know their shape—you get the answer. It was profoundly simple, once I saw it."

Phillips then tied up his research with an astute call to a duPont company official, who accidentally told him the classified name of the explosive material the U.S. Army uses in its A-bombs.

Though he had already concluded that "billions of dollars and years of research are no longer required for the design and construction of a fission bomb," but that "fanatical dedication to the goal and scientific know-how are," the researcher could only be sure he had the right plan—and an "A" paper—when his adviser broke a month-long silence to declare that the document might be classified. The paper raised several distinguished eyebrows in a startled physics department and earned Phillips praise from Dyson for "accomplishing so much in so short a time." Phillips was warned that his work was "a sensitive thing" and that he might even run the risk of being kidnapped if word got out. Only one other such theoretical design had been made outside "authorized" circles in recent memory, and that was a sub-kiloton model by an MIT graduate student who chose to remain anonymous.

After switching majors to the Aerospace and Mechanical Sciences Department this fall to further his aim of becoming an astronaut, Phillips thought he had traded the problems of detonation for those of his newest ingenuity, Aristotle's Campus Pizza Delivery (friends have nicknamed him "shroom"—both for his pizza toppings and for the cloud shape made by an atomic blast). And life as the Princeton Tiger was challenge enough: "You can't help but get inebriated. When you're in the stands, the alumni get insulted if you don't take a hit from their flasks."

But the doggedness of University Press Club reporters finally led Phillips and his adviser to break the story (with sensitive configurations deleted). "We decided the whole purpose of the paper would be defeated if we didn't speak to the press," Phillips explains. Professor and student hope that publicity of the project will focus attention on the vulnerability of industrial societies to terrorists: the inadequately guarded in-transport supplies of plutonium, from which the 15 pounds ($100,000 worth) necessary to build Phillips' device could be stolen.

Instant fame has not changed the bomb designer's fortune; he's "having a blast" enjoying the attention of waves of wire service reporters and photographers, feature writers and scientific journalists. But the limelight can pale, as when Phillips stumbled out of bed to answer the phone at 2 a.m. and was greeted with: "This is the Australian Broadcasting Service in Sydney. You're on the air."

Asked by a Paris Match correspondent if he has further plans, perhaps to develop a hydrogen bomb as a senior thesis, Phillips leans against the wall of his proctor-reinforced dorm and shakes his head. The point about terrorist danger has been made, he feels, and he has no basic interest in armaments beyond that. "I just want to drop the whole thing," he sighs.

[From the New Haven Register, Feb. 9, 1977]

PAKISTANI AGENT TRIES TO GET AREA STUDENT'S PLANS FOR BOMB

(By Stan Fisher)

A "very, very persistent" Pakistani embassy official has attempted to obtain plans for a crude atomic bomb—plans that were assembled as a class project last year by Princeton University student John A. Phillips.

Phillips, 21, a North Haven resident, said

---

*Our writer was assisted by the reporting of Alexander N. Wolff '79 and Ralph Taylor '77.—ED.

today he rebuffed the official's inquiries and the matter has been under investigation by the Federal Bureau of Investigation, at the request of the Central Intelligence Agency, and that U.S. Sen. William Proxmire is scheduled to discuss the situation in the Senate Thursday morning.

Phillips' research paper, written for a physics course in 1976, was compiled from declassified government publications and includes plans for assembling a crude, Pu 239 fission bomb.

Three weeks ago, he said, a Pakistani official telephoned him to ask for a copy of the paper. Phillips said the official refused to identify himself and would say only that his government was "interested in information" when asked why Pakistan would be interested in the plans.

Pakistan recently purchased a nuclear reprocessing plant from France, under the stipulation that the country not build a nuclear bomb, Phillips said. Three months ago, French government officials asked Phillips to testify regarding construction of an atomic bomb as a prelude to their sale of the reprocessing plant to Pakistan.

Phillips said the Pakistan official first called university officials to locate him. Because of that advance warning, an FBI agent was present when the embassy official's call came through.

The embassy official was "very persuasive . . . he wouldn't take no for an answer," Phillips said. While money was not specifically offered, the official said "It would be worth my while" to provide the plans, he said.

Phillips said he eventually learned the official's name, at the FBI agent's request, by asking to whom he should send the plans. He then told the man that he wouldn't provide them.

Phillips' project was undertaken to disprove the contention that the near-impossibility of constructing an atomic bomb precludes the need for stronger safeguards for shipment and storage of atomic materials.

While he implied that he was not surprised by the inquiry from another government, he did not "expect it to be Pakistan." He since has been advised, he said, of the eagerness of Third World countries for information regarding nuclear devices.

Phillips, the son of Prof. Aris and Mrs. Bessie Phillips of North Haven, graduated from North Haven High School and attended the University of California at Berkeley for two years before transferring to Princeton. He is extending his undergraduate education there and is currently in a double junior-year program. As the result of his paper and the inquiries, he has been receiving government protection.

INVENTORS: A PRINCETON TIGER DESIGNS AN ATOMIC BOMB IN A PHYSICS CLASS

(By Richard K. Rein)

John Aristotle Phillips of Princeton is probably even more rah-rah than the average college senior. On Saturday afternoons he puts on a tiger suit and leads the football cheers. He has danced in the male kickline of the Triangle show. And he helps run a campus pizza business that grosses $1,000 a week. But there is another side to John Aristotle Phillips: he has just designed a homemade atomic bomb.

"I wanted it to be simple, inexpensive and easy to build," says Phillips, 21, the son of a Yale engineering professor. "The idea was not to use any classified information. I wanted to do it with what was available to the public."

Phillips spells out his design in a 40-page physics term paper. According to nuclear physicist Frank Chilton of Palo Alto, Calif., the Princeton student has overcome some of the major pitfalls in building a nuclear device. "He says it's 20 years behind the time," Phillips observes, "but still more sophisticated than the Hiroshima bomb." Phillips hasn't actually built the bomb, but it would be about the size of a beachball and weigh 125 pounds. It would cost about $152,000—of which roughly $150,000 is needed to buy the critical 15 pounds of plutonium necessary to make it explode (with one-half the force of the Hiroshima bomb). Plutonium is, however, for sale only to governments and properly accredited corporations and individuals. "The idea is that you steal it," says Phillips, who advocates stronger safeguards to prevent such thefts.

Page 20 of Phillips' research paper has been withheld from public view: It deals with the key problem of the type of high-explosive component needed to trigger the nuclear blast. Phillips figured out the answer with the aid of nuclear engineering textbooks and two U.S. government publications. Says Phillips: "It's very simple. Any undergraduate physics major could have done what I did." (Last year, for a TV show, an anonymous MIT student did design a low-yield A-bomb.)

Phillips is now working on his senior project, a crash-protection system for motorcyclists. He once rode a Honda 500 east from Berkeley, where he spent his first two college years. He will graduate in June with an engineering degree and is applying for astronaut training. Right now he's looking forward to Princeton's Nov. 6 football game at Yale. The student who plays the Eli bulldog is Phillips' best friend. "We're going to together and work out some crazy routines," says Phillips. "That's what I like best about being the tiger. You can do just about anything."

[From the New Times magazine]

JOHN PHILLIPS: HIS PHYSICS PROJECT WAS AN ATOM BOMB

When John Aristotle Phillips went to check if he'd flunked his physics project (after a month's silence from his professor), he was told that the government had his paper and was considering giving it classified status. Apparently John's blueprint for an atomic bomb, more than half as powerful as the one that destroyed Hiroshima, was right on target.

Petite enough to fit inside the trunk of a car, and quite economical (the materials, excluding plutonium, would cost about $2,000), the bomb, says John, was not so difficult to design. "Any determined terrorist with a basic understanding of physics could do what I did." That was the main reason that John, then 20 and a junior at Princeton, undertook the atomic challenge. "I wanted to draw attention to the issue of safeguarding nuclear materials. My belief is that the U.S. doesn't use enough discretion in the procedures used to transport and store the materials." With a bit of stolen plutonium (John's bomb requires 15 pounds), a terrorist could build himself a bomb and play an endless game of nuclear blackmail.

"Billions of dollars and years of research are no longer required for the design of a Pu-239 fission bomb," John told me. It took him just under five months, Almost all the references John used—there were about 25—are available to the public in physics and engineering libraries; the other two, "The Los Alamos Primer" and "Manhattan District History, Project Y," came from the U.S. Government Printing Office.

John's physics adviser, who'd worked at Los Alamos, bent over backwards *not* to reveal any classified information for fear of endangering his national security clearance. "He merely directed me to a couple of books and told me when I got off the track," John affirmed.

After the research, he had only to fill in one missing link—how to arrange the explosives to achieve a supercritical mass and detonate the bomb. That was highly classified.

"I made a conceptual guess," John said. "I had a flash, and it turned out to be right. It was profoundly simple once I saw it, and someone else with determination could see it too."

More immediately frightening to Phillips' family than a determined terrorist is a lazy one, who would find it more profoundly simple to "recruit" someone like John as a consultant. "We did consider the kidnap possibility," he says, "and it took a while before my parents, my professors and I decided to give in to reporters who somehow got wind of my paper. If I've drawn attention to the safeguard problem, if this has in any way helped deter a real bomb from going off in a place like Manhattan and killing a million people in a 10-millionth of a second, then my purpose has been achieved."

In fact, while John is disturbed by strange letters and midnight callers who ask for him and hang up as soon as he responds, his project has, perhaps, already had positive effects. Within a few weeks after he went public this past September, France announced its new willingness to cooperate with the U.S. to establish tighter safeguards in the sale of reprocessing plants and in mid-November offered Pakistan an easy way out of a sales contract signed last spring.

John would like to think his project has something to do with it: "I got a call from the French Embassy in Washington. They wanted my paper, which of course I couldn't give them. But they did say it was brought up as an important subject in the controversy over whether to sell more reprocessing plants and nuclear technology."

Now 21, John is completing his major in aerospace science, hoping eventually to become an astronaut. He expects a patent soon on a motorcycle-crash protection device he invented. He's also the Princeton Tiger at football games, runs Aristotle's Campus Pizza Delivery (his own creation, grossing about $1,500 a week) and is busy trying to choose among several exciting job offers that followed his explosive fame.

And his paper? The U.S. government finally did not classify it because of a sort of "Catch-22," but his professors locked it up after removing a key page.

ORDER OF BUSINESS

Mr. STEVENS. Mr. President, I reserve the remainder of our time.

The PRESIDING OFFICER. Under the previous order, the Senator from New Mexico (Mr. SCHMITT) is recognized for a period not to exceed 15 minutes.

Mr. STEVENS. I ask unanimous consent that the special order for Senator SCHMITT be vacated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Under the previous order of the Senate, the Senator from South Carolina (Mr. THURMOND) is recognized for a period not to exceed 15 minutes.

Mr. STEVENS. I ask unanimous consent that that order be vacated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Under the previous order, the Senator from Alabama (Mr. ALLEN) is recognized for a period not to exceed 15 minutes.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that that order be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, there will now be a period of 1 hour for the transaction of routine morning business, with state-

ments therein not to exceed 10 minutes each.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider a nomination that has been reported from the Committee on Foreign Relations, and ask for its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered. The nomination will be stated.

DEPARTMENT OF STATE

The legislative clerk read the nomination of Richard B. Parker, of Kansas, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Lebanon, which had been reported earlier in the day from the Committee on the Judiciary.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE PAUL WARNKE NOMINATION

Mr. HUMPHREY. Mr. President, I wish to address myself to a matter which has been occupying a great deal of public attention.

I am disturbed over the bitter attack that has been launched against a very distinguished fellow citizen, a gentleman by the name of Mr. Paul Warnke. I am very disturbed over the circulation, in the Senate and elsewhere, of a memorandum opposing the nomination of Paul Warnke to be Director of the Arms Control and Disarmament Agency and our chief SALT negotiator. What is so disturbing is the fact that this memorandum, which urges Senate rejection of Mr. Warnke's nomination, is predicated on what I find to be, through my long acquaintanceship with Mr. Warnke, outright distortions and misrepresentations of this distinguished citizen's views on arms control and disarmament.

I believe I qualify as an observer in this area, Mr. President. I am the author of the Arms Control and Disarmament Agency. In 1956, I authored a resolution in this body to establish a Special Committee on Arms Control and Disarmament. I served as chairman for that committee for many years. I attended, as a U.S. delegate, the disarmament conference in Geneva, representing this country.

I also, as your Vice President, was in part, at least, a participant in and, in part, responsible for what we call the Nuclear Nonproliferation Treaty.

Much of my public life has been given to this effort of arms control. I sponsored the resolution here in the Senate, asking President Kennedy to take the lead in the so-called Limited Nuclear Test Ban Treaty. These are measures that are a part of my public life.

I have had the opportunity over these many years to work with Mr. Warnke and to work with others with whom he was associated. As he has indicated in his testimony before the Committee on Foreign Relations, he does not believe in unilateral disarmament. He believes in negotiated, balanced reduction of weapons as a means of strengthening our national security, not weakening it.

Mr. PROXMIRE. Will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. PROXMIRE. I congratulate the distinguished Senator from Minnesota on the statement he is making on Mr. Paul Warnke. I have known Mr. Warnke for some time and I think this is one of the best appointments any President has made in recent years. Most appropriately, because as I understand it, Mr. Warnke is being appointed to the Arms Control Agency and he has solid military experience, he is one who is in a position to understand arms control, not only believes very deeply in controlling arms, trying to secure effective limitations, but also is one who understands the military implications practically and thoroughly. I think this is a very good appointment.

I think it is ironic that the grounds on which Mr. Warnke is being attacked, as I understand it, seem to be that he believes in what he is doing. He is appointed to a mission that he believes should be carried out and I cannot think of any more important mission that any public servant is going to have in coming years.

Incidentally, I think one of the most important statements that the President of the United States made in his inaugural speech was when he made the specific commitment to do his best in his 4 years in office to limit and reduce nuclear arms throughout the world. I think the statement made by the Senator from Minnesota is most significant and I am delighted to have the opportunity to support it.

Mr. HUMPHREY. I thank the Senator from Wisconsin very, very much.

The main exhibit in this memorandum I spoke of is the spring 1975 foreign policy article written by Mr. Warnke, entitled "Two Apes on a Treadmill," which it excerpts with 12 different ellipses in a few hundred words. The purpose of the omissions is to disguise the fact that Mr. Warnke did not propose some vaguely sounded unilateral arms control initiative but, instead, suggested some kind of halt which would seek some corresponding halt within 6 months on the other side. This view was directly mirrored in the actions of President Kennedy which were successful in achieving a partial test ban agreement 14 years ago. This is a very hardheaded version of unilateral initiative and a very plausible one. And it certainly is not unilateral disarmament.

The author, or authors, of the memorandum ends by saying that Mr. Warnke "supports unilateral arms reductions to levels far below anything proposed in current arms limitations talks."

In the first place, neither side at the arms talks has proposed unilateral arms reductions at all. And the evidence compiled about Mr. Warnke does not show him arguing for unilateral arms reductions either. It shows him, at earlier periods, urging halts or abandonment of programs not then completed.

For example, it shows Mr. Warnke opposing the ABM—period. Yet, it fails to note this opposition eventually became actual U.S. policy. It shows him urging a delay in MIRVing. Many MIRV proponents now regret that MIRV was deployed, particularly since once deployed, it could become a nonnegotiable escalation in the arms race—a vulnerability which may take a $30 billion MX missile program to counter.

The memorandum asserts that Mr. Warnke has not complained about Soviet programs. But, in fact, the ellipses used in the memorandum have deleted just such references by Mr. Warnke to the Soviet spiral of deployment.

The memorandum does not just take statements out of literary context; it removes issues from the temporal context as well. It assumes that past opposition to a weapon system which was later purchased is equivalent to a desire to eliminate that weapon system unilaterally after its purchase, and after the Soviet Union has responded to that purchase, and after the entire strategic situation has moved ahead to a different time period. Apparently, it is deemed current unilateral disarmament to have opposed weapons systems in the past.

The memorandum criticizes the Project on Budget Priorities—a citizens' organization formed to lobby for reductions in defense spending—for asserting the United States will continue to lead the Soviet Union in numbers of missile warheads "well into the 1980's, no matter what the Russians do." It asserts this is incorrect. But, it is not. Indeed, on page 125 of former Defense Secretary Donald Rumsfeld's report on the U.S. defense posture—Annual Defense Department report fiscal year 1978—it can be seen that the United States has a 5-year lead into the eighties, even in hard-target kill capability, despite the larger Soviet warheads.

The main objection of the memorandum is to the speech in which Mr. Warnke said:

> Even substantial nuclear superiority, short of nuclear monopoly, could not be a decisive factor in any political confrontation between the United States and the Soviet Union.

I leave as an exercise for the reader the pondering of what "substantial," and "decisive," and "political" mean in this sentence. But it is obviously true that neither the United States nor the Soviets are going to capitulate in a political crisis just because one side can destroy the other more times over.

Mr. President, I ask unanimous consent that the full text of Mr. Warnke's article be printed in the RECORD in order for my colleagues to understand the full

dimension of his views on this matter and not be misled by distortions or misrepresentations of those views.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APES ON A TREADMILL

(By Paul C. Warnke)

Recent articles in Foreign Policy argue that critics of our defense spending overstate its impact and misapprehend its driving impulse. Philip Odeen insists that our military investment has never been a better buy. Albert Wohlstetter questions the very existence of a strategic arms "race" between the Soviet Union and the United States.

Wohlstetter's position, as I understand it, is that these two rivals accumulate nuclear arms each at its own pace, a pace that is for each affected by a complex series of considerations. In decrying the notion of a race, Wohlstetter asserts that the metaphor is inapposite because the paces don't match. There can be no race, he argues, "between parties moving in quite different directions." He cannot, of course, mean that the United States is backing up while the Soviet Union presses on. Both continue to amass nuclear weapons in quantities and varieties inexplicable on any military basis. The "race" analogy is not destroyed by the fact that the "runners" may move at times at different speeds. Marathons fit the tag as well as sprints. More damaging to the figure of speech, perhaps, is the fact that a true race needs a finish line.

What troubles me, however, is not the question whether the metaphors in vogue are too simplistic. In exhausting detail, Wohlstetter documents the intricacy of strategic arms competition. Not discussed is the key question whether what we are doing in this field is necessary or even desirable.

The Soviets have, in the past, at times surprised us by building more nuclear weapons than we anticipated. But their hot pursuit has, in the estimation of informed observers, never overcome our initial lead. As expressed by Secretary Kissinger in testimony before the Senate Foreign Relations Committee on September 19: "I think there is common agreement that at no time in the postwar period has the Soviet Union had a strategic superiority over the United States in any significant category."

The failure to secure effective limitation would mean, he warned, that "the probable outcome of each succeeding round of competition is the restoration of a strategic equilibrium, but at increasingly higher levels of forces." Perhaps, then, we are not racing together toward Armageddon. Maybe the continued expenditure of billions for quantitative additions and qualitative improvements does not bring doomsday any closer. Instead, it may be that we are jogging in tandem on a treadmill to nowhere.

Critics of our defense planning may use questionable metaphors. But the important national security questions they raise can't be solved by contests in semantics. The issue remains whether we are spending for defense about the right amount of money for about the right force structure. Everything is not necessarily happening for the best in the best of all possible worlds. Philip Odeens' article contends: "The best case for the defense budget is that a good case has not been made against it." The burden of proof, I would suggest, is on the proponent of a proposition and the best case *against* the defense budget is, accordingly, that an adequate case has not been made *for* it. A Panglossian approach to Pentagon spending is unwarranted, particularly under present circumstances. The Office of Management and Budget (OMB) has noted in its conferences on inflation that very little else of the Federal budget involves discretionary outlays. According to OMB calculations, for the 1975 fiscal year the defense area takes up $57.1 billion out of a total available for discretionary spending of $92.2 billion. Indeed, OMB calculates the planned discretionary nondefense outlays exclusive of personnel costs as only $15.1 billion. The rationale for devoting this lion's share of Federal disposable income to military arms and manpower should be an extraordinarily persuasive one. The U.S. Congress and the American public should insist on knowing if such rationale exists.

It may be that there is nothing we can do to cut down on the amount of our resources that we devote to our national defense. Perhaps we must continue to spend these steadily increasing billions in order to preserve our freedom. The interesting exchanges that have appeared here recently leave me, however, unconvinced. I think we are spending too much on military arms and manpower and that to continue to do so worsens our economic position and jeopardizes our true national security.

TWO FALLACIES

There are, as I see it, two major fallacies that drive our expenditures for defense to their present giddy heights. The first is the fiction that protection of our interests implies a global military mission requiring that we maintain the capability to deal with a congeries of contingencies throughout the world. We face a single military threat, not a hostile world. Our force posture should be optimied to deter Soviet resort to force, not to pose a delusive military solution to political or economic situations that may give us concern. The second fallacy is that, regardless of any practical military utility, a failure by the United States to maintain a cosmetic military "superiority" will cause us political disadvantage, the loss of bargaining position in arms limitations negotiations, and the sacrifice of the confidence of our allies. The proposition that we must maintain a lead across the spectrum of strategic and conventional forces is a formula for endless escalation in defense costs. To conclude that we must overcome every Soviet lead despite its lack of military meaning is to accept the rule of illogic. That kind of lead will have political insignificance only if we act as if it matters. In combination these dubious assumptions have led us to an almost reverential preoccupation with weaponry.

Perpetuation of these fallacies will push our defense budget even higher over the next few years. The present congressional approach—squeezing a few billion out of Administration requests but not cancelling any major programs—will not arrest this trend. What is required instead is a re-evaluation of the role of American military power in today's world. Also needed is an approach to the arms limitations that will cut through the complexities of the search for strategic nuclear equivalence under the disparate circumstances of Soviet and American concerns and given the asymmetries in nuclear armament. What should be tried instead is to evoke a process of matching restraint, either in advance of formal agreement, or appreciably below the limits set by negotiated accords. In 1963, President John F. Kennedy broke the atmospheric testing impasse by announcing a unilateral American moratorium and calling for reciprocal action from the other side. The present strategic balance is sufficiently stable to permit us to explore fully this proven approach to arms control.

For fiscal 1975, the Congress finally agreed on an appropriations bill of $82.6 billion. This was about $4.5 billion below the amount requested by the Administration. In addition, $5 billion in defense spending was provided in other appropriations bills covering military construction and foreign military assistance. Immediately, Pentagon sources complained that because of inflation the total, a new high in absolute dollars, would be short—allegedly by $11 billion—of the amount required to sustain the current program. A failure to obtain this amount through supplementals would, these sources warned, require the reconsideration, reduction, or elimination of major programs. I hope that this is true; that hard times will compel a realistic look at our defense budget where hard experience has failed.

Our defense programs remain today linked to no coherent foreign policy that shows when and how our armed forces should be used. They are, instead, consistent with a world in which American interests can be advanced only through the possession of a versatile military capability which will allow the application of our force on a worldwide basis. This is neither today's world nor one in which we should want to live. In a world where only force counted, the Soviet Union and we would be consigned to a superpower condominium, a duopoly in which each probed cautiously to the limits of its sphere of influence. The only restraint would be the fear of impinging upon the other's vital interests. The concerns of the rest of mankind, their hopes, their miseries, would be of no moment. If such a world could be created, I think few Americans would find it congenial. If such a world is to be prevented, our preoccupation with military power as a political tool needs to be faced and overcome.

Too often in the past 20 years we have behaved as if our ability helpfully to influence world events required military force. In my opinion, basic American objectives usually have been understandable and even commendable. But the military means employed to seek these objectives have frustrated our aims and set a sorry precedent. Today, in the context of the oil crisis and feared resource shortages, there are reports of special forces to be trained for rapid deployment to protect American supplies.

An article by Drew Middleton in *The New York Times* of October 25, 1974, discussed the formation of ranger battalions as reflecting "the growing conviction in the Defense Department that the forces must be prepared as much for swift intervention across the world as for a major war against the Soviet Union in Europe." Some commentators have suggested that renewed denial of Middle East oil, or even retention of current price levels, should be treated as tantamount to military action requiring a direct American military response. Coming from another country, such suggestions might strike us as a shocking reversion to imperialism. Coming from us, they are unlikely to strike others as more savory. As those who have the most in hand, and thus the most to lose, I question the wisdom of our espousing an international doctrine that a country may take what it thinks it needs when normal trade relations are deemed inadequate. I question too whether this is either a sound example to set for the Soviet Union or a safe principle to espouse to the "have not" nations. Imperial conquest is obviously beyond the reach of this latter group. But the possibility of terrorist blackmail, when the makings of nuclear weapons will become increasingly available, are chilling indeed.

I won't presume to contest Wohlstetter's awesome scholarship. But the myths that he alleges are no necessary part of the case for a more modest conception of the American military role. We may well have underestimated the ultimate deployments of Soviet nuclear weapons systems. It may well be that we have also underestimated our own willingness to proceed with redundant quantities and unneeded improvements and the effect this has had in keeping Soviet programs going. The solemn jog on the treadmill has continued with one contestant apparently running harder but never quite catching up.

WE ARE NOT THE WORLD'S POLICEMAN

The fallacy of an American global military mission, failure to perform which would mean the loss of world stability, has been with us for a long time. In a simpler era, it

appeared in the concept of a Pax Americana with the United States as world policeman. Its most ludicrous form was voiced by President Nixon in explaining his refusal to end our participation in the conflict in Indochina. Precipitate withdrawal would mean, he maintained, an end to our role as "peacekeeper" in the Asian world.

Realistic recognition that we need not and cannot be the world's policeman is now quite general. But this discredited notion still has major impact on our defense policy. Our armed forces still are tailored for use in wars of all varieties in any and all places.

The former Chief of Naval Operations, Admiral Zumwalt, was wont to support Navy demands for the biggest share of the Pentagon budget on the ground that the Navy was needed to "project increments of American power" on a worldwide basis. Roy Ash, Director of OMB, informed the Senate Budget Committee this year that further reductions in the military budget would upset the balance of power throughout the world and hence jeopardize our national security. And Secretary of Defense Schlesinger, in a television documentary on "Peace and the Pentagon" predicted that if we're to "drop the torch," there would be no one to pick it up. I hope that he is right. Self-selected torch carriers aren't much use in fire prevention.

Contemporary experience should indicate that most of the world wants none of our military intervention. The local conflicts that continue to trouble the international community certainly cannot be ameliorated by American firepower. Détente is based on the wholesome realization by the United States and the Soviet Union that their direct military involvement in local conflicts would create unacceptable risks. There is still some dangerous posturing on both sides. But sensitive diplomacy has begun to come into its own.

No one can look with much pride at the American performance in the Cyprus crisis of last summer. Our recalcitrance in decrying the coup sparked by the Greek colonels against President Makarios was equaled by our sluggishness in condemning the Turkish intervention. But we can at least be grateful that not even ceremonial use was made of our military forces. At a minimum, such a gesture would have challenged the Soviet Union to choose its side and thus escalate the crisis. The side against which the American power was arrayed would, moreover, be unlikely to respond to subsequent U.S. diplomatic efforts for an equitable result.

The last decade and a half has done much to teach us that the injection of American firepower into a local conflict is rarely compatible with our foreign policy interests. At a minimum, it will exponentially increase the devastation. A matching imprudence on the part of the other military superpower could engulf the world. Our obligations toward Israel or others do not require that we maintain in our force structure elements designed for a global intervention capability. For the most part, investment in such forces will buy us nothing but trouble.

At least equally clear is the unwisdom of maintaining men and materiel especially adapted for counterinsurgency operations. Intervention by the United States in an internal dispute is both unwise and un-American. Nothing in our traditions, in our international agreements, or in the United Nations Charter obligates us to take a stand for a foreign government challenged by a significant segment of its own people. Our own internal situation is not so parlous or our world position so precarious that we are threatened when an alien people opts for a form of governmental organization that we find distasteful. Some continuing investment for counterinsurgency purposes is still identifiable in the defense budget. Much more is submerged in the overall size and structure. Both our financial position and our national security will be the better for its eradication.

Perhaps the starting point is to abandon the fractional numbers game as a purported basis for force planning. In the early days of the Nixon Administration, much was made of the fact that we had moved from a "two and a half wars" planning assumption because Sino-Soviet rivalry would prevent them from waging war against us concurrently. The Soviet Union was seen, sensibly, as the one plausible military threat. But instead of preparing for one war at a time, we were told that we would be prepared to take on one and a half wars.

A half a war would, by definition, be a war against a minor military power, not the Soviet Union. Such a foeman is indeed not worthy of our steel. The one-half war contingency is an unwarranted residuum of the abandoned role of world policeman. No minor power is going to attack us. For us to attack one of them should be unthinkable.

Short of a major war, American military forces may be required for participation in United Nations peacekeeping operations, for the evacuation of American citizens caught in local hostilities, and to give meaning to our commitment to Israel's survival. But none of these contingencies require the amassing of a separate half-war capability. To the extent that any of them may involve confrontation with the Soviet Union, it is our basic one-war capability that is relevant.

When a whole war dropped from our defense planning base in 1969, it had little effect on our force structure. But dropping the half war from our force planning could yield significant savings. It should end expensive preparations for the myriad contingencies where our military force should never be committed.

ILLUSION OF OMNISCIENCE

About 20 years ago, the English historian D. W. Brogan wrote of the "Illusion of American Omnipotence." This illusion has been largely dispelled by events. There persists in some quarters, however, an illusion of American omniscience. Neither we nor any other outsiders are wise enough to decide for another people the course to which their aspirations should lead them. The continuing penumbra of the illusion that somehow we know best can only blur a sound perception of our true foreign policy interests.

Only this illusion of omniscience can explain our persistence in covert operations intended to influence events in other countries. There may be little in the defense budget for the funding of these clandestine activities. But the Chief of Central Intelligence, William Colby, informed an open meeting last September that such operations were still in progress, including some in South America. He defended retention of this capability as giving us an "option between diplomatic protest and sending in the Marines." Surely our economic and political influence in the world community can do more to fill that gap than illegal paramilitary operations in another country. And there is usually the commendable option of doing nothing at all.

The sorry history of Vietnam shows also that clandestine activities by CIA operatives may precede the Marines only briefly. As with counterinsurgency, secret actions to subvert the political choice of other people are a nasty bit of international busybodyism. They make us hostage to the faction that we aid. They earn the lasting hostility of those whom we oppose—and who may win out despite us. There is little chance that the world community believes our efforts to undermine the Allende government were, as maintained by President Ford, "in the best interests of the people in Chile." Instead, they are apt to see American dirty tricks in many situations where none have been played.

An American President should now be wise enough and confident enough not to hear in his mind's ear the cry: "Who lost China?" Today's electorate should be sophisticated enough to understand that no foreign country is ours to win or lose. And many Americans are bold enough to doubt that there would be greater stability and less misery in Asia today if the Kuomintang still reigned and profiteered in Peking.

An expansive approach to world power is a heady attraction for any American President. The Commander-in-Chief syndrome will affect even the least vainglorious of men. The free hand that has been given to the executive in foreign affairs makes it much more fun than dealing with a balky Congress in the domestic arena. It's easier to screw up the economy in Chile than to square it away in the United States.

WE'RE NUMBER ONE

We cannot, for obvious reasons, forfeit a major position in world affairs. And we must continue to rely on the executive as our principal spokesman internationally. But the retention of a strong world role and the maintenance of an effective defense posture will require that the President and his chief foreign affairs advisers begin to talk more sense to the Congress and to the people. Vaunting rhetoric about our peacekeeping role, our worldwide commitments, the morale of our allies, control of the seas, and our indispensable leadership of the free world now awakens as much derision as respect.

The theory that we must be prepared for a wide variety of military contingencies has major impact on the size and style of our conventional forces. But it also infects thinking about nuclear weapons. If we and the Soviet Union may become engaged in limited nuclear war, where the stake is less than national survival, then scenarios can be devised which call for an elaboration of our nuclear arsenal. Surgical nuclear strikes against missiles and other military targets become conceivable and a counterforce capability thus becomes a security requirement. If limited nuclear war for limited objectives is regarded as plausible, then the design of "mini-nukes" to minimize the mess can be argued as desirable. If, instead, nuclear arms must serve only to prevent any use of Soviet nuclear weapons against us or those whose security is integral to ours, then this role can be filled at more modest cost.

The proposition that we must remain ahead of the Soviet Union in most if not all perceivable elements of military power is the second fallacy that inflates defense spending. It impacts particularly on the field of strategic arms. If the controlling criterion for world prestige is to proclaim that militarily "We're Number One," then effective agreement on control of strategic arms is hardly possible, and the Vladivostok undertaking will be used to justify rather than to limit modernization of nuclear forces.

As its only living superpower model, our words and our actions are admirably calculated to inspire the Soviet Union to spend its substance on military manpower and weaponry. Ex-President Nixon asserted repeatedly that he could not negotiate effectively if he went to the bargaining table with the Soviet Union as the world's second strongest military power. There is every reason to feel that we have persuaded the Soviets on this score and that they too will not negotiate from a position of military inferiority. If we insist on remaining Number One, because there are incalculable risks in being Number Two, then the Soviets have the wherewithal to escape that subordinate position. They will continue to struggle to catch up by exploiting the quantitative and qualitative permissiveness of the Vladivostok agreement. We will be told that we dare not allow them to do so.

Schlesinger, in criticizing the efforts by Congress to cut the fiscal 1975 Pentagon budget, noted Ford's comments that "the United States must remain the premier power." And, he continued, "the American people will have to pay the costs." The result of this approach may not be an arms

race, but I think it will do until one comes along.

The contention that, whatever the practical military utility, we will incur political disadvantages unless we maintain a lead across the spectrum of strategic and conventional forces, is both a recipe for endless escalation of defense costs and a self-fulfilling prophesy. Kissinger told the Senate Foreign Relations Committee in its hearings on détente that whether or not one superpower has true nuclear superiority, "the appearance of inferiority—whatever its actual significance—can have serious political consequences." To a degree, this is true. Our strategic nuclear forces must not only be strong enough. They must be known to be strong enough to deter the Soviet Union from using its strategic nuclear forces against us or our allies. But a lead in numbers or size that can be seen to be insignificant will have political consequences only if the other side concedes them a meaning they would otherwise lack. Where we can see that a Soviet military development is not significant, it's sheer conceit to fear that our allies will believe otherwise.

A look at today's key issues shows clearly how few of them can be affected helpfully by superior military strength. We couldn't ignore the Soviet Union as an international power in the many years when we dwarfed its strategic nuclear forces. Today both countries know, and the rest of the world knows too, that we dare not fight one another. The respective strategic nuclear forces serve only as offsets, not as exploitable resources. They are not translatable into sound political currency. Elsewhere in the world, the United Kingdom is no easier in its economic situation because it has Polaris submarines. India's "nonmilitary" nuclear test brought no relief from its grievous problems.

We are militarily the most powerful nation the world has known. But the oil-producing countries are notably unimpressed. Oblique hints of application of military power to win our way on petroleum pricing have been met with mockery. Any effort to translate these threats into action could serve only to drive the Arab states to the dubious protection of the Soviet Union. It would destabilize, as no CIA activity could, the conservative, American-oriented governments of Iran and Saudi Arabia. A marine division or two might overwhelm a Middle-East oil country. But this, like Macbeth's bloody event, would not "trammel up the consequence, and catch with his surcease success." Instead, we would face an indefinite occupation and protection of vulnerable production facilities in terrain not unfamiliar with guerrilla activity. Here, as in the other major world problems, use of our military force is not a sensible option.

Our deep interest in Israel's security presents, of course, a special case. There need be no question of our ability and readiness to respond to Israel's military needs in the event of attack. But no combination of local enemies could threaten Israel's survival as gravely as a Soviet-U.S. military confrontation in that area. And no military aid could contribute as much to regional security as their joint commitment to an equitable solution.

Overestimation of the practical utility and the political potency of our armed forces adds up to a defense budget that consumes over 60 per cent of disposable Federal income. It ensures the further build-up of strategic arms inventories at exorbitant cost and, because further qualitative changes are more apt to lessen than to improve deterrence, with an actual threat to national security.

CAN WE AFFORD TO NEGOTIATE?

In trying to end this irrational arms competition, total reliance is now placed on negotiations looking toward formal agreements. Bilateral talks are being held on control of nuclear arms and multinational discussions are being held on reduction of the opposing forces in Europe. But the ongoing process seems to aggravate the problem. The history of the SALT negotiations shows the process of formal agreement on nuclear arms control to be complex, prolonged, and uncertain of eventual success. The accomplishments to date have yielded few if any real dividends. The limitation imposed on antiballistic missile systems in SALT I, and further tightened at the Moscow summit last June, should at least have brought about tacit mutual restraint in the further accumulation of offensive strategic weapons. With no defensive missiles to overcome, a fraction of the existing strategic forces on either side is adequate to wreak devastation on the other's society, and initiation of nuclear war thus means national suicide.

But, in defiance of the dread logic, both the Soviet Union and the United States have continued to move ahead. No major offensive weapons program has been canceled. We have proceeded with our MIRVing of the Poseidon fleet and our Minuteman missiles. The Soviet Union has continued to test its own MIRVs and to develop a new family of intercontinental ballistic missiles.

The mindless build-up has continued while the negotiators wrestled with the difficulties of designing formal controls for two nuclear arsenals that developed on different lines. The tentative agreement outlined at the Vladivostok conference would provide a tent big enough to accommodate just about everything each side now has or contemplates.

Moreover, while the negotiators fumble for formulas and the summiters pursue their loftier processes the existence of the negotiations and the agreements already reached are used to justify new nuclear weapons programs. The Vladivostok understanding is defended as the best that can now be achieved. It could well be a significant step forward toward effective nuclear arms control, but not if, as suggested in President Ford's post-Summit press conference, the Vladivostok ceilings must also be treated as a floor for U.S. strategic forces. When the floor meets the ceiling, little living room remains.

Accordingly, rather than creating a climate in which restraint can be practiced, the existence of the negotiations themselves has been an occasion for acceleration of strategic arms development. Weapons concepts not proscribed by the porous terms of the 1972 interim agreement on control of offensive arms have acquired a hitherto undetected charm. The prospect of a 150-kiloton limitation on underground tests after March of 1976 has precipitated calls for an augmented test program before that date. Recent progress at the summit supports, we are told, an augmented Trident program, at close to a billion and a half dollars per unit. The question inescapably arises whether, under our current defense policies, we can afford to negotiate about arms control.

The "bargaining chip" argument can certainly be questioned. Indeed it has been, but unsuccessfully. It can reasonably be maintained that if our strategic nuclear posture is not now strong enough for us to bargain effectively, we should not be bargaining at all. But we are in fact continuing to bargain and to build up redundant strength as we do so. The acquisition of more, and more esoteric, nuclear arms adds exponentially to the difficulty of devising effective federal controls. Our testing and deployment of MIRVs in the early days of SALT is a striking case in point. Now there is talk of mobile missiles to lessen the vulnerability allegedly implicit in the massive MIRV go-ahead permitted by the terms of the November summit meeting.

I would not like to see the SALT talks stop. The process itself should be, for both participants, an educational experience. Acceptance of common concepts on strategic matters is itself a form of progress.

One can ever harbor hope that an effective formal agreement may eventually be developed. But if we must accept the insistence that the momentum of our strategic weapons programs must be maintained in order to bargain effectively, the talks have become too expensive a luxury.

A POLICY OF RESTRAINT

Insofar as formal agreements are concerned, we may have gone as far as we can now go. If so, the verdict on whether the Vladivostok Accord is better or worse than nothing is not yet in. It does set finite though lofty limits. It does recognize equivalence. It should be treated as an augury that genuine progress is possible. It should not be allowed to spark further weapons programs that will impede such progress toward effective arms control.

What is needed most urgently now is not a conceptual breakthrough but a decision to take advantage of the stability of the present strategic balance. It's futile to buy things we don't need in the hope that this will make the Soviet Union more amenable. The Soviets are far more apt to emulate than to capitulate. We should, instead, try a policy of restraint, while calling for matching restraint from the Soviet Union.

As a start, we might inform the Soviet Union both privately and publicly that we have placed a moratorium on further MIRVing of our land- and sea-based missiles. We should also announce that a hold has been placed on development of the Trident submarine and the B–1 strategic bomber. We should advise the Soviet Union that this pause will be reviewed in six months in the light of what action the Soviet Union takes during that period.

If the Soviet Union responds by some significant slowing of its own strategic arms build-up, we can at the end of the first six months announce additional moves. We might, for example, scrap some of our older missiles and our more aged B–52 strategic bombers. If reciprocal action is taken by the Soviet Union, such as the elimination of some of its older missile-carrying submarines and a freeze on the development of the new family of ICBMs, other other low-risk initiatives are available to us. We can, and should, for example, substantially reduce the numbers of tactical nuclear weapons now deployed in Europe. The number—over 7,000—is many times in excess of that useful in any remotely conceivable contingency. Employment of a fraction of that number would destroy the terrain they purport to protect. A quarter or less would serve as well to bolster the deterrent efficacy of our conventional and strategic forces. And the circumstances of their deployment, in many cases, make them vulnerable to capture or sabotage. A sizable cut would improve both our security and the climate for reciprocal Soviet action.

There is, of course, a chance that the Soviet response may be lacking or inadequate. But our present lead in technology and warheads makes it possible for us to take this initiative safely. No advances the other side might make in six months or many more could alter the strategic balance to our detriment.

The chances are good, moreover, that highly advertised restraint on our part will be reciprocated. The Soviet Union, it may be said again, has only one superpower model to follow. To date, the superpower aping has meant the antithesis of restraint. Soviet moves toward antiballistic missile defense were followed by U.S. ABMs and our multiple independently targetable warheads to overcome any defensive system. Soviet MIRVs are now in development. There now are hints that we may build more massive missiles to match Soviet throw-weight.

The "monkey see, monkey do" phenomenon extends beyond the area of strategic arms. Soviet and American ships compete for visibility where both would be hard put to explain the military purpose. Even our clandestine operations in foreign countries are rationalized by President Ford on the ground that "Communist nations spend vastly more money than we do for the same kind of purpose."

It is time, I think, for us to present a worthier model. The strategic arms competition is a logical place to start. The steps we can take in trying to start a process of reciprocal restraint are not drastic. They would create no risk to our national security. We can be first off the treadmill. That's the only victory the arms race has to offer.

PAUL WARNKE ON EAST-WEST RELATIONS

Mr. HUMPHREY. Mr. President, I have recently reviewed Mr. Paul C. Warnke's article, "We Don't Need a Devil (To Make or Keep our Friends)," in the winter 1976–1977 issue of Foreign Policy, a publication in the field of international relations. I commend it to my colleagues and certainly find nothing in it that should cause any of them alarm. Indeed, it is a superb summary of a number of world problems.

In light of the concern stirred by the memorandum circulated in the Senate, I might emphasize some of the points that show a resolute point of view on the part of Mr. Warnke.

In discussing the United States-Soviet dialogue, he suggested that an "urgent example" is related to the possibility of a succession struggle in Yugoslavia after Tito's death. Mr. Warnke concluded:

It should be made clear to the Soviet Union that we would regard Soviet intervention in Yugoslavia as unacceptable.

In discussing Eastern Europe, he anticipated the present administration's desire in not subordinating freedom to détente. He wrote:

Nor should the importance of the semi-adversary, semi-cooperative United States-Soviet relationship lead us to collaborate in the indefinite subjugation of national freedoms. There are, of course, practical restraints on what we could do to help Eastern Europe toward greater latitude of action. But our concern with detente with the Soviet Union should not signal either to that country or to the Eastern European states that we espouse greater Soviet control as a means to reduce Soviet anxieties and to freeze twin spheres of superpower influence. Maybe we can't do much to improve their plight, but at least we should not be seen to collaborate to make it hopeless.

On the Chinese recognition problem, Mr. Warnke noted:

. . . but greater speed in normalization should not be purchased by U.S. action designed to compel the Taiwan solution Peking desires.

Still, these quotations do not do justice to a commonsense and humane but richly philosophical and learned survey of world problems which Mr. Warnke presented in his article. I invite the Members of this body to read this article and ask unanimous consent that it be placed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE DON'T NEED A DEVIL (TO MAKE OR KEEP OUR FRIENDS)

(By Paul C. Warnke)

The old adage maintains: "The enemy of my enemy is my friend." In both Peking and Moscow, this might be regarded as the prescription for better relations with Washington. But the nugget of truth in the saying provides, at least for the United States, no lasting guide for sound and safe foreign policy. Perpetuation of dangerous international enmity is not a commendable way to keep old friends or to make new ones.

With respect to our most established friendship, that with the countries of Western Europe, the common nightmare of possible Soviet aggression has undoubtedly been a factor tending toward greater cohesion. As that threat is seen to recede, lamented as that perception may be by NATO traditionalists, we nonetheless need not accept the conclusion that our friends' loss of an enemy will cost us our friends.

The cultural and economic interdependence of the North Atlantic community surely could survive the shock even of genuine East-West accommodation. The values that we share can endure outside a cold war climate, driving us forward in pursuit of our common dream of a world where economic, social, and political development eases the blight and diminishes the very real threat to world security that otherwise would be posed by the thwarted billions in Asia, Africa, and Latin America.

Nor does our friendship with Japan require the preservation of a common enemy. Certainly the Japanese still take considerable comfort from the U.S. military presence.

But the reality of a military threat to Japanese security is now somewhat hard to credit. Soviet intransigence about the Kuriles, together with the history of Japanese-Russian conflict, help keep the concept of a common enemy vividly in the Japanese consciousness. But our Asian forces are more than adequate to show both the Russians and the Japanese that the U.S. interest in protecting Japan's security far outmatches any conceivable Soviet motivation to threaten it.

Indeed, installation of a Communist government in Japan, whether by force or by subversion, might well be farthest from Soviet ambitions. The specter of a Communist rival linking Chinese manpower to Japanese industrial strength would be far less congenial than the existing situation.

The dissipation of the myth of mainland China as a monstrous aggressor has done no long-range damage to U.S.-Japanese ties. Any short-range harm was more the product of our rudeness in not enabling the Japanese government to move in tandem with us.

Some lingering residuum of the once monolithic common Communist enemy in Asia is retained in the Korean peninsula. The apparent interest of North Korean President Kim Il-sung in possible exploitation of the U.S. rejection in Indochina, and the recent tree-cutting tragedy in the demilitarized zone, must be taken both in Japan and here as evidence that a North Korean effort to reunify Korea under its control is not wholly implausible. But a respectable body of opinion considers that Kim Il-sung was discouraged by Peking and Moscow in 1975 from taking any steps against South Korea in the wake of the U.S. setback in Southeast Asia. And recent press reports suggest a Chinese effort to lower the temperature of the U.S.-Korean confrontation at Panmunjom.

The continuation of an independent South Korea has a bearing on Japanese perceptions of their own security. In considerable part, however, the importance of South Korea to Japan's security is a product of our constant repetition of the theme to Japanese audiences. As with the once-perceived threat from Red China, it will likely dim with time unless kept polished by American rhetoric. Here again, the loss of a mutual enemy should not cost us a friend.

The true test of the applicability of the aged aphorism to contemporary international relations thus can be found in Sino-U.S. and U.S.-Soviet relations. Each country has been seen as our enemy. Neither can yet be characterized as our friend.

In our dealing with the Soviet Union, the first stirrings of détente were felt, and the Strategic Arms Limitation Talks (SALT) were launched before Secretary of State Kissinger acted as advance man for President Nixon's trip to Peking in early 1972—in what Nixon described as "the week that changed the world." But there is nothing to indicate that U.S.-Soviet détente had been furthered by the mutual hostility that existed vis-à-vis China. Instead, trips by U.S. officials to Peking created for the Soviet leaders the dire prospect of a Sino-U.S. partnership in opposition to the Soviet Union. Thereafter, some greater priority might well have been placed on productive negotiations with the potential friend of an implacable enemy.

Whatever the reasons, the Soviet reaction was curiously pallid when in the spring of 1972 the Nixon administration mined the harbor at Haiphong and stepped up the bombing of Hanoi just before Nixon was scheduled to go to Moscow to consummate the SALT I agreements. In 1960, the far slighter provocation of an unarmed U–2 flight in Soviet air space had led Nikita Khrushchev to cancel President Eisenhower's visit and to walk out of the Paris summit meeting. But in 1972, while Soviet shipping was trapped in Haiphong harbor, Nixon was welcomed to Moscow where he and Brezhnev signed the treaty limiting antiballistic missile sites as well as the interim agreement on control of offensive nuclear arms.

IMPORTANT BUSINESS

Entirely apart from their respective relations with the People's Republic of China, the United States and the Soviet Union have important business to do. We need not be friends in order to recognize that certain agreements and understandings are in our mutual interest and indeed may determine our mutual survival. There remain things that the Soviets want from us, notably feed grains and technology; and there are things we can achieve with them which would contribute to our own and to world security without damaging that of the Soviet Union. Apart from the imperative of an agreement at SALT that would effectively restrain both quantitative and qualitative competition in the accumulation of still more nuclear arms, other useful measures of control over the deployment of military forces could lessen the risks of military confrontation.

The Vienna talks on mutual and balanced force reductions have now been going on for three years. These negotiations have had the benefits of permitting Western Europe's participation in discussions of alliance security and of resulting in some information about Soviet forces. A significant step toward greater confidence in Europe would be achieved if agreement could be reached on reciprocal reduction of offensive capability. The U.S. proposal to withdraw 1,000 tactical nuclear weapons in exchange for the pullback of a Soviet tank army moves toward this objection. As repeatedly urged by the U.S. Congress, the Soviet Union and the United States should also initiate discussions about restricting naval forces in the Indian Ocean and creating what the U.N. General Assembly has called for as a "zone of peace."

Meaningful arms control discussions between the two nuclear superpowers improve the international climate and could lessen disturbing tendencies toward nuclear proliferation. A major contribution toward world peace and toward reduction of the devastation of local hostilities could be made by agreement with the Soviet Union, and pref-

erably the other major international arms suppliers as well, on tight limits on arms transfers, particularly to the Middle East and Africa.

The existence of the U.S.-Soviet dialogue also provides a medium for avoiding serious conflict by the communication of respective views on vital interests. An urgent example relates to the possibility of a succession struggle in Yugoslavia after Tito's death. It should be made clear to the Soviet Union that we would regard Soviet intervention in Yugoslavia as unacceptable.

THE OBSESSION WITH STATUS

Too often, however, it appears that our foreign policy is overly controlled by our concern with the U.S.-Soviet relationship. Our reaction to international developments too often is warped by our obsession about whether third parties will think that we or the Soviet Union won the latest round. And equally often, the developing countries of the world in all likelihood regard the superpower competition as an irrelevant sideshow. Their grinding problems of poverty, population, and amorphous political institutions dwarf for them the issues of relative superpower status.

In dealing with the smaller countries of Asia, Africa, and Latin America, it is important that we be seen to think of their own best interests, not primarily how they might fit into the complex game of global maneuver we play with the Soviets.

Nor should the importance of the semiadversary, semicooperative U.S.-Soviet relationship lead us to collaborate in the indefinite subjugation of national freedoms. There are, of course, practical restraints on what we could do to help Eastern Europe toward greater latitude of action. But our concern with détente with the Soviet Union should not signal either to that country or to the East European states that we espouse greater Soviet control as a means to reduce Soviet anxieties and to freeze twin spheres of superpower influence. Maybe we can't do much to improve their plight, but at least we should not be seen to collaborate to make it hopeless.

In recognizing that we and the Soviet Union largely control the issues of global peace or war, moreover, it is a mistake to overestimate the importance of the Soviet Union as a world power. Militarily, it approaches the strength of the United States. But in terms of economic weight and political influence, and as a promising source of materials and technology, it is still a long way from the first rank. The Soviet Union has not as yet demonstrated, for example, either the ability or the inclination to help much in bridging the gap between the industrialized North and the needy South.

As a provider of economic aid and know-how, the Soviet record is spotty, intermittent, and blotted with glaring self-interest. Our own record should be much better, but in any contest for relative superpower lovability, we should win hands down.

Within the Arab world, where Moscow has made a major effort, its strategic potential remains powerful but its political and economic influence has suffered a series of setbacks. In Egypt, President Sadat dismissed some 20,000 Soviet military advisers in 1972, and Soviet influence in that country this year was completely eradicated with the abrogation of the Egyptian-Soviet friendship treaty. Also this year, President Assad ignored Soviet remonstrations in sending Syrian troops to Lebanon to throw back and contain the leftist Lebanese Moslem and Palestinian forces. This fall, President Nimeiri of Sudan charged that Soviet efforts to regain influence in the Middle East had led it to connive in a Libyan-sponsored coup to overthrow his regime. The decline of Soviet fortunes in the area makes its presence at any reconvening of the Geneva conference on Middle East peace still perhaps desirable, but hardly essential.

Nor does progress at the Paris Conference on International Economic Cooperation (CIEC) between the industrialized and the developing countries demand a Soviet presence. Though it may have been designed in part to upstage Soviet efforts in the developing world, CIEC should not forever exclude Soviet participation. But there is serious question as to whether this would add much to the dialogue. What is required for reasonable progress is U.S. willingness to implement the promises of Kissinger's September 1975 speech to the special session of the United Nations.

It remains important to do with the Soviet Union the important business that we have together, but we should not mistake this for a comprehensive foreign policy.

The process of détente and the resulting U.S.-Soviet negotiations have not encountered much opposition from our old friends. The health of the North Atlantic Alliance of course requires that we consult with the Western Europeans when and as the SALT talks begin to make progress. But they themselves are direct participants in the Vienna negotiations on mutual, balanced force reductions and it was largely at their behest that we supported and endorsed the Helsinki "final act" of the Conference on Security and Cooperation in Europe. This indulgence of the general European view that the accord would lessen tensions and allow the Eastern Europeans greater latitude was about all that we got out of Helsinki. But it was probably enough to make the exercise worthwhile.

For our new acquaintances in the People's Republic of China, however, even limited friendship may be felt to imply adoption of their attitude toward a hated enemy. That the Sino-Soviet hostility remains real and enduring was demonstrated when the Chinese leadership refused even to let the Soviet Communist Party express its regrets about Chairman Mao's death. And to the extent that this hostility leads both countries to seek better relations with the United States, their distaste for one another does not work to our disadvantage.

The way in which we look at China, however, should not be limited to the perspective of our own complex rivalry with the Soviet Union. The value of a reasonably normal relationship with China does not turn on its availability as a counter against expansion of Soviet power and influence. If the Soviet Union did not exist, it would still be important that we try to work with the government of one-quarter of the world's people to deal with the global problems of peace, development, and environmental protection. Any help that we might be in China's own development would do more than create the legendary market for U.S. goods. It would also contribute to prospects for China's internal stability and international cooperation.

For the Chinese, however, our value as a friend may still be perceived as a function of our status as their enemy's enemy. One of the more deflating phenomena for American visitors is the Chinese lack of curiosity about the United States and the rest of the outside world. They are eager to talk to Americans about China's revolutionary glories but when information about the state of affairs in the United States is volunteered, they tend to be affable but indifferent.

The fact that China sees us largely now as an offset to Soviet power is evident and frequently underscored. Both in Peking and in Washington, Chinese officials still decry our failure to block the Soviet intervention in Angola. Last year, visitors were lectured about the folly of giving the Russians a diplomatic triumph at Helsinki, with the president of the United States caricatured as a captive behind the Soviet chariot. This summer, the hospitality to former Secretary of Defense Schlesinger, extended through the brief of Mao's death, was a conspicuous reward for his hard line about détente and the growth of Soviet military power.

Our policy toward China, however, cannot reasonably be predicated on our willingness to show how anti-Soviet we are. Our policy toward the Soviet Union cannot turn on Chinese prejudice. After Mao's death, the chances of Sino-Soviet rapprochement have become more difficult to measure. In the event that the two Communist giants get back together, our interests demand that neither one regard us as its implacable foe.

The temptation to court China by taking a tough stance toward others can have unfortunate impact on U.S. policy. In the summer of 1972, a senior Nixon administration official explained our tragic inertia in disengaging from Vietnam on grounds that our withdrawal would make us "irrelevant" to China. Decisions on force posture in Asia should not now be made on the basis of Chinese advice and concerns. We must instead consult our own interests and hope China can learn to like us for ourselves.

The major impediment to early warming of Sino-U.S. relations is the question of Taiwan. Peking seems to complain that the United States has not implemented the principle of the Shanghai communiqué, in which we noted that Chinese on both sides of the Formosa Strait regard Taiwan as a part of China. Recitation of the obvious did not, however, commit us to resolve this singularly Chinese problem. Nor did it become our business to dictate Taiwan's future.

What we can do is to state our interest in moving promptly to full diplomatic recognition and exchange with the People's Republic of China. We should seek no undertakings about Taiwan from the Chinese government and should give none.

It is not our responsibility to re-establish Peking's control over Taiwan, any more than it would be to reconvert Bangladesh to East Pakistan. This is a job for Chinese ingenuity and negotiation. Suggestions that the Taiwan issue may have to be settled "by bayonet" remain in the realm of rhetoric and Peking must appreciate that our interests in the area, as evidenced by our naval and air forces there, would be regarded as threatened by any efforts to achieve reunification by military force.

Stagnation in Sino-U.S. relations could, as noted by Roger Glenn Brown in the summer issue of Foreign Policy, sap political strength from those in China favorably disposed toward Washington. But greater speed in normalization should not be purchased by U.S. action designed to compel the Taiwan solution Peking desires.

No undue obsession with traditional balance of power concepts is needed to believe that U.S.-Soviet and Sino-U.S. relations will do much to shape the world's future, either for good or for bad. As the enemy of neither, with malice toward none, we gain our greatest ability to make that future brighter, and more likely.

THE PAUL WARNKE NOMINATION AND NATIONAL SECURITY

Mr. HUMPHREY. Mr. President, just to continue this discussion for a moment, the proposed nomination of Paul Warnke to be Director of the Arms Control and Disarmament Agency and our chief negotiator for SALT II is an excellent choice on the part of President Carter. I also say that I urged upon the President and the Secretary of State that they get Mr. Warnke to undertake this very difficult and time-consuming and arduous task.

I also believe the Arms Control and Disarmament Agency, since its inception, has not had the support that it needs from Presidents and Secretaries of State.

Let me remind the Senate that the total budget for the Arms Control and Disarmament Agency is approximately $13 million. The budget for the Pentagon is $120 billion plus; $120 billion or more for our national security, as we interpret it, from the Pentagon; $13 million for arms control, the efforts that we make at negotiated settlements that are mutually acceptable and mutually beneficial.

Mr. President, I want to make it clear that no agreement is worth the paper it is written upon unless it is mutually beneficial. Agreements are not kept, nor should they be kept, unless they are beneficial.

There are those that believe that the arms race gives you additional security. I am here to tell you that all it does is escalate the possibility of catastrophe. It gives you no additional security. Security comes when we know that we have the forces that are necessary for our own protection on the one hand, the forces that we need to take care of our vital interests abroad on the other hand, and our commitments to our allies. But, Mr. President, real national security is in the strength of our economy, in an American population that feels that their Government truly represents them. Real national security comes in eliminating from our economy 7 million to 8 million unemployed. Real national security comes from eliminating racism and segregation and discrimination.

Thank goodness, we now have people in public positions who understand that national security is a composite of adequate national defense, a strong economy, and social responsibility and consciousness on the part of our citizenry and our fellow Government officials.

The Arms Control Agency is vital to our national security. An arms race does not give us additional security. It only raises the risk of conflict and confrontation. This point was aptly noted in last Friday's New York Times in an editorial stating:

> Halting the arms race will advance the nation's security far more than continuing it. Better still would be substantial reductions in strategic nuclear weapons on both sides, while maintaining essential equivalence.

Mr. President, it is through the systematic, responsible control and reduction of armaments, as a result of careful negotiations and binding treaty commitments, that true security is assured.

Last Thursday, the Washington Post elaborated further on Mr. Warnke's views on arms limitation:

> He doubts, for instance, that it serves either deterrence or diplomacy to add new arms once a nuclear power has a force sufficient to assure the devastation of any other power that might strike it first. He suspects that the negotiating process itself may sometimes impel, rather than restrain arms programs. These are matters worthy of rigorous public examination.

However, efforts have been underway to prevent such a public examination of a vital policy area. A memorandum has been selectively circulated in the Senate which misrepresents and distorts Mr. Warnke's position on arms control and disarmament.

The Washington Star appropriately noted this fact in an editorial last Thursday by pointing out:

> An anonymous memorandum is circulating on Capitol Hill. It alleges among other things, that Mr. Warnke supports unilateral arms reductions to levels far below anything being proposed in current arms limitation talks.

As the editorial noted: unilateral "is a scare-word in any arms control context":

> . . . it appears in this case to be a very loose construction of Mr. Warnke's view.

Mr. President, I believe the campaign which was launched against Mr. Warnke's nomination is somewhat unbecoming of the Senate.

ACDA should and must play a critical role in all negotiations between ourselves and the Soviet Union, as well as any other countries, for the purpose of the reduction and control of nuclear weapons and other armaments.

Mr. Warnke has a fine record of responsible service in the Department of Defense as Assistant Secretary for International Security Affairs. He understands the imperatives of national security.

Therefore, Mr. Warnke will be very cognizant of the need to assure adequate protection of our national security interests during the course of negotiations. Furthermore, the Senate will thoroughly debate these matters in deciding to give or withhold its advice and consent to ratification of any agreement resulting from these negotiations.

Finally, it is the President and the Congress which have the final responsibility of assuring that America's vital interests are protected, and I am certain that we will all fulfill that responsibility.

Mr. President, I ask unanimous consent that certain articles and editorials that I have gathered relating to Mr. Warnke and his views be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb 4, 1977]

MR. CARTER, MR. WARNKE AND THE ATOM

President Carter's choice of Paul Warnke as director of the Arms Control and Disarmament Agency and chief negotiator in the strategic arms limitation talks matches in caliber the best of his Cabinet appointments.

Halting the arms race will advance the nation's security far more than continuing it. Better still would be substantial reductions in strategic nuclear weapons on both sides, while maintaining essential equivalence. Even Congressional "hawks" like Senator Henry Jackson have so acknowledged. That is the President's policy; it is the policy Mr. Warnke would energetically pursue.

False, even scurrilous agitation about his nomination suggests he favors unilateral American disarmament. Such distortion surely will get full response when he testifies on his nomination. Suffice it to say here that what he has actually advocated—challenging the other side to "mutual example" by unilateral *restraint*—is hardly a revolutionary departure. Presidents Eisenhower, Kennedy and Johnson practiced analogous restraint. We hope Mr. Warnke is rapidly confirmed and can get on with the broad agenda the President has already offered on arms control.

Mr. Carter has vowed to move "quickly and aggressively" to halt all nuclear tests, to complete the arms limitation treaty with the Soviet Union, to reduce strategic arms further, to cut back arms sales to less developed countries and to curb the spread of plutonium reprocessing plants and nuclear weapons. To this, Secretary Vance yesterday added Soviet-American limitation of conventional arms. None of this will be easy.

In combating the spread of sensitive nuclear technology, Mr. Carter can already claim progress. It was his campaign pressure that brought success to the long struggle by Washington's arms control officials—notably Fred Ikle and Charles van Doren—to turn Ford Administration policy around. President Ford's decision just before Election Day to defer the domestic reprocessing of plutonium helped to discourage French and German sales of such plants to Pakistan and Brazil.

The next task is to revise the Ford Administration's budget for anti-proliferation research. Too much money remains earmarked for work on plutonium, which needs most to be controlled; too little is directed toward alternative technologies for extracting energy from spent fuel without also producing plutonium. A major effort in this direction is necessary to persuade the Europeans and Japanese to defer their plutonium reprocessing and to join in the search for alternatives.

Nonproliferation also is the objective of Mr. Carter's proposal to Moscow to halt all nuclear explosions. Such a step could discourage further tests elsewhere, particularly a second "peaceful" test by India.

Still more important is the effort that Secretary of State Vance and Mr. Warnke, if confirmed, will initiate next month in Moscow to complete the nearly finished arms limitation treaty (SALT II). It would limit each side's long-range ballistic missiles and bombers to 2,400, of which 1,320 missiles could carry MIRV multiple warheads. It thus covers the important, rapid-reaction weapons with an aggressive "first strike" potential.

What delays the treaty is disagreement over two less important "second strike" weapons, the American sea-based cruise missile and the new Soviet medium-range Backfire bomber. It is tentatively agreed that bombers carrying long-range air-launched cruise missiles will be counted against the MIRV missile total. But the Soviets want to ban sea-based cruise missiles, with more than 360 miles of range, while exempting Backfire. The Pentagon wants to limit both or neither. Former Secretary Kissinger devised a compromise formula a year ago to limit the sea-based cruise in the treaty, while restricting the Backfire less formally through a separate understanding, and to compensate for these added Soviet bombers by reducing the treaty ceiling of 2,400, perhaps to 2,150. President Ford would not impose this on the Pentagon in an election year. But President Carter appears prepared to pursue this or a similar formula to complete the treaty. Meanwhile, Defense Secretary Brown has slowed development of the sea-based missile.

Mr. Carter rightly seems to deem both the cruise missile and Backfire as of secondary importance. The Joint Chiefs of Staff have now rejected the thesis that Soviet missile deployments and civil defense efforts have given Moscow nuclear superiority. The argument that the Kremlin seeks such superiority for the future is best answered by limiting the buildup on both sides in the SALT II treaty. No time should be wasted in pressing it to a conclusion and moving to negotiations for further reductions.

[From the Washington Post, Feb. 3, 1977]

THE WARNKE NOMINATION

The nomination of Paul Warnke as director of the Arms Control and Disarmament Agency puts the right man in the right place at the right time. Mr. Warnke, a former Assistant Secretary of Defense, believes strongly that arms control serves the nation's security. As obvious as it may seem to say so, this is exactly the conviction one wants in the man leading the single government agency charged with arms control. At a moment when a major debate is developing about the Soviet-American strategic equa-

tion, it is vital to have in this post someone with the stature, intellectual force and argumentive powers of Paul Warnke to assure that this point of view receives the hearing it deserves at the top of the government.

Now, Mr. Warnke's views, long on the public record, are controversial. He doubts, for instance, that it serves either deterrence or diplomacy to add new arms once a nuclear power has a force sufficient to assure the devastation of any other power that might strike it first. He suspects that the negotiating process itself may sometimes impel, rather than restrain, arms programs. He has asked whether U.S. arms programs do not incite some part of the Soviet-American arms competition. These are matters worthy of rigorous public examination. And in view of the fact that Mr. Warnke, while serving as ACDA director, would evidently also head the administration's team in the SALT talks, another question arises. The government's SALT position will surely reflect a mixing of his views with those of others. Could the American negotiating position be weakened if the Russians knew that the man presenting it personally holds other views?

The Foreign Relations Committee will conduct Mr. Warnke's confirmation hearing. But Sens. Sam Nunn and Henry Jackson, among others, who sit on Armed Services, also wish to question him. That's fine. The different viewpoints on arms control deserve exposition by their strongest proponents. The public, not to speak of the government, will learn from the exchange. It could amount to a kind of pre-negotiation SALT ratification debate that could help the administration prepare for the talks. No one need worry about the burdens such a debate would impose upon Mr. Warnke; he is eminently fit to carry the arms control brief.

Even as public hearings are being prepared, however, an anonymous memo is being circulated that accuses Mr. Warnke of favoring "unilateral" disarmament. We find this characterization of his views inaccurate and scurrilous. And we find the circulation of this sort of anonymous memo a positive disservice to policy debate. This is not the first occasion in which Carter appointment initiatives have been met with this tactic. Are some of the people with reservations about Mr. Warnke so lacking in confidence on the merits that they must resort to sneaky smears?

[From the Washington Star, Feb. 3, 1977]

A HEARING FOR MR. WARNKE

The U.S. Senate, which likes to be thought courteous and deliberative, belied that reputation in its casual handling of the Sorensen appointment. Perhaps the guardians of its good name will take matters in hand before the mistake is repeated in the matter of Mr. Paul Warnke's impending nomination.

Mr. Sorensen's nomination as CIA chief had at least been formally announced before that whispering campaign began. Mr. Warnke, according to the latest from the White House, will shortly be nominated by President Carter to head the Arms Control and Disarmament Agency and to conduct the next round of SALT talks; but his appointment is not yet official.

Yet even unannounced, Mr. Warnke has already become a target of opportunity in the Senate. During a Senate Armed Services session on Tuesday with the Air Force chief of staff, Gen. David Jones, Sen. Sam Nunn of Georgia read a statement on "nuclear superiority" attributed to Mr. Warnke. He asked General Jones to comment, and the general complied.

Was General Jones told that he was being asked, in effect, to be an informal witness on Mr. Warnke's judgment?

And apart from this unusual proceeding—which is unfair to Mr. Warnke (who should be permitted to defend his views on nuclear weapons at an appropriate time and place) as well as to General Jones (who should not be asked to intervene in a political matter)—an anonymous memorandum is circulating on Capitol Hill. It alleges, among other things, that Mr. Warnke "supports unilateral arms reductions to levels far below anything being proposed in current arms limitation talks."

"Unilateral" is a scare-word in any arms control context and it appears in this case to be a very loose construction of Mr. Warnke's view. That view, as we understand it, is in essence that the U.S. should refrain from the development of new weapons systems (e.g., the further "mirving" of missiles) if the net effect is merely to provoke parallel responses on the Soviet side. This obviously involves a judgment that Soviet strategic weapons planning and deployment are direct responses to our own; and that judgment is as debatable as any other in this complex field. It is not, however, foolish or implausible on its face. The point is not whether one agrees with it but how well Mr. Warnke could defend it in formal hearings. Mr. Warnke made an interesting case for trial restraint in the escalation of strategic weapons in a recent issue of Foreign Policy. He should have the opportunity to elaborate on it in public.

The Senate, in short, should exercise its "advice and consent" function formally, in the open, with full adversary discussion of the pertinent issues—not in the back alleys and cloakrooms.

Mr. Warnke has identified himself in recent years with a number of controversial positions on arms and arms control, and has been a severe critic of several new weapons systems dear to Pentagon hearts. But we will be very surprised if Senator Nunn and others among Mr. Warnke's critics can make the simplistic charge that he is a unilateral disarmer stick. The charge is false. Certainly President Carter can ill afford to allow another of his appointees to become the victim of a senatorial mugging before he even makes it to the hearing room.

It shouldn't be necessary to recall fundamental civic principles for the benefit of the Senate; but sometimes its curious proceedings, of which Senator Nunn's performance is a good example, make it seem so. One hundred senators who rarely agree on the time of day cannot conduct an arms control policy. The Senate is not (as the Supreme Court had to remind it last year in ruling the Federal Elections Commission legislation unconstitutional) the appointive branch of government. A President, then, is entitled to appoint officers who enjoy his confidence, and they are entitled to be heard out, and until recently the presumption has been in favor of their confirmation in the absence of good reason to deny it. Differences of judgment are not good reason.

Perhaps it ought to be added, since Senator Nunn and others are in a state of nervous excitement over Mr. Warnke's appointment, that any arms control agreement negotiated by the administration will be the work of many hands and will not be binding without the consent of two thirds of the Senate. So even if Mr. Warnke were the rash and foolish disarmer his detractors allege him to be—as we do not for a moment suppose—the Senate would not be powerless to protect us against his mistakes.

THE CALIFORNIA TUNA FISHING INDUSTRY

Mr. HAYAKAWA. Mr. President, I wish to say something about the tuna fishing industry in California.

Mr. President, the California tuna fishing industry has been in great jeopardy for some time—and is threatened now with what could be the death blow.

The U.S. Court of Appeals in the District of Columbia ruled last Thursday night to continue severe restraints against the incidental taking of porpoises by U.S. tuna fishermen. This ruling was taken against the American Tunaboat Association, and it virtually puts our tuna fishermen out of businesss.

It is a strange but out of business. that modern methods of tuna fishing cause porpoises to be accidentally ensnared in nets and killed. And it is understandable that in 1972, in response to the concerns of conservationists and others, the Congress passed the Marine Mammal Protection Act. While this act was well intentioned, it has not succeeded in its purpose.

The act did not foresee the enormous economic burden it has placed upon American tuna fishermen. Nor did it consider the fact that foreign tuna fishermen, not bound by our laws, are still taking porpoises. What we have, then, is a situation unsatisfactory to the conservationists' purpose and an economic calamity for U.S. tuna fishermen.

Let me emphasize that the Marine Mammal Protection Act will save porpoises only from tuna boats that fly the American flag. Boats under other flags will continue to fish freely, by any method they choose, and without regard to the porpoise population.

We are not going to solve this problem by keeping our fishermen home.

I have introduced an amendment to loosen the present restrictions and to provide the time and money to solve this problem.

Essentially, my amendment seeks the answers to two problems. First of all, it permits our tuna fishermen to go back to work while technological research continues into new kinds of netting and other equipment which will mean the loss of only a minimal—and perhaps one day zero—number of porpoises. And progress is being made. For example, I learned just recently of a 550-ton tuna catch in which only four porpoises were lost.

I stress that our fishermen are as deeply concerned as we all are in pursuing their livelihood in a manner which will not endanger these wise and friendly creatures of the sea. It is a fact that the presence of porpoises swimming about the surface is an alert to fishermen of schools of yellowfin and other tuna below. Obviously, the loss of porpoises would mean losses to the tuna catch.

Second, my amendment addresses itself to the scientific research needed so that we can understand, and learn to deal with, the habits of porpoises. We simply do not know why tuna and porpoises swim around together. We have only recently learned that many netted porpoises thought to be dead were only playing dead by flipping over on their backs.

Much needs to be learned about porpoises before we have a solution.

From month to month American fishermen are improving their nets and improving their fishing methods so that the porpoise kill has been dramatically diminished since 1972 when the legislation was enacted.

My amendment has been referred to the Senate Commerce Committee for

consideration. Because of its urgency, I am asking the chairman of that committee to take it up as a top priority.

One tuna fisherman was quoted in the newspaper over the weekend as saying, "All we are asking for is the time." My amendment would provide that time, and put it to good purpose.

I thank the Chair.

THE NOMINATION OF PAUL WARNKE

Mr. HART. Mr. President, I have been interested in the remarks made by my colleague from Minnesota regarding the nomination of Mr. Warnke. I ask that the Senator answer a question or two.

It is the impression of the Senator from Colorado that perhaps there is no one in this body who has better credentials and background in the whole area of arms control and disarmament than the distinguished Senator from Minnesota.

I wonder whether in his judgment the policy of this administration, which seems to be totally committed towards arms control and disarmament, is best served by appointing someone who has the same kind of commitment or whether the President of the United States would be better served to go out and look for someone opposed to arms control and disarmament at the present time?

Mr. HUMPHREY. It is very easy for me to answer that question.

I think if the administration is going to pursue its stated objectives of balanced force reduction—and I repeat the word balanced—through mutually acceptable enforcement of the verifiable agreements, and those are credentials and qualifications that are essential, then the administration should have as its chief negotiator and its arms control and disarmament agency director a person that is in full support of and in sympathy with the objectives and the policy determinations of the President and his administration.

Mr. HART. I thank the Senator.

Is it the Senator from Minnesota's impression from what he knows of Mr. Warnke's background and qualifications that he is the type of person who would more or less strike out on his own in very serious international bargaining and negotiations to try to push a point of view which is his and not that of the President of the United States?

Mr. HUMPHREY. No; he would not do that.

Let me say very clearly that while Mr. Warnke will be the chief negotiator, if confirmed, and while he will be the Director of the Agency known as ACDA—Arms Control and Disarmament Agency—if confirmed, he will be a member of the President's national security team that will help the President arrive at positions, policies, and options for negotiations with the Soviet Union.

I would want Mr. Warnke to speak his mind within the councils of the administration. I would hope that he would speak up for what he believes is the better approach to the difficult problems of arms control and, particularly, as it relates to strategic nuclear weapons.

But I know the man, and know him well. I know that once a policy decision has been arrived at, unless it is something that flagrantly violates his sense of what is right, he will honorably and loyally and persistently follow that policy in the negotiations. In other words, he will genuinely represent the Government's point of view as arrived at after consultation, rather than Mr. Warnke's individual point of view.

Mr. HART. Is the Senator familiar with any instance in Mr. Warnke's public life where he has taken positions in his official capacity contrary to those of his superiors?

Mr. HUMPHREY. No; I do not, and I knew him as a member of the administration when I was Vice President. I know we had different points of view on certain matters, even concerning the war in Southeast Asia, but I also know that he made those points of view clear in the discussions that took place. But once the policy was arrived at, while he was not the Secretary of Defense, he faithfully and loyally served his country and his administration.

Mr. HART. As I have indicated, it is this Senator's impression that there are two Americans who probably know as much as anyone about the whole field of arms control and disarmament, the distinguished Senator from Minnesota and former Governor of New York, Averell Harriman, and Governor Harriman is a strong supporter of the Warnke nomination.

Mr. HUMPHREY. That is correct.

Mr. HART. An individual who has negotiated and bargained with the Russians for the last 50 years—I believe that is his record.

I am interested in whether the Senator from Minnesota feels that there is anything more important to this country and to long-range national security than achieving some overall level on the strategic and nuclear proliferation?

Mr. HUMPHREY. There is absolutely no issue that is more significant and more important for this country today, or for the foreseeable future.

Our first task is to try to put a cap on what has already developed and to stop further development, further arms race, further proliferation of these incredibly destructive nuclear devices and then, hopefully, through tedious and, may I say, painstaking, difficult and time-consuming negotiations, to be able to reduce, or roll back.

That is our hope, that is our objective.

I repeat again, we have to expect that the negotiations will be difficult. We have to expect that the Soviet Union, for example, will want to get every advantage it can.

But I remind my colleagues through this colloquy that our negotiator will have with him the representatives of the Department of Defense, he will have been counseled and advised by the Joint Chiefs of Staff, he will have with him the representatives of the State Department, he will have with him representatives from the Central Intelligence Agency, he will have with him representatives of all the different branches of our armed services.

It is not as if, somehow or another, he is off on an individual lark, making a visit to Moscow in the hopes he will win friends. He is not there for that purpose.

He is there to carry out the mandates, the instructions, and the policies of our Government.

Mr. HART. Is there any agreement he could strike that is not subject to confirmation by this body?

Mr. HUMPHREY. None whatsoever.

Furthermore, there is no agreement that he can strike that would not have the review of the President, or the President would remove him forthwith, because the President has the power not only of nomination, but of removal.

Mr. HART. Does the Senator from Minnesota know of any other individual whom the President could have picked who is more qualified than Mr. Warnke?

Mr. HUMPHREY. If I had thought so, I would have recommended him.

I do not take any particular claim for the nomination of Mr. Warnke, but over the last 2 months I have visited from time to time with Mr. Vance and with the President on this matter because it is very close to me.

I put 20 years of my life into this and I have had some heartaches and some disappointments over what has happened, over the inadequacy of our efforts.

I wanted Mr. Warnke, and I called the Secretary of State not once but half a dozen times, knowing that Mr. Warnke had first turned down the request that had been made.

Mr. Warnke is a very able attorney, able enough to represent some of the finest clients in America.

I urged upon the Secretary of State that he pursue this, that he not let Mr. Warnke get off the hook, as I said. He owes it to the country. He is able; he is skilled in this matter. It would have been a serious mistake not to have someone of such competence and skill working with the Government in these delicate and sensitive negotiations.

Mr. HART. One final question, if the Senator will permit.

It is one of the great regrets of the Senator from Colorado's life that at one point during the Presidential race in 1972, he and the Senator from Minnesota were not on the same side. It has been suggested to Mr. Warnke that somehow he be disqualified for this position because he supported the nominee of the Democratic Party in that election. Does the Senator from Minnesota feel that way?

Mr. HUMPHREY. No; I supported him, too, enthusiastically; and I think the country would have been better off if GEORGE MCGOVERN had been elected rather than Richard Nixon. I think that one of the finest credentials Mr. Warnke has is that he saw the difference.

Mr. Warnke not only was one of the advisers to Senator MCGOVERN; he also was one of my advisers in 1968, and he has been an adviser to many Members of this body whose loyalty and patriotism are beyond question. I think that Mr. Warnke's decision in 1972 was one that most Americans wished they had made.

Mr. HART. I thank the Senator.

Mr. President, I commend to this body the views of the distinguished Senator from Minnesota, who I think has given more of his life to trying to solve the

biggest problem that confronts the human race—the limitation of strategic nuclear weapons—than anyone else of whom I know. I believe that all Members of the U.S. Senate would be well advised to follow his advice in this matter.

Mr. HUMPHREY. I thank the Senator from Colorado. He is very generous.

The PRESIDING OFFICER (Mr. MOYNIHAN). The time of the Senator from Colorado has expired.

Mr. GRIFFIN. Mr. President, I know of no one in the Senate for whom I have greater affection than the Senator from Minnesota (Mr. HUMPHREY). But, of course, we do occasionally disagree, and we do disagree concerning the nomination of Mr. Warnke—not to be an adviser to the President on disarmament—but to be the U.S. negotiator with the Soviet Union on a SALT II agreement.

Let me illustrate my concern. If I wanted to sell a house, I would not hire a real estate agent who had already said publicly that my house is worth only 50 percent of the asking price. Nor would I expect, for example, that a lawyer who had publicly declared his belief that an accused person is guilty would thereafter be appointed by the court to be the defense counsel.

Apparently, Mr. Warnke is very sincere in his views that the U.S. Armed Forces can do without the B–1 bomber, that we can do without the XM–1 tank, and without the Trident submarine. Mr. Warnke seems to have no use for the cruise missile—which, incidentally, is one of the most important matters at issue in the SALT II talks.

I think President Carter is entitled to have advice and counsel from a person who has the views of Mr. Warnke—just as he is entitled to have advice and counsel from those who have contrary views. If Mr. Warnke's name were being put forth only as director of the Arms Control Agency—even though I recognize that in such a capacity he would be more than just as an advisor—I would not have so much difficulty supporting the nomination.

But the Senate and the country should be aware that there are two nominations of Mr. Warnke pending before the Foreign Relations Committee—one to make Mr. Warnke the Director of the Arms Control and Disarmament Agency and another to make him Ambassador, as our chief negotiator at the SALT talks.

The hearings of 2 days held by the Committee on Foreign Relations have been illuminating. I deplore as much as anyone the use of unsigned memorandums which make charges. I believe that is a despicable tactic. But I believe there should be discussion about the points made in the memorandums and whether the so-called charges are accurate.

The word "charge," I suggest is not even an appropriate word; because, after all, Mr. Warnke is entitled to the views he holds. There is nothing wrong with his holding those views. The only question in my mind, and one that seriously concerns me, is whether he has not destroyed his own credibility as a negotiator.

I look upon the negotiator for the United States in these very difficult talks with the Soviet Union as someone who must be able to do some tough bargaining. If the Russians can turn around and read back statements that our chief negotiator has made over the last 6 or 7 years, which actually give away more than the Russians are asking for, it seems to me that we would be putting ourselves in a very awkward and difficult position at the negotiating table, to say the least.

I will have much more to say on this subject, Mr. President. Today, I merely wish to make clear that there are strong views on the other side.

The Committee on Foreign Relations has not voted as yet. Because this nomination relates to foreign policy, it is appropriate that the nomination is being considered by the Foreign Relations Committee. But because the SALT talks could also profoundly affect our defense posture, it would seem most appropriate to me that the nomination, if and when approved by the Foreign Relations Committee, should be referred to and considered by the Committee on Armed Services. I hope that committee will consider it. It should. It has a responsibility to do so.

I look forward to further discussions of this very crucial and important nomination.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. GRIFFIN. I yield.

Mr. STEVENS. Mr. President, I commend the Senator from Michigan for his statement, and I wish to indicate my support for his plea that these two nominations be referred to the Committee on Armed Services for review prior to consideration on the floor of the Senate.

I do not know whether the Senator from Michigan has seen these, but I have in my hands three articles written by Scripps-Howard staff writers Tim Wyngaard and Gene Goldenberg on the 8th, 9th, and 10th of this month concerning these nominations.

I believe it is important for us to continue this inquiry to determine the facts concerning the relationship of this nominee to the past actions with regard to the Pentagon papers and with regard to the actions that made those Pentagon papers available to the Rand Corp., and to others outside the Government.

Mr. President, I ask unanimous consent to have these articles printed in the RECORD, and I thank the Senator for yielding.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FIRST SCRIPPS-HOWARD ARTICLE

(By Tim Wyngaard)

WASHINGTON, February 8.—Senate opponents of Paul C. Warnke—President Carter's choice to head U.S. disarmament efforts—are probing reports that Warnke played an indirect role in the leaking of the Pentagon Papers.

They are investigating allegations that Warnke, while a top Defense Department official in the late 1960s, authorized Daniel Ellsberg's access to the secret Vietnam study, despite the fact that Ellsberg had quit the Pentagon in opposition to the war. Ellsberg later admitted leaking the classified documents to several newspapers in 1971.

Warnke last (Monday) night told Scripps-Howard News Service he had "recommended" that the Rand Corporation, a private "think tank" under contract to the Pentagon, be given a set of the papers. Ellsberg obtained his copy of the secret documents there.

But Warnke called the reports that he had authorized Ellsberg's access "totally inaccurate," and said that the permission must have been granted by two former aides then working at Rand.

The aides, Morton H. Halperin and Leslie H. Gelb, had worked under Warnke when he was Assistant Secretary of Defense for International Security Affairs between 1967 and 1969.

Under him, they headed the task force that drafted the classified study of the origins of U.S. involvement in Vietnam.

The Senate inquiry centers on allegations from other former Pentagon officials that one and possibly two Defense Department investigations of the leak of the papers showed Warnke had turned over the 47-volume report for Rand use. No wrongdoing in turning over the report was suggested in those investigations.

But the sources also allege Warnke authorized Ellsberg's access, despite the fact that he (Ellsberg) had quit the Pentagon in opposition to the war and had stated on a number of occasions that the papers should be made public. Ellsberg had worked on the early stages of the Pentagon Papers project.

Warnke told Scripps-Howard he "expects" the issue to come up in his confirmation hearings, scheduled to start today, for the directorship of the U.S. Arms Control and Disarmament Agency and as Carter's special negotiator for Strategic Arms Limitation Talks (SALT).

Last weekend—before the Pentagon Papers charges began circulating—Senate Democratic Leader Robert C. Byrd, W. Va., said Warnke was in "some trouble" because of past comments suggesting that U.S. nuclear parity with the Soviet Union was unnecessary.

Ellsberg denied charges of theft and unauthorized possession of government documents after he released the papers, arguing that the set of papers he copied at Rand were the private property of Warnke, Halperin and Gelb.

Last (Monday) night, Warnke denied he regarded the set of papers sent to Rand as "private documents." It was one of several sets sent to "classified storage facilities," he said. Other sets were sent in much the same way to former Defense Secretaries Robert McNamara and Clark Clifford, he said.

Warnke is now a partner in Clifford's law firm here.

At Ellsberg's trial, Gelb testified that twice early in 1969 Halperin asked that Ellsberg be given access to the documents at Rand and that "we denied access."

The third request by Halperin for Ellsberg later that year has authorized, Gelb testified. Gelb did not explain who he meant by "we."

Warnke told Scripps-Howard he did not know the requests were being made and that Gelb must have meant that Gelb and Halperin made the Ellsberg decision themselves.

Warnke also said that the White House is "completely aware" of the issue and that it was "discussed" with Carter aides some time ago. He said the Carter staff "probably raised the matter with him."

"I would not have regarded it as important," Warnke said.

The Pentagon Papers charge is expected to stir additional opposition to Warnke, in much the same manner that an affidavit Theodore C. Sorensen gave during Ellsberg's trial doomed his nomination to head the Central Intelligence Agency for Carter.

Sorensen withdrew from contention for the CIA job last month on the first day of his confirmation hearings. He took that step after an affidavit he had offered in the Ellsberg case came to public notice.

The sworn statement acknowledged that he had leaked classified information to newsmen at the direction of the late President Kennedy. And he admitted taking seven boxes of classified information with him when he quit the White House after Kennedy's assassination. The case against Ellsberg was thrown out of court after the Justice Department revealed that the White House "Plumbers" in the Nixon administration had broken into Ellsberg's psychiatrist's office, looking for damaging information about Ellsberg in the wake of the Pentagon Papers leak.

SECOND SCRIPPS-HOWARD ARTICLE

(By Tim Wyngaard and Gene Goldenberg)

WASHINGTON, February 9. Despite his claim that he knew nothing of Daniel Ellsberg's attempt to obtain the Pentagon Papers, Paul C. Warnke was warned in advance, according to a former top aide.

The apparent discrepancy raised questions regarding Warnke's handling of classified documents, similar to problems which doomed Theodore C. Sorensen's nomination to be President Carter's director of the Central Intelligence Agency.

Warnke, Carter's choice to head U.S. disarmament efforts; was asked during his confirmation hearings yesterday (Tuesday) before the Senate Foreign Relations Committee about his role in granting Ellsberg access to the top-secret papers.

"I did not know of the Ellsberg request," Warnke told the committee.

He said two former aides—Morton H. Halperin and Leslie H. Gelb—granted Ellsberg access to the papers without telling him in advance.

But Halperin told Scripps-Howard News Service Tuesday that he told Warnke in 1969 that Ellsberg was about to be allowed to see the classified report on the origins of the Vietnam War.

Halperin said he did that in compliance with an agreement under which Warnke, he (Halperin) and Gelb sent the papers to the Rand Corporation, a private "think tank" with Pentagon contracts.

And in 1973 Halperin testified during Ellsberg's trial that for theft of the papers that Warnke knew Ellsberg was seeking the papers because Warnke had turned down an earlier Ellsberg request.

Ellsberg admitted copying Warnke's set of 47 volumes of the papers and distributing them to newspapers in 1971.

Ellsberg, Halperin and Gelb—all of whom worked on preparing the Pentagon Papers under Warnke while he was assistant secretary of defense for international security affairs from 1967 to 1969—were associated with Rand after the close of the Johnson administration.

But Ellsberg earlier had quit his defense job in protest of the Vietnam War and had repeatedly said the Pentagon Papers should be made public to show the faults of U.S. policy in Indochina.

In transferring the Pentagon Papers and other documents to Rand just prior to leaving the Pentagon in December, 1968, Warnke, Halperin and Gelb stipulated that they would control access to the papers. Their agreement with Rand said that at least two of the three men would have to approve use by others and that all three "should be informed in advance of Rand's granting access."

The rules under which the transfer and access were to be controlled was spelled out in a covering memorandum all three men signed at the time.

Halperin told Scripps-Howard News Service that Warnke "did in fact know" of the Gelb-Halperin decision to allow Ellsberg to see the papers.

"He was told . . . before we did it," Halperin said.

Asked if Warnke objected or tried to block the move, Halperin paused and said: "I just don't remember."

Gelb, the new director of politico-military affairs at the State Department, told Scripps-Howard he could not remember any details of the arrangement, which he said was negotiated by Halperin.

Referring to the transfer of the Pentagon Papers to Rand, Warnke told the Foreign Relations Committee, "I thought the procedures were adequate so that there would be no security problem. The problem was the procedures were disregarded."

Ellsberg had a top-secret security clearance but "disregarded the security classification" of the papers, Warnke said.

Opponents of the Warnke nomination are investigating charges by a former defense official that Warnke approved Ellsberg's access to the papers and therefore was indirectly linked to the leak.

THIRD SCRIPPS-HOWARD ARTICLE

(By Tim Wyngaard and Gene Goldenberg)

WASHINGTON, February 10.—President Carter's choice to head U.S. disarmament efforts Paul C. Warnke, and two colleagues ordered the removal of classified documents—including the papers of a dead man—from the Pentagon despite federal restrictions on such actions.

Top Defense and Justice Department officials said the actions of Warnke and his aides were typical of abuses in the handling of classified government papers and their removal by individuals leaving government jobs.

The Senate Foreign Relations Committee is considering Warnke's nomination to be both director of the Arms Control and Disarmament Agency and chief strategic arms negotiators. Sens. Barry Goldwater, R–Ariz., and Sam Nunn, D–Ga., have asked Chairman John C. Stennis of the Armed Services Committee to hold hearings on Warnke before the Senate votes on his confirmation.

The files removed by Warnke, Morton H. Halperin and Leslie H. Gelb when they left their Pentagon jobs at the close of the Johnson administration in January, 1969, included the top-secret, 47-volume Pentagon Papers. They later were distributed to newspapers by Daniel Ellsberg.

But the files also included the "private papers" of Warnke and John T. McNaughton, a top defense official who with his wife and a son died in a plane crash a year and a half earlier.

McNaughton; who preceded Warnke as deputy assistant defense secretary for international security affairs, was about to be confirmed as secretary of the Navy when he died.

A former top defense official who examined the McNaughton papers during investigation of the Ellsberg leak said many of the documents were classified. But he said the McNaughton files also included working papers dealing with McNaughton's Vietnam War studies and nuclear talks with Russia which were "of considerable historical and monetary value" to his estate.

"Very definitely these were McNaughton's personal papers; his own personal squiglings—it's hard to see how many of McNaughton's personal papers could be considered theirs," he said; referring to Warnke, Halperin and Gelb.

Foye F. McNaughton, executor of his son's estate, told Scripps-Howard News Service that he never was asked for permission when Warnke, Halperin and Gelb transferred what they termed McNaughton's "private papers" to the Rand Corp., a private "think tank" and defense contractor, in January, 1969.

Nathan T. Elliff; a Pekin, Ill., lawyer representing the John McNaughton estate; confirmed that "no request was ever made to me and I never heard of one."

Defense Department officials said the removal of numerous top-secret documents from the Pentagon as was done by Warkne, Halperin and Gelb might have violated regulations in existence at the time. Those rules required that a departing official file a "termination and debriefing statement" including a pledge that he had no classified material in his possession.

In addition, officials said no classified material could be considered the personal or private property of a departing official. However, defense officials would not say:

Whether Warnke sought or received a special waiver to remove classified material from the Pentagon to Rand and later from Rand's Washington office vault to Rand vaults in California?

Why McNaughton's papers were included with Warnke's?

Whether Warnke complied with Pentagon instructions dealing with classified materials?

They did say they were more concerned about the way the classified materials among the Warnke and McNaughton papers were handled once they reached Rand.

And why wouldn't defense officials comment?

"This matter" said one, "is politically sensitive."

Within a week after publication of the Pentagon Papers; defense officials seized "armloads and boxes" of the classified material which Warkne, Halperin and Gelb had stored at Rand's offices here; according to the defense official.

On June 21, 1971, eight days after initial newspaper reports on the Pentagon Papers; Warnke and Halperin contacted the National Archives seeking to turn over their "private papers," which included 20 looseleaf binders of McNaughton documents. The transfer to Archives was accomplished by June 30.

Even though these documents were deeded to Archives; Warnke and Halperin retained sole control of access to the papers until last June.

Mr. PERCY. Mr. President, with reference to the comments that have just been made by my distinguished colleagues, I point out that the jurisdiction for the confirmation proceedings for Mr. Warnke is clearly in the hands of the Committee on Foreign Relations.

Knowing of the concern expressed by some of our distinguished colleagues about the nomination, our chairman, Senator SPARKMAN, joined by our ranking minority member, Senator CASE, with their typical sense of fairness and justice and thoughtfulness, extended a cordial invitation to members of the Committee on Armed Services to join members of the Committee on Foreign Relations and participate in the questioning of Mr. Warnke. That invitation was extended to that committee. It was accepted by a number of Senators on the Armed Services Committee who did come in and actually questioned the witness.

Also, after considering the nomination, I felt it advisable to consult with the former Administrators of the Arms Control and Disarmament Agency. I called Mr. William Foster, a respected member, and asked his judgment as to Mr. Warnke's qualifications. He enthusiastically supports the nomination.

I talked with Mr. Gerard Smith, who headed the Agency, who was head of our delegation in Helsinki when I visited the delegation in Helsinki, to learn firsthand from that negotiating team the problems they were up against in SALT I. I also visited at that time with Mr. Paul Nitze, who was a member of the delegation. Mr.

Gerard Smith enthusiastically supports the nomination.

I then talked with Mr. Paul Nitze, following knowledge I had that he had sent a letter to Senator SPARKMAN, as chairman of the Committee on Foreign Relations, raising certain key, pertinent questions. I obtained a copy of that letter and read to Mr. Warnke certain passages from the letter, giving him an opportunity to comment, which he did.

I then asked Mr. Paul Nitze if he would be willing to testify, and he said that he would, if an invitation were extended to him. Subsequently, that invitation was extended, and he did testify, and he certainly was the most formidable and knowledgeable person who had been before the committee. He was there and could be questioned by any members.

The confirmation proceeding is moving along, and all responsible parties who have asked to testify, for and against, have been heard in that forum.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. PERCY. Certainly it will be debated fully in the Chamber without any question. But I merely report at this time I think a greater service has been performed by Senator GRIFFIN, and by others who have raised questions, because I think a nominee for this powerful position should go through all of the questioning that appropriately can be put to him as to his views that he has held in the past, as to his competence and ability, and as to the views he now holds and the program that he would pursue in the future.

I am very happy to yield to my distinguished colleague for any comment or question, without losing my right to the floor.

Mr. CHURCH. I thank the Senator from Illinois.

First of all, I wish to join with him in the observation he made at the outset that the exclusive jurisdiction in this matter is with the Foreign Relations Committee. As to this, the rules of the Senate are explicit. I think it would be very unfortunate, indeed, if we did not strictly adhere to those rules. It would be unprecedented and we would live to regret it in the future.

As the Senator from Illinois has pointed out, every effort has been made to accommodate all Senators. Those who sit on the Armed Services Committee were invited to attend the hearings conducted by the Foreign Relations Committee, to participate fully and to ask whatever questions they wished of Mr. Warnke and all other witnesses.

The invitation was extended to every Member of the Senate, and there were those who availed themselves of it, who were neither members of the Foreign Relations Committee nor the Armed Services Committee.

But such is the general interest in this nomination that the distinguished chairman of the Foreign Relations Committee wished all Senators to know that they were welcome to participate.

So no one can fairly say that these hearings excluded any Member of the Senate. This being the case, it is very important to protect the proper jurisdiction of the Foreign Relations Committee as laid forth in the Senate rules.

I, for one, would resist very strongly any effort, in violation of the rules, to confer joint jurisdiction upon another committee of the Senate.

I also commend the Senator from Illinois, my able colleague and fellow member of the Foreign Relations Committee, for having taken the initiative in conferring with former directors of the Arms Control and Disarmament Agency.

Mr. William Foster is a man that I have known and respected for many years. It was my privilege, years ago, to attend some of the negotiating sessions in Geneva and to visit with other representatives there from the United Kingdom and the Soviet Union, at the time we were attempting to work out the Nuclear Nonproliferation Treaty. I came to highly respect William Foster at that time, as I came to respect Mr. Gerard Smith who later headed up the Agency. To know that both of these men enthusiastically support Mr. Paul Warnke is very reassuring indeed.

Moreover, both of these men engaged in active negotiations of a high order at the time that they were serving as Director of the Arms Control and Disarmament Agency.

I have heard it said that somehow this is too big a job for Paul Warnke; it is going to spread his talent too thin. I must say I have seldom seen a witness appear before the committee with talents more evident or more generously endowed. I am certain that he has fully as much capacity as his predecessors to both head up the Agency and engage in important negotiations at the same time.

Mr. William Foster did it when we were attempting to work out the terms of the Nuclear Nonproliferation Treaty, while serving as Director of the ACDA, Mr. Gerard Smith did it in those complicated negotiations that preceded the SALT I agreements, while simultaneously serving as the Director of the ACDA.

So it seems strange to me to hear it now said that a man of the remarkable capacities of Paul Warnke will be stretched too thin if he serves both as the Director of the ACDA and negotiates also in the upcoming SALT II talks to implement the principles agreed to at the Vladivostok summit.

Therefore, I commend the distinguished Senator from Illinois for having brought to our attention these outstanding ACDA Directors who also negotiated so well in the past. Their opinion should carry great weight, and it should be remembered that they set the precedent for serving in the dual capacity for which Paul Warnke has now been nominated.

I congratulate the Senator on his remarks.

Mr. PERCY. I thank very much my distinguished colleague.

ALLIANCE TO SAVE ENERGY

Mr. PERCY. Mr. President, I am pleased to ask unanimous consent to have printed in the RECORD on behalf of Senator HUBERT HUMPHREY and myself a joint statement that we made today regarding formation of the Alliance To Save Energy, a statement by President Jimmy Carter, and a statement by Mr. Ralph Nader.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

ALLIANCE TO SAVE ENERGY

(By Senator CHARLES H. PERCY and Senator HUBERT H. HUMPHREY)

Energy conservation has been called "slow-growth" economics by its critics; its supporters have hailed it as the only way to save our way of life.

Record cold temperatures this winter should awaken us to the need to make saving energy the nation's top domestic priority. Because of the cold temperatures and shortage of natural gas, we have been struck with untold human hardship. Thousands are out of work. Millions are struggling to keep warm. And in January, for the first time, we imported more than 50 per cent of the oil burned in America. Not since the Arab oil embargo has the need for energy conservation been so obvious.

If we are to have an effective national energy conservation effort, there must be a different approach and a new definition, one which could capture widespread popular support.

Economic facts are a compelling argument for energy conservation. Conservation energy—based on more efficient and economical use of the energy we have now—is an enormous, untapped alternative energy source that can reduce our dependence on expensive foreign oil and dwindling domestic energy supplies.

Alliance to Save Energy, a new national organization, will promote this great energy source.

One of our chief tasks is to convince every American—homeowners, apartment-dwellers, motorists, business leaders, labor union officials, government officials—that it is actually far less expensive in the long run to invest to save energy than it is to purchase energy.

Alliance to Save Energy will seek to develop a broadly-based constituency for energy conservation; to ensure competitive production of conservation energy from investment in more efficient buildings, transportation facilities, industrial processes and electric generation; and to ensure the production of conservation energy in the amount needed to reduce the political and social costs such as our vulnerability to the oil cartel and damage done to the environment.

We believe that about 35 Quads of conservation energy, which equals about 16 million barrels of oil a day, can be produced by 1985. This would provide for an average energy growth of about 3.5 per cent per year over the next ten years.

Clearly the production of oil, gas and electricity could be held to replacement levels while providing for the energy needs of an expanding economy.

In 1976 dollars, energy will cost an average of approximately $4.50 per million BTU's in 1985. Yet conservation energy is estimated to have a median cost of only $2.50 per million BTU's. As a result, if conservation energy can replace 35 Quads of conventional energy sources, some $70 billion in 1976 dollars will be slashed from our prospective energy budget in 1985.

These 35 Quads of conservation energy represent the largest and least expensive source of new energy in the United States. It is time to make this a national goal, and to seek it as aggressively as we seek more expensive energy sources.

Producing 35 Quads of conservation energy by 1985 will require us to:

Create in the American people a commitment to save energy as an alternative inexpensive source of energy for every farm, office, factory and family.

Provide longer term financing to stimulate immediate thermal improvements to residences, appliances, and industrial processes.

Demand strict enforcement of Federal en-

ergy efficiency standards on autos, buildings, appliances, and industrial processes.

Alliance to Save Energy is a private, non-profit, non-partisan organization.

Former President Gerald Ford and Vice-President Walter Mondale will serve as Honorary Chairmen. Dr. James Schlesinger will serve as the Honorary Advisor.

The activities of ASE will be determined by a Board of Directors in consultation with an Advisory Board. The Board of Directors will elect an Executive Committee from their members to implement policy.

The Chairman and Co-Chairman of the Board of Directors are Senators Charles H. Percy and Hubert H. Humphrey.

Dr. Henry Kissinger will serve as Chairman of the Advisory Board, honorary Chairman will be Speaker Tip O'Neill, and honorary co-chairman will be minority leader John Rhodes. Honorary Vice-Chairpersons will be HUD Secretary Patricia Harris for housing, Commerce Secretary Juanita Kreps for commerce and industry, Labor Secretary Ray Marshall for labor, and Transportation Secretary Brock Adams for transportation.

The Advisory Board will be made up of individuals from all sectors of American life. It will also include 10 regional Chairpersons, coinciding with the 10 Federal regions, who will oversee the programs of the 50 State Chairpersons.

(A list of the boards to date is attached.)

Policies, positions and actions of ASE will generally constitute a consensus among its directors, advisors and members. But everyone participating in ASE reserves the right to disagree with the organization and to express individual opinions.

An Executive Director will be appointed to manage the day-to-day activities of the organization. A staff of approximately 25 professionals will be headed by Assistant Directors responsible for:

Commerce and industry,
Buildings,
Transportation,
Utilities,
Public Education,
Legislative affairs.

This basic organizational structure will be reflected within each state. The state organizations will identify and promote projects of specific value to the state including a statewide conference on conservation energy.

There will be a six month initial phase, funded by contributions from diverse sectors totaling about $150,000. Thereafter, activities would be budgeted at a minimum of $2 million a year to be increased as needed.

ASE will be organized as a non-profit corporation, and application will be made for Federal tax exempt status, under which donations to ASE will be tax deductible. Legislative activities will be kept at a level less than 20 per cent of the overall budget.

ALLIANCE TO SAVE ENERGY

Chairman: Senator Charles H. Percy.

Co-Chairman: Senator Hubert H. Humphrey.

Honorary Chairmen: Former President Gerald R. Ford, Vice President Walter F. Mondale.

Honorary Advisor: The Honorable James R. Schlesinger.

Advisory Board:

Chairman, Dr. Henry A. Kissinger.

Honorary Chairman, Representative Thomas P. O'Neill, Jr.

Honorary Co-Chairman, Representative John J. Rhodes.

Honorary Chairwoman for Industry & Commerce, Secretary Juanita Kreps.

Honorary Chairman for Labor, Secretary S. Ray Marshall.

Honorary Chairwoman for Housing, Secretary Patricia Harris.

Honorary Chairman for Transportation, Secretary Brock Adams.

Ambassador Anne Armstrong,* Ambassador to Great Britain.

Andrew A. Athens, President, Metron Steel Corporation; National Chairman, United Hellenic-American Congress.

Monsignor Geno Baroni, President, National Center for Urban/Ethnic Affairs.

Mrs. Margery Benton,* President, Better Government Association of Chicago.

Dr. Marver Bernstein, President, Brandeis University.

Dr. Kazys Bobelis, President, Lithuanian American Council.

Frank Borman, President, Eastern Airlines.

Dr. Arnita Boswell, President, University of Chicago.

Lester Brown, President, Worldwatch Institute.

Capt. Howard Bucknell, III, U.S. Navy (Retired), University of Georgia.

Jacques Cousteau, President, Cousteau Society.

John Gardner, Chairman, Common Cause.

Peter Gillingham, President, Intermediate Technology-U.S.

William Herring, Chairman of the Board, Houston Natural Gas Company.

Robert Ingersoll*, Deputy Director, Board of Trustees, University of Chicago.

Senator Henry M. Jackson, Chairman, Senate Energy and Natural Resources Committee.

I. L. Kenen, Editor Emeritus, Near East Report; Honorary Chairman, American Israel Public Affairs Committee.

Ambassador Philip Klutznick, former Ambassador to the U.N. for the U.S.

Dr. Myron Kuropas, Supreme Advisor, Ukrainian National Association; former Special Assistant to President Ford for Ethnic Affairs.

Ambassador Sol Linowitz.

George Meany*, President, AFL–CIO.

Arthur Nielsen, Jr.*, Chairman of the Board, A. C. Nielsen Company.

Eleanor Holmes Norton, Commissioner for Human Rights, City of New York.

Captain J. J. O'Donnell, President, Air Line Pilots Association.

Eugene Odum, Director. The Institute of Ecology, University of Georgia.

I. M. Pei, Architect and Planner.

Peter Peterson, Chairman of the Board, Lehman Brothers.

Russell Peterson*, President, New Directions.

Eugene Pokorny*, Vice President of Cambridge Reports.

David Rockefeller, Chairman, Chase Manhattan Bank.

Lawrence Rockefeller, President, Rockefeller Foundation.

Ambassador Ken Rush, Ambassador to France and former Chairman of Union Carbide.

John Sawhill*, President, New York University.

Rabbi Alexander M. Schindler, Chairman, Conference of Presidents of Major Jewish Organizations; President, Union of American Hebrew Congregations.

E. F. Schumacher, President, Intermediate Technology Development—England.

Irving Shapiro, Chairman of the Board, Du Pont Corporation.

Joseph Sisco, President, American University.

Russell Train, Former Director of Environmental Protection Agency.

Rawleigh Warner, Jr., Chairman, Mobil Oil.

Elmer Winter*, President, American Jewish Committee.

Arthur Wood, Chairman and Chief Executive Officer, Sears, Roebuck & Company.

Leonard Woodcock*, President, UAW.

Glenn E. Watts*, President, Communication Workers of America.

Ambassador Barbara White, President, Mills College.

Frank Zarb, Former FEA Administrator.

* Board of Directors.

ALLIANCE TO SAVE ENERGY: ADVISORY BOARD—U.S. SENATORS

Dewey F. Bartlett, Oklahoma.
Clifford P. Case, New Jersey.
John H. Chafee, Rhode Island.
Lawton Chiles, Florida.
Dick Clark, Iowa.
John C. Danforth, Missouri.
Dennis DeConcini, Arizona.
Thomas F. Eagleton, Missouri.
Mike Gravel, Alaska.
William D. Hathaway, Maine.
S. I. Hayakawa, California.
John H. Heinz III, Pennsylvania.
Walter D. Huddleston, Kentucky.
Daniel K. Inouye, Hawaii.
Jacob Javits, New York.
Edward M. Kennedy, Massachusetts.
Patrick J. Leahy, Vermont.
Richard G. Lugar, Indiana.
Charles McC. Mathias, Jr., Maryland.
Spark M. Matsunaga, Hawaii.
James A. McClure, Idaho.
Sam Nunn, Georgia.
Richard S. Schweiker, Pennsylvania.
Robert T. Stafford, Vermont.
John C. Stennis, Mississippi.
Richard (Dick) Stone, Florida.
Herman E. Talmadge, Georgia.

STATEMENT BY PRESIDENT JIMMY CARTER ON FORMER PRESIDENT FORD'S AND VICE-PRESIDENT MONDALE'S ROLE AS HONORARY CHAIRMEN OF THE ALLIANCE TO SAVE ENERGY

Saving energy must be a major national priority. It is one of America's greatest challenges.

I want to welcome the timely creation of the private, non-profit Alliance to Save Energy which is being announced today. This organization is dedicated to the concept that there is a new, inexpensive and accessible resource: conservation energy. Conservation energy is the energy derived by replacement of wasteful habits and technology with more efficient ones. Every American can join in the effort to make conservation energy one of our chief resources. I urge them to do so.

I have asked Vice-President Mondale to serve as Honorary Co-Chairman of the Alliance to Save Energy. I am especially pleased and grateful that former President Ford will serve in this capacity also.

As I said in my address to the nation last week, we must face the fact that the energy shortage is permanent and there is no way we can solve it quickly or easily.

Conservation will be the centerpiece of our national energy policy. The amount of energy we waste is greater than the amount of energy we import from foreign nations. All of us must learn not to waste energy. I'm confident that the Alliance to Save Energy will play a significant role in implementing our national energy policy. It is just this kind of effort which is now required to mobilize the American people behind the critical need to use precious energy resources more wisely.

STATEMENT BY RALPH NADER ON CREATION OF ALLIANCE TO SAVE ENERGY, FEBRUARY 10, 1977

Senators Percy and Humphrey should be congratulated for launching this major national effort for energy efficiency in all sectors of the economy. Energy efficiency is our greatest immediate source of energy. We can reduce inflation, diminish pollution, defend the consumer and make our economy more efficient and competitive overseas. Mobilizing the public to secure more efficient automobiles, building operation and construction, industrial processes, and consumer tech-

nologies will relieve greatly the pressures that are placed on our society by an energy scarcity based on waste. For this group to succeed requires the support and attention of many Americans.

Mr. HUMPHREY. Mr. President, I wish to join the Senator from Illinois. I have a very brief statement that I presented this noon at the press conference announcing the formation of the Alliance to Save Energy.

I am delighted to join Senator PERCY as cochairman of the Alliance to Save Energy—a citizen conservation organization.

The purpose of the Alliance is straightforward: To stimulate a public debate on energy conservation alternatives and to publicize the potential of energy conservation for reducing our dependence on foreign energy sources

CONSERVATION—STEWARDSHIP

In January, we imported 50 percent of all our oil needs. Energy conservation is the quickest way we have to reduce these imports.

The potential for energy conservation is significant. For example, West Germany uses energy 50 percent more effectively than we do. Yet, their standard of living—their income per capita—is comparable to ours.

So, the technology exists to conserve energy. And we can conserve energy without lowering our standards of living.

What do we need to do?

First, a more aggressive effort must be initiated to develop energy-conserving technology—more efficient electric engines and auto engines.

Second, a national commitment to improve home insulation and to use storm windows and doors must be made. This commitment can cut home energy use anywhere from 15 to 40 percent.

Third, an enormous amount of so-called waste heat from utilities and industrial plants can be captured and used for heating purposes—up to 500,000 barrels equivalent of oil daily could be saved.

Fourth, urban trash can be burned to produce electricity—and save up to 500,000 barrels of oil daily, too.

There are many other actions we can take as well. Mr. Roger Sant, former head of FEA's energy conservation program, can fill you in better than anyone. He will be a principal consultant to the Alliance.

Energy conservation makes sense economically, as well. It is cheaper to invest in energy saving technology than in producing new energy from inaccessible domestic reserves.

Taken together, these facts show why President Carter has made energy conservation our No. 1 energy priority. And they show why Congress has taken more aggressive action in promoting energy conservation than in any other energy area. And they show why actions to publicize energy conservation possibilities are so important now.

We have avoided a large-scale economic disruption this winter, despite gas shortages, due to conservation—turning the thermostat down and even temporarily reducing office hours.

We could have the same impact in energy demand—but without the lowered temperatures and early closings—through better insulation and other actions. That is what conservation is all about—using less energy to do the same work without sacrificing our comforts, lifestyle or standard of living.

A good example: Many smaller Minnesota communities, where winters are relatively cold, produce electricity and heat for the downtown area together. It cuts down on heating bills, and uses waste energy, which would otherwise be thrown away. The Germans and Scandanavians do the same thing. We should do it everywhere. It is money in your pocket.

I also call upon Governors to form in their respective States "Alliance to Save Energy." I ask the mayor's of our cities to organize on a municipal basis their local "Alliance to Save Energy." This alliance must reach into every area and section of our country if it is to be effective. We must mobilize America to wage war on waste in energy.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of conservation actions taken by Congress and a Dear Colleague letter dated February 9, 1977, with reference to the Alliance To Save Energy.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ENERGY CONSERVATION BACKGROUND

Conservation Actions taken by Congress:

1. Home insulation grants for lower income families.
2. Fuel economy standards for autos.
3. Mandatory energy-use labeling for appliances.
4. Mandatory lighting, efficiency and insulation standards for federal buildings.
5. States have been encouraged to establish State conservation programs (e.g., in Minnesota, gas lawn lights are being shut off).
6. Energy conserving performance standards for new buildings and for federal buildings have been established.
7. An energy conservation demonstration program has been established composed of grants and loan guarantees.
8. Energy conservation targets have been established for industry.

Estimates of the savings from these actions vary sharply. These are provisions of the:

Energy Policy and Conservation Act (Dec. 1975).

Energy Conservation and Production Act (Aug. 1976).

In addition, a sharp increase in R & D has occurred for solar energy, windmills, electric vehicles and other activities which complement energy conservation efforts.

U.S. SENATE,
Washington, D.C., February 9, 1977.

DEAR COLLEAGUE: There is a growing realization in government and in the public at large that the Nation wastes enormous amounts of energy. As foreign supplies of energy become tenuous and domestic supplies dwindle, we must look toward a promising new source of energy—conservation energy. Conservation energy is the energy we can produce by employing more efficient technology in our everyday lives. Experts estimate that 35 quadrillion BTU's (equivalent to 16,000,000 barrels of oil a day) of conservation energy can be produced by 1985. This would result in a savings of $70 billion!

We agreed that such a tremendous energy potential must not be lost. Antiquated energy pricing policy, insufficient public information and the absence of an organized energy constituency have prohibited exploration of conservation energy in the past. Therefore, we are launching the Alliance to Save Energy. We plan for the Alliance to do everything necessary to generate strong public commentment to save energy.

We are not alone in recognizing the strong possibilities presented by conservation energy. In forming the Alliance to Save Energy, we are joined by former President Ford and Vice President Mondale, who will be Honorary Chairmen. James Schlesinger will be Honorary Advisor. Henry Kissinger will serve as Chairman of the Advisory Board, with Secretaries Harris, Krepps, and Marshall as Honorary Vice-Chairpersons for Housing, Commerce and Industry and Labor respectively.

We will be Co-Chairman and Chairman of the Board of Directors. We are asking all Senators to serve on the Board of Advisors with special emphasis on promoting this activity in their respective states. Your advice and support in this effort would be invaluable.

We envision the Board of Advisors as doing just that—advising. In addition, Senators' aid in developing statewide conservation seminars is also contemplated.

This is an ambitious program. Your participation on the Board of Advisors will be a great help. We are having a press conference on Thursday, February 10 at 1:30 in Room EF100; you are welcome to come. If you would like to join us please phone your "aye" or "nay" to me at 4-2152. We would need your answer by 12 noon tomorrow, Thursday, February 10 in order to announce your acceptance. The foregoing information is confidential until 1:30 P.M. Thursday.

Sincerely,

HUBERT H. HUMPHREY.
CHARLES H. PERCY.

Mr. HUMPHREY. I take this moment to commend the Senator from Illinois for his remarkable leadership and initiative in this effort. I am delighted and honored to be a copartner with him. I want the record clear. He has been the inspiration of it. And I find myself as a partner being given the benefit of that honor without having performed but little of the work.

Mr. PERCY. Mr. President, will the Senator yield for just one comment?

Mr. HUMPHREY. I yield.

Mr. PERCY. For 10 years the Senator from Illinois has joined with the Senator from Minnesota on a host of projects, and when we join together it is a common cause if I may use that phrase. I am never more thrilled than working side by side with him. His inspiration, energy, drive, and devotion for what is right for this country is so paramount that burdened as he is with heavy responsibilities and duties he carries, I knew there would be no hesitancy on his part adding one more important chore because, as he said, this is one of the most important things that America must do. Therefore, it is important for HUBERT HUMPHREY to do it. I am ever so grateful for the opportunity day by day

I have to live and work and be inspired by my distinguished colleague.

Mr. HUMPHREY. I thank the Senator.

THE PAUL WARNKE NOMINATION

Mr. HUMPHREY. Mr. President, I do not know what the time situation is. Is there time available for comment, may I ask?

The PRESIDING OFFICER. There is time available.

Mr. HUMPHREY. Mr. President, I shall take only a moment to respond to the comments of the distinguished Senator from Michigan. He is such an admirable gentleman. May I say over the years here in the Senate since I returned in 1972 we found ourselves so frequently working together. I have the highest regard for him. I might say that I think he is a natural leader, and he is really a gentleman of the first order. It bothers me at times when we are on different sides. But there are honestly held views about issues and about nominations. We in the Senate know that. We want our public and our constituents to know that.

To disagree does not mean that you have to be disagreeable. To disagree does not mean that you hold the other person's views in disrespect. It is simply that we sometimes see things differently.

And in this instance on Mr. Warnke we see things in part differently. I think that it is fair to say the Senator from Michigan does not seem to have too much objection to Mr. Warnke being head of the agency as such. I think the Senator from Michigan is more concerned about Mr. Warnke being our chief negotiator. I believe I am correct in that statement.

The Senator from Michigan stated that Mr. Warnke had opposed the B–1 bomber, he had opposed the Trident submarine, he had opposed the cruise missile, and there were other weapons systems of which Mr. Warnke expressed his concern about or his opposition to.

I want the American people to know that during the 8 years that Mr. Warnke was out of Government from 1969 to 1977 he was an active participant in the debate and the dialog that was taking place in this country on national security policy. I think we should keep in mind that there are many views that have changed in these 8 years. Many different points of view have been expressed in these 8 years. For instance, the man that is speaking now, during the 1960's was an avid, strong supporter of our participation in the war in Vietnam, not because I like war—because I hate it—but I thought that the administration was pursuing a proper course. I changed my mind and I changed it, may I say, in degrees, not all one 180° turn and in the process of changing it it cost me something, too. It also required a great deal of soul searching.

This happens in men's lives, and it is the way it ought to be. If you come here with a set of views and you never change your mind, then I must say you are either the beneficiary of omnipotent wisdom or you are just plain stubborn and unwilling to learn.

Mr. Warnke was in the discussions, and he added a degree of intellectual input into the discussion of national security policy that was desperately needed.

Like many people who talk—and I ought to know—and who write—and I ought to know—you sometimes say too much. You sometimes write too much. You sometimes find that what you said last year is not all that you should have said, or may have been wrong. You change your mind. You get new information. That is not something to be ashamed of. Consistency is a virtue only if you are consistently right. If you are consistently wrong, it is not a virtue, it is a plague.

Mr. Warnke was not the Secretary of Defense from 1969 to 1977. He was not the director of ACDA. He was not in government. He was a teacher. He was a lawyer. He was a citizen. He was a participant in public discussion. Undoubtedly many things that he said were for the purpose of provocation of thought, to get people to think things through.

If you read what he said, he generally pointed out that this was his view, or he was concerned, or he felt that we ought to take another look.

For example, the B–1 bomber: There are a lot of Senators here who were not for the B–1 bomber. I have voted against the B–1 bomber—not because I do not think we need bombers, but because I have had a view, which I may change, I cannot say, and if I do, I am not going to go around in ashes and sackcloth, I am not going around apologizing to anyone. I am just simply going to point out, if I should change, which I doubt, that I have new facts.

It is my judgment that the B–1 bomber may end up being technologically obsolete before it starts to fly. It has been my judgment in the past that the B–52's were good enough for the next 10 years, and I saw no reason to be rushing into a bomber like the B–1. That has been my view.

Am I in error? Why, some of the most prominent people in America in the field of defense strategy agree. More of them disagree with me. The present Secretary of Defense, Harold Brown, was the Secretary of the Air Force in the Johnson administration, on which I served, when we called for the B–1 bomber. He was for the B–1 bomber. I think he still is. He is going to be a part of that negotiating team that discusses disarmament, arms control, and strategic arms limitation with the Soviet Union.

Harold Brown is no cream puff. He is a man of science and technology, the Secretary of Defense, and a B–1 bomber advocate. So Mr. Warnke is going to have to face up to Mr. Brown.

The President of the United States has got some views, too, you know, and he is Commander in Chief. We sometimes forget that when we elect the President, we are not just electing somebody that won the public opinion polls; we are electing a person who has tremendous responsibilities. One of his responsibilities, and the main one, above all else, is the security of this Nation as Commander in Chief of the Armed Forces of the United States.

The President of the United States has views on the B–1 bomber. He said he wanted to review it. He has views on the Trident submarine. He wants to take another look. He has not expressed the view that he is against them, to my knowledge. He is a submariner himself. Admiral Rickover is one of his heroes. The Trident submarine, the Polaris submarine, the Poseidon submarine—these are creations of that great inventive mind of Admiral Rickover.

I voted against the Trident submarine here, and yet I believe America ought to have a Navy second to none. I believe that we are a sea power, and I believe that if the Defense Department would come in here with a budget that was not always trying to give one-third to the Army, one-third to the Navy, and one-third to the Air Force to make all the generals and admirals happy, we would have a better defense structure.

I have seldom ever voted against anything that the Navy needed. Why did I cast my vote against the Trident submarine? Because I thought the whole purpose of a submarine in a nuclear age was to be able to launch submersible missiles, and I knew, and technology told us, and we were told here in the debate, that we could put on the Poseidon submarine and the Polaris submarine the Trident missile. The only reason you want that big old submarine is as a launching platform for the missile.

I may have been wrong. We are going ahead and building the submarine. I have not gone out and whipped myself, taken sticks and beaten on my back, and I have gone to the altar and asked for forgiveness for having voted against the Trident submarine. I accepted the majority vote. One thing I do know: they did not tell us how much it was going to cost. If they did, they flunked their course in arithmetic, because after understanding we were going to get an $8 million submarine, we have about $200 million in the baby now. What a bathtub. I hope it floats; and it will. It is a great machine, no doubt about that.

The final one was the cruise missile. There is no weapons system that is more sharply debated than the cruise missile.

The cruise missile is not something brand new. As a matter of fact, we had the cruise missile back in the 1950's.

Do you know what happened to the cruise missile? The military thought it was worthless. Yes, Mr. President, for years, better than 15 years, the military technicians said, "Oh, that thing, the cruise missile, that is a World War II apparatus. We do not need any cruise missile."

Then all at once they woke up and found out. They said, "You know, that cruise missile will do everything a manned bomber will do."

Do you know what the argument for the B–1 bomber is? It will fly close to the ground, and the Russians will not be able to detect it in their radar, and it will come in and make its strike before they know what hit them.

Do you know what the cruise missile will do? It will not only fly from here to the Soviet Union unmanned, but you can launch it from a freight car, or a streetcar, or a washing machine. Not only that, it will fly low, and it will skip and jump over all the trees without ever hitting a leaf. At least that is what they say it will do. Of course, they have not tried it, but that is the theory. It has the most sensitive radar, it has the most reliable computers—what a machine. I am intrigued by the cruise missile.

You know, you can put cruise missiles on B–52's, and make them every bit as effective as the B–1, and even more so, but you cannot put a cruise missile on a B–1. How about that? It is the modern miracle weapon, but it will not fit on a B–1. It will fit on a B–52.

The cruise missile has one mission: not to give you a ride to Disneyland, but to put on that missile a bomb, a nuclear warhead, and to deliver it to the target. That is its whole purpose. It is not a free ride, not an excursion, not something for tourists.

What is the purpose of the B–1? The same thing. So what does Mr. Warnke say? He says, "You know, we ought to take a look at all these things. I am not too sure about that cruise missile."

Is he wrong? If he is, I say most of the military has had the same view for years. It is only the last couple of years that the military woke up and said, "Hey, we have a cruise missile; now we can put a radar on it. We have one that will shoot 200 miles, 600 miles, maybe we can make one that will go 2,000 miles, that will really scare them to death."

The PRESIDING OFFICER. The time for morning business has expired.

Mr. HUMPHREY. Now, you would not want to stop me in the middle of the stream, would you?

Mr. STEVENS. Mr. President, I ask unanimous consent that the time for morning business be extended for 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. Thank you very much. Observers will notice that morning business in the Senate takes place in the afternoon.

What has Mr. Warnke been saying? He has been saying what 43 Members of the U.S. Senate said about the Trident. I wish Senator McINTYRE were here. There is not a better Senator on defense than Senator McINTYRE, as the Senate knows. Senator STENNIS disagreed with him, and he won, though it was a close vote.

The Senator from Iowa (Mr. CULVER) submitted a resolution that the whole Senate joined in, or a majority, that we hold up on the B–1, and let the new President take a look at it. I voted for the cruise missile. I remember when the Senator from Maine (Mr. HATHAWAY) brought up an amendment to stop the deployment of the cruise missile. I listened to the argument, and I said, "I think you are wrong, Senator," and I voted in the opposite way.

That does not make me a hawk, and my voting against the B–1 does not make me a dove. It just means I am concerned, and I want to learn. And when I hear arguments made about Mr. Warnke, because he has some doubts about the cruise missile, the B–1, or Trident, or because he was opposed to them, I say, so what? So were a lot of people. He is going to get his chance.

I have served in the Cabinet of the United States, and the present distinguished Presiding Officer of the Senate (Mr. MOYNIHAN) has served with Presidents, and been in an advisory capacity to Presidents. The Senator from New York has been very close to three Presidents—four Presidents, in fact—and he knows that when he gets a chance, he gets his word in, but ultimately the President makes the decision. That is what we elect Presidents for, and the National Security Council ultimately will advise the President.

Mr. Warnke, if his nomination is confirmed, will take the positions of his Government, and I want to tell you something: If he was good enough to represent some of the biggest corporations in America in the courts of this land, if he is big enough to represent some of the largest insurance interests in the country in suits that run into the billions of dollars, and they are willing to have him to speak for them—and, oh, let me tell you, when you are negotiating for money, it is almost like negotiating for national security.

Some of the best people in this country, in terms of their so-called standard of values—namely, the business leaders—have hired Mr. Warnke. They said, "Paul, protect us." And he made thousands of dollars in fees.

Then what did he do? He gave it all up to serve this country. He gave it all up to serve the interests of peace. He gave it all up to serve our national security.

That is a real sacrifice. That is why, first of all, I imagine his dear wife said to him, "Paul, you mean to tell me that after having served in Government for years, underpaid and overworked"—and he was—"now you are a lawyer, now you have been doing well, now we have been living well, you are going to go back into that madhouse again?"

I can just hear the argument going on out in the Warnke residence.

Mrs. Warnke did not know some of us were calling up Cy Vance every day and saying, "Don't let him off the hook. He's good; get him down here. Get him."

So he is up here. Let me make it clear, the confirmation is going to be acted on by the Senate Committee on Foreign Relations. We have just had S. 4 passed here on committee jurisdictions. I do not care how many other committees want to peek at it or look at it, but when the votes are counted as to whether he is going to be appointed or not, it is going to come out of the Senate Committee on Foreign Relations, unless we want to change the rules.

As was said by the Senator from Idaho, Mr. CHURCH, and the Senator from Illinois, Mr. PERCY, "Y'all come." In the Southern tradition now, so we know who is in power here: "All you folks, y'all come, come and hear what he has to say."

When it is all said and done, I tell you, I have heard witnesses before that committee, but I have heard very few that were as able and as forthright and as intelligent as the witness Paul Warnke.

I yield to my friend from New Jersey.

Mr. CASE. Mr. President, I do not think the Senator ought to yield, except he has to yield. We have to get him downstairs to meet the Foreign Minister of Peru. If I do not take him with me now, I shall have to do that by myself.

Mr. HUMPHREY. I have to meet the Minnesota Gas and Electric Co. out there first.

Mr. CASE. I ask him to come down, now.

Mr. DANFORTH. Mr. President, I think the Senator from Minnesota has stated with his usual eloquence precisely why the nomination of Mr. Warnke should now be presented to the Committee on Foreign Relations. The reason is that he did, in fact, change his opinions.

Mr. HUMPHREY. Whatever the Senator from Missouri says, I shall respect. The things he says that I disagree with, I shall write him a note.

Mr. DANFORTH. For precisely the reasons stated by the Senator from Minnesota, this nomination should be referred to the Committee on Armed Services, if not for formal action, for at least very intensive interrogation of Mr. Warnke before his nomination is voted on by the Senate.

The reason for this is, as the Senator from Minnesota said, that Mr. Warnke did change his positions, which had been very well known during the course of his testimony before the Committee on Foreign Relations.

As George Will pointed out in his column this morning in the Washington Post, the record of Mr. Warnke had been an open book before the people of this country. His record had been an open book. He had published very extensively in the field. He has stated his position in various open forums as to precisely what he thought the policy of the United States should be with respect to arms limitation.

He has appeared before committees of Congress. He appeared last March 9 before the Senate Committee on the Budget in a debate with Mr. Paul Nitze and described in that appearance, in some detail, precisely what his opinions were on arms negotiation. This past winter, Mr. Warnke wrote an article entitled "Apes on a Treadmill," which has been widely circulated, stating his views on what he believes the most innovative initiative the United States should take should be.

I suggest that I cannot read the minds of Senators who happen to be members of the Committee on Armed Services to determine why they did not attend the meeting of the Committee on Foreign Relations to interrogate Mr. Warnke, but it just might be that while they may have agreed or disagreed with Mr. Warnke's position, at least they believed that they understood with great clarity what Mr. Warnke had been saying and what he was trying to do and what that position was. His position in his "Apes on a Treadmill" article, which he does not call a unilateral disarmament, is at least a unilateral pause by the United

States in its development of strategic weapons to determine what the Soviet Union should do. Now he appears before the Committee on Foreign Relations and announces before the Committee on Foreign Relations that he would not pursue that position while negotiations are underway.

That is a deviation from what his previous position had been, because the "Apes on a Treadmill" article appeared in Foreign Policy with less than a year to go in the interim arms agreement, with SALT II very much approaching the front burner, with America hopefully commencing the negotiation of SALT III. Yet, during the pendency of these very serious negotiations, Mr. Warnke presented to the public in his foreign policy article his position on a unilateral moratorium on America's development of strategic arms.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator from Missouri yield

Mr. DANFORTH. I yield to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. The Senator from Missouri mentioned a moment ago the Committee on Armed Services. I am a member of that committee. Of course, I cannot speak for the committee, but this nomination is one of such great importance, and one for a position in which the occupant must deal so closely and is so deeply involved in the Nation's weapons systems and the entire national defense programs of the United States, that it seems to me very important that the Committee on Armed Services have an opportunity to interrogate Mr. Warnke as to his beliefs, his thinking, and his philosophy on the matters which he must negotiate for the United States if he is confirmed by the U.S. Senate.

I recognize full well that the Committee on Foreign Relations has jurisdiction. That is under the rules and is appropriate. But I think the Committee on Armed Services would be unwise not to ask and seek to have Mr. Warnke come before that committee so that he can be interrogated by the members of the Committee on Armed Services on just the issues which the Senator from Missouri has been discussing.

I do not know what the committee, as a committee, will do. I can say, insofar as this one member of the committee is concerned, the Senator from Virginia, that I shall urge the committee to have Mr. Warnke before it so that the members of that committee, the ones charged with the responsibility for the national defense of our Nation, for the weapons systems of our Nation, will have an opportunity to go fully into this matter with the nominee and the prospective negotiator with the Soviet Union.

I thank the Senator from Missouri for yielding.

Mr. DANFORTH. Mr. President, I want to clarify one misstatement which I made. I stated that the Nitze article was published in 1976. I have been informed it was published in 1975.

Nevertheless, Paul Nitze yesterday, appearing before the Foreign Relations Committee, stated that he has followed Mr. Warnke's thinking from 1969 through at least March of 1976 when they appeared together before the Senate Budget Committee, that he also was familiar with Mr. Warnke's testimony 2 days ago before the Foreign Relations Committee, and that he believes that there is a departure from Mr. Warnke's views from what they had been over a period of 6 years very consistently to what they were when he appeared before the Foreign Relations Committee.

Therefore, I am of the opinion that the Senate, before the confirmation of this man, at least must know precisely what he thinks.

I do not agree with the Senator from Minnesota who appeared to say that it does not matter who we have as our SALT negotiator and who we have as the President's arms adviser because it is the President who makes the decision. I do not agree with that because I believe that the Senate of the United States does have a role to play in fashioning the foreign policy of this country.

We took a different route a decade ago when the Senate decided it did not have that kind of role to play in enacting the Tonkin Gulf resolution. I think in retrospect, most people believe that was a mistake.

But let us now exercise our responsibility in at least keeping track of what the policy of the United States is going to be in matters relating to our foreign relations and matters relating to disarmament.

The Constitution provides the Senate with but two methods of exercising that authority. One, by the confirmation of Presidential nominees; and two, by the ratification of treaties.

Here we have one of them before us in the foreshadowing of a possible treaty to be negotiated.

I think we have got to enter into this with our eyes open and I suggest it must be referred to the Armed Services Committee.

Mr. GRIFFIN. Will the Senator yield for a comment?

Mr. DANFORTH. Certainly.

Mr. GRIFFIN. Mr. President, I commend the Senator on an excellent statement.

As addition to what he has said, and to make an obvious point, a treaty to be negotiated by this nominee does have to come to the Senate of the United States for ratification by a two-thirds vote. It would be something of a tragedy, I say, in terms of our foreign policy, if a treaty should come back which the Senate could not ratify.

I think it is the better part of wisdom for the Senate to take a close look now at the broad issues involved and, as a partner in the treatymaking process to provide some input at this point.

I hope the administration will realize that, under these circumstances, to send a negotiator who does not have the overwhelming support of the Senate would be a very unwise and questionable thing to do.

Certainly, if the nominee does not go to these negotiations with the support of at least two-thirds of the Senate—and more—he goes to the negotiations under a very severe handicap in view of the kind of test the treaty would await here in the U.S. Senate.

I believe that a full discussion now—with the participation of every Senate committee having any interest—would be very constructive, and would help the administration as we fashion and shape together a policy that will be vitally important, not only to the United States but to the whole world.

I yield to the Senator.

Mr. DANFORTH. Mr. President, just one last comment.

What is involved, I think, is something much more significant than simply a jurisdictional struggle between two committees of the Senate. The committee system, after all, is merely a tool by which the Senate works its will.

But I think what is involved here is the role of the Senate in helping in an informed way to shape the policies of this country with respect to matter as crucially important as arms limitation.

I do believe that we have to go into this knowing precisely what the position of the administration is and precisely what the position of the administration's chief advisory in this field, and arms negotiator, is.

We do not know that at the present time.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. DANFORTH. I yield to the Senator from Virginia.

Mr. HARRY F. BRYD, JR. Mr. President, I am pleased to note that the Senator from Missouri feels this nomination should be sent to the Armed Services Committee. I feel the same way.

I do not believe there is a field of jurisdictional dispute. The Foreign Relations Committee has the nomination before it and I know of no effort to take that away from the Foreign Relations Committee.

The view that I have is that after the Foreign Relations Committee concludes its hearings, then the Armed Services Committee should have an equal opportunity to query the nominee and to proceed in depth to consider his nomination.

That, however, does not mean that the Armed Services Committee by so doing would seek to assume jurisdiction over the confirmation hearings of the nominee.

But I concur in the view expressed by the Senator from Missouri.

I have heard much favorable comment on the Senator from Missouri's interrogation of Mr. Warnke, which was widely televised. I have heard much favorable comment, and while I did not see it myself, I pass that along to the Senator from Missouri, and I congratulate him.

ADDITIONAL STATEMENTS SUBMITTED ON NOMINATION OF PAUL WARNKE

Mr. HASKELL. Mr. President, last year the Washington Post published the transcript of a discussion by four nuclear experts regarding the prospect of nuclear war. The opinion of every participant was that nuclear war in some form would occur before the year 2000. This assessment is not that of a few isolated pessimists, but rather the accepted, if chill-

ing, conclusion of most specialists in the field of nuclear conflict. Recent seminars at Great Britain's Cambridge University and Princeton University reached similar determinations.

The control of nuclear weapons, then, is not simply a matter of curbing expensive and unnecessary weapons systems or of preserving a strategic balance but a question of survival itself. Failure to pursue aggressively every possibility of limiting or reducing atomic weapons may eventually endanger all of humanity.

The Arms Control and Disarmament Agency is directed by law to serve as the President's principal adviser on arms control and disarmament affairs. The director of this agency will play a crucial role in America's future arms control policy. Paul Warnke is eminently well qualified to serve in this capacity. As General Counsel to the Department of Defense and as Assistant Secretary of Defense for National Security Affairs, he achieved a distinguished record of public service on which to assess his future performance. His past performance in the field of arms control indicates his thorough command of this complex and crucial subject. I am gratified that a person of the experience and caliber of Paul Warnke has agreed to serve as Director of ACDA.

During this past week, a concerted effort in opposition to President Carter's nomination of Paul Warnke has been mounted. Charges that Mr. Warnke will negotiate a treaty harmful to the United States are absurd and an affront to a man who has dedicated many years of his life to the welfare of this Nation. Senators who have specific objections to particular aspects of proposed arms limitations should not need reminding that the Senate retains the constitutional obligation to review, debate, and vote on any treaty. We are not being asked to appoint an arms control czar to dictate U.S. policy, but rather to approve the nomination of the individual best suited to search for ways in which to curb the arms race while enhancing American security.

Through neglect, the Arms Control and Disarmament Agency has become moribund and demoralized. I can think of no one more qualified than Paul Warnke to restore the mission and revitalize the personnel of this agency so that it may pursue the urgent task of finding intelligent initiatives to control the spread of nuclear weapons.

Mr. KENNEDY. Mr. President. I find it somewhat difficult to understand the current groundfire of opposition to the nomination of one of this Nation's most respected and knowledgeable foreign policy and arms control professionals for the directorship of the Arms Control and Disarmament Agency.

Paul Warnke has served this Nation in the past as Assistant Secretary for International Security Affairs and has been a frequent adviser and counselor before the Congress.

In every area, he has shown himself to be a man committed to the interest of this Nation, committed to our future and committed to peace.

I find it more than a little disheartening to note that the opposition to this nomination is apparently concentrated on his past statements in support of halting the nuclear arms race.

Apparently his detractors are not so much unhappy with Mr. Warnke as they are with the concept of arms control and with the concept of checking the maddening pursuit of weapons of nuclear destruction.

Well, the President supports arms control. The American people support arms control. And I believe the vast majority of the Congress supports arms control as well.

There are those who also seem to be willing to pull out of context past statements made by Mr. Warnke in order to raise questions about the nomination. Most prevalent seems to be charges of his having supported unilateral disarmament. Not only is that far from the truth but it reflects a kind of smear campaign that we have not seen in many years.

I find it particularly unfortunate as well that an arms control concept which was successfully used in the past is being given such incredibly distorted commentary. Twice within the recent past, temporary moratoria to halt a particular strategic activity have been issued. They have produced responsive action by the Soviet Union. First, President Kennedy at American University in 1963 announced a temporary moratorium on nuclear testing if the Soviet Union followed suit. That temporary and brief hiatus in testing helped produce the partial test ban treaty.

Then again in the late 1960's, at the urging of Senator Pastore, a resolution relating to a moratorium on nuclear proliferation was passed. That resolution and the Presidential support for the concept helped promote positive response from the Soviet Union that led to the negotiation of the Nuclear Nonproliferation Treaty.

So even the concept of temporary restraint by the United States, on the condition that the Soviet Union responds accordingly, is a worthwhile and valid arms control concept.

So the opposition is not only distorting Mr. Warnke's position but it is also distorting the concept of parallel restraint, initiated by the United States, which can have a positive effect, and has had one at least twice in the past.

With regard to Mr. Warnke, I also think it worth noting his strong support for NATO through the years, and I would note his statements in recent testimony support our role in NATO:

> We could not survive as the kind of Nation we are and want to remain in a world in which the population and resources of Western Europe were dominated by a hostile power.
>
> I believe also that the American military contribution to NATO has been a unique one, and one which cannot be replaced.

Those were his words. Yet he also has criticized, I believe correctly, the excessive number of the more than 7,000 tactical nuclear weapons based in Europe.

Criticism of the 7,000 warheads also was expressed by both Senator Pastore and Symington and was the subject of a very critical report by the Joint Atomic Energy Committee.

I would ask unanimous consent to place that testimony in the RECORD.

In addition, I think it is evident from his past testimony and record that his role will be one of providing new life to an agency which has been demoralized over the past 8 years. Funds have been cut. Top people have been purged. Also the agency has been pushed outside the centers of decisionmaking.

The Arms Control and Disarmament Agency has the legal responsibility for commenting on the arms control implications of new weapons systems. We have seen an abdication of responsibility and a total failure to provide to the President the strong and forceful views on arms control that are necessary for intelligent decisionmaking in a nuclear world. The Defense Department is not likely to win laurels as the advocate of arms control when it comes to each year's decisionmaking on new weapons systems.

Yet there also must be a voice of restraint, a voice of caution, a voice of arms control within reach of the President on these matters.

Paul Warnke can provide that voice. It is absolutely critical that this voice be available now to President Carter.

The new negotiations on strategic arms represent a crucial opportunity for the United States and other nations to achieve a turn away from nuclear arms escalation.

The opportunity today is not merely to ratify the levels of Vladivostok but to lower them. The opportunity is not merely to ratify a threshold test ban treaty but to negotiate a comprehensive test ban treaty. The opportunity today is not merely to place a quantitative cap on nuclear weapons but to add a qualitative brake as well.

All one has to do is ask what weapons systems were in existence in 1969 and what weapons systems are being added to stockpiles today to recognize the failure of arms control over the past two administrations.

The ABM treaty and SALT I were important but they did not prevent an ever-escalating flow of resources into nuclear and conventional weapons development. The overwhelming chore of the present administration is to cut through the technical morass and make the political decisions that will permit a negotiated halt to the arms race, and once halted, begin a negotiated process of reducing the stockpiles of death that place dark shadows over the future of all of us.

I also want to emphasize the continuing support and confidence of the President for Mr. Warnke and his reaffirmation of a determination to move aggressively toward further arms control pacts.

I ask unanimous consent that the relevant portion of the President's press conference be placed in the RECORD at this time.

There being no objection, the material

was ordered to be printed in the RECORD, as follows:

STATEMENT OF PAUL C. WARNKE, FORMER ASSISTANT SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY AFFAIRS

Mr. WARNKE. Thank you, Mr. Chairman. As you suggest, sir, I will count on my statement being printed in the record and I will endeavor now to highlight some of the points that I endeavored to make.

First of all, I would like to say that I think very highly of the agreements that were reached with SALT. As a matter of fact, sometimes I think that perhaps I think more highly of these than do the administration spokesmen; but, in my opinion, the Moscow agreements can constitute a very large step toward effective control over strategic nuclear weapons.

ABM TREATY IS PRINCIPAL ACCOMPLISHMENT

The principal accomplishment, in my view, is the ABM treaty. That, to me, constitutes realistic recognition of the fact that no physical defense on any known or foreseeable technology is available against a nuclear attack of any significant size.

Accordingly, both sides have accepted the principle that safety resides not in physical defense but in the certainty that the attacker would be destroyed by the retaliatory strike that the other side would be able to mount.

LOOPHOLES IN INTERIM AGREEMENT

Now, in addition to the ABM treaty, the interim agreement does provide some control over offensive systems. I find the coverage at the present time disappointingly small; and what troubles me, as I point out in my statement, is the possibility that the loopholes that exist in the interim agreement may make that agreement a brake on the offensive arms race, but instead a spur to that race.

So construed, the interim agreement would be at least slightly worse than no agreement at all.

But, entirely apart from the restriction on offensive systems, the ABM Treaty is a major accomplishment; it should serve to put the end to the inordinate expense and the very high risks of the nuclear arms race.

LOGIC INHERENT IN ABM LIMITATION

The question, however, is whether both sides will accept the logic that I find to be inherent in the ABM limitation. In all logic the ABM Treaty should eliminate any fear that the other side can achieve a first-strike capability. Because of the narrow limitations on the ABM system that either side can deploy, each is, in fact, open to nuclear attack even in a second strike. The surviving forces would be far more than sufficient totally to devastate the attackers' side.

NO PURPOSE IN ACHIEVING NUMERICAL SUPERIORITY

Under those circumstances, it seems to me, Mr. Chairman and Senator Cooper, that the continuation of the missile numbers game is in fact a mindless exercise, that there is no purpose in either side's achieving a numerical superiority, which is not translatable into either any sort of military capability or any sort of political potential. That is why, in my opinion, the ceilings that are placed in the interim agreement on both land-based and sea-based missiles should not be the cause for any concern on our part. They do give the Soviets an apparently large mathematical edge. They are permitted, as I read it, some 2,350 missile launchers to our 1,710, but either figure is a flagrant example of military redundancy. In the light of the abandonment of any foreign hope of an ABM defense, either number affords more missiles than the other side affords in the way of targets.

So, accordingly, we should not be concerned about the existing mathematical edge nor should we be concerned about any attempts that the Soviet Union might make to add additional, useless numbers to their already far more than adequate supply.

I suggest in my statement that were the Soviet Union to do this, we might perhaps feel some relief that they have not expended their funds for militarily more meaningful and potentially more mischievous purposes.

INTERIM AGREEMENT PROVIDES SOME CONTROL

Now, I believe that sensibly construed, the Interim Agreement does provide some measure of control which is useful in assuring the survivability of our land-based missile systems for the indefinite future. It does limit, in a qualitative way, the numbers of large missiles that the Soviet Union can construct. It confines them to some 313 instead of the magic number of 500 which at times has been suggested as the figure that would give the Soviets a counterforce capability against our land-based missiles.

With this limitation, it seems to me apparent that even with the Minuteman part of our offensive triad alone, enough Minuteman missiles would survive to inflict unacceptable damage to the Soviet Union. But I believe that a sensible construction of the Interim Agreement requires that we recognize that acceptance of the numerical imbalance is possible because, in fact, numbers are totally irrelevant to our security in the strategic nuclear arms field.

If missile numbers were a valid measure of national strength, then the Interim Agreement would be improvident; but since they are without significance, there is nothing for which we need compensate.

Accordingly, I feel that we should focus on the fact that arms control must not be allowed to become the new medium for fueling the arms race and this, in my opinion, could be the result if the Congress were to accept any one of three arguments which, as I read them, are currently being presented as justification for new strategic weapon systems.

LINKING APPROVAL TO FUNDING OF NEW STRATEGIC WEAPON SYSTEMS

The first and, I think, the most flagrant of these is the argument that approval of the Interim Agreement and the ABM Treaty should be linked to the funding of new strategic weapon systems. It has been suggested by Secretary Laird that the price for Pentagon support of the Moscow accords will be the agreement by Congress to fund the new programs for a manned, strategic bomber and for an underwater-launched missile system which includes a submarine which is more expensive than our nuclear carriers and approximately the same size as the largest Soviet surface ship.

There has also been a suggestion that a submarine-borne cruise missile should now be perfected because of the fact that this is not forbidden by the Interim Agreement.

In my view, if the SALT agreements mean that we must now spend more money to build more strategic weapon systems and continue the offensive arms race, then the SALT agreements should not be approved by the Congress. Instead, they should be sent back to the drawing board with directions that the job be done again and that it be done better this time.

I was gratified to see that President Nixon has asserted that the arms control agreements—the ABM Treaty and the Interim Agreement—should be approved on their merits. He stated in his news conference on June 22 that he would not have signed them unless he believed that standing alone they were in the interest of the United States; but, at the same time, and I feel somewhat inconsistently, he has contended that failure to approve the new offensive weapon programs would seriously jeopardize the security of the United States and jeopardize the cause of world peace.

As I understand his position, it appears to be based on two arguments that differ somewhat from Secretary Laird's contention that the agreements and the new funding for additional weapon systems must be linked.

ACCUMULATION OF ADDITIONAL DEFENSIVE WEAPONS BY SOVIET UNION

The first of these is an argument which I believe is based more on military cosmetics than it is on military capability. President Nixon has emphasized the fact that the Soviet Union proposes to go ahead with programs in areas from which they are not foreclosed under the Interim Agreement. But since both countries are confined to what I regard as token ABM defenses, these new offensive systems add nothing to the Soviet ability to deter or in any way to utilize blackmail against the United States.

In my view, the Soviets have always lagged behind the United States in their appreciation of the realities of nuclear logic. Since I feel that way and since they have now begun to move in a direction which I regard as being the desirable direction, I don't think that we should substitute their judgment for our common sense when it comes to the further accumulation of offensive nuclear weapons.

We should accept, in fact, the reality that the ABM Treaty assures our deterrent for the years to come. We should not yield to the temptation to get back into a numbers race and, as far as any political disadvantage is concerned stemming from the appearance of mathematical superiority, this can be prevented by a sound, rational explanation of our views to our own people, to our allies and to those who might be disposed to be hostile to us.

Since the accumulation of additional offensive weapons by the Soviet Union will give them nothing that they do not now have and will challenge nothing that is important to our national security, it seems to me that we should not, by apparently attributing some military significance to any such gesture, put ourselves at a political disadvantage. This will occur if, and only if, we bad mouth our own strength.

BARGAINING CHIP ARGUMENT

The third argument that has been presented is the so-called bargaining chip argument and that to me poses perhaps the direst potential for continued arms escalation.

We were told for almost three years that we had to deploy an ABM in order to assure success at the first SALT, but as I understand the developments, the delay in reaching an ABM treaty stemmed less from Soviet reluctance to enter into an agreement on defensive systems than it did from our own insistence that a defensive treaty be linked to some measure of control over offensive weapons.

President Nixon noted in his State of the World Message last February that: The Soviet Union wished to work toward an initial agreement limited solely to antiballistic missiles. We considered that so narrow a solution would risk upsetting the strategic balance and might put a premium on the further development of offensive weapons.

Now, if that was the risk then that is what the Interim Agreement should prevent. The Interim Agreement is good if it diminishes that risk. If, in fact, it spurs the arms race, then it is indefensible and it will spur the arms race if we continue during arms control negotiations to take the position that we must escalate the arms race in order to accumulate further bargaining chips.

I think the experience with the ABM Treaty documents justifies this apprehension.

Our decision to go ahead with the ABM deployment, while the impasse continued at Helsinki and Vienna, has just meant more expense and less control. We have continued with deployment of an unneeded ICBM antiballistic missile defense centered in North Dakota. The Soviet Union has gone ahead with its Galosh system which could not possibly defend Moscow and now, in a curious twist, both sides seem to be in a position in which they may end up with an additional ABM system that they never seemed to want before.

The treaty permits us to deploy a command and control ABM around Washington and the Soviets are entitled to build east of the Urals a defense of ICBM missiles. But whether or not they go ahead, it seems to me, sir, that the Congress should reject any further ABM expenditures.

With the completion of the treaty it seems obvious that not even a bargain-chip argument can be advanced as a reason for deploying a system that can provide no effective defense.

In my view, the reason that the Soviet Union and the United States have been able to negotiate and have been able to reach an agreement is because each side has had to recognize the other side's technical potential. Each side must recognize that it is not capable of achieving any sort of meaningful advantage in the strategic weapons field unless the other side is willing to concede that advantage, and nothing in the history of the arms race indicates any such concession or any such prospect of one dropping out of the competition if the competition continues. Neither side need let the other one gain an appreciable advantage and neither side will.

So, if the bargaining-chip argument is valid, and if it is going to be used, what it means is that the continuation of strategic arms limitation talks will lead to agreements to arm rather than agreements on arms control.

SALT AGREEMENTS SHOULD BE CONSIDERED ON THEIR OWN MERITS

As President Nixon has suggested, the SALT agreements should be considered by Congress on their own considerable merits. I think that decisions on new nuclear weapon systems that are now forbidden should be made entirely separate from the consideration of these agreements and should be made with primary emphasis on their implications for effective arms control in the future.

Any program that threatens the retaliatory capability of either side should be rejected. I refer, of course, specially to such things as antisubmarine warfare programs or anything else that might have the same impact as an antiballistic missile defense in appearing to challenge the retaliatory capability of either side.

AGREEMENTS ASSURE TIME FOR SENSIBLE SELF-RESTRAINT

In my view, the major accomplishment of the agreements signed at Moscow is to assure time for sensible self-restraint. No action that the Soviet Union can take, at least for the duration of the Interim Agreement, can threaten our deterrent or in any respect endanger our security.

Accordingly, I would recommend that we announce now that we are withholding any further deployment of nuclear weapons pending further negotiations. The ABM Treaty does not require that, just because it is permitted, we must go ahead and spend further billions on a useless ABM site. What the ABM Treaty does provide is that we need no more MIRVs, no new bombers, no larger submarines to enable us to penetrate a nonexistent Soviet defense.

Instead of bargaining chips, I think our restraint can create the best climate for further progress in arms limitations. Our example can be well publicized and can, and I believe would put great pressure on the Soviet Union to respond in kind.

The agreements reached at Moscow can do much to move the world toward nuclear sanity and I would suggest that any arguments that diminish this bright promise should be taken with at least a grain of salt.

Thank you, sir.

(Mr. Warnke's prepared statement follows:)

PREPARED STATEMENT OF PAUL C. WARNKE, FORMER ASSISTANT SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY AFFAIRS

The SALT agreements as arms control

"On their own merits, the Moscow agreements can constitute a giant step toward effective control over strategic nuclear weapons. The ABM treaty is realistic recognition that no physical defense is possible against a nuclear attack of significant size. By its terms, both of the nuclear superpowers accept the proposition that security against nuclear devastation depends instead on the certainty that an attacker would himself be destroyed by a retaliatory second strike.

"The accompanying Interim Agreement provides some measure of control over offensive missile systems. Though disappointingly permissive, it nonetheless can be a useful beginning toward comprehensive restriction of offensive nuclear weapons. But its utility in real arms control depends upon its explication and acceptance as a means of facilitating further restraint. If, instead, its support is linked to Congressional adoption of crash programs in many of the offensive weapons areas which it does not cover, this Interim Agreement could prove to be slightly worse than no offensive agreement at all.

"Whether or not offensive weapons are restricted, the ABM treaty by itself would constitute the single greatest major accomplishment in controlling the nuclear arms race, with its inordinate expense and incalculable risks, by its adoption, each side will accept the policy that a strategic nuclear exchange, in light of the modern technology of death, spells out only the assured destruction of both. Soviet strategic planners, as quoted by advocates of an American nuclear warfighting capability, have in the past characterized the concept of mutual assured destruction by its acronym—a "MAD policy." Now, however, the SALT ABM treaty attests that, in the nightmare nuclear world, "though this be madness, yet there is method in it."

"In all logic, the restriction on ABM defenses should eliminate any fear that either side may acquire a first strike capability. Thus it should ensure stability and forestall the accumulation of additional offensive weapons. Since each has abandoned any real attempt to defend itself from nuclear attack, the number of warheads that would survive even an all-out first strike would be sufficient totally to devastate the attacker's society. For example, if the Soviet Union, by striking first, could destroy all of our ICBMs and all our bombers, and even if the attack could catch and destroy most of our submarines in port, 10 surviving Poseidon submarines could aim 1,600 warheads at the Soviet Union. They would run out of targets before they ran out of missiles. In thus assuring retaliatory capability, the ABM treaty makes continuation of the missile numbers game a mindless exercise.

"To the extent that the Interim Agreement actually leads toward the limitation of offensive weapons, it can be a desirable complement to the ABM treaty. But to the extent that it is used as an argument for accelerated construction and deployment of new offensive systems, it can only nullify the gains the treaty has achieved and thus disserve the cause of genuine arms limitation. It becomes an agreement to arm—not arms control.

"The ceilings put on ICBMs and SLBMs give a mathematical edge to the Soviets in both land-based and sea-based missiles. In aggregates, they are permitted about 2,350 missile launchers that can reach United States territory while we are restricted to some 1,710 that can be aimed at the Soviet Union from our ICBM silos and missile submarines. But this nuclear edge gives the Soviet Union no practical military capability that we do not have, and that we would not have with far fewer missiles entirely apart from our commanding lead in strategic bombers and deliverable warheads. Elimination of any forlorn hope of ABM defense of populations and facilities makes either ceiling figure a flagrant example of military redundancy. And even if our potential adversary should elect to pour additional resources into additional warheads, we need have no concern. Instead, we might properly feel some gratification that he has not used these funds for more meaningful and more mischievous purposes.

"Sensibly construed, the Interim Agreement is of some value in assuring survival of our land-based missile deterrent for the indefinite future. Limited to no more than 313 large missiles of SS–9 size or greater, and with no testing yet of true MIRV technology, a Soviet counterforce strike would leave enough Minutemen to obliterate the Soviet Union, even without resort to our submarine-launched missiles and our nuclear bombers. It thus lengthens the lead time during which, if we are really serious about nuclear arms control, we can exercise restraint and look for reciprocal action from the Soviet Union. But pursuit of this sound policy requires an explanation of the Interim Agreement which focuses on the fact that we can accept the numerical imbalance because it is in fact totally irrelevant to our security. To suggest instead that this missile surplusage must be offset by the expenditure of additional billions on strategic offensive systems that are outside the parameters of the agreement is inconsistent and self-defeating. If missile numbers were a valid measure of national strength, the Interim Agreement would be improvident. Since they are militarily meaningless, there is nothing for which we need compensate.

"We must not let arms control be converted into a new reason for escalating the arms race. This will be the ironic and tragic result if the Congress accepts any of the three current arguments used to justify new strategic weapons programs.

"The first of these fallacies is that approval of the treaty and Interim Agreement must be linked with new funding of strategic weapons programs to preserve our security. Secretary Laird has told this Committee that the price for Pentagon support of the SALT accords is Congressional approval of proposed programs for a new manned strategic bomber and a new underwater-launched missile system carried by a submarine about the size of the largest Soviet surface ship and more expensive than our most modern attack carrier. Suggested also is a submarine-borne cruise missile. This has little more merit than a nuclear arrowhead shot from a crossbow. If the SALT agreements mean that we must spend more money and buy more weapons for our security, they should not be approved by Congress. Instead they should be sent back to the drawing board with the request that the job be done again and be done better.

"President Nixon has now asserted, however, that the arms limitation agreements should be approved on their merits. He assures us that he would not have signed them unless he believed that "standing alone, they were in the interest of the United States." But at the same time, in his news conference of June 22nd, he has contended that failure to approve the new offensive weapons pro-

grams "would seriously jeopardize the security of the United States and jeopardize the cause of world peace." His position seems to rest on two further arguments that differ somewhat from Secretary Laird's contention that the agreements and new funding must be linked.

"One of these arguments appears to be based on military cosmetics rather than military capability. It is emphasized that the Soviet Union has indicated its intention to go ahead with programs in areas not controlled by the Interim Agreement. With both countries confined to token ABM systems that can defend neither populations nor industrial plants, the only mission for more warheads would be, as Winston Churchill put it, to "make the rubble bounce." The Soviets have always lagged behind us in strategic doctrine. We should not now substitute their judgment for our own common sense. Rather we should accept the fact that the ABM treaty assures our retaliatory deterrent for years to come and we should see that this fact is appreciated by our own people, by our friends, and by those who might feel disposed to be unfriendly.

"Strategic nuclear forces can serve no purpose except to deter an enemy from using his. By this single sensible criterion we have more than enough and cannot fall into an inferior position unless this deterrent is threatened. With the ABM limitation, nothing that can threaten it is remotely in prospect. Whatever else the Soviet Union may do in the offensive nuclear missile area is without military meaning. It can give them a political advantage if, and only if, we appear to concede it to them by depreciating our own strength.

The "bargaining chips" argument is the third risk that arms control may be converted into arms escalation. We were told for almost three years that we had to deploy an ABM in order to assure success at SALT. But the delay in reaching an ABM agreement seems to have stemmed less from Soviet recalcitrance than from our insistence that an ABM limitation be accompanied by limitations on offensive weapons. As noted in President Nixon's State of the World message of February 9, 1972: "The Soviet Union wished to work toward an initial agreement limited solely to antiballistic missiles. We considered that so narrow a solution would risk upsetting the strategic balance, and might put a premium on the further development of offensive weapons." The Interim Agreement can be defended only if in fact it diminishes that risk. If it spurs the arms race, then it is indefensible. It will do so if new offensive nuclear weapons systems are supported as bargaining chips for further negotiations.

"Our decision to deploy an ABM, while the impasse continued, has meant just more expense and less control. Experience shows that nations hoard obsolete weapons just as some wealthy men save string. We are now condemned to continue with our unneeded ABM defense of some Minuteman missiles in North Dakota. The Soviets will probably retain their "Galosh" system that can't defend Moscow. Indeed, we may both end up with an additional mirror image ABM we never seemed to want before. The treaty permits us to deploy a "command and control" ABM around Washington. They are entitled to build, east of the Urals, and away from Soviet populated areas, an ABM defense for some of their missiles. Whether or not they engage in profligate futility, Congress should reject any further ABM expenditures. Not even a "bargaining chip" argument can be advanced now that an effective ABM limitation has been achieved.

"What has led both nations to the bargaining table and what can lead to lasting and comprehensive limitations on offensive weapons is each side's recognition of the other's technical potential. The agreements, presumably, were designed to avoid the costs of converting that potential into weapons that would then be countered and nullified. Neither need—and neither will—let the other achieve a position of appreciable bargaining advantage. To continue to build additional nuclear weapons systems in order to bargain from strength will mean only that the final bargain will be the poorer. In the interim, the existence of negotiations will have been used to spur the arms race. If the "bargaining chip" argument is to prevail, it is questionable that we can continue to afford arms control negotiations.

"As President Nixon has suggested, the SALT agreements should be considered by Congress on their own considerable merits. Decisions on new nuclear weapons systems not now forbidden should be made separately and with primary emphasis on their arms control implications. Those that may threaten the Soviet retaliatory capability should be rejected as inconsistent with the SALT accords. Measures that serve, like the ABM limitation, to protect the mutual deterrent should be favorably considered. Among them are restrictions on further testing and on developments in ASW. They should have top priority in the negotiations that are to follow.

"The major accomplishment of the agreements signed at Moscow is to assure time for the sensible self-restraint that can bring an end to the nuclear arms race. No action the Soviet Union can take at least for the duration of the Interim Agreement can threaten our deterrent or endanger our security. We therefore should announce now that we are withholding any further deployment of nuclear weapons pending further negotiations. The ABM treaty does not mean that, because it is not forbidden, we must spend further billions on useless ABM sites. The treaty does mean that we need no more MIRVs, no new bombers, no larger submarines to penetrate a non-existent Soviet defense.

"Our restraint can, moreover, create the best climate for further progress in arms limitations. This example—which can and should be well publicized— would put pressure on the Soviets to respond in kind and would turn the negotiations themselves into a medium for arms control.

"The agreements reached at Moscow can do much to move the world toward nuclear sanity. Any arguments that diminish their promise should be taken with at least a grain of salt."

Senator SPARKMAN. Thank you very much, Mr. Warnke.

I wonder if the members of the committee would feel that perhaps the best way to proceed is to hear from each one of these people first and then propound questions across the board; otherwise, I am afraid we would never get through today.

Our next witness is Mr. Donald G. Brennan, senior member, professional staff, of the Hudson Institute.

Mr. Brennan, we will be very glad to hear from you, sir.

STATEMENT OF DONALD G. BRENNAN, SENIOR FELLOW, PROFESSIONAL STAFF, HUDSON INSTITUTE

Mr. BRENNAN. Mr. Chairman and members of the committee, it is a pleasure and a privilege for me to appear before you once again. As some of you know, the subject of arms control and disarmament has been a major field of my study for perhaps a dozen years and I am grateful for your invitation to testify on the historic proposed agreements now before you.

Background of witness

A detailed biographical sketch is attached at the end of my statement. Let me mention here that I organized and edited the volume "Arms Control, Disarmament and National Security," often called the bible of arms control, which was endorsed by Senator Fulbright, among others, and I have collaborated with or consulted or testified for many congressional groups and agencies of the executive branch on matters concerning arms control, including at least four prior occasions on which I have presented testimony to this committee. There were the hearings on the establishment of ACDA, on the Partial Nuclear Test Ban, on ABM in the spring of 1969 and on the ratification of the Geneva Protocol on Chemical and Biological Warfare in the spring of last year.

I have supported, in one way or another, every arms control agreement that has been established since World War II. I have also been an active advocate for a dozen years or more of a suitable Soviet-American agreement limiting strategic offensive weapons; such an agreement was a particular focus of my work in the mid-1960s. It is therefore a matter of particular disappointment to me that the proposed agreements now before you are such that I cannot support them.

Difficulties with agreements

The difficulties with the two agreements are quite different; the proposed ABM Treaty does the wrong thing well and the Interim Agreement does the right things badly.

To begin with the ABM Treaty: We and the Soviets have agreed not to defend ourselves, not only against each other but, interestingly, against anyone else, either. I believe that at least on the American side this agreement stems purely from a sophomoric ideology and fashion. Let me elaborate on this point.

Mutual assured destruction posture

The idea has taken hold in the United States that the best route to nuclear peace and security resides in a strategic posture in which we and the Soviets maintain a capability to destroy a large fraction, say, one-quarter to one-half, of each other's population and cities and in which no attempt is made by either side to interfere with the assured destruction capability of the other. Such a posture is often called a "mutual assured destruction posture." It has the property that the obvious acronym for it—MAD—provides at once the appropriate description for it, that is, a "mutual assured destruction" posture as a goal is almost literally mad.

If technology and international politics provided absolutely no alternative, one might reluctantly accept a MAD posture. But to think of it as desirable, for instance, as a clearly preferred goal of our arms control negotiations, as the proposed ABM Treaty automatically assumes, is bizarre.

As some of you probably know, I have often suggested a reduction-to-absurdity proof of the madness of MAD. If a MAD posture were genuinely desirable, we and the Soviets could have an arms control agreement to mine each other's cities. The Soviets could plant large thermonuclear explosives under, say, the first 100 American cities, and we could do the same there. This arrangement would save most of the present troubles and costs of ICBMs, SLBMs, bombers and so on and, of course, would make any and all active defense systems, such as ABM and air defense, completely irrelevant, at least as far as Soviet-American confrontations were concerned. And yet despite the obvious technical effectiveness of a mined-city posture for implementing MAD, I suspect that few of you would care to sell such a program to your constituents.

Your constituents would have the right reaction. Some would describe the reaction as naive or unsophisticated; however, it would in fact represent the wisdom of rejecting a wholly unproved theory when it leads to absurd consequences.

The main theory involved is that a MAD posture is the best way to protect against nuclear war altogether. This theory is reflected in the preamble to the proposed ABM Treaty and in the Letter of Submittal of June 10, 1972, from Secretary of State Rog-

ers: "Effective limits on antiballistic missile systems . . . will decrease the risk of outbreak of nuclear war . . ."

There is, of course, not the slightest shred of evidence in support of this idea. Many nuclear strategists, including those who have achieved the greatest prominence in the field, do not believe it is true. The prevalent popularity of this theory can only be described as a fashion. Yet the government is apparently prepared to gamble that the theory is true and thereby commit us to a MAD posture indefinitely.

The treaty itself contains evidence that the theory is little more than a fashion. If, as is usually argued in support of the theory, stability resides in high hostage levels and the interposition of ABM on both sides would be destabilizing because of reducing those levels, it should be similarly destabilizing if the hostage levels were reduced by direct cuts in offensive force levels. But the same treaty preamble which extols limits on ABM systems, without regard to their technical characteristics, including effectiveness, also has the parties "Declaring their intention . . . to take effective measures toward reductions in strategic arms, nuclear disarmament . . ." This is something less than consistency.

[From the Washington Post, Feb. 10, 1977]

PRESIDENTIAL PRESS CONFERENCE—FEBRUARY 9, 1977

Q. Mr. President, your nominee to head the Arms Control and Disarmament Agency, Paul Warnke, wrote about a year and a half ago that the United States "should try a policy of restraint while calling for matching restraint from the Soviet Union," but Mr. Warnke didn't seem to believe that that had to be guaranteed in advance in an agreement. Is that a view to which you subscribe and can you explain why or why not?

A. I know Mr. Warnke very well. I have met with him several times to discuss his attitude on disarmament matters. I have complete confidence in him. The first two times I asked him to take the job, he turned me down. We tried to find an alternative who is as well qualified as he is that would express my views and those views acceptable to my country. I was unsuccessful in equaling him. He finally agreed to take the job, at my insistence, as a public service.

I believe his views are well considered by me. I have accepted them. I think when the members of the Senate consider what Mr. Warnke stands for, he will be approved overwhelmingly. I obviously believe that we both have to take initiatives, both the Soviet Union and the United States. Most of our discussions will be bilateral in nature. Subsequently I hope to bring in other nations to discuss, for instance, comprehensive test ban questions and others, the European nations who are nuclear powers and also the Chinese. That would come later.

But I believe that Mr. Warnke's proposals are sound. I have no concern about his attitude. There will be instances on nuclear weapons where each country has to take some initiative. But the overall balance of mutual restraint, cutting down on the overall dependence on nuclear weapons is what counts.

I might add one other point, Mr. Warnke's position will be carefully coordinated with my own, working closely with the State Department, Defense Department officials. Our decisions with the Soviets will be made public. We will consult with our allies whenever possible. Any ratification of an agreement with the Soviet Union will obviously require senatorial approval. Even if I or Mr. Warnke or some other person in the negotiation process should make a mistake inadvertently, that mistake would be closely scrutinized by the public, but I have complete confidence in him.

Q. Mr. President, just to follow up a bit on Stan's question, could you tell us, sir, do you believe that there should be a rough parity between the nuclear forces of the Soviet Union and the United States? Do you think we ought to, in the arms negotiations, strive for superior force or do you believe that as long as we have the ability to inflict horrendous damage on them that it really doesn't matter which side has the most bombs?

A. At the present time, my judgment is that we have superior nuclear capability. The Soviet Union has more throw weight, larger missiles, larger warheads. We have more missiles, a much higher degree of accuracy, and also, we have three different mechanisms which are each independently adequate to deliver atomic weapons: airplanes, submarines, and intercontinental ballistic missiles. I think we are superior, in that either the Soviet Union or we could destroy a major part of the other nation if a major attack was made—with losses in the neighborhood of 50 to 100 million people if a large exchange was initiated.

We have the capability, as do the Soviets, to detect the launching of opposing missiles and then I, as President, and the leaders in Russia would have to be faced with the question of how much of a retaliatory attack to make. But in the exchange tens of millions of people would be killed and the threat of this kind of holocaust is what makes it important that we do keep an adequate deterrent capability, and it also is crucial for all of us to remember that it is necessary to have drastic reduction in dependence on atomic weapons.

In almost every major speech that I have made since I have been involved in national politics, I expressly committed, first to stabilize the situation; secondly, to have demonstrable reduction in dependence on atomic weapons and set as our committed long-range goal complete elimination of nuclear weapons from the earth.

I had a meeting this morning with a representative of the People's Republic of China and he told me very clearly that the goal of the Chinese government was to reduce dependence on nuclear weapons to zero.

If we and the Soviet Union can demonstrate an ability to stop the present growth and then to have substantial reductions, I believe then, we can go to the French, British, the Chinese and others and say, "Would you join us in stopping testing and in moving in clearly monitorable ways to reduce dependence on atomic weapons?"

Q. Mr. President, to follow that up, a little bit earlier, if I understood you correctly, you said that you thought that each of the two countries, us and the Soviets, might have to take some initiatives. I am trying to translate that into some other problems we face. Is the United States today prepared to take the initiative perhaps in restraining the development of the cruise missile in order to get something going in the SALT talks?

A. I wouldn't want to single out one particular weapon which is still in the development stage, but I will give you a couple of examples that are symbolic in nature, not too profound. One is that I suggested to the Soviet Union that they let us know and that we let them know before we launch any kind of intercontinental ballistic missile in a test phase. We launch our missiles from Vandenberg Air Force Base. We don't launch them from the standard silos. The Soviet Union does launch missiles from their standard operating silos for these purposes. I think a prior notice that this launch was going to take place—24 hours or 48 hours—would help a great deal.

I have called on the Soviet Union to join us in a comprehensive test ban to stop all nuclear testing for at least an extended period of time, two years, three years, four years. The Soviets are interested in using nuclear explosives to divert the course of a river in northern Russia. I don't think they need to test any more. If they want to put that as a proviso in the agreement, that they would like to go ahead and divert that river, I think that would be something we could negotiate and let us have observers there to learn from them and vice versa. But I think that the initiation of proposals that might be mutually acceptable of this kind is very, very important.

We have two unresolved questions derived from the Vladivostok agreement called SALT II, and that is the cruise missile and the Backfire bomber. I would be willing to go ahead with the Soviet Union, conclude a quick agreement, if they think it advisable, and omit the Backfire bomber and the cruise missile from the negotiations at this stage. And then in the SALT III talks, if necessary, put those two items back in for further discussion.

But I think it is important for us, without any pressure on me, not to proceed too hastily, in a very careful and methodical way to demonstrate to the world that we are sincere.

Q. I am sorry to pursue the subject, but I am. When Mr. Warnke wrote that, he was apparently talking about weapons systems as well as nuclear warheads. He was talking about perhaps restraining the development of a particular weapons system, hoping for reciprocity by the Soviets.

My question is, would you consider saying to the Soviets, say the B–1 or any other weapons system, we are not going to develop it for six months, we want to see something from you in the way of reciprocity?

A. Again, let me avoid reference to a particular weapons system on our side. Let me refer to a weapons system on their side. The Soviets have a missile with limited range, it is not intercontinental in nature, called the SS–20. They have begun to install those missiles in mobile installations where they can move them in a concealed way from one part of an area to another. It makes it very difficult to pinpoint their exact location.

I would like to see the Soviets cease deployment of the mobile missile, even though it is not of the intercontinental type. It is very difficult to distinguish it from the intercontinental missile called the SS–16. If they would agree to a cessation of the use or deployment of the mobile type missiles which could be moved around in different locations before launch, that would be a very important point for us to join them in a mutual agreement. It would mean we would not then perhaps spend the large amounts of money to develop a mobile missile. But if the Soviets should move to a development of that to be moved from one place to another undetected, then that would put a great pressure on us to develop a mobile missile of our own.

I think on both sides there has to be some initiation. But as individual weapons systems are restrained, using initiative, you have got to be sure that the overall balance of deterrent is not disturbed.

Mr. LEAHY. Mr. President, I have been greatly disturbed by the whispering campaign that has begun in opposition to the anticipated nomination of Paul Warnke as director of the Arms Control and Disarmament Agency. Many of our colleagues are ready to condemn him now, before he has the opportunity to complete his testimony. This is patently unfair to both Mr. Warnke and the President.

Thursday of last week, the Washington Post printed an editorial that generally supports the nomination of Mr. Warnke, noting his excellent qualifications for the job and his strong support of a reduction in nuclear weapons. I am looking forward to seeing a person with those views

in the important role of Director of the Arms Control and Disarmament Agency. Yes, it is important that we maintain enough weapons in our nuclear arsenal to deter an attack on the United States. But simply adding weapons to our arsenal does not lead to stability, but instead increases the likelihood of nuclear war. It is only through arms limitation agreements with the Soviet Union that we can guarantee a lasting peace. I believe that Mr. Warnke understands and concurs with this view.

I hope that the Senate will treat Mr. Warnke fairly, by ignoring the unsigned memoranda and whispered rumors that attempt to discredit him. We will have the chance to question him, to explore his background, and to discuss with him his views on nuclear weapons. Let us at least wait until he has had his chance to defend himself before we pass judgment on his nomination.

Mr. President, I ask unanimous consent that the Washington Post editorial on Mr. Warnke be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WARNKE NOMINATION

The nomination of Paul Warnke as director of the Arms Control and Disarmament Agency puts the right man in the right place at the right time. Mr. Warnke, a former Assistant Secretary of Defense, believes strongly that arms control serves the nation's security. As obvious as it may seem to say so, this is exactly the conviction one wants in the man leading the single government agency charged with arms control. At a moment when a major debate is developing about the Soviet-American strategic equation, it is vital to have in this post someone with the stature, intellectual force and argumentative powers of Paul Warnke to assure that this point of view receives the hearing it deserves at the top of the government.

Now, Mr. Warnke's views, long on the public record, are controversial. He doubts, for instance, that it serves either deterrence or diplomacy to add new arms once a nuclear power has a force sufficient to assure the devastation of any other power that might strike it first. He suspects that the negotiating process itself may sometimes impel, rather than restrain, arms programs. He has asked whether U.S. arms programs do not incite some part of the Soviet-American arms competition. These are matters worthy of rigorous public examination. And in view of the fact that Mr. Warnke, while serving as ACDA director, would evidently also head the administration's team in the SALT talks, another question arises. The government's SALT position will surely reflect a mixing of his views with those of others. Could the American negotiating position be weakened if the Russians knew that the man presenting it personally holds other views?

The Foreign Relations Committee will conduct Mr. Warnke's confirmation hearing. But Sens. Sam Nunn and Henry Jackson, among others, who sit on Armed Services, also wish to question him. That's fine. The different viewpoints on arms control deserve exposition by their strongest proponents. The public, not to speak of the government, will learn from the exchange. It could amount to a kind of pre-negotiation SALT ratification debate that could help the administration prepare for the talks. No one need worry about the burdens such a debate would impose upon Mr. Warnke; he is eminently fit to carry the arms control brief.

Even as public hearings are being prepared, however, an anonymous memo is being circulated that accuses Mr. Warnke of favoring "unilateral" disarmament. We find this characterization of his views inaccurate and scurrilous. And we find the circulation of this sort of anonymous memo a positive disservice to policy debate. This is not the first occasion in which Carter appointment initiatives have been met with this tactic. Are some of the people with reservations about Mr. Warnke so lacking in confidence on the merits that they must resort to sneaky smears?

(This concludes additional statements submitted on the nomination of Paul Warnke.)

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of February 7, 1977, the Secretary of the Senate, on February 7, 1977, received messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

Under authority of the order of the Senate of February 7, 1977, the Secretary of the Senate, on February 8, 1977, received a message from the President of the United States submitting a nomination which was referred to the Committee on Foreign Relations.

Under authority of the order of the Senate of February 7, 1977, the Secretary of the Senate, on February 9, 1977, received a message from the President of the United States submitting a nomination which was referred to the Committee on Foreign Relations.

Under authority of the order of the Senate of February 7, 1977, the Secretary of the Senate, on February 10, 1977, received messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received on February 7, 8, 9, and 10 are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

The following messages from the House of Representatives were received during the adjournment of the Senate:

ENROLLED JOINT RESOLUTIONS AND BILL SIGNED

On February 8, a message stating that the Speaker had signed the following enrolled joint resolution, which was subsequently signed by the President pro tempore:

H.J. Res. 227. Joint resolution making urgent power supplemental appropriations for the Department of the Interior, Southwestern Power Administration for the fiscal year ending September 30, 1977, and for other purposes.

On February 9, a message stating that the Speaker had signed the following enrolled bill, which was subsequently signed by the President pro tempore:

S. 649. An act to authorize payment of salaries of certain members of Senate committee staffs at the rates paid to them on January 4, 1977.

The message also stated that the House has passed without amendment the joint resolution (S.J. Res. 10) to extend the period of time in which the American Indian Policy Review Commission must submit its final report and to increase the authorization of appropriations for such Commission.

The message stated further that the Speaker had signed the joint resolution (S.J. Res. 10), supra.

On February 10, the joint resolution (S.J. Res. 10) was signed by the Vice President.

At 2:03 p.m. today, a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that the House has passed the following bills and joint resolutions in which it requests the concurrence of the Senate:

H.R. 583. An act to amend chapter 5 of title 37, United States Code, to extend the special pay provisions for reenlistment and enlistment bonuses;

H.R. 692. An act to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond guarantee authority; and to improve the disaster assistance, certificate of competency and Small Business set-aside programs;

H.J. Res. 239. A joint resolution extending the filing date of the 1977 Joint Economic Report; and

H.J. Res. 240. A joint resolution to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes.

ENROLLED BILL AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on February 9, 1977, he presented to the President of the United States the enrolled bill (S. 649) to authorize payment of salaries of certain members of Senate committee staffs at the rates paid to them on January 4, 1977; and

On February 10, 1977, he presented to the President of the United States the enrolled joint resolution (S.J. Res. 10) to extend the period of time in which the American Indian Policy Review Commission must submit its final report and to increase the authorization of appropriations for such committee.

HOUSE BILLS REFERRED

The following House bills were each read twice by their title and referred as indicated:

H.R. 583. An act to amend chapter 5 of title 37, United States Code, to extend the special pay provisions for reenlistment and enlistment bonuses; to the Committee on Armed Services.

H.R. 692. An act to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond gaurantee authority; and to improve the disaster assistance, certificate of competency and Small Business set-aside programs; to the Select Committee on Small Business.

JOINT RESOLUTION PLACED ON CALENDAR

The joint resolution (H.J. Res. 239) extending the filing date of the 1977 Joint Economic Report, was read twice by its title and placed on the calendar.

COMMUNICATION RECEIVED BY THE SECRETARY OF THE SENATE

The Secretary of the Senate reported receipt of the following communication:

DEPARTMENT OF STATE,
Washington, D.C., February 7, 1977.

Mr. FRANCIS R. VALEO,
Secretary of the Senate,
U.S. Senate.

DEAR MR. VALEO: I have been asked to reply to your letter of January 28 to Secretary of State Vance forwarding a copy of Senate Resolution 48, relative to the release of Abu Daoud, for transmittal to the Government of France.

In accordance with the wishes of the Senate, copies of the resolution and of the record of the Senate debate on this issue have been transmitted by the Department of State to the Government of France through the French Ambassador in Washington.

Sincerely yours,

KEMPTON B. JENKINS,
Acting Assistant Secretary for Congressional Relations.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC–614. A letter from the Director of the Office of Management and Budget, Executive Office of the President, reporting, pursuant to law, an additional cost of reapportionment for a prior reapportionment for the Southwestern Power Administration making the new total cost to be $6.4 million; to the Committee on Appropriations.

EC–615. A letter from the Chairman of the Indian Claims Commission transmitting, pursuant to law, a report of its final determination in respect to the claim case 342–G, the Seneca Nation of Indians, Plaintiff, v. the United States of America, Defendant (with accompanying papers); to the Committee on Appropriations.

EC–616. A letter from the Assistant Secretary of the Navy, Installations and Logistics, reporting, pursuant to law, a proposal to transfer the obsolete guided missile cruiser EX-LITTLE ROCK and the destroyer EX-THE SULLIVANS to the City of Buffalo; to the Committee on Armed Services.

EC–617. A letter from the Secertary of the Army transmitting, pursuant to law, a report of progress of the Army Reserve Officers' Training Corps Flight Instruction Program for the period January 1 through December 31, 1976 (with an accompanying report); to the Committee on Armed Services.

EC–618. A letter from the Acting Assistant Secretary of Defense, Installations and Logistics, transmitting, pursuant to law, the report of Department of Defense Procurement from Small and Other Business Firms for July-September 1976 (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC–619. A letter from the Chairman of the Export-Import Bank of the United States transmitting, pursuant to law, a report on loan, guarantee and insurance transactions supported by Eximbank during December 1976 to Communist countries (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC–620. A letter from the Secretary to the Council of the District of Columbia reporting, pursuant to law, that, due to certain omissions, Council Act 1–225 "An act to amend laws of the Council affecting elections and Latino community development" is being re-transmitted for referral and review by Congress; to the Committee on the District of Columbia.

EC–621. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–225 "An act to amend laws of the Council affecting elections and Latino community development" (with accompanying papers); to the Committee on the District of Columbia.

EC–622. A letter from the District of Columbia Auditor transmitting, pursuant to law, reports on (1) Department of Human Resources Practices and Procedures and (2) Employment of Mrs. Gladys Yeldell and Mayor's Order 76–22 (with accompanying reports); to the Committee on the District of Columbia.

EC–623. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–224 "An act to authorize the Mayor of the District of Columbia to operate a program of resocialization furloughs for the residents of the institutions and facilities of the District of Columbia government operated by the District of Columbia Department of Corrections" (with accompanying papers); to the Committee on the District of Columbia.

EC–624. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–222 "An act to correct and abate nuisances on private property" (with accompanying papers); to the Committee on the District of Columbia.

EC–625. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–221 "An act to transfer the approval of taxicab insurance rates from the Council to the Superintendent of Insurance" (with accompanying papers); to the Committee on the District of Columbia.

EC–626. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–223 "An act to protect the habitability of rental units subject to notices to vacate" (with accompanying papers); to the Committee on the District of Columbia.

EC–627. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within the past sixty days (with accompanying papers); to the Committee on Foreign Relations.

EC–628. A letter from the Chairman, National Advisory Council on International Monetary and Financial Policies, Department of the Treasury, transmitting, pursuant to law, the Annual Report covering the period July 1, 1975 through June 30, 1976 (with an accompanying report); to the Committee on Foreign Relations.

EC–629. A letter from the Secretary of Commerce transmitting, pursuant to law, notice of the President's decision on his granting Federal recognition to "Expo '81," an International General Category I (Universal Exposition proposed to be held in 1981 in the County of San Bernardino, California (with accompanying papers); to the Committee on Foreign Relations.

EC–630. A letter from the Acting Assistant Secretary for Administration, Department of Treasury, transmitting, pursuant to law, a report on the implementation by the U.S. Customs Service of a system of records on importers, brokers, consignees, etc., in accordance with the Privacy Act (with an accompanying report); to the Committee on Government Operations.

EC–631. A letter from the Acting Assistant Secretary of the Interior transmitting, pursuant to law, financial statements of the Colorado River Basin Project for the year ended June 30, 1976 (with an accompanying report); to the Committee on Interior and Insular Affairs.

EC–632. A letter from the Chairman of the Civil Aeronautics Board transmitting, pursuant to law, a report concerning laws administered by the Board or regulatory actions of the Board on the inefficient use of energy (with an accompanying report); to the Committee on Interior and Insular Affairs.

EC–633. A letter from the Deputy Comptroller General of the United States transmitting a draft of proposed legislation recommending the repeal of sections 3478 and 3479 of the Revised Statutes (31 U.S.C. 204 and 205); to the Committee on the Judiciary.

EC–634. A letter from the Commissioner of the Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation, as well as a list of the persons involved (with an accompanying report); to the Committee on the Judiciary.

EC–635. A letter from the Acting Director of the National Science Foundation transmitting a draft of proposed legislation for authorization for appropriations for Fiscal Year 1978 (with accompanying papers); to the Committee on Labor and Public Welfare.

EC–636. A letter from the Deputy Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a follow-up report to the report entitled "Toward a National Manpower Policy" (with an accompnying report); to the Committee on Labor and Public Welfare.

EC–637. A letter from the Deputy Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a follow-up report to the report entitled "Report and Recommendations, May 3, 1974" (with an accompanying report); to the Committee on Labor and Public Welfare.

EC–638. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, reports on (1) report of the General Services Administration, (2) report of the Department of Defense, (3) report of the United States Postal Service, and (4) report of the Department of Housing and Urban Development (with accompanying reports); to the Committee on Public Works.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM–61. House Resolution No. 4 adopted by the Legislature of the State of New Hampshire expressing disapproval of blanket amnesty; to the Committee on Armed Services:

"HOUSE RESOLUTION NO. 4 EXPRESSING DISAPPROVAL OF BLANKET AMNESTY

"Whereas, millions of members of our armed forces fought and thousands died in the Vietnam conflict; and

"Whereas, they and their families have made tremendous sacrifices on behalf of their country; and

"Whereas, blanket amnesty for draft dodgers and deserters would belittle the sacrifices of those who performed their patriotic duty and would endanger our future national defense; now, therefore, be it

"Resolved by the House of Representatives:

"That no unconditional blanket pardon or amnesty for draft dodgers and deserters ought to be declared.

"Further Be It Resolved, that certified copies of this resolution be forwarded by the secretary of state to the members of the New Hampshire delegation to the United States Congress, the clerk of the United States Senate, the clerk of the United States

House of Representatives, and to the President of the United States."

POM-62. House Joint Memorial No. 2 adopted by the Legislature of the State of Idaho urging the United States Fish and Wildlife Service to withhold designation of any grizzly bear critical habitat outside Yellowstone and Glacier National Parks; to the Committee on Commerce:

HOUSE JOINT MEMORIAL NO. 2

By Resources and Conservation Committee

"A joint memorial stating the findings of the legislature of the State of Idaho for the hearing record of the United States Fish and Wildlife Service proposed designation of critical habitat for the grizzly bear, and directing copies to be sent to persons specified

"Whereas, an overwhelming majority of Idahoans, individually and representing groups, who appeared before hearing officers of the U.S. Fish and Wildlife Service, testified that the Grizzly Bear population for the past 50 years has remained relatively stable, and, in fact, during the last three years has been on the increase; and

"Whereas, it is apparent that the Grizzly Bear lives compatibly with Idaho natural resource uses that include logging, grazing, hunting, fishing, camping, hiking, roads, trails, water developments, organization camps and off-road vehicles; and

"Whereas, there has developed a harmonious existence between the Grizzly Bear and resource users and the majority of those testifying feel that the Grizzly Bear has sufficient biological habitat to maintain its populaiton under existing U.S. Forest Service and U.S. Park Service mangagement programs; and

"Whereas, there is widespread disagreement among students of big game biology as to whether or not the Grizzly Bear is indeed a threatened species and, even so, there has been no sport hunting of the Grizzly Bear in Idaho since 1946; and

"Whereas, it is felt that the biologic aspects of Grizzly Bear management cannot be separated from the social and economic needs of the American public at the present time nor in the future; and

"Whereas, the citizens particularly of Southeastern Idaho have a social and economic life pattern that is dependent upon the federal lands within the proposed Grizzly Bear habitat which includes a major portion of the Lodgepole pine base on the Targhee National Forest with an annual timber yield potential estimated at 22-million board feet with more than 200-million board feet now under contract; and

"Whereas, the above mentioned cut provides nearly all of the raw material to the Idaho Stud Mill in St. Anthony, the Garland Call Pole Company in Idaho Falls, and about 30 small timber product businesses and approximately 250 individual permittees who cut poles, posts and such timber; and

"Whereas, the above-mentioned activity provides a major share of the economic base of Fremont County and a large portion of the pine in the area has been killed by the Mountain Pine Beetle in past years and it is now desirable to have this dead timber removed by commercial operations to eliminate a fire hazard and to permit new timber stands to grow, both of which will work to the benefit of Grizzly Bears as well as other wildlife in the area; and

'Whereas, the Interagency Grizzly Bear Study Team in its report of February 11, 1976, stated that logging modifies the habitat only temporarily and has the potential for improving bear habitat within a short period,

NOW, THEREFORE, BE IT RESOLVED by the members of the First Regular Session of the Forty-fourth Idaho Legislature, the House of Representatives and the Senate concurring, that we respectfully urge the U.S. Fish and Wildlife Service to withhold designation of any Grizzly Bear critical habitat outside of the Yellowstone and Glacier National Parks until all of the questions concerning the advisability of such establishment are answered in a scientific and reasonable manner.

"Be it further resolved that the Chief Clerk of the House of Representatives be, and he is hereby authorized and directed to forward copies of this Memorial to the President of the United States, to the Director of the Fish and Wildlife Service for entry in the public hearing record, to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to the Secretary of Interior of the United States.

POM-63. House Joint Resolution No. 2 adopted by the Legislature of the State of Indiana providing for the ratification of the proposed amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary:

"HOUSE ENROLLED JOINT RESOLUTION NO. 2

"A Joint Resolution providing for the ratification of the proposed amendment to the Constitution of the United States relative to equal rights for men and women

"Whereas, Both Houses of the Ninety-Second Congress of the United States of America, at the second session of such Congress, adopted a joint resolution proposing to amend the Constitution of the United States in the following words, to wit:

"JOINT RESOLUTION

"Proposing an amendment to the Constitution of the United States relative to equal rights for men and women.

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein). That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE

"Section 1. Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.

"Sec. 2. The Congress shall have the power to enforce, by appropriate legislation, the provisions of this article.

"Sec. 3. This amendment shall take effect two years after the date of ratification."

"Be it resolved by the General Assembly of the State of Indiana:

"Section 1. That the said proposed amendment to the Constitution of the United States of America be, and the same is hereby, ratified by the General Assembly of the State of Indiana.

"Section 2. That certified copies of this joint resolution be forwarded by the Governor of Indiana to the Administrator of General Services, as required by section 106b, Title 1, United States Code, as well as to the Secretary of State of the United States and the President of the Senate and Speaker of the House of Representatives of the Congress of the United States."

POM-64. A resolution adopted by the Youngstown City Council, Youngstown, Ohio, urging the National Congress to renew funding of the Runaway Youth Act of 1974, under the Office of Youth Development of the Department of Health, Education and Welfare; to the Committee on Labor and Public Welfare.

POM-65. Senate Joint Resolution No. 4 adopted by the Legislature of the State of Nevada congratulating Jimmy Carter and Walter Mondale on their inaugurations as President and Vice President, respectively, of the United States; ordered to lie on the table:

"Senate joint resolution congratulating Jimmy Carter and Walter Mondale on their inaugurations as President and Vice President, respectively, of the United States

"Whereas, On the 20th day of January, Jimmy Carter and Walter Mondale will be formally inaugurated as President and Vice President, respectively, of the United States; and

"Whereas, these men assume leadership of a nation dedicated to human advancement and the realization of peace and liberty for men and women everywhere; and

"Whereas, On the inauguration day of Jimmy Carter and Walter Mondale, Nevadans will look with concern as these leaders embark the nation on a journey into her third century; a century sure to be filled with unknown challenges and dangers; and

"Whereas, The citizens of the United States, through the elective process, have expressed their confidence and trust in Jimmy Carter and Walter Mondale successfully to direct this nation through these trying times; now, therefore, be it

"Resolved by the Senate and Assembly of the State of Nevada, jointly, That the members of the 59th session of the legislature of the State of Nevada extend their best wishes and congratulations to Jimmy Carter and Walter Mondale on their inaugurations as President and Vice President, respectively, of these United States; and be it further

"Resolved, That the contents of this resolution be dispatched by telegraph by the legislative counsel to Jimmy Carter and Walter Mondale, and that certified copies of this resolution be prepared and transmitted forthwith by the secretary of state to Jimmy Carter and Walter Mondale; and be it further

"Resolved, That this resolution shall become effective upon passage and approval."

OVERSIGHT HEARINGS ON THE COUNCIL ON WAGE AND PRICE STABILITY—SPECIAL REPORT (REPT. NO. 95-8)

Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs, submitted a special report on oversight hearings on the Council on Wage and Price Stability, together with additional views, which was ordered to be printed.

Mr. PROXMIRE. Mr. President, the Committee on Banking, Housing and Urban Affairs has submitted a report based on oversight hearings on the performance of the Council on Wage and Price Stability. It calls for the continuation of the activities of the Council with a somewhat large staff, and rejects mandatory wage and price controls or even standby authority to invoke them.

The most important feature of the U.S. economy in early 1977 is that inflation has been curbed but not yet suppressed. We must not expect to master inflation by the use of monetary and fiscal policies alone. The cost of trying to beat inflation in this way is an intolerably high level of unemployment. So we must supplement these policies by measures that will be applied at the industry level and at the level of the Federal regulatory agencies.

The report states that—

* * * the committee sees no useful purpose in supplying the President or the Council even with standby authority to apply mandatory controls. Our experience with

directives and freezes and orders ought to be enough to show that this is not the way to proceed.

Instead, the report aims at the use of governmental inflation to strengthen the competitive forces in the economy, and proposes that the Council, by objective analysis and public information, should persuade both Government agencies and private industries to avoid actions that are likely to give a push to inflation.

The present size of the Council is ludicrously inadequate to deal with the diverse inflationary problems of a $1.8 trillion economy. And the inflationary impact statements presently required to accompany Federal regulatory proposals fail to provide an adequate evaluation of the potential results of regulation. What is needed then is a requirement that the regulatory agencies should conduct a thorough cost/benefit study of all substantial proposals, and that a strengthened Council should analyze and comment on these studies.

As for developments in the private sector, the Council could contribute to the scaling down of inflationary wage and price demands by publicizing its own objective analyses of their consequences. This is not a call to establish fixed guidelines, but a proposal to mobilize the influence of public opinion in the interest of moderating unjustified increases. The Council's role in the long-term policy of bringing inflation to a halt is an important one, even as an auxiliary to broader policies to solve the inflation problem.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MUSKIE, from the Committee on the Budget:

S. Con. Res. 10. An original concurrent resolution revising the Congressional budget for the United States Government for the fiscal year 1977 (Rept. No. 95–9).

Without amendment:

S. Res. 54. A resolution waiving section 402(a) of the Congressional Budget and Impoundment Control Act of 1974 with respect to the consideration of S. 521, a bill to amend the John F. Kennedy Center Act, to authorize funds for the repair of leaks (Rept. No. 95–10).

By Mr. CANNON, from the Committee on Rules and Administration:

Without amendment:

S. Con. Res. 8. A concurrent resolution authorizing the printing of the committee print entitled "The Accounting Establishment" as a Senate document (Rept. No. 95–11).

S. Res. 53. A resolution authorizing the printing of additional copies of the committee print entitled "NATO and the New Soviet Threat" (Rept. No. 95–12).

S. Res. 65. A resolution authorizing additional expenditures by the Committee on the Judiciary for routine purposes (Rept. No. 95–13).

S. Res. 71. A resolution authorizing additional expenditures by the Committee on Armed Services for routine expenses (Rept. No. 95–14).

With an amendment:

S. Res. 72. A resolution authorizing additional expenditures by the Committee on Armed Services for the procurement of consultants (Rept. No. 95–15) (title amended).

Without amendment:

S. Res. 78. An original resolution authorizing additional expenditures by committees of the Senate for inquiries and investigations during the transition period.

S. Res. 79. An original resolution authorizing the revision and printing of the Senate Manual for use during the Ninety-fifth Congress.

S. Res. 80. An original resolution to pay a gratuity to Sidney and Tillie Rosenthal.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following reports of committees were submitted:

By Mr. HARRY F. BYRD, JR., from the Committee on Armed Services:

W. Graham Claytor, of the District of Columbia, to be Secretary of the Navy.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. SPARKMAN, from the Committee on Foreign Relations:

Richard B. Parker, of Kansas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Lebanon.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

POLITICAL CONTRIBUTIONS STATEMENT

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Richard B. Parker.

Post: Beirut.

Contributions, amount, date, and donee:

1. Self, none.

2. Spouse, none.

3. Children and Spouses, none; Names: Mr. and Mrs. Kimball Kenway, Mr. and Mrs. Jeffrey Parker, Jill Parker, Richard J. Parker.

4. Parents, Names, Mrs. John A. Robenson, mother, none.

5. Grandparents, Names, decreased.

6. Brothers and Spouses, Names, Maj. Gen. and Mrs. David S. Parker, none.

7. Sisters and Spouses, Names, none.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

RICHARD B. PARKER.

Subscribed and sworn (or affirmed) before me this 27th day of January A.D. 1977, at Washington, D.C.

[SEAL] STELLA MAKARA.

Commission expires July 31, 1977. (Title) Notary Public.

By Mr. CULVER, from the Committee on Armed Services:

Clifford L. Alexander, Jr., of the District of Columbia, to be Secretary of the Army.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. BROOKE (for himself, Mr. SPARKMAN, Mr. TOWER, Mr. CASE, Mr. MCINTYRE, Mr. JAVITS, Mr. MATHIAS, Mr. LEAHY, Mr. HATFIELD, Mr. MCGOVERN, Mr. BUMPERS, Mr. ABOUREZK, Mr. GRAVEL, Mr. DECONCINI, Mr. ANDERSON, Mr. ALLEN, Mr. PEARSON, Mr. EAGLETON, and Mr. HEINZ):

S. 664. A bill to amend the National Housing Act to provide for the insurance of graduated payment mortgages, and for other purposes; to the Committee on Banking, Housing and Urban Affairs.

By Mr. LAXALT:

S. 665. A bill to provide an opportunity to individuals to contribute $1, in connection with the payment of their Federal income tax, to the U.S. Olympic Fund, and for other purposes; to the Committee on Finance.

By Mr. STEVENS (for himself, Mr. DOMENICI, Mr. HATFIELD, and Mr. BURDICK):

S. 666. A bill to allcw Federal employment preference to certain employees of the Bureau of Indian Affairs, and to certain employees of the Indian Health Service, who are not entitled to the benefits of, or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians, and for other purposes; to the Committee on Governmental Affairs.

By Mr. LAXALT (for himself and Mr. CANNON):

S. 667. A bill to declare certain federally owned land held in trust by the United States for the Te-Moak Bands of Western Shoshone Indians; to the Committee on Indian Affairs.

S. 668. A bill granting the consent and approval of Congress to the California-Nevada Interstate Compact; to the Committee on the Judiciary.

By Mr. STEVENS (by request) (for Mr. GOLDWATER):

S. 669. A bill to help relieve the burden of high property taxes by allowing each homeowner a Federal income tax credit or rebate for property taxes paid for the support of public schools; to the Committee on Finance.

By Mr. GRIFFIN:

S. 670. A bill entitled "The Industrial Safety Encouragement Act of 1977"; to the Committee on Human Resources.

By Mr. BENTSEN:

S. 671. A bill to amend the Federal Aviation Act of 1958 to limit under certain circumstances the discretion of the Civil Aeronautics Board in determining the rate of compensation to be paid to an air carrier for the transportation of mail by aircraft; to the Committee on Commerce, Science, and Transportation.

By Mr. HUMPHREY (for himself, Mr. ROTH, Mr. METCALF, Mr. LUGAR, Mr. JAVITS, Mr. RIBICOFF, Mr. NUNN, Mr. MCGOVERN, Mr. MELCHER, Mr. PERCY, Mr. ANDERSON, Mr. DOLE, Mr. WEICKER, Mr. MCCLELLAN, Mr. MUSKIE, and Mr. BAYH):

S. 672. A bill to provide for the procurement by the General Services Administration of existing solar energy devices for use in government buildings; to the Committee on Environment and Public Works.

By Mr. HASKELL:

S. 673. A bill to limit potential or existent conflicts of interest on the part of elected and appointed officers and employees of the Government, to require financial disclosure, and for other purposes; to the Committee on Governmental Affairs.

By Mr. CURTIS (for himself and Mr. HANSEN):

S. 674. A bill to reinstate the provisions of the Sugar Act of 1948 beginning with calendar year 1978; to the Committee on Finance.

By Mr. BENTSEN:

S. 675. A bill to amend the Internal Revenue Code of 1954 to encourage greater use of insulation and to promote the development of solar and geothermal energy; to the Committee on Finance.

S. 676. A bill to amend the Small Business Act to authorize loans to small business concerns which suffered economic injury as a result of the floating of the Mexican peso; to the Committee on Small Business.

S. 677. A bill to amend the Tariff Schedules of the United States to raise the value limit for personal articles which may be imported duty free by returning residents, and for other purposes; to the Committee on Finance.

By Mr. BENTSEN (for himself and Mr. TOWER):

S. 678. A bill to amend section 1108 of the Federal Aviation Act of 1958 with respect to foreign registered aircraft operated in the United States; to the Committee on Commerce, Science, and Transportation.

By Mr. PEARSON:

S. 679. A bill to provide equal educational opportunities for students in the Nation's elementary and secondary schools; to the Committee on Human Resources.

By Mr. SCHWEIKER:

S. 680. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit to employers for wages paid to youths 21 years of age or under or to persons unemployed for 15 weeks or more who have been hired to increase the work force of the employer; to the Committee on Finance.

By Mr. HEINZ:

S. 681. A bill to amend the Wild and Scenic Rivers Act of 1968 by designating a portion of the Allegheny River, Pa., for potential addition to the National Wild and Scenic Rivers System; to the Committee on Energy and Natural Resources.

By Mr. MAGNUSON:

S. 682. A bill to amend the Ports and Waterways Safety Act of 1972; to increase the use of vessels of the United States to carry imported oil; and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. McINTYRE:

S. 683. A bill to amend the Tariff Act of 1930 and the Tariff Schedules of the United States to reduce the burden of paperwork involved in the customs entry process for travelers and goods entering the United States; to the Committee on Finance.

By Mr. PROXMIRE:

S. 684. A bill to establish a Federal Bank Commission to administer all Federal laws relating to the conduct of the banking business both foreign and domestic, including such laws relating to the chartering of banking institutions and their branching activities, bank holding companies and their activities, Edge Act corporations and their activities, and the examination, supervision, and regulation of banking institutions under Federal law; to the Committee on Banking, Housing and Urban Affairs.

By Mr. MATHIAS:

S. 685. A bill to amend the Tax Reform Act of 1976 to conform the termination of date for certain tax deductions for transfers of partial interests in property for conservation purposes with the termination dates of related provisions; to the Committee on Finance.

By Mr. CHURCH (for himself and Mr. WILLIAMS):

S. 686. A bill to provide financial assistance to utility regulatory bodies and electric utilities to carry out energy conservation demonstration projects, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. MAGNUSON:

S. 687. A bill to establish a uniform and comprehensive legal regime governing liability and compensation for damages and cleanup costs caused by oil pollution, and for other purposes; to the Committees on Commerce, Science, and Transportation; and Environment and Public Works, jointly, by unanimous consent.

By Mr. MELCHER:

S. 688. A bill to eliminate a restriction relating to certain lands granted to the State of Montana; to the Committee on Energy and Natural Resources.

By Mr. CANNON (for himself and Mr. KENNEDY):

S. 689. A bill to amend the Federal Aviation Act of 1958 to encourage, develop, and attain an air transportation system which relies on competitive market forces to determine the variety, quality, and price of air services, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HASKELL (for himself and Mr. HART):

S. 690. A bill for the relief of the Jefferson County Mental Health Center, Incorporated, and 103 individuals; to the Committee on Finance.

By Mr. CRANSTON:

S. 691. A bill to provide for the preservation and enhancement of critical habitat for migratory waterfowl and other wetlands-dependent migratory birds of the Pacific flyway in the Grasslands area of the San Joaquin Valley, Calif.; to the Committee on Environment and Public Works.

By Mr. HUMPHREY:

S. 692. A bill to provide third-class mailing privileges to Gold Star Wives of America, Inc.; to the Committee on Governmental Affairs.

S. 693. A bill to provide that certain land of the United States shall be held by the United States in trust for certain communities of the Mdewakanton Sioux in Minnesota; to the Committee on Indian Affairs.

By Mr. KENNEDY:

S. 694. A bill to adjust the status of Indochinese refugees to that of lawful permanent residents of the United States, and for other purposes; to the Committee on the Judiciary.

By Mr. PROXMIRE (for himself, Mr. BAYH, Mr. BROOKE, Mr. BURDICK, Mr. FORD, Mr. HUMPHREY, and Mr. METZENBAUM):

S. 695. A bill to amend the Defense Production Act of 1950, as amended; to the Committee on Governmental Affairs.

By Mr. PROXMIRE:

S. 696. A bill for the relief of Jae Yoon Sim; to the Committee on the Judiciary.

By Mr. BENTSEN:

S. 697. A bill to amend the Clean Air Act in order to establish a National Commission on Air Quality; to the Committee on Environment and Public Works.

By Mr. MELCHER:

S. 698. A bill for the relief of Ivan Mauricio Mas-Jaccard, his wife, Carmen Has-Jaccard, and their children, Clifford Mas-Jaccard and Jonny Mas-Jaccard; to the Committee on the Judiciary.

S. 699. A bill to designate the Veterans' Administration hospital in Miles City, Mont., as the "Mike Mansfield Veterans' Hospital"; to the Committee on Veterans' Affairs.

By Mr. CRANSTON:

S. 700. A bill to amend the Act of October 13, 1949, relating to the conveyance of certain land to the city and county of San Francisco, Calif.; to the Committee on Armed Services.

By Mr. PELL:

S. 701. A bill to provide Federal financial assistance to educational institutions in order to assist such institutions to meet the emergency caused by the high costs of fuel and fuel shortages and harsh weather conditions, and for other purposes; to the Committee on Human Resources.

By Mr. HUDDLESTON:

S. 702. A bill to amend section 1114, title 18, United States Code, so that Federal mine safety inspectors will be protected by criminal statutes; to the Committee on Human Resources.

By Mr. PELL (for himself, Mr. GOLDWATER, and Mr. MATHIAS):

S. 703. A bill to improve the administration and operation of the Overseas Citizens Voting Rights Act of 1975, and for other purposes; to the Committee on Rules and Administration.

By Mr. HEINZ (for himself and Mr. BIDEN):

S. 704. A bill to offset the human and economic hardships created by critical shortages of energy supplies of unusually severe weather conditions; to the Committees on Human Resources; Banking, Housing and Urban Affairs; Small Business; and Government Affairs, jointly, by unanimous consent.

By Mr. JAVITS (for himself, Mr. KENNEDY, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. BROOKE, Mr. BELLMON, Mr. PELL, Mr. STAFFORD, Mr. MATSUNAGA, Mr. CRANSTON, Mr. LAXALT, Mr. HUMPHREY, Mr. RANDOLPH, Mr. BAYH, Mr. INOUYE, Mr. HATHWAY, Mr. RIEGLE, Mr. ANDERSON, Mr. METZENBAUM, and Mr. HART):

S. 705. A bill to amend the Public Health Service Act to revise and strengthen the program under that Act for the regulation of clinical laboratories; to the Committee on Human Resources.

By Mr. LAXALT:

S. 706. A bill to amend the Congressional Budget Act of 1974 to limit increases in the levels of total budget outlays and total new budget authority set forth in concurrent resolutions on the budget, except during time of war; to the Committee on Governmental Affairs.

By Mr. JOHNSTON (for himself, Mr. BARTLETT, and Mr. BELLMON):

S. 707. A bill to amend the Mineral Leasing Act of 1920, and for other purposes; to the Committees on Commerce, Science, and Transportation and Energy and Natural Resources, jointly, by unanimous consent.

By Mr. CLARK (for himself, Mr. LEAHY, Mr. ABOUREZK, Mr. PEARSON, Mr. BAYH, Mr. BUMPERS, Mr. BURDICK, Mr. CHURCH, Mr. DECONCINI, Mr. MATHIAS, Mr. GRAVEL, Mr. HART, Mr. HASKELL, Mr. HATHAWAY, Mr. HEINZ, Mr. HUDDLESTON, Mr. HUMPHREY, Mr. INOUYE, Mr. KENNEDY, Mr. MATSUNAGA, Mr. MCGOVERN, Mr. MCINTYRE, Mr. METCALF, Mr. RANDOLPH, Mr. RIEGLE, Mr. STAFFORD, and Mr. ZORINSKY):

S. 708. A bill to amend title XVIII of the Social Security Act to provide payment for rural health clinic services; to the Committee on Finance.

By Mr. MAGNUSON (for himself and Mr. PEARSON) (by request):

S. 709. A bill to amend the Consumer Product Safety Act and to aid in the enforcement of Acts implemented by the Consumer Product Safety Commission; to the Committee on Commerce, Science, and Transportation.

By Mr. STEVENSON:

S. 710. A bill to amend the Export Administration Act of 1969; to the Committee on Banking, Housing and Urban Affairs.

S. 711. A bill to establish a Federal Bank Examination Council; to the Committee on Banking, Housing and Urban Affairs.

By Mr. STEVENSON (for himself, Mr. PERCY, Mr. EAGLETON, Mr. DANFORTH, Mr. HUMPHREY, Mr. ANDERSON, Mr. STENNIS, Mr. LONG, Mr. EASTLAND, and Mr. JOHNSTON):

S. 712. A bill to authorize the construction of a replacement lock and dam for Locks

and Dam 26, Mississippi River near Alton, Illinois and Missouri, and for other purposes; to the Committee on Environment and Public Works.

By Mr. STEVENSON:

S. 713. A bill to amend the Internal Revenue Code; to the Committee on Finance.

By Mr. RIEGLE (for himself and Mr. GRIFFIN):

S. 714. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Environment and Public Works.

By Mr. CASE:

S. 715. A bill to amend the Ports and Waterways Safety Act of 1972 and section 4417 a. of the Revised Statutes in order to further improve port and waterway safety; to the Committees on Commerce, Science, and Transportation.

By Mr. INOUYE (for himself and Mr. MATSUNAGA):

S. 716. A bill to amend title 5 of the United States Code to prohibit the consideration of certain matters in the determination of cost-of-living allowances for employees stationed outside the continental United States; to the Committee on Governmental Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. BROOKE (for himself, Mr. SPARKMAN, Mr. TOWER, Mr. MCINTYRE, Mr. JAVITS, Mr. MATHIAS, Mr. LEAHY, Mr. HATFIELD, Mr. MCGOVERN, Mr. BUMPERS, Mr. ABOUREZK, Mr. GRAVEL, Mr. DECONCINI, Mr. ANDERSON, Mr. ALLEN, Mr. PEARSON, Mr. EAGLETON, Mr. HEINZ, and Mr. CASE):

S. 664. A bill to amend the National Housing Act to provide for the insurance of graduated payment mortgages, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

YOUNG FAMILIES' HOUSING ACT

Mr. BROOKE. Mr. President, I am introducing a bill today which is intended to expand homeownership opportunities for young families. Housing costs have continued to rise at an increasingly rapid rate over the past few years, and the proportion of American families who are able to afford a median-priced, new home has declined from 54.7 percent in 1970 to 39.6 percent in 1975—after income tax consideration. The decline over the same period in the proportion of families able to afford existing homes, while less, has also been substantial.

Those who have been most adversely affected by this "affordability problem" have been young families who are seeking to purchase a home for the first time. A just-released budget issue paper by the Congressional Budget Office observes that—

> The first-time home buyer is confronted by the full spectrum of cost increases—changes in sales price, interest rate, property tax, hazard insurance, maintenance and repairs, and heating and utilities.

The Congressional Budget Office study found that the cost of a median-priced new home for first-time homebuyers has on average risen almost twice as fast as their incomes, and that the cost of an existing home has risen 1½ times as fast as their incomes in the period 1970–75.

Potential home buyers must be able to meet substantial downpayment requirements. According to the Congressional Budget Office study, downpayments on median-priced new homes rose almost 1⅔ times as fast as annual income for the first-time home buyer, and more than 1¼ times as fast as income for existing homes.

There is an increasing proportion of families in the 25- to 34-year-old age group seeking to buy their first homes, and these families are finding that they are unable to buy the homes their older brothers and sisters bought just a few years ago. If the trends of the past few years continue, most of these families will be priced out of the homeownership market forever.

Last year, I worked with Dr. Kenneth Rosen of Princeton University to develop a proposal to assist these families in buying a home. I introduced the Young Families' Housing Act last July 22 and 3 days of hearings were held by the Subcommittee on Housing and Urban Affairs of the Banking Committee last August.

The bill I introduced last year established a new FHA-insured mortgage instrument, an "equity-adjusted mortgage," which would reduce monthly payments during the early years of a mortgage and increase those payments proportionately during the later years. The new mortgage instrument, which is similar to a graduated payment mortgage, was structured to take account of the fact that a young family's income and the value of its home is likely to rise over the life of the mortgage.

A second provision of the bill allowed the creation of a new type of tax-exempt savings account—an "individual housing account"—which would allow first-time home buyers to accumulate equity for the downpayment on a house. This savings account, which operates on a similar principle to the individual retirement account, would permit a potential home buyer to deposit up to $2,500 a year to a maximum of $10,000. This amount would be deductible from income for income tax purposes, and the interest income would be exempt from taxation.

Subsequent to our Housing Subcommittee hearings, President Ford announced last September that FHA would initiate an experimental mortgage program which was similar to the approach contained in the bill which I introduced last year. This graduated payment mortgage program will be conducted on an experimental basis by HUD during this year.

The graduated payment mortgage embraces the same principles as the equity-adjusted mortgage, and the mechanics of the instrument may be easier to understand.

The bill which I reintroduce today provides authority for FHA to make its experimental graduated payment mortgage program a permanent program. The second section of the bill, providing for individual housing accounts, remains substantially the same as last year's bill, with a new provision to recapture a portion of the taxes foregone. This would be accomplished by reducing the basis in the house at the time of sale by the amount of the downpayment which derived from our individual housing account.

Homeownership has been the principal way in which American families acquire equity and a stake in our society. If the majority of young families are deprived of the opportunity for homeownership, I believe that we will lose one of the most important stabilizing forces in our society. By enactment of the Young Families' Housing Act, we can restore the possibility of homeownership for these young families.

Mr. President, I feel very strongly that this bill is needed if today's first time homebuyers are to have the same chance that we had to buy a home. I intend to devote as much time and energy as is necessary to assure the passage of this bill, and I hope that my colleagues, including the 17 cosponsors, will work with me to reopen the opportunity for homeownership to our young families.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 664

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Young Families' Housing Act of 1977".

GRADUATED PAYMENT MORTGAGES

SEC. 2. (a) This section may be cited as the "Graduated Payment Mortgage Insurance Act".

(b)(1) The caption of section 245 of the National Housing Act is amended to read as follows:

"GRADUATED PAYMENT MORTGAGES".

(2) Section 245 of such Act is amended—

(A) by inserting "(a)" after "Sec. 245.";

(B) by striking out "on an experimental basis" in the first sentence;

(C) by striking out the second sentence and inserting in lieu thereof the following: "Notwithstanding any other provision of this title, the outstanding principal balance of a mortgage or loan insured pursuant to this section may not at any time exceed (1) 97 per centum of the appraised value of the property covered by the mortgage determined as of the date the mortgage is accepted for insurance, or (2) if the mortgagor is a veteran and the mortgage is to be insured in accordance with the provisions of section 203 of this title, such higher percentage of appraised value as is provided for purposes of determining the maximum mortgage amount eligible for insurance under section 203(b)(2) in the case of veterans."; and

(D) by adding at the end thereof the following:

"(b) To be eligible for insurance under this section, a mortgage or loan shall—

"(1) be executed by a mortgagor or borrower who shall have paid on account of the property at least 10 per centum of the Secretary's estimate of the cost of acquisition in cash or its equivalent;

"(2) have a maturity not to exceed 30 years; and

"(3) meet the requirements of section 203(b) of this title for insurance, except as such requirements are specifically modified by the provisions of this section.

"(c) Any mortgage or loan insured pursuant to this section which contains or sets forth any graduated mortgage provisions (including but not limited to provisions for adding deferred interest to prin-

cipal) which are approved under this section and applicable regulations, shall not be subject to any State constitution, statute, court decree, common law, or rule of public policy limiting the amount of interest which may be charged, taken, received or reserved, or the manner of calculating such interest (including but not limited to prohibitions against the charging of interest on interest), if such statute, court decree, common law, or rule would not apply to the mortgage or loan in the absence of such graduated payment mortgage provisions.".

INDIVIDUAL HOUSING ACCOUNTS

SEC. 3. (a) SHORT TITLE.—This section may be cited as the "Individual Housing Account Act".

(b) ALLOWANCE OF DEDUCTION.—

(1) IN GENERAL.—Part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 221 as 222 and by inserting after section 220 the following new section:

"SEC. 221. INDIVIDUAL HOUSING ACCOUNTS.

"(a) DEDUCTION ALLOWED.—In the case of an individual, there is allowed as a deduction amounts paid in cash during the taxable year by such individual to an individual housing account.

"(b) LIMITATIONS.—

"(1) MAXIMUM ANNUAL DEDUCTION.—The amount allowable as a deduction under subsection (a) to an individual for any taxable year may not exceed $2,500. In the case of a married couple filing separate returns, the sum of the amounts allowable to each of them under subsection (a) for the taxable year may not exceed such amount.

"(2) MAXIMUM LIFETIME DEDUCTION.—The amount allowable as a deduction under subsection (a) to an individual for all taxable years may not exceed $10,000. In the case of a married individual, the $10,000 amount in the preceding sentence shall be reduced by an amount equal to the sum of the amounts allowed as deductions for all taxable years to his spouse.

"(c) DEFINITIONS AND SPECIAL RULES.—

"(1) INDIVIDUAL HOUSING ACCOUNT.—For purposes of this section, the term 'individual housing account' means a trust created or organized in the United States for the exclusive benefit of an individual, or in the case of a married individual, for the exclusive benefit of the individual and his spouse jointly, but only if the written governing instrument creating the trust meets the following requirements:

"(A) No contribution will be accepted unless it is in cash, and contributions will not be accepted for the taxable year in excess of $2,500 on behalf of any individual or in excess of $10,000 on behalf of an individual for all taxable years.

"(B) The trustee is a bank (as defined in section 401(d)(1)) or another person who demonstrates to the satisfaction of the Secretary that the manner in which that person will administer the trust will be consistent with the requirements of this section.

"(C) No part of the trust funds will be invested in life insurance contracts.

"(D) The interest of an individual and the balance in his account is nonforfeitable.

"(E) The assets of the trust will not be commingled with other property except in a common trust fund or common investment fund.

"(F) The entire interest of an individual or married couple for whose benefit the trust is maintained will be distributed to him, or them, not later than 120 months after the date on which the first contribution is made to the trust.

"(d) TAX TREATMENT OF DISTRIBUTIONS.—

"(1) IN GENERAL.—Except as otherwise provided in this subsection, any amount paid or distributed out of an individual housing account shall be included in gross income by the payee or distributee for the taxable year in which the payment or distribution is received, unless such amount is used exclusively in connection with the purchase of a principal residence for the payee or distributee. The basis of any person in such an account is zero.

"(2) EXCESS CONTRIBUTIONS RETURNED BEFORE DUE DATE OF RETURN.—Paragraph (1) does not apply to the distribution of any contribution paid during a taxable year to an individual housing account to the extent that such contribution exceeds the amount allowable as a deduction under subsection (a) if—

"(A) such distribution is received on or before the day prescribed by law (including extensions of time) for filing such individual's return for such taxable year.

"(B) no deduction is allowed under subsection (a) with respect to such excess contribution, and

"(C) such distribution is accompanied by the amount of net income attributable to such excess contribution.

Any net income described in subparagraph (C) shall be included in the gross income of the individual for the taxable year in which it is received.

"(3) TRANSFER OF ACCOUNT INCIDENT TO DIVORCE.—The transfer of an individual's interest in an individual housing account to his former spouse under a divorce decree or under a written instrument incident to a divorce is not to be considered a taxable transfer made by such individual notwithstanding any other provision of this subtitle, and such interest, at the time of the transfer, is to be treated as an individual housing account of the spouse, and not of such individual. After the transfer, the account is to be treated, for purposes of this subtitle, as maintained for the benefit of the spouse.

"(e) TAX TREATMENT OF ACCOUNTS.—

"(1) EXEMPTION FROM TAX.—Any individual housing account is exempt from taxation under this subtitle unless such account has ceased to be an individual housing account by reason of paragraph (2) or (3). Notwithstanding the preceding sentence, any such account is subject to the taxes imposed by section 511 (relating to imposition of tax on unrelated business income of charitable, etc., organizations).

"(2) LOSS OF EXEMPTION OF ACCOUNT WHERE INDIVIDUAL ENGAGES IN PROHIBITED TRANSACTION.—

"(A) IN GENERAL.—If, during any taxable year of the individual for whose benefit an individual housing account is established, that individual engages in any transaction prohibited by section 4975 with respect to the account, the account ceases to be an individual housing account as of the first day of that taxable year. For purposes of this subparagraph the individual for whose benefit any account was established is treated as the creator of the account.

"(B) ACCOUNT TREATED AS DISTRIBUTING ALL ITS ASSETS.—In any case in which any account ceases to be an individual housing account by reason of subparagraph (A) on the first day of any taxable year, paragraph (1) of subsection (d) applies as if there were a distribution on such first day in an amount equal to the fair market value (on such first day) of all assets in the account (on such first day).

"(3) EFFECT OF PLEDGING ACCOUNT AS SECURITY.—If, during any taxable year, the individual for whose benefit an individual housing account is established uses the account or any portion thereof as security for a loan, the portion so used is treated as distributed to that individual.

"(f) ADDITIONAL TAX ON CERTAIN AMOUNTS INCLUDED IN GROSS INCOME.—

"(1) DISTRIBUTION NOT USED TO PURCHASE RESIDENCE.—If a distribution from an individual housing account to an individual for whose benefit such account was established is made, and not used in connection with the purchase of a principal residence for such individual, the tax liability of such individual under this chapter for the taxable year in which such distribution is received shall be increased by an amount equal to 10 percent of the amount of the distribution which is includable in his gross income for such taxable year.

"(2) DISQUALIFICATION CASES.—If an amount is includable in the gross income of an individual for a taxable year under subsection (c), his tax under this chapter for such taxable year shall be increased by an amount equal to 10 percent of such amount required to be included in his gross income.

"(3) DISABILITY CASES.—Paragraphs (1) and (2) do not apply if the payment or distribution is attributable to the taxpayer becoming disabled within the meaning of section 72(m)(7).

"(g) COMMUNITY PROPERTY LAWS.—This section shall be applied without regard to any community property laws.

"(h) CUSTODIAL ACCOUNTS.—For purposes of this section, a custodial account shall be treated as a trust if the assets of such account are held by a bank (as defined in section 401(d)(1)) or another person who demonstrates, to the satisfaction of the Secretary, that the manner in which he will administer the account will be consistent with the requirements of this section, and if the custodial account would, except for the fact that it is not a trust, constitute an individual housing account described in subsection (c). For purposes of this title, in the case of a custodial account treated as a trust by reason of the preceding sentence, the custodian of such account shall be treated as the trustee thereof.

"(i) REPORTS.—The trustee of an individual housing account shall make such reports regarding such account to the Secretary and to the individual for whom the account is maintained with respect to contributions, distributions, and such other matters as the Secretary may require under regulations. The reports required by this subsection shall be filed at such time and in such manner and furnished to such individuals at such time and in such manner as may be required by those regulations.

"(j) REDUCTION OF BASIS.—The basis of any residence acquired with funds withdrawn from an individual housing account shall be reduced by an amount equal to the amount of expenditures made in connection with the acquisition of the residence out of such funds.".

(2) DEDUCTION ALLOWED IN ARRIVING AT ADJUSTED GROSS INCOME.—Paragraph (10) of section 62 of such Code (relating to retirement savings) is amended—

(A) by inserting "or housing" after "Retirement" in the caption of such paragraph, and

(B) by inserting before the period at the end thereof the following: "and the deduction allowed by section 221 (relating to deduction of certain payments to individual housing accounts)".

(c) TAX ON EXCESS CONTRIBUTIONS.—Section 4973 of such Code (relating to tax on excess contributions to individual retirement accounts, certain section 403(b) contracts, certain individual retirement annuities, and certain retirement bonds) is amended—

(1) by inserting "INDIVIDUAL HOUSING ACCOUNTS," after "ACCOUNTS," in the caption of such section,

(2) by redesignating paragraphs (2) and (3) of subsection (a) as (3) and (4), and by inserting after paragraph (1) the following:

"(2) an individual housing account (within the meaning of section 221(c)),", and

(3) by adding at the end thereof the following new subsection:

"(d) EXCESS CONTRIBUTIONS TO INDIVIDUAL HOUSING ACCOUNTS.—For purposes of this section, in the case of an individual housing account, the term 'excess contributions' means the amount by which the amount contributed for the taxable year to the account exceeds the amount allowable as a deduction under section 221(b)(1) for such taxable year. For purposes of this subsection, any contribution which is distributed out of the individual housing account and a distribution to which section 221(d)(2) applies shall be treated as an amount not contributed.".

(d) TAX ON PROHIBITED TRANSACTIONS.—Section 4975 of such Code (relating to prohibited transactions) is amended—

(1) by adding at the end of subsection (c) the following new paragraph:

"(4) SPECIAL RULE FOR INDIVIDUAL HOUSING ACCOUNTS.—An individual for whose benefit an individual housing account is established shall be exempt from the tax imposed by this section with respect to any transaction concerning such account (which would otherwise be taxable under this section) if, with respect to such transaction, the account ceases to be an individual housing account by reason of the application of section 221(e)(2)(A) or if section 221(e)(4) applies to such account.", and

(2) by inserting "or an individual housing account described in section 221(c)" in subsection (c)(1) after "described in section 408(a)".

(e) FAILURE TO PROVIDE REPORTS ON INDIVIDUAL HOUSING ACCOUNTS.—Section 6693 of such Code (relating to failure to provide reports on individual retirement account or annuities) is amended—

(1) by inserting "OR INDIVIDUAL HOUSING ACCOUNTS" after "ANNUITIES" in the caption of such section, and

(2) by adding at the end of subsection (a) the following: "The person required by section 221(i) to file a report regarding an individual housing account at the time and in the manner required by such section shall pay a penalty of $10 for each failure unless it is shown that such failure is due to reasonable cause.".

(f) ADJUSTMENT OF BASIS OF RESIDENCE PURCHASED THROUGH USE OF AMOUNTS IN ACCOUNT.—Section 1016(a) of such Code (relating to adjustments to basis) is amended by inserting after paragraph (20) the following new paragraph:

"(21) in the case of a residence the acquisition of which was made in whole or in part with funds from an individual housing account to the extent provided in section 221(j);".

(g) CLERICAL AMENDMENTS.—

(1) The table of sections for part VII of subchapter B of chapter 1 of such Code is amended by striking out the item relating to section 221 and inserting in lieu thereof the following:

"Sec. 221. Individual housing accounts.

"Sec. 222. Cross references.".

(2) The table of sections for chapter 43 of such Code is amended by striking out the item relating to section 4973 and inserting in lieu thereof the following:

"Sec. 4973. Tax on excess contributions to individual retirement accounts, individual housing accounts, certain 403(b) contracts, certain individual retirement annuities, and certain retirement bonds.".

(3) The table of sections for subchapter B of chapter 68 of such Code is amended by striking out the item relating to section 6693 and inserting in lieu thereof the following:

"Sec. 6693. Failure to provide reports on individual retirement accounts or annuities or on individual housing accounts.".

(h) EFFECTIVE DATE.—The amendments made by this section apply to taxable years beginning after December 31, 1976.

By Mr. LAXALT:

S. 665. A bill to provide an opportunity to individuals to contribute $1, in connection with the payment of their Federal income tax, to the U.S. Olympic Fund, and for other purposes; to the Committee on Finance.

UNITED STATES OLYMPIC FUND ACT OF 1977

Mr. LAXALT. Mr. President, our country takes great pride in the ability and accomplishments of its Olympic athletes. We have enjoyed substantial success in the past Olympic competition and hope to continue to enjoy this success long into the future. However, to insure this continued success, we must provide adequate funding necessary for the promotion, administration, and maintenance of our Olympic teams.

In the past, there have not been adequate funds to provide necessary training facilities for the use of our athletes or for the expenses required for them to sustain themselves. Much of the cost of preparing for the games has thus fallen directly on the participants themselves. Not only must the athlete procure his own training facility, but he must also provide for much of his own transportation and living costs. These costs can be very substantial and surely have deterred many qualified athletes.

In order for us to continue our superb representation in the Olympic games, we must provide the funds that will insure that our best athletes are able to participate and that they will have access to adequate training facilities. For this reason, I am today introducing legislation to furnish a checkoff on each individual's tax return for purposes of establishing a "U.S. Olympic Fund." This fund will be used to finance athletes representing the United States in the winter and summer Olympics. Under my proposal, proceeds from the checkoff would be matched two for one by general revenues for a maximum contribution to the Olympic fund of $80 million annually.

For the taxpayer, the Olympic checkoff would function much like the existing Presidential campaign fund. When the taxpayer completes his income tax form there will be a box he can mark if he wishes to contribute $1 to the fund. If the taxpayer does not wish to participate, he simply marks the box which indicates a desire for nonparticipation.

Half of the funds supplied by the fund would be used to pay the transportation, living, and other expenses for the athletes and coaches from the time of selection until the conclusion of the games. The remaining half would be used to purchase necessary training facilities and equipment.

Mr. President, other nations heavily subsidize their Olympic programs. I am certainly not proposing either the lavish funding or the regimentation characteristic particularly of the Communist programs. But, I do believe that our athletes deserve a fair chance. Passage of this bill will upgrade the standards of our Olympic program and enable us to continue to be well represented in this important worldwide program. I urge my colleagues' support for this measure and ask unanimous consent that the text of this measure be printed in the RECORD at this time.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 665

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 1. SHORT TITLE.

This Act may be cited as the "United States Olympic Fund Act of 1977".

SEC. 2. DESIGNATION BY TAXPAYERS TO UNITED STATES OLYMPIC FUND.

(a) IN GENERAL.—With respect to each taxpayer's return for the taxable year of the tax imposed by chapter 1 of the Internal Revenue Code of 1954, such taxpayer may designate that either—

(1) $1 of any overpayment of such tax for such taxable year, or

(2) $1 of any contribution which the taxpayer forwards in money with such return,

be available to the United States Olympic Fund established by section 3 of this Act.

(b) JOINT RETURN.—In the case of a joint return of husband and wife, each spouse may designate that $1 be available to the fund under subsection (a).

(c) DESIGNATION ON FIRST PAGE OF RETURN.—Space shall be made available for the designations referred to in subsection (a) on the first page of the tax return forms for such tax.

(d) DESIGNATED OVERPAYMENT TREATED AS REFUND.—For purposes of the Internal Revenue Code of 1954, any overpayment of tax designated under subsection (a) shall be treated as being refunded to the taxpayer as of the date prescribed for filing the return of such tax (disregarding any extension) or, if later, the date the return is filed.

(e) EFFECTIVE DATE.—This section shall apply to taxable years ending after the date of the enactment of this Act.

SEC. 3. UNITED STATES OLYMPIC FUND.

(a) ESTABLISHMENT OF FUND.—There is hereby established on the books of the Treasury of the United States a fund to be known as the "United States Olympic Fund" (hereinafter in this section referred to as the "fund").

(b) APPROPRIATIONS FOR AND DEPOSITS INTO FUND.—

(1) GENERAL RULE.—Except as provided in paragraph (2), there is appropriated to the fund for each fiscal year, out of amounts in the general fund of the Treasury not otherwise appropriated, an amount equal to twice the amounts designated during such fiscal year to be available to the fund under section 2 of this Act. Such amounts shall remain available to the fund without fiscal year limitation. The amounts appropriated by this subsection shall be transferred monthly to the fund by the Secretary of the Treasury.

(2) LIMITATION.—If, at the beginning of any fiscal year, the amount which has been paid into the fund since the close of the preceding summer Olympic games is in ex-

cess of $80,000,000, no amount shall be appropriated to the fund under paragraph (1) in excess of the amounts designated during such fiscal year to be available to the fund under section 2 of this Act.

(c) REPORTS TO CONGRESS.—The Committee shall submit to each House of the Congress a report at the end of each fiscal year concerning the use during such year of funds provided pursuant to this Act.

(d) EFFECTIVE DATE.—This section shall take effect January 1, 1978.

By Mr. STEVENS (for himself, Mr. DOMENICI, Mr. HATFIELD, and Mr. BURDICK):

S. 666. A bill to allow Federal employment preference to certain employees of the Bureau of Indian Affairs, and to certain employees of the Indian Health Service, who are not entitled to the benefits of, or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians, and for other purposes; to the Committee on Governmental Affairs.

Mr. STEVENS. Mr. President, in 1934 Congress passed the Wheeler-Howard Act which reformed the administration of Indian affairs. This was no minor act for it made significant reforms which provided not only for the preferential hiring of Indian people into the Bureau of Indian Affairs, but also for preference for subsequent promotion within that organization. For reasons still not entirely clear—possibly because at the time the act was passed Indian people generally lacked the education and experience to move beyond the unskilled jobs for which they were initially hired—the Interior Department did not enforce the provisions of the legislation dealing with Indian promotion rights. With the passage of time, however, these important Indian rights faded into almost total obscurity.

During the same period, talented and highly motivated persons, not eligible for Indian preference, have been recruited into the Bureau of Indian Affairs and the Indian Health Service, which was split off from the BIA in 1954. These persons quite rightly assumed that they, as civil service employees in other agencies, would be able to develop their full career potential within each of these two principal organizations serving the needs of Indian people.

However, times have changed. Indians are no longer satisfied with the menial though necessary jobs which so long have been offered to them. In their restlessness to locate better employment for themselves, while at the same time gaining increasing control over Federal agencies which for so long have been staffed almost exclusively by non-Indian employees, Indian spokesmen have discovered their rights to promotional preference and claimed these as clear Indian rights under the law.

Opponents, dismayed by the implications of this section of the Wheeler-Howard Act, contested the matter in the courts where it consistently has been upheld in favor of the Indians. The most recent and final decision, Mancari against Morton, was upheld by the Supreme Court in an 8-to-0 decision on June 17, 1974.

Some non-Indians, who have found that their BIA and IHS careers have reached a dead end, have been able to take advantage of promotional opportunities outside the BIA and IHS and have continued their careers with a minimum of interruptions. However, for most others it is not so easy. Many BIA and IHS positions have no equivalents in other Federal agencies. This tends to be particularly true of those employees with the longest tenure occupying the higher grades, who have developed unique specialties. Consider, for example, the instance of a person who has worked his way up the career ladder to where he has become the head of a large specialized boarding school serving Navajo Indians.

Or the IHS engineer who has been promoted to a higher than average engineering position by virtue of his talent in organizing Indian communities to develop their own domestic water supply. Neither individual can be promoted to positions to which qualified Indians apply and neither can look forward to furthering their careers elsewhere, except in the most exceptional or fortuitous circumstances. Each can remain in his or her current position, frustrated and possibly undisturbed, until eligible to retire.

In the meantime, ambitious, highly motivated and qualified Indian people must wait in frustration for non-Indians to vacate these types of key jobs. This is not a happy situation for either group, nor one which creates a harmonious atmosphere in which to carry forth the national objective of increasing Indian self-determination through greater Indian control over these two important agencies.

To resolve this conflict, I am introducing this piece of legislation. It will achieve equity for the non-Indian employee by allowing him to retire earlier than normally would be the case. It will release these jobs which qualified Indians are anxious to fill.

This bill would provide increased retirement benefits only to those non-Indians who retire on or before December 31, 1989, after completing 25 years of service, or 20 years of service at age 50. Also, these employees must be employed by the Bureau of Indian Affairs or the Indian Health Service on the date of enactment of this act, and not entitled to annuity under other sections of the civil service retirement, or not entitled to a preference under section 12 of the 1934 Wheeler-Howard Act, or any other provision of the law granting a preference to Indians in promotions or other personnel action.

In order to encourage non-Indian employees to retire at the end of their normal service, the bill provides that an employee's annuity shall be based on 2.5 percent of his average pay for each of the first 25 years of service, or 20 years of service upon reaching age 50, and 2 percent of his average pay for each year thereafter. Thus, there would be little incentive for non-Indians to remain in the Bureau of Indian Affairs or Indian Health Service after his 25- or 20-year period. I feel that this bill will assist those long-term Federal employees now finding their careers at a virtual standstill because of the Indian preference decision.

In order that essential services to Indian people are maintained, my bill provides authority to the Secretaries of the Interior and Health, Education, and Welfare to postpone, for not more than 12 months, the retirement of an employee of their Department, if such postponement is found to be necessary.

During testimony on this bill in the last Congress, we heard administration witnesses concede that nonpreference employees of the Indian Service find themselves in a unique situation with regard to Federal service. For, so long as a qualified Indian applicant is available, these employees do not enjoy equal opportunity for career advancement. Thus, the law, or at least the Government's failure to properly interpret and enforce it for an extended period of time, has had a deleterious effect on these employees.

One of the primary purposes of this bill is to redress that effect. In addition, the bill will further the cause of Indian self-determination by encouraging non-Indians to retire early, thus releasing more middle and higher level positions for qualified Indian applicants.

Mr. President, I ask unanimous consent that my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 666

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 8336 of title 5, United States Code, is amended by redesignating subsection (h) as subsection (i) and inserting the following new subsection:

"(h) An employee is entitled to an annuity if he (1) is separated from the service after completing 25 years of service before December 31, 1989, or after becoming 50 years of age and completing 20 years of service before December 31, 1989, (2) was employed in the Bureau of Indian Affairs or the Indian Health Service continuously from June 17, 1974, to the date of his separation, (3) is not otherwise entitled to full retirement benefits, (4) is not an Indian entitled to a preference under section 12 of the Act of June 18, 1934 (48 Stat. 986) or any other provision of law granting a preference to Indians in promotions and other personnel actions.

SEC. 2. Section 8339 of title 5, United States Code, is amended—

(1) by inserting in subsection (f), immediately after "subsections (a)–(e)", the following: "and (n)";

(2) by inserting in subsection (i), immediately after "subsections (a)–(h)", the following: "and (n)";

(3) by inserting in subsections (j) and (k)(1), immediately after "subsections (a)–(i)" each time it appears, the following: "and (n)";

(4) by inserting in subsection (l), immediately after "subsections (a)–(k)", the following: "and (n)";

(5) by inserting in subsection (n), immediately after "subsections (a)–(e)", the following: "and (n)"; and

(6) by adding at the end thereof the following:

"(n) The annuity of an employee retiring under section 8336(h) of this title is:

"(A) 2½ percent of his average pay multiplied by so much of his total service as does not exceed 20 years; plus

(B) 2 percent of his average pay multiplied by as much of his total service as exceeds 20 years.".

SEC. 3. (a) Section 8341 of title 5, United States Code, is amended—

(1) by inserting in subsection (b)(1), immediately after "section 8339(a)–(i)", the following: "and (n)"; and

(2) by striking out of subsection (d) "section 8339 (a)–(f) and (i)" and inserting in lieu thereof the following: "section 8339 (a)–(f) and (n)".

(b) Section 8344(a)(A) of such title is amended by striking out "and (i)" and inserting in lieu thereof "(i), and (n)".

SEC. 4. The Secretaries of Interior and Health, Education, and Welfare are each authorized to postpone, for not more than 12 months, the retirement of an employee of their Department under the provisions of this Act, if such postponement is found to be necessary for the provision of essential services to Indian people or to protect essential interests of the United States. Notwithstanding any other provision of this Act, an employee whose retirement is so postponed shall remain eligible for retirement under this Act.

SEC. 5. The amendments made by this Act shall take effect on and apply to employees retiring on or after the date of enactment of this Act.

Mr. DOMENICI. Mr. President, I am pleased to cosponsor legislation introduced today by the distinguished Senator from Alaska that would provide early retirement benefits for non-Indian employees of the Bureau of Indian Affairs and the Indian Health Service. These two groups of Federal employees are the most adversely affected by the national policy of Indian preference in the BIA and IHS that has received special emphasis in recent years. Many of these employees joined the BIA and IHS under entirely different conditions, and have compiled long careers of dedicated public service only to find their way to further promotion and advancement blocked by the policy of Indian preference. I believe that in fairness to these particular career civil servants, we must act now to provide relief from a problem that we have in part created.

I know that my fellow Senators are in agreement with the view that individual effort and achievement, by Indians or non-Indians alike, should be fairly and justly rewarded. However, many non-Indian BIA and IHS professionals are presently being treated in a manner inconsistent with this view, in order that another national policy, Indian preference, might be accommodated.

Various means of relieving this situation are at hand. Vigorous action within the executive branch to implement an effective out-placement program would be of considerable benefit to younger employees, and I urge the President to give prompt attention to this matter. For older employees, whose career investment in BIA and IHS is substantial, early retirement benefits, as incorporated in the legislation we are introducing today, would afford the most realistic and practical solution.

Finally, let me point out that this legislation is not new. A very similar bill passed both Houses of Congres late in the 94th Congress, but was vetoed by President Ford.

Mr. President, I believe that this problem deserves our prompt and serious attention, and I urge the support of my fellow Senators for this legislation.

By Mr. LAXALT (for himself and Mr. CANNON):

S. 667. A bill to declare certain federally owned land held in trust by the United States for the Te-Moak Bands of Western Shoshone Indians; to the Committee on Indian Affairs.

Mr. LAXALT. Mr. President, it has long been a goal of this Congress to provide each citizen the opportunity of a decent standard of living. We continue to strive toward achievement of this goal and have made much progress. Nevertheless, many areas continue to exist where much more work is needed.

In my home State of Nevada, an opportunity has arisen where the initial success of this goal hinges upon attainment of a land base. Today, the Wells Indian Community is attempting to establish a land base which is obviously necessary for the development of a viable community.

The Bureau of Land Management presently holds land in and around the Wells City limits which would enable the 75 members of the Wells Indian Community to begin their community development program. Of first priority is a housing program for the provision of decent homes and is to be followed by community and recreational facilities to enhance economic and community development for these people.

Mr. President, on behalf of my distinguished colleague from Nevada, Senator CANNON, and myself, I am today introducing legislation to declare that 80 acres be held in trust by the United States for the Te-Moak Bands of Western Shoshone, the parent council of the Wells Indian Community. Access to utilities and other services is readily available through the city of Wells. I believe, Mr. President, that particular recognition should be given to the fact that this proposal has been well-received and encouraged by the local, State, and Federal organizations involved.

Mr. President, I ask that this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 667

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, subject to all valid existing rights-of-way and easements, all right, title, and interest of the United States in and to the following described land, and improvements thereon, are hereby declared to be held by the United States in trust for the Te-Moak Bands of Western Shoshone Indians:

The north half of the southwest quarter of section 4, township 37 north, range 62 east, Mount Diablo base and meridian.

Mr. CANNON. Mr. President, I am joining today with my distinguished colleague, Mr. LAXALT, in submitting a bill to provide the Wells Indian community in Wells, Nev., with approximately 80 acres to be held in trust for their use.

This community numbers about 75 members. At present the group is ineligible for housing assistance and other benefits available to Indians living on land-based reservations or colonies. This proposal has been carefully studied by the city of Wells, the State of Nevada, and the intertribal council in Nevada and all are in agreement on the importance of this effort. Additionally, the Bureau of Land Management and the Bureau of Indian Affairs are supportive of the Indians. I do not anticipate any objections will be found and I hope the Senate will be able to take early action on the bill.

By Mr. LAXALT (for himself and Mr. CANNON):

S. 668. A bill granting the consent and approval of Congress to the California-Nevada Interstate Compact; to the Committee on the Judiciary.

CALIFORNIA-NEVADA INTERSTATE COMPACT

Mr. LAXALT. Mr. President, in 1968, after 13 years of negotiations, commissions representing the States of California and Nevada, agreed upon the terms of an interstate compact which would provide for the allocation of the waters of the Lake Tahoe Basin and the Truckee, Carson, and Walker River Basins to each of the two States. The principal objectives of the commissions were: First, to promote intergovernmental cooperation; second, to enhance economic development in the area; and third, to insure the most orderly, integrated, and comprehensive development, conservation, and control of the water contained within the lake and river basins.

After more than 12 years of negotiations, this commission came forth with a proposed bistate compact, which was subsequently amended and passed by the California Legislature in August of 1970, and by the Nevada Legislature in March of 1971. Although ratified by both legislatures, this compact must, under our Constitution, also be consented to by the Congress. Accordingly, on behalf of my distinguished colleague from Nevada, Senator CANNON, and myself, I submit this proposal for appropriate consideration.

The compact essentially recognizes existing uses and apportions to each of the States those waters not needed to meet existing uses. In the Lake Tahoe basin, each State was allocated a fixed amount of water to provide for existing uses as well as future uses. In the Truckee River basin, after the existing decreed rights of the Pyramid Lake Indians had been recognized, California was allocated a fixed quantity of water for existing uses plus the right to develop a given amount of water for future uses. The remainder of the Truckee River flow was allocated to Nevada for present and future uses. In the Carson-Walker River basins, each State was allocated an amount of water deemed sufficient to provide for existing uses. All water over and above that not needed to meet existing uses was distributed to each State on a percentage basis.

In ratifying the compact, the legisla tures of California and Nevada, added language designed to insure that that compact would not deny anyone rights to

use water, within the allocations granted by the compact, which they might establish under State or Federal law.

Mr. Roland D. Westergard, the State engineer for the Division of Water Resources, Department of Conservation and Natural Resources of the State of Nevada, has prepared a statement on the California-Nevada Interstate Compact which explains the need for the compact and summarizes its major provisions. Mr. President, at this point I ask unanimous consent that Mr. Westergard's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON CALIFORNIA-NEVADA INTERSTATE COMPACT

INTRODUCTION

The California-Nevada Interstate Compact was formulated to provide each of the States of California and Nevada their equitable share of the interstate waters of Lake Tahoe and the Truckee, Carson and Walker River Basins. The compact is intended to resolve many of the problems rising from each state's increasing use of a limited, common water supply. These problems, which finally resulted in the determination to negotiate an interstate compact, first came to public light in the late 1940's when the State Engineers of California and Nevada faced difficulties in the administration of water rights on the Truckee, Carson and Walker River Systems. The principal water using agencies in the lower basins were protesting all new water right applications on these streams which were not supported by long-term carryover storage. These agencies took the position that there was no unappropriated water available from natural flow in excess of their rights.

Need for compact

In 1947–48 an attempt was made to resolve this water right problem in the Lake Tahoe Basin. An investigation of the use of water in the Lake Tahoe watershed was made jointly by the two states in 1948, and results were reported in June 1949. The report concluded that granting applications then pending or those to be filed within the then foreseeable future for use within the Tahoe Basin for domestic purposes and recreational uses would have little effect, if any toward depleting Lake Tahoe to the detriment of downstream users. The report went on to recommend that as regards applications for appropriation of water for domestic and recreational use in the Lake Tahoe watershed, it should be the general policy to continue to grant such applications. Subsequently, the State Engineers of the two states issued permits for water for domestic purposes over the protests of downstream water user organizations.

During the early 1930's, the Lake Tahoe Interstate Water Conference Committee, created by the Governors of Nevada and California, was actively engaged in adjusting conflicting differences raised by the then proposed "Truckee River Agreement". The Federal Government proposed to execute this agreement with Nevada water users as a supplement to the 1915 Truckee River Decree. As a result of the Conference Committee's efforts, provisions were incorporated into the decree establishing a maximum permissible water level for Lake Tahoe of 6229.1 feet above sea level. This maximum stands today and provides protection against avoidable flooding for all the properties adjacent to the Lake. Many other conflicting differences considered by the Committee were not solved at that time. Some of these, such as desirability of a reduction in the fluctuations of the level between maximum and minimum permissible limits, still plague the Lake Tahoe Basin.

In the Carson River Basin, from 1941 through 1949, the California State Engineer provided watermaster service on the West Carson River. In 1950, the State watermaster was replaced by a Federal watermaster acting under a preliminary adjudication and temporary restraining order filed in the case of the *United States v. Alpine Land and Reservoir Company, et al.* This case, initiated in 1925, was being pushed after many years of inactivity, in order that the water rights of the Carson River System would be adjudicated prior to construction of the Washoe Project of the U.S. Bureau of Reclamation.

As to the Walker River Basin, about 1950 there had been changes in membership of the Board of Directors of the Walker River Irrigation District and the Board of U.S. Water Commissioners which administers Decree C–125 of the Federal District Court of Nevada. These Boards instituted a strict administration of the rights defined in the decree affecting the Walker River. The watermaster was required to adhere to the letter of the Decree, causing great distress among users under vested rights, especially users in California. At the same time, the Walker River Irrigation District instituted engineering studies of potential water projects on the Walker River for the benefit of the District lands in Nevada. These would utilize nearly all of the remaining unappropriated waters of this river. Again, this alarmed the Walker River water users in California.

As a result of all of these water conflicts the desirability of an interstate compact between California and Nevada was discussed by the two states. However, it was not until 1955 that legislation was obtained initiating compact negotiations. The legislation received further impetus at that time from the pending authorization of the Washoe Project, a Bureau of Reclamation Project to develop additional waters in the Lake Tahoe, Truckee River and Carson River Basins.

Establishment of commissions

Under similar legislation passed by the legislatures of California and Nevada in 1955, each state established a commission for the purpose of negotiating an interstate compact which would provide for the equitable distribution and use of the waters of Lake Tahoe and the Truckee, Carson and Walker River Basins.

Federal legislation was also passed authorizing these negotiations and providing for the appointment and participation of a federal representative.

Basis of negotiations

In general, provisions of the interstate compact, which were arrived at after nearly thirteen years of negotiations, reflect several basic principles. These can be summarized as follows:

1. Existing rights and beneficial uses are recognized as having the highest priority of use of available waters.

2. Waters not needed to satisfy these recognized existing rights and beneficial uses are to be divided in proportion to water needs of the two states.

3. Uses of water made under federal claims of right in each state are to be considered as benefitting the state in which the use is made and hence are to be charged against the allocation of that state.

Summary of major provisions of compact

Article IV—California-Nevada Interstate Compact Commission

Article IV establishes a permanent commission, provides for the selection of members and provides for the funding for the work of the commission. The ex officio chairman of the commission is a representative of the United States to be chosen by the President of the United States.

Article V—Lake Tahoe Basin

Upon construction and completion of an overflow weir at the source of the Truckee River above the existing structure at the outlet of the Lake, the total annual gross diversion from all sources in the Lake Tahoe Basin shall not exceed 34,000 acre-feet. The State of California is allocated 23,000 acre-feet annually and the State of Nevada is allocated 11,000 acre-feet annually for use within the Basin.

Existing transbasin diversions as of December 31, 1959, from the Lake Tahoe Basin in both states may be continued if such rights were recognized as vested rights under the laws of the state in which the diversion is made. The existing transbasin diversions recognized by the compact are: (1) In California, a diversion from Echo Lake, a tributary of the Upper Truckee River Basin, into the American River Basin in California averaging approximately 1,700 acre-feet per year. (2) A Nevada transbasin diversion is from North Creek (Third Creek), a tributary of Lake Tahoe, into Washoe Valley of 5.5 cubic feet of water per second. (3) A second Nevada transbasin diversion of a maximum of 3,000 acre-feet annually from Marlette Lake for use in Nevada.

These three transbasin diversions recognized by the Compact are historical uses and in existence on December 31, 1959. In Nevada the diversion from North Creek into Washoe Valley was determined by a District Court in Washoe County, Nevada, in 1892. The Marlette Lake diversion represents a part of the water system started in 1872 by the pred ecessors of the Virginia City Water Company to bring water from the Sierras to Virginia City to operate the ore reduction mills of the newly discovered silver bonanza.

Article VI—Truckee River Basin

The first allocation to Nevada is for water for use on the Pyramid Lake Indian Reservation in the amounts provided in the 1944 Truckee River Decree (Final decree in *United States vs. Orr Ditch Company, et. al.*, U. S. District Court for the District of Nevada, Equity No. A–3). This allocation recognizes the authority of the Federal Court Decree to serve an early priority (1859) of water to the Pyramid Lake Indian Reservation of some 30,000 acre-feet annually.

There is allocated to California: 1) The right to divert 10,000 acre-feet of water per calendar year within the Truckee River Basin in California. This water may be stored in reservoirs at times when the flow in the Truckee River at the Iceland gauge exceeds 500 cubic feet per second. This is the provision in the compact to allocate water from the Truckee River for use in California which was not a part of the Truckee River Decree of 1944. 2) The amount of water as decreed to the Sierra Valley Water Company by judgment in the case of the *United States vs. Sierra Valley Water Company* in the U. S. District Court for Northern California. The amount of water decreed to the Sierra Valley Water Company totaled 60 cubic feet per second for irrigation, domestic and stock-watering during the irrigation season of March 15 to September 30 of each year. 3) Six thousand acre-feet of water annually from the conservation yield of Stampede Reservoir having a storage capacity of 225,000 acre-feet. California may divert all or any portion of the said 6,000 acre-feet from Stampede Reservoir directly or by exchange from any source on the Truckee River or its tributaries or from Lake Tahoe. 4) When the 16,000 acre-feet allocated to California is being used or its total use is imminent, California will be permitted to develop additional yields of water for use in California,

either directly or by exchange if all existing beneficial uses in Nevada are recognized. Nevada may share in such additional yield by bearing a proportionate cost of the development. 5) The right to store in Prosser Creek Reservoir a maximum of 30,000 acre-feet of water annually. There is allocated to Nevada all water in excess of the allocations made to California.

Article VII—Carson River Basin

There is allocated to the State of California: 1) The right to divert from the West Fork Carson River for existing non-irrigation uses and for direct irrigation use commencing on March 15 and ending on October 31 of each year or presently irrigable lands determined to be approximately 5,600 acres, an aggregate flow of water equal to a thirty-day average of 3 cubic feet per second per 100 acres or 168 cubic feet per second for the area as a whole but not to exceed a maximum aggregate diversion of 185 cubic feet per second. One unique feature of the Compact is that it provides for the rotation of all or a portion of the flow of the West Fork between California and Nevada users if the flow falls below 175 cubic feet per second. 2) The right to divert from the East Fork Carson River for existing nonirrigation uses and for direct irrigation use commencing on March 15 and ending on October 31 of each year on presently irrigable lands, determined to be approximately 3,820 acres, an aggregate flow of water equal to a thirty-day average of 3 cubic feet per second or 115 cubic feet per second for the area as a whole. 3) The right to store 2,000 acre-feet of water per annum within Alpine County for supplemental use on presently irrigated lands adverse to Lahontan Reservoir.

There is allocated to the State of Nevada: 1) The right to divert water from the Carson River and its tributaries commencing March 15 and ending October 31 of each year at the rate of 3 cubic feet per second per 100 acres for use on presently irrigated lands above Lahontan Reservoir determined to be approximately 41,320 acres. The rate of 3 cubic feet per second per 100 acres is based on a thirty-day average for the area as a whole and shall not exceed 700 cubic feet per second on the East Fork Carson River, 300 cubic feet per second on the West Fork Carson River, and 220 cubic feet per second on the Main Carson below the confluence. 2) The right to divert or store water in Lahontan Reservoir for use on the Newlands Project subject to the diversion for existing irrigation use and to the right of each State to store waters upstream from Lahontan Reservoir.

Both states are allocated the right to store water in existing reservoirs upstream from Lahontan Reservoir to the extent of existing capacities. Present uses of water on National Forest Lands in the Toiyabe National Forest are confirmed and recognized by both states. Additional yields shall be available for development under the currently authorized Washoe Project in excess of existing beneficial uses in Nevada as recognized by Nevada Law. Such additional yields shall be allocated between the State with equal priority, 20 percent allocated to California and 80 percent to Nevada. Each state has the right to participate in any development project by bearing a proportionate cost of such development. In the event a joint development is not feasible or desirable, each state may develop separately its proportionate share of the remaining water. Waters of the Carson River are not to be used outside the Carson River Basin except by exchange of other allocated waters from the Lake Tahoe or the Truckee River Basins.

Article VIII—Walker River Basin

The provisions of the decree in the case of *United States vs. Walker River Irrigation District, et al.*, known as Decree C–125, are recognized and confirmed. 2) The right under Decree C–125 to store 85,000 acre-feet of water from the West Walker River in Topaz Reservoir is recognized and confirmed subject to certain exceptions. The first is that a maximum of 85,000 acre-feet of water less reservoir evaporation may be rediverted for use annually from November 1 through October 31 of the following year. The second is that the maximum rate of diversion to such reservoir is 1,000 cubic feet per second. And third, that water qualified for storage and allowed to pass through the reservoir and not rediverted in Nevada will be deemed to have been held in storage. 3) The right under Decree C–125 to store 57,000 acre-feet of water from the East Walker River in Bridgeport Reservoir is recognized and confirmed subject to certain exceptions. The first being that a maximum of 57,000 acre-feet of water less reservoir evaporation may be rediverted for use annually from November 1 to October 31 of the following year; and secondly, water may be stored upstream from the Bridgeport Reservoir without loss to the quantity allocated for storage in the Bridgeport Reservoir. 4) Each state is allocated an amount for existing diversions and uses of water from the Walker River upstream from the Weber Reservoir and not specifically covered in Decree C–125. The Commission after being established to administer the compact will ascertain the amounts and priorities of such uses.

In addition to the allocation to recognize and confirm the provisions of the Walker River Decree C–125, there is allocated to Nevada for use on the Walker River Indian Reservation a maximum of 13,000 acre-feet for storage in Weber Reservoir and a later rediversion to use and in addition 9,450 acre-feet per year, both allocations to have a priority of 1933. The season for diversion of water to storage shall be from November 1 to October 31 of the following year. The season for diversion of water directly for use shall be from March 1 to October 31 and at a maximum rate of 60 cubic feet per second.

California is allocated the right to divert water from the West Walker River at the time Topaz Reservoir is storing water, if such diversions have no net effect on the Topaz Reservoir storage for the season.

There is allocated to the State of California, 35 percent of unused waters or waters in excess of the amounts allocated or required to satisfy all rights and uses recognized and confirmed. There is allocated to the State of Nevada 65 percent of such unused water. The reregulation of storage waters allocated are not to be considered as the development of "unused water".

Separate development may be undertaken by either state for surface storage of unused water of the West Walker River so allocated. The State Engineer of Nevada and the California Department of Water Resources have been directed to prepare and present a joint report by July 1, 1969. This report is to include a review of all potential developments of unused water of the West Walker River with the benefits to be obtained from each such development.

Article X—Interbasin Transfers of Use

Article X provides that either state may, directly or by exchange, use the allocations of the Truckee River in the Lake Tahoe or Carson River Basin and the waters of the Carson River in the Lake Tahoe or Truckee River Basin. It further provides that Lake Tahoe may be used as a physical facility to accomplish such an exchange.

Article XIII—Fish, Wildlife, and Recreation

This article determines that the use of water for preservation, protection and enhancement of fish, wildlife, and recreation is recognized as a beneficial use.

Article XXI—Nonimpairment of Rights United States

Article XXI provides that, except as provided in Article XXII, the Compact cannot be construed as affecting the obligations of the United States to the Indians and Indian tribes or any right owned or held by or for Indians or Indian tribes subject to the jurisdiction of the United States. Nor shall it affect any rights or powers of the United States or its agencies in or to the waters of the Truckee, Carson or Walker River Basin or the Lake Tahoe Basins or the capacity of the United States to acquire rights in and to the use of those waters. Nor may it be construed as subjecting any property of the United States to taxation by either state. Nor may it be construed as subjecting any property of the United States to the laws of any state to an extent other than the extent to which such laws be applied in the absence of the Compact.

Article XXII—Ratification and Consent

Article XXII provides that the Compact shall be effective as it has been ratified by the legislators of Nevada and California and has been consented to by act of Congress of the United States and that Congress has provided in its consent legislation or by separate legislation that certain provisions of the Compact shall be binding upon the agencies, wards and instrumentalities of the United States.

Consideration of comments and suggestions

In 1965 a provisional draft of Compact was adopted by the two states. This was submitted to all interested agencies for comments and suggestions. Many federal agencies including Interior, Justice, Agriculture, and Commerce responded with comments and suggestions on how the Compact might be improved. Following the receipt of the comments of the federal agencies, California and Nevada spent two more years negotiating. The comments of the federal agencies were considered and utilized, and resulted in many changes in the proposed Compact. In some few instances the two states felt that the suggestions of the federal agencies could not be incorporated in the Compact.

In 1968, following the completion of the present Compact, the two states answered comments of the federal agencies to the 1965 draft. In many cases the suggestions had been adopted and in those instances in which they could not be used, the commission explained the reasons therefor.

Need for compliance by the United States

Those provisions which the two states believe the United States should agree to be bound are found in Article XXIII of the Compact and concern only the total amount of water allocated to each state.

It is of utmost importance for the governing agencies of the United States to understand that the United States is not bound to any particular use within either of the two states nor to any particular development of any future project within the states, but would only be bound with respect to the allocations of water between the two respective states. Consequently, for effective administration and effective allocation, the states of California and Nevada believe most strongly that it is necessary for the United States to consent to enter into a binding contract insofar as Article XXII of the Compact is concerned.

The United States owns or controls almost all the storage and diversion facilities on the Truckee and Carson Rivers and Lake Tahoe. Its failure to agree to the allocations provided in the Compact would nullify the force and effect of the substantive provisions of said Compact. As an example, the United States claims the rights to all water stored in Lake Tahoe between elevations 6223 and

6229.1, or approximately 720,000 acre-feet of water. The Compact provides for use within the Tahoe Basin of 34,000 feet allocated on the basis of approximately ⅔ to California and ⅓ to Nevada. Failure of the United States to agree to this use in each of the states would preclude the development of perhaps one of the greatest recreational resources in the country.

The area to which the compact applies is one which unfortunately cannot claim either a firm or sufficient supply of water for its potential domestic, industrial and recreational development. Thus, present uses are provided for in the Compact in terms of allocation of the water to the respective states with the hope that conservative use may allow some development for the future in these areas.

Should the United States refuse to agree to these allocations and refuse to consent to be bound by them, neither state can plan, develop or assume its individual obligation for what appears to be its future destiny. Certainly presently unused waters that are available and could be developed in the future would entail partnership of the United States as a party to the development. Each of the two states looks to the United States as a partner in such development rather than as a partisan. The waters in excess of present uses have been allocated as between the two states and if the United States as a partner in the development of any future project, which at present appears to be the only realistic approach, were not bound by the allocations of water, the agreements between the two states would be of no effect.

Mr. LAXALT. Mr. President, legislation providing for congressional consent to the compact was first introduced in 1971. Consent bills have been introduced in each Congress since that time. No action has been taken on any of these bills, however, principally because of opposition of Federal agencies to the compact. With the filing of a Federal suit in late 1973 against all of the water users of the Truckee River in Nevada, for the purpose of defining Federal water rights, these Federal agencies have been reluctant to indicate any position with respect to the compact. Personally, I find this distressing given the significance of the compact for our area. Mr. President, I urge that this measure be given consideration by the appropriate committee at the earliest opportunity.

By Mr. STEVENS (by request) (for Mr. GOLDWATER):

S. 669. A bill to help relieve the burden of high property taxes by allowing each homeowner a Federal income tax credit or rebate for property taxes paid for the support of public schools; to the Committee on Finance.

RESIDENTIAL PROPERTY TAX RELIEF ACT OF 1977

Mr. STEVENS. Mr. President, on behalf of the Senator from Arizona (Mr. GOLDWATER) and at his request, I introduce a bill entitled the "Residential Property Tax Relief Act of 1977."

I ask unanimous consent that a statement by Senator GOLDWATER, together with an attachment and the bill itself, be printed in the RECORD.

There being no objection, the material and bill were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GOLDWATER

THE RESIDENTIAL PROPERTY TAX RELIEF ACT OF 1977

As we in Congress begin our consideration of various proposals to stimulate the economy and restore the spending power of consumers, I can think of nothing that would be more welcome to the nation's forty million families who live in owner-occupied homes than relief from the cruel burden of constantly rising property taxes.

For that reason, I am today introducing legislation designed to reduce substantially the property tax of every homeowner in the nation.

My bill includes three major features which direct its benefits primarily to low- and average-income families.

First, the bill will reduce the burden of every homeowner who pays a school tax on his residence by granting him a federal income tax credit up to $150, in addition to the deduction now allowed for real estate taxes.

Second, it will allow elderly homeowners who pay more than 5% of their total income in local property taxes to obtain a federal rebate of those taxes up to $150, even if they pay no income tax.

Third, the bill will provide tax relief for the nation's 10.3 million mobile home dwellers on an equal basis with site-built homeowners.

The national tax credit or rebate is set at $150 because it conforms to the average benefit that States with property tax relief programs for certain groups of their citizens have adopted as reasonable.

The local or State property tax remains a major source of financing for public school education. It provides half of the funds spent annually on public school support, while only 10% comes from federal aid to education. According to the Advisory Commission on Inter-Governmental Relations, $14 billion of all residential property taxes is raised from the take on single-family homes. In addition, there is an estimated quarter billion dollars in State property taxes derived from single-family homes. Neither of these amounts include the tax on mobile homes, which I will discuss in a moment.

The property tax is so burdensome that Professor Richard Netzer has calculated that if the real estate tax were viewed as a sales tax imposed on the rental value of a home, it would have been equivalent to an average tax rate of 21% for 1970. In other words, the property tax, seen as a sales tax on rental value, falls much more heavily on housing than sales taxes do on other commodities in our economy.

I would emphasize that this tax is paid for by the typical American who is already hard pressed to meet the combined burden of federal, State, and local income, personal property, and sales taxes, not to mention utility taxes on electricity, gas, telephone service and other basic necessities of life which many persons must pay. This massive collection of taxes hits especially hard at retired persons. It is also felt severely by the vast majority of salaried workers who are unable to take advantage of tax breaks such as itemized business expenses.

We must reject the myth that property tax relief would benefit only the wealthy. To the contrary, homeowners as a class have average-or below-average incomes.

In its "Residential Finance Survey" for 1970, the U.S. Bureau of the Census reports that family income from all sources was below $15,000 in 74% of the country's 31 million one-family, owner-occupied homes. Forty-five percent of these families had incomes of less than $10,000 and 19 percent had family incomes under $5,000. The findings of this survey are substantiated by nearly idetical statistics included in an analysis by the Internal Revenue Service of 26 million federal income tax returns filed in 1970 which itemized real estate tax deductions.

The actual number of single-family households with moderate and low family incomes is substantially higher. My office has been informed by the Census Bureau that its survey did not encompass any of the nation's four million mobile homes. One of the major attractions encouraging the fast-growing number of mobile homes sales is the ability of modest income families to enjoy home-ownership without being well-to-do; and I am certain that if the incomes of the approximately 8 million people who then lived in mobile homes as their principal residence had been included with the data compiled by the Census Bureau in its 1970 property survey, the burden of the property tax would be seen to fall even more heavily on the poor and lower income families.

As great as the burden of the property tax is upon the typical family, it falls most severely upon the Nation's 6.3 million elderly homeowners. In fact, a tax study made by the staff of the Advisory Committee on Inter-Government Relations in late 1972 concluded that the burden on the elderly is "a national scandal."

Almost 2 million elderly families paid 17%, and in some regions of the country as high as 31%, of their total annual income in real estate taxes. The average elderly homeowner paid over 8% of his income in property taxes, compared with 3.4% of total income for the average American family.

At hearings on property tax relief held by the Senate Subcommittee on Inter-Governmental Relations in 1973, the American Association of Retired Persons presented testimony graphically describing the plight of the Nation's elderly homeowners. For example, letters were introduced into the record from citizen after citizen who complained that they are paying more now for taxes in their retirement than they were paying when they were working. There was a letter from one gentleman who wrote that he had lost his wife of 53 years. This resulted in a reduction in his social security. Yet, at the same time, his property tax was raised 200 percent.

Now, I know there is a movement afoot whereby governments would give loans on homes in order to pay property taxes, which loans become liens against the houses. But I want to state emphatically that this is a callous approach. For most people in the lower income brackets, their residence is their only capital purchase. It represents stability, security, safety and comfort. It is the only thing they really have in case of catastrophe.

Thus, I am totally opposed to allowing the property tax to become the "inheritance tax" on the poor, which is what the tax lien idea would do. It is my belief that governments should look at the total flow of cash income to a household, and if a family cannot pay their tax out of their cash flow, they should not have to liquidate or encumber their residential holding.

Therefore, I have provided in the bill I am introducing today a special rebate of tax payments to the elderly. By this provision, an elderly person or couple, age 62 or older, can file for a federal rebate of all local and State property taxes which exceed 5% of their total income up to a maximum of $150. This rebate would be paid by the federal government regardless of whether or not the elderly taxpayer owes any federal income tax. It is a true rebate directly tied to the homeowner's payment of a real estate tax and not to an individual's payment of income tax.

In addition, I have provided in the bill for recognition as first class citizens for the 10.3 million Americans who now live in mobile homes. Far too often, lawmakers and bureaucrats have overlooked the fact that a growing number of Americans live in mobile homes year around. These government officials fail to realize that one out of every two new single-family houses sold is a mobile, not a fixed site, home.

In all, at least 4.5 million mobile homes are currently used as the year around residences of Americans. There are 350,000 persons who live in 160,000 mobile homes in Arizona alone.

Accordingly, I have provided in the legislation that taxpayers who own mobile homes shall be given the very same tax credit or rebate as the one given to owners of site-built homes. Moreover, the bill insures that any mobile home tax which contributes to the support of public education will entitle them to the tax credit, whether the tax is labeled a personal property tax, a license fee, or whatever.

When the Supreme Court decided in 1973 to uphold the constitutionality of the property tax system of financing public schools, it virtually guaranteed that locally raised dollars will continue to pay a major share of school funds. Although challenges are still being made in a few State courts, it is clear that these cases will not abolish the property tax as a major source of school financing, but merely result in a different mix of Federal, State and local funds.

In conclusion, I fear that the residential property tax will continue to grow faster than the income of the average household. With the adoption by local governments of computerized and annual tax appraisals, the tax on one's home will eat up whatever equity a person may have gained by his purchase. In mny instances, retired persons will no longer be able to afford living in their own homes. Relief is urgently needed and needed now.

I ask that a statement by the Manufactured Housing Institute endorsing my bill be inserted in the RECORD. Following that statement, I ask that the text of the bill appear in the RECORD.

From Manufactured Housing Institute.

To the Honorable Barry Goldwater, U.S. Senate, 440 Old Senate Office Building, Washington, D.C.

DEAR SENATOR GOLDWATER: I appreciate your calling to our attention the introduction of your bill which proposes to grant tax relief for that portion of a homeowner's property tax which is directed to support public education. Though the Manufactured Housing Institute would not claim to speak on behalf of all of the ten million persons who live in mobile homes, we honestly believe that each mobile home resident would sincerely appreciate and support the recognition which your bill gives to our form of housing. In Section 2 (D), recognition is given to the fact that mobile homeowners are currently subject to many different-and sometimes unfair—forms of taxation such as real estate taxes, personal property taxes, excise taxes, ad valorem personal property taxes, license excise taxes, etc.

If the Congress does ultimately approve your proposal as the form of tax relief needed, we believe that it is essential that citizens living in mobile homes be treated on an equal basis as all other types of homeowners. The multiplicity of taxes to which mobile homeowners are frequently subjected is an especially crushing blow in light of the fact that the medium income of mobile home families (according to the 1970 census) is $6,690. And, when we consider that 31.6 percent of those living in mobile homes are 55 years old or older, we can begin to appreciate the dimensions of this burden. Mobile home living is an especially appropriate form of housing for lower and middle income individuals because of the economies which make it possible to produce a complete home in a factory and ship it to a home site for occupancy in many states and localities. But, often, the advantages to this economical life is more than offset by the crushing tax burdens imposed upon the residents.

Again, Senator Goldwater, we appreciate your astute understanding of this problem and wish to commend you for your proposal. If there is anything we can do to further document the need for tax relief on an equitable basis, please do not hesitate to call upon us.

Sincerely,

WALTER L. BENNING,
President.

S. 669

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Residential Property Tax Relief Act of 1977".

SEC. 2. (a) Part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by renumbering section 42 as section 43, and by inserting after section 41 the following new section:

"SEC. 42. RESIDENTIAL PROPERTY TAXES PAID FOR SUPPORT OF PUBLIC EDUCATION.

"(a) GENERAL RULE.—In the case of an individual, there shall be allowed as a credit against the tax imposed by this chapter for the taxable year an amount equal to the State and local residential property taxes paid or accrued during the taxable year which are imposed for the support of public elementary and secondary education, but only to the extent that such taxes do not exceed the lesser of—

"(1) $150 ($75, in the case of a married individual filing a separate return), or

"(2) except as provided in subsection (b), the amount of the tax imposed by this chapter for the taxable year reduced by the sum of the credits allowable under the preceding sections of this part (other than sections 31 and 39).

"(b) CERTAIN INDIVDUALS WHO HAVE ATTAINED AGE 62.—In the case of an individual—

"(1) who has attained the age of 62 before the close of the taxable year, and

"(2) who has paid or accrued State and local residential property taxes during the taxable year which are imposed for the support of public elementary and secondary education in excess of 5 percent of his total income for the taxable year,

the limitation contained in subsection (a)(2) shall not apply to the extent of the amount of such excess, reduced by the amount (if any) of the credit allowable for the taxable year under subsection (a). For purposes of this subsection, the total income of an individual includes all items taken into account in determining support for purposes of section 152.

"(c) INCOME TAX BENEFITS NOT TO EXCEED AMOUNT OF RESIDENTIAL PROPERTY TAXES PAID FOR SUPPORT OF PUBLIC EDUCATION.—If the amount allowable (but for this subsection) as a credit under subsection (a) for any taxable year, when added to the amount by which the tax under this chapter for the taxable year is less by reason of the deduction allowed under section 164 for State and local residential property taxes for which credit otherwise allowable under subsection (a), exceeds the total amount of State and local residential property taxes paid or accrued during the taxable year which are imposed for the support of public elementary and secondary education, the amount allowable as a credit under subsection (a) shall be reduced by an amount equal to such excess.

"(d) STATE AND LOCAL RESIDENTIAL PROPERTY TAXES.—For purposes of this section, the term State and local property taxes' means—

"(1) State and local real property taxes (within the meaning of section 164) on property which is comprised primarily of one or more dwelling units, including mobile homes, and the land on which the dwelling unit or units are situated, and

"(2) State and local taxes (other than real property taxes) or license fees on mobile homes.

"(e) DETERMINATION OF AMOUNTS OF RESIDENTIAL PROPERTY TAX PAID FOR SUPPORT OF PUBLIC EDUCATION.—For purposes of subsection (a), the amount of any State or local residential property tax which is imposed for the support of public elementary and secondary education shall be—

"(1) with respect to any residential property tax imposed solely for such support, the amount of such tax; and

"(2) with respect to any residential property tax imposed in part for such support, the portion of such tax—

"(A) designated in the bill for such tax submitted to the taxpayer by the taxing jurisdiction imposing such tax; or

"(B) determination from information set forth in such bill or from information furnished to the taxpayer by such taxing jurisdiction,

as the amount of such tax which is imposed for the support of public elementary and secondary education.

"(f) SPECIAL RULES.—

"(1) TAXES CONSTRUCTIVELY PAID.—Under regulations prescribed by the Secretary or his delegate, the provisions of subsections (d), (e), and (f) of section 164 shall apply to real property taxes with respect to which credit is allowable under subsection (a).

"(2) TRUSTS.—No credit shall be allowed under subsection (a) to a trust.".

(b) The table of sections for such part IV is amended by striking out the last item and inserting in lieu thereof the following:

"Sec. 42. Residential property taxes paid for support of public education.
"Sec. 43. Overpayments of tax."

SEC. 3. Section 6401(b) of the Internal Revenue Code of 1954 (relating to excessive credits treated as overpayments) is amended—

(1) by inserting ", 42 (relating to residential property taxes paid for support of public education)," before "667(b)", and

(2) by striking out "31 and 39" and inserting in lieu thereof "31, 39, and 42".

SEC. 4. The amendments made by this Act shall apply to taxable years beginning after December 31, 1976.

By Mr. GRIFFIN:

S. 670. A bill entitled the "Industrial Safety Encouragement Act of 1977"; to the Committee on Human Resources.

S. 670

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4(b)(4) of the Occupational and Health Act of 1970 is amended by adding at the end thereof the following new proviso:

"*Provided,* That in any case where an employer's failure to comply with any provision of this chapter or any standard promulgated thereunder or to comply with any state statutory, administrative or common law requirement relating to industrial safety causes or contributes to an accident resulting in bodily injury, no provision of any workers' compensation law or similar state statute shall be construed to bar an action or third-party complaint for contribution or indemnification or other relief in the nature thereof under an otherwise applicable statute or principles of common law against such employer by a person liable or alleged to be liable for such injury or to limit recovery in any such action; nor in any action by an employer for subrogation under a workers' compensation law or similar state statute shall the defendant be prevented from raising as a defense the employer's contributory fault where such fault involves failure to comply with the Occupational Safety and Health Act or any standard promulgated thereunder or failure to comply with any state authority,

administrative or common law requirement relating to industrial safety."

By Mr. BENTSEN:

S. 671. A bill to amend the Federal Aviation Act of 1958 to limit under certain circumstances the discretion of the Civil Aeronautics Board in determining the rate of compensation to be paid to an air carrier for the transportation of mail by aircraft; to the Committee on Commerce, Science, and Transportation.

REDETERMINATION OF AIRLINE MAIL RATE COMPENSATION

Mr. BENTSEN. Mr. President, today I am introducing legislation to remedy an inequity in the subsidy program under the Federal Aviation Act as it was administered and subsequently litigated for the year 1966. Because of a rather strange series of events, two airlines—Texas International and Ozark—were treated differently than nine other carriers under the subsidy program for that year.

Mr. President, since 1961 the CAB has given local service carriers subsidy payments for the transportation of mail pursuant to the Federal Aviation Act. The payments are provided on a monthly basis according to a formula based on profits and expenses. Such payments are subject to repayment by a carrier to the Government, if post-fiscal year audits of an airline's books show excess profits. Under this system, income taxes are considered an expense in determining whether or not the carrier had excess profits over the course of the year during which subsidy payments were made. The CAB audits for 1966 were completed in 1967 and showed no excess profits for the nine airlines involved and no paybacks were requested at that time.

Mr. President, things would have been fine if CAB had finalized all of its decisions regarding the 1966 subsidy at that point.

It did, in fact, close six of the cases; however, it failed to dispose of five others. The pending cases included—Texas International, Ozark, Air West, Allegheny, and Piedmont Airlines. The final resolution of four of the cases did not occur until 1970. The Piedmont case was not settled until 1974.

As we all too well remember, those 4 intervening years were recession years. During that period, the airline industry, in particular, suffered heavy losses. As most businesses facing similar circumstances will do, the airline companies carried back the losses on their income tax returns. After the airlines had done so, the CAB finally got around to completing its decisions on the 1966 subsidies issue for all but Piedmont. Rather than basing its ruling on the profits situation as it existed in 1967, the Board chose to recognize the amended tax figure. As a result, the carriers' tax liability, and thus its expense figure, declined causing an increase in its profits. The CAB declared the amended profits level to be excessive and demanded repayment of the subsidies which had been received during the year 1966.

Mr. President, with justification, the four carriers took the matter to court with each of the airlines filing in a different circuit. In two of the cases—those involving Texas International and Ozark—the court decided in favor of the CAB. In the other two—the Allegheny and Air West cases—the courts ruled with airlines. In the latter suits the court stated firmly that the regulatory process would be a shambles if members in the same class were differently treated in an arbitrary manner. Further, in the ninth circuit, the court described the situation as follows:

> Whether a carrier would be forced to return or allowed to keep hundreds of thousands of dollars would turn on fortuitous circumstances, including the order in which the CAB decided to process paper work and the dispatch with which it was processed. The facts of this case failed to demonstrate any reasonable justification for continued adherence to a procedure which did not treat all members of the class equally.

As the court points out, we have a situation in which the administration of justice was impeded by bureaucratic delays and an arbitrary administrative hand.

Given the difference of opinion among the circuits, one might have thought that the CAB would have appealed to the Supreme Court. However, the agency chose instead to allow Air West and Allegheny to keep their money.

Moreover, the CAB then proceeded to settle the *Piedmont* case consistent with the Air West and Allegheny rulings allowing the carrier to keep its subsidies.

Mr. President, what we have here is a 1966 subsidy program that treated nine airlines one way and two another way. We simply cannot ignore the inequity in such a lopsided result. This legislation is offered to correct this glaring inequity.

Mr. President, on occasion we have all come across Federal agency decisions with which we disagree, and I am leery of setting a precedent that opens all such administrative decisions to reversal through legislation. At the same time, however, some agency decisions are so overwhelmingly inequitable that action is clearly needed to insure justice. Faced with no alternative in this instance, I believe that congressional action is clearly warranted if justice is to be achieved.

By Mr. HUMPHREY (for himself, Mr. ROTH, Mr. METCALF, Mr. JAVITS, Mr. RIBICOFF, Mr. NUNN, Mr. MCGOVERN, Mr. MELCHER, Mr. PERCY, Mr. ANDERSON, Mr. DOLE, Mr. WEICKER, Mr. MCCLELLAN, Mr. MUSKIE, Mr. BAYH, and Mr. LUGAR):

S. 672. A bill to provide for the procurement by the General Services Administration of existing solar energy devices for use in Government buildings; to the Committee on Environment and Public Works.

SOLAR ENERGY GOVERNMENT BUILDING ACT

Mr. HUMPHREY. Mr. President, I send to the desk for appropriate reference a bill entitled the "Solar Energy Government Building Act," which I introduce today on behalf of myself and a number of cosponsors.

This bill, Mr. President, will require the Government of the United States to take the initiative in the experimentation and development of the use of solar energy upon Government buildings. This will afford a tremendous cost saving in our fuel bills, and, of course, a great deal of conservation of fossil fuel.

I have just left a conference with the Senator from Illinois (Mr. PERCY), and we launched today what is known as the Alliance to Save Energy. We will discuss that in greater detail at another time, but it represents a cross section of people throughout this Nation: different economic groups, producers, distributors, consumers, developers, environmentalists, labor, capital, management—with the honorary chairmen being the former President of the United States, Mr. Ford, and the Vice President of the United States, Mr. MONDALE.

This piece of legislation, Mr. President, will, I believe, be of immense help in our battle for alternative sources of fuel and energy, and at the same time will be directed toward the very commendable effort on conservation.

Mr. President, the Solar Energy Government Building Act, which I am introducing today, can constitute a milestone in energy development. It is the first bill designed to take a new energy technology to the point where it becomes cost-competitive with conventional energy sources.

My colleagues here are very aware of my intense interest in the rapid utilization of solar energy. This interest is rooted in two strong beliefs: that solar technology can be quickly and relatively cheaply developed; and that solar energy is preferable to environmentally harmful fossil and nuclear energy.

My belief that solar technology could rapidly mature has been sorely tested. I have been disappointed, for example, with the "go-slow" approach to the development of solar energy that has characterized the efforts of the Energy Research and Development Administration.

As you know, Mr. President, Congress has literally had to force an acceleration of solar energy research and development on ERDA. Despite this footdragging, however, we are starting to see good returns from our solar program—returns which confirm that rapid progress can occur in solar energy technology.

For example, the Oil Daily recently headlined a story that solar space heating for homes and offices has now become competitive with electric heat; and in 4 years, it should become cheaper than oil or gas heating, as well. In fact, the story indicates that solar space heating is recovered by homeowners in only one-half the usual 30-year period for home mortgages themselves.

Even more encouraging are some recent developments in the field of photovoltaics.

First are the results of a series of studies performed under contract for the Energy Research and Development Administration—ERDA—by Motorola, RCA, and Texas Instruments. These studies were funded specifically to examine the potential for automation to reduce the current high cost of photovoltaic sys-

tems. The independent conclusion of these three ERDA studies is that existing production technologies have a marked cost reduction potential. The potential is such that photovoltaic costs will become competitive with conventional power sources via automation by the mid-1980's. According to the ERDA contractors, evolutionary development of the photovoltaic industry, and not technological breakthroughs, is the key to future cost competitiveness.

Two additional developments suggest that cost competitiveness can possibly occur even sooner than the mid-1890's.

The first of these is contained in the conclusions of a just completed report for the Federal Energy Administration—FEA—by Spectrolab of California. The report focuses on pure silicon photovoltaic cells. Such cells are used worldwide today for the direct conversion of solar radiation to DC current. The cost is high—roughly $14 per watt of electricity versus $1 per watt currently for nuclear powerplant capacity. But the high cost is due to the labor-intensive, piecemeal production techniques used for the cells and silicon material—used because photovoltaic sales are insufficient to warrant automation of production facilities.

In a true sense, the stage of photovoltaic production technology today is identical to the auto in 1910, the vacuum tube in 1925 or the transistor in 1950. Expensive, but needing only automation to slash costs by a factor of 10 or more.

The FEA study by Spectrolab makes that identical point. The study concludes that production line automation—an assembly line manufacturing only 3.373 megawatts annually, in this case—would reduce photovoltaic cell costs to $1.22 per watt. Adding power systems, storage and encapsulation would raise prices to some $2 per watt.

That is a price only double present nuclear powerplant capital costs. It is a price achieved through the simple application of automated technology—and not much application at that, when we recall by comparison that new powerplants average over 1,000 megawatts capacity. It is a price achieved without the use of inexpensive concentrator systems capable of slashing photovoltaic cell material requirements by a factor of 50 or 100. And, it is a price based on the use of pure silicon photovoltaic cells—far more expensive than impure silicon and other materialls now under evaluation as photovoltaic cell material.

The major criticism of photovoltaics has been that the high cost of pure single crystal silicon prevents them from becoming cost competitive. The FEA study focused on that criticism. However, recent developments in 1976 may render that controversy moot. Two companies, AEG Telefunken of West Germany, and the Solarex Corp. of Rockville, Md., announced that they independently had developed photovoltaic cells using impure semicrystalline silicon.

This development alone should lead to a cost reduction by a factor of 30 in the price of silicon, and thus to a substantial reduction in the cost of photovoltaic systems as well.

Solar energy is, indeed, far closer to economic reality than some of my colleagues, Mr. President, and their constituents realize. What is needed is one major push—a push to insure the rapid commercialization of the most advanced solar technologies; and these are space and water heating, plus photovoltaic electricity generation.

The "Solar Energy Government Building Act" will give solar energy that final push. It has two titles which I will review now:

TITLE I: SOLAR HEATING AND HOT WATER

This title mandates installation of solar space heating and hot water systems in 15,000 GSA or DOD buildings over the coming 6 fiscal years. The purpose: to move these solar technologies from a cottage industry to a mature industry, complete with a nationwide cadre of skilled craftsmen experienced in their application and installation.

This title closely follows recommendations recently presented to the FEA by the Mitre Corp., a well-known consulting firm, in a report entitled, "Solar Energy Government Buildings Program—Policy and Implementation Plan."

This report projects a total Federal outlay for this program of some $598 million. But the actual Federal revenue impact is far smaller, because Federal fuel bills will be reduced by $568 million over the subsequent 20 years. Our oil payments abroad will be cut by some $500 million annually, as well.

This program will not give us something for nothing—but it is as close as any Government program can be to that intriguing situation.

As you, Mr. President, and my colleagues know well, the Congress established a solar heating and cooling demonstration program 2 years ago. The program has been expensive and limited in scope. In fact, only some 250 projects have been funded thus far. But it has achieved its purpose of stimulating the development of a variety of solar space conditioning systems.

It is time to build on this technical infrastructure and the Solar Energy Government Building Act does just that.

TITLE II: FEDERAL PHOTOVOLTAIC

This title, too, is designed to benefit from very recent research findings—the aforementioned FEA-Spectrolab study and a new U.S. Army report.

This title mandates the installation of some 50 megawatts electrical over each of the succeeding 5 fiscal years of photovoltaic electric systems. The purpose: to enable the application to occur of automated production techniques necessary to bring photovoltaic costs down to a competitive level.

To repeat my earlier point, the cost of photovoltaic cells, like transistors for example, are markedly affected by production economies of scale. Government purchases pursuant to this title, under the direction of GSA and DOD, of 50 megawatts electrical annually will enable photovoltaic manufacturers to attain such economies. While not large, a market of this size—mainly for radar and other remote-site uses—is sufficient, according to the FEA-Spectrolab study and other sources, to justify the automation of photovoltaic production lines. And such automation will yield photovoltaic cells, including storage and power systems, in the range of $2 per watt.

Can 50 megawatts electrical of photovoltaic cells at a price of $2 per watt be fruitfully utilized by GSA and DOD? Yes. In fact, a new U.S. Army report to the FEA contends that as much as 100 megawatts electrical annually of such cells could be used just by DOD at a price of $2 per watt and higher. The study is entitled "DOD Photovoltaic Energy Conversion Systems—Market Inventory and Analysis." It indicates that sizable Federal fund savings and improved DOD system reliability will flow from the replacement of remote electric generators with photovoltaic systems. For that reason, no funds are provided for photovoltaic purchases in this title beyond $100 million for the acquisitions during the first fiscal year—1978.

In summary, this act will move solar heating, hot water, and electricity generation into the mainstream—will establish them as economically and technologically viable. It will give our Nation—and indeed the world—a realistic solar option for the first time.

I ask unanimous consent, Mr. President, that the text of the Solar Energy Government Building Act, two articles from the Oil Daily, entitled, "$800 Million Solar Market by 1985?", December 24, 1976, and "Solar Heat Could Become Competitive in 4 Years," January 6, 1977, and an article from the Christian Science Monitor entitled, "Washington Chided on Energy," February 3, 1977, be included at this point in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 672

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Solar Energy Government Building Act".

SOLAR ENERGY GOVERNMENT BUILDING PROGRAM

SEC. 2. There is hereby established a solar energy Government building program (hereinafter referred to in this Act as the "program"), which shall be a five year plan program of accelerated procurement and installation of solar systems for hot water, space heating, and electricity production in new and existing Federal buildings, using technologically and technically approved and proved equipment and which shall be composed of the solar hot water and space heating program established pursuant to title I of this Act and the Federal photovoltaic utilization program established pursuant to title II of this Act.

PURPOSES

SEC. 3. The program shall accomplish the following—

(1) accelerate the growth of a commercially viable solar heating industry in order to make solar heating available to the general public as an option which can reduce national consumption of fossil fuel by one

hundred and fifty thousand barrels of crude oil per day;

(2) conserve fossil fuel costs of the Federal Government;

(3) stimulate the general use within the Federal Establishment of life-cycle costing and innovative procurement methods; and

(4) develop program performance data to support policy decisions on future incentive programs with respect to energy.

TITLE I—SOLAR HOT WATER AND SPACE HEATING PROGRAM FOR FEDERAL BUILDINGS

SEC. 101. The Administrator of General Services (hereinafter in this Act referred to as the "Administrator") shall establish a solar hot water and space heating program (hereinafter referred to in this title as the "program"). The program shall be designed to place a solar hot water device and a solar space heating device and appropriate storage systems in fifteen hundred federally owned buildings within six fiscal years following the date of enactment of this Act.

DUTIES

SEC. 102. (a) The Administrator, within one hundred and eighty days of the date of enactment of this Act, and annually thereafter for the immediately subsequent and consecutive five years, shall conduct a survey of Federal buildings to determine the three thousand new and existing structures not previously surveyed which are most suitable for installation of solar hot water and space heating devices within the immediately subsequent and consecutive twelve months. Such structures shall be geographically distributed evenly within the United States so as to stimulate the development of a broad solar energy installation capability throughout the United States.

(b) In determining the most suitable Federal structures for the installation of solar hot water and space heating devices, the Administrator shall use life-cycle costing techniques and endeavor to minimize costs in the selection of Federal structures for installation of solar systems.

(c) Not later than ninety days after the date of enactment of this Act, the Administrator shall determine such performance standards as may be necessary for the development and implementation of standards for solar hot water and space heating applications in Federal structures for the purposes of carrying out the provisions of this title.

GUIDELINES

SEC. 103. (a) The Administrator, with assistance from the Secretary of Housing and Urban Development, the Administrator of the Energy Research and Development Administration, and the Administrator of the Federal Energy Administration, shall establish guidelines for the procurement and installation of solar hot water and space heating devices pursuant to this title.

(b) The Administrator shall promulgate such guidelines as may be necessary for the development of life-cycle costing methodologies required by section 102(b).

PROGRAM MONITOR

SEC. 104. The Administrator shall continually monitor for progress of the Program to assess whether such program should be continued at its initial scale or at an expanded or contracted scale.

REPORT

SEC. 105. The Administrator shall annually report to Congress on the status of the Program, including recommendations for future funding levels necessary to fully implement the target set forth in section 101.

DEPARTMENT OF DEFENSE

SEC. 106. The Secretary of Defense shall ensure that the Federal structures selected for participation in the program which are occupied by personnel of the Department of Defense or which serve a defense-related function will continue to perform any defense-related activities without interference or interruption.

TRAINING

SEC. 107. The Administrator shall determine whether a central training program should be established for the purpose of acquainting appropriate Federal procurement personnel and facility administrators with the most advanced means to utilize solar energy devices and energy conservation practices in the operation and maintenance of Federal structures.

ADVISORY COMMITTEE

SEC. 108. There is hereby established an Advisory Committee on the Solar Energy Government Building Program to assist the Administrator in the establishment and conduct of the program. Such Committee shall be composed of the Secretary of Defense, the Secretary of Housing and Urban Development, the Administrator of the National Aeronautics and Space Administration, the Administrator of the Energy Research and Development Administration, the Administrator of the Federal Energy Administration, and the Postmaster General.

AUTHORIZATION

SEC. 109. There is authorized to be appropriated the sum of $100,000,000, for the purposes of this title, for each of the fiscal years 1978, 1979, 1980, 1981, 1982, and 1983.

TITLE II—FEDERAL PHOTOVOLTAIC UTILIZATION PROGRAM

PROGRAM ESTABLISHMENT

SEC. 201. There is hereby established a Federal Photovoltaic Utilization Program (hereinafter in this title referred to as the "program") for the annual acquisition and use of photovoltaic solar electric systems and associated storage capability, primarily for use by the Department of Defense. Each such acquisition shall include photovoltaic electrical systems capable of producing up to 50 megawatts of electrical energy and shall occur annually. The program established pursuant to this title shall be conducted for a minimum of five years which may be extended by appropriate legislation at the request of the Secretary of Defense.

ADMINISTRATION

SEC. 202. The Administrator with assistance from the Secretary of Defense (hereinafter referred to in this title as the "Secretary") shall administer the program and shall—

(1) insure that the installation of photovoltaic electric systems pursuant to this title shall not interfere with defense-related activities;

(2) prescribe such rules and regulations as may be appropriate to monitor and assess the performance and operation of photovoltaic electric systems installed pursuant to this title; and

(3) report annually to Congress on the status of the program.

PROGRAM FUNDING FORMULA

SEC. 203. (a) The Administrator of the Energy Research and Development Administration shall establish, within 60 days following the date of enactment of this Act, a photovoltaic system evaluation and purchase program to provide such systems as are required by the Secretary to carry out the intent of this title. In acquiring photovoltaic systems pursuant to this title, the Energy Research and Development Administrator shall—

(1) insure that such systems reflect the most advanced technology; and

(2) schedule purchases in a manner which will stimulate the development of a permanent low-cost private photovoltaic production capability in the United States.

(b) The Administrator shall provide all photovoltaic systems for the program established pursuant to this title at a cost equal to their purchase price or at $2 per peak watt array cost of installed capacity at each facility selected to participate in the program, whichever is less.

AUTHORIZATION

SEC. 204. To undertake application-design and engineering activities pursuant to the program established by this title, there are authorized to be appropriated $25,000,000, for each of the fiscal years 1978, 1979, 1980, 1981, and 1982, to the Administrator and $100,000,000 for photovoltaic system acquisition in fiscal year 1978 to the Administrator.

[From the Oil Daily, Dec. 24, 1976]

$800 MILLION SOLAR MARKET BY 1985?

CAMBRIDGE, MASS.—With solar hot water and heating systems now being developed for mass production, Arthur D. Little Inc., projects an annual U.S. market ranging from $800 million to $1.6 billion by 1985. This will be, at a minimum, a twenty-fold increase over the $40–50 million solar market Arthur D. Little is estimating for 1976.

These findings were developed during the just-completed second phase of the Cambridge-based consulting firm's international project to assess business opportunities for solar climate control. Sponsored cooperatively by 50 manufacturers, utilities, energy companies, and venture capital groups from 10 countries, the project's second phase evaluated specific technologies and markets in America, Japan, and Europe. Project sponsors, who have spearheaded the growth of the solar climate control industry, have active industrial interests in the United States, Canada, Japan, France, Germany, Belgium, Denmark, Italy, Spain and Algeria.

According to Arthur D. Little, Inc., market growth over the next nine years will be accelerated by such factors as escalating energy costs, the success of demonstration projects, increasing industrial commitment, and appropriate government incentives. Dr. Peter E. Glaser, Arthur D. Little vice president and director of the solar climate control project, is positive about industry progress to date. "Solar energy systems are becoming a recognized factor in the construction industry. They are no longer just the province of the gadgeteer or the environmental enthusiast."

"Solar climate control fits in with environmental and energy conservation efforts, but its economics in most areas are not yet competitive with other energy sources," Dr. Glaser states. "The current residential market is comprised of home owners with discretionary incomes, motivated either by idealism or the trend-setting desire to be 'first on their block' with a solar collector.

"However, each increase in the price of fuels will further enhance solar climate control as an economically attractive energy alternative, bringing it within reach of the consumer."

The Government's commitment to solar energy demonstration programs, legislation providing energy conservation incentives to home owners and the more than 300 new corporate and utility solar installations have heightened consumer and builder awareness of solar climate control. Moreover, in addition to the many small solar companies entering the market, Dr. Glaser reports that several large corporations are producing solar devices on a limited scale in preparation for major production commitments.

According to Martin M. Glesk, the solar project's marketing consultant, "The proposed federal government tax credit would assume up to 40% of the cost of a new solar system. This legislation, if passed, will give industry decision-makers the push they need to launch serious marketing efforts. Standardization of solar energy technology,

through the efforts of various government agencies and industry associations such as the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) and the American Society for Testing Materials (ASTM), will also have a positive impact."

Arthur D. Little expects solar water heaters for single family residences will dominate the early market. Initial costs for solar heaters designed to provide 40–70% of hot water requirements will range from $1,000–1,500. Due to the continual need for hot water year-round, life cycle costs will be attractive with payback periods of less than 10 years. Within three to five years solar water heaters could be offered by mass merchandisers.

Solar water heaters are smaller and less complicated than solar space heating systems, making them particularly suited to installation in existing buildings. The more than 70 million existing housing units in the United States represent a large retrofit market opportunity.

According to Arthur D. Little, solar hot water systems combined with space heating capability will also gain market acceptance in the near term.

In southern climates, these combined systems will handle a substantial portion of total heating requirements, but in the Northeast, they may account for only about 25 percent of the combined hot water and space heating load. Although larger systems could provide greater energy savings during the cold northeastern winter their size would not be effectively utilized during the summer months, and it would take longer to amortize their cost.

James C. Burke, technical director of the Arthur D. Little solar project, does not expect direct solar cooling using heat-actuated equipment to be cost-competitive with conventional vapor compression air conditioning equipment in the near term.

"Before solar cooling becomes economically attractive," Burke states, "conventional energy costs will have to be considerably higher, and improvements must be made in the costs and performance of solar equipment."

While solar heating technology is relatively simple in concept and application, and its economics are improving, the widespread acceptance of solar heating systems by the multifaceted construction industry will be less straightforward, Arthur D. Little reports. A consensus must be reached among the diverse groups influencing the decisions to use solar systems.

Home owners, architects, engineers, developers, builders, financial institutions, zoning and code officials all have special requirements which must be met. These groups will be looking to the solar industry for reliable cost effective, and durable solar systems which are architecturally acceptable and can be efficiently integrated into building construction.

[From Oil Daily, Jan. 6, 1977]

SOLAR HEAT COULD BECOME COMPETITIVE IN 4 YEARS

WASHINGTON.—Solar heating of new homes may be economically competitive with oil and gas heating within four years, according to a study by the Energy Research and Development Administration.

The study, released yesterday, also said solar heating is already economically competitive with electric heating in new homes. Within 15 years, the report notes, solar heating might pay for itself through lower fuel costs in new homes.

The ERDA projections, however, are based on the assumption that fuel costs will increase only 10% a year for the indefinite future. They also do not reflect the potential higher rates that consumers might have to pay for standby heating on cloudy days, ERDA officials said.

The study assumes the sun will provide up to 60 or 70% of the heat and hot water for any new home where solar equipment is installed, according to Dr. Henry Marvin, director of ERDA's Solar Energy Division. The homes would need a cloudy day backup system, he noted.

Marvin said the current average cost for solar heating ranges from $4,000 to $12,000 based on a solar collector cost of $20 per square foot. ERDA's goal, he said, is to cut this by 50% by 1980.

Marvin said, "At that price, solar heating could be competitive with all fuels, including natural gas, in most regions of this country."

Solar heating is competitive with electricity at present costs in Atlanta, Bismark, N.D., Boston, Charleston, S.C., Columbia, Mo., Dallas, Grand Junction, Colo., Los Angeles, Madison, Wis., Miami, New York and Washington, according to the study.

[From the Christian Science Monitor, Feb. 3, 1977]

WASHINGTON CHIDED ON ENERGY

(By Louise Sweeney)

WASHINGTON.—The federal government should be leading the country by using solar energy in its own departments, says a congressional chairman who scores five federal departments for their "passivity" on the issue.

"The federal government should take a more active role in leading the country in the way it should go," Rep. Leo J. Ryan (D) of California said at a hearing of the House subcommittee on conservation, energy, and natural resources.

"The impression I get from these hearings is one of a kind of passivity in the face of the extreme cold weather" and current energy crisis, said Mr. Ryan, new committee chairman.

Turning to a spokesman for the General Services Administration (GSA), which oversees construction and maintenance of federal buildings, Mr. Ryan scolded:

"You're landlord for the whole country for the federal government, what are you putting on your roofs [for solar energy], what's going to be going through your pipes?"

Mr. Ryan indicated that the GSA building of one solar energy experiment in Manchester, N.H., was not enough, and suggested that GSA actively investigate solar energy even as a partial energy source in its buildings "like the new HEW [Health, Education, and Welfare] building down the hill—why aren't there any solar energy panels on the roof?"

Jerry J. Fitts, a spokesman for the Department of Housing and Urban Development, noted HUD has so far been involved in 150 solar heating and cooling or hot water projects for 1,500 dwelling units in 41 states and that an additional $4 to $5 million in grants will be awarded by mid-May.

"Australia and Israel are light years ahead of us," he added. His committee is going to act as "a spur or a goad" to get such movement under way. Mr. Ryan added, explaining it would hold hearings twice a year to find out what the various agencies had specifically done in this area.

A spokesman for the Energy Research and Development Administration, Dr. Robert Hirsch, testified about the Mitre Corporation study for ERDA which made headlines recently with its statement that solar heating is economically competitive with electric baseboard heating in 12 U.S. cities. This study of single-residence, middle-class homes has been widely praised, but committee member Rep. Thomas N. Kindness (R) of Ohio criticized it for being too narrow, suggested multi-dwelling or industrial studies would have been more useful and snapped: "I can't see any value in the study at all—$20,000 worth or anything else."

Mr. Fitts also criticized the report's conclusions based on cost "assumptions" of the ERDA study and said its $20 per square foot of solar collector costs was at variance with the median of $28 per square foot the Department of Housing and Urban Development had found in its demonstration projects.

ERDA and HUD have established a national solar heating and cooling center to answer questions from the public and industry about solar energy. The center's toll-free number is 800–523–2929.

A Federal Energy Administration spokesman, John K. Freeman, testified that major solar energy proposals awaited the administration's forthcoming comprehensive energy program.

GSA administrator Jack Eckerd said he thought the federal government should have a crash program for solar energy similar to the Apollo moon shot program.

Mr. ROTH. Mr. President, I am pleased to join Senator HUMPHREY as the prime Republican sponsor of this legislation. He is to be commended for his efforts toward developing solar power as a viable and economic source of energy for the Nation. The seriousness of the natural gas shortage gripping much of the country emphasizes the need for us, as a Nation, to hasten the development of nonpetroleum resources.

The bill focuses on the two areas where solar power can be of the greatest help: first, in space heating and cooling; and second in the generation of electric power.

As some of my colleagues may know, 23 percent of the energy in the United States is consumed for space heating and cooling. If we can substitute solar energy for the current sources of that heating and cooling, there will be enormous energy savings. The technology to put solar heating into place exists today, but the industry, the broad base of skilled workmen, engineers, and architects does not. The purpose of title I of the bill is to provide us with this industry.

Title II has a similar objective, though it focuses on the conversion of solar power into electricity. For a variety of reasons, it seems unlikely that solar energy will be immediately available for generating electricity at large central power stations. One example of the obstacles to use of solar power for large facilities is the size of the photovoltaic array which would be required. For instance, it is estimated that under the very best circumstances—such as the perennially sunny Southwest—it would require 3 square miles of solar collectors to equal the electricity production of an average central power station. Moreover, the ideal sites for such large solar generating plants are often hundreds of miles from the areas needing the electricity. Consequently, the transmission line loss would be extremely high.

But these same handicaps do not burden a technology focused on smaller central power stations. These are practical today. And, through a mandated

Federal use of such stations, we could stimulate the production of photovoltaic cells to a point where they will offer viable alternatives to liquid propane, diesel generators, and the other systems we use for isolated homes and businesses.

Mr. President, it seems apparent to me that we are seeing the beginning of the end of the fossil fuel era. Even the most optimistic reports state that the petroleum resources, principally oil and gas, will be exhausted within decades. Coal, of which we have much greater quantities, will last longer, but it requires vast changes in our technology in order for coal to be produced, transported, and consumed.

Solar energy, on the other hand, is a "here and now" technology. It is already economically viable in sunny areas of the country. It could become economically viable for other areas as well, provided we help. Solar energy for heating and cooling and solar energy for electricity production could release thousands, perhaps millions, of homes, businesses, and industries from their present reliance on oil and gas. Solar energy is not the miracle which will set us free from dependence on foreign oil, but it is certainly a commonsense first step in that direction.

Mr. President, we know what basic technologies will provide the energy systems of the future. One of these is solar energy, and it behooves us to hasten its development. The bill which Senator HUMPHREY and I are introducing will do this.

By Mr. HASKELL:

S. 673. A bill to limit potential or existent conflicts of interest on the part of elected and appointed officers and employees of the Government, to require financial disclosure, and for other purposes; to the Committee on Government Affairs.

FEDERAL CONFLICT OF INTEREST ACT OF 1977

Mr. HASKELL. Mr. President, I am introducing today the Federal Conflict of Interest Act of 1977, to protect public policy from the personal financial interests of governmental policymakers. We need to provide all parts of the U.S. Government with a coherent, consistent, and enforceable code of conduct to insure that positions of public responsibility are neither used nor appear to be used for private gain.

The present patchwork of conflict of interest regulations has been shown to be pathetically inadequate over the past several years. Enforcement of existing regulations has been sporadic, ranging from perfunctory to nonexistent, thus allowing a great many real and potential conflicts of interest to remain undetected and unpunished. The result is growing cynicism and mistrust of both the institutions and the individuals of Government. As Howard Fleiger of U.S. News & World Report has correctly admonished us:

> No greater challenge faces the Carter Administration and the new Congress than that of restoring public confidence in the political character of America.

President Carter took steps before taking office to insure that he and high-ranking officials of his administration did what was necessary to assure their freedom from the appearance of potential misuse of public office. We must continue in that welcome new direction by enacting the kind of Government-wide code of public conduct recommended by the Commission on Executive, Legislative and Judicial Salaries which issued its report in December of last year. The legislation I am introducing today is a significant step toward that goal.

This legislation vests in the Civil Service Commission power to establish standards of proper financial conduct for officers and employees of the executive and legislative branches, and guidelines for use by executive agencies and congressional committees in enforcement of those standards. Its adoption would bring about badly needed uniformity of rules and standards of conduct, consistency of enforcement procedures, and a significant and necessary degree of external monitoring of that enforcement.

In the case of Members of Congress, public disclosure of our personal financial interests is a precondition to living up to the fundamental principle that public office should not be used for private gain. With public disclosure, with everything out on the table, our constituents will have the basis on which to make a reasoned judgment of our integrity and our use of our public responsibilities.

But we must go beyond public disclosure to insure that some authority outside of Congress is empowered to audit our disclosure statements to insure their accuracy and honesty. We have passed the point when the public will swallow a scheme in which Congress simply polices itself. It should be noted that the Peterson commission on salaries to which I have referred found substantial merit in the idea of creating a new authority charged with auditing and enforcement responsibilities.

In the 94th Congress I introduced legislation creating an independent Commission on Ethics responsible for enforcing a code of conduct on a Government-wide basis. That proposal met with a good deal of general support, but many Members balked at the idea of setting up a wholly new piece of Government machinery. I thus modified my original proposal to vest in the Civil Service Commission many of the responsibilities of the original independent Commission.

There is general feeling that the Civil Service Commission is at present underutilized, and that its special authority could, indeed, be enhanced to perform some of the monitoring and auditing functions necessary to convince the public that we really mean business. The legislation I am introducing today places realistic demands on the Commission, and does not attempt to remove primary front-line responsibility for enforcing standards from the Congress or from the individual executive agencies. It does provide a needed outside guarantee of stringency of that enforcement. I am hopeful this legislation will receive careful attention in the weeks ahead.

Public officials today are commonly believed to be taking personal advantage of their public positions. However mistaken that belief may be in the case of the great majority of officeholders and career public servants, it is a belief firmly entrenched in the public mind. And, let us face it, it is a belief not without substantial basis in fact. It is a belief bred of an extraordinary series of scandals involving public officials, and only some very stiff measures will be adequate to dispel it.

Perceptions are in some ways the lifeblood of public and political life. The appearance or suspicion of conflict of interest or of personal aggrandizement is just as damaging as the reality. As an editorial in the New York Times recently reminded us:

> Surely the ancient principle must apply: Justice should not only be done, but should also be seen to be done.

If justice is going to be seen to be done, I think we need to get down to some very basic principles which ought to dictate our approach to public life. I believe this legislation speaks to those principles in a realistic and effective way.

By Mr. CURTIS (for himself and Mr. HANSEN):

S. 674. A bill to reinstate the provisions of the Sugar Act of 1948 beginning with calendar year 1978; to the Committee on Finance.

Mr. CURTIS. Mr. President, today I am introducing legislation to reinstate the provisions of the Sugar Act of 1948.

Sugar today is the world's most depressed commodity. In January, for example, the nearest world futures contract closed at 7.5 cents a pound, at least 4 cents below cane sugar production costs.

Further, record forecasts for both world beet and cane sugar show a production increase of 6.5 million tons over 1976.

Since the expiration of the Sugar Act in 1974 we have failed to provide any remedy for low domestic prices to farmers. Prices paid to farmers who produce beets and cane have fallen drastically. Sugar beet growers this year will receive only $21 a ton versus $45 last year, and a comparable price drop has affected sugarcane growers. Present prices are far below the cost of production of both beet and cane farmers. Unless sugar farmers have assurance of a fair return, they will have no incentive to continue sugar production, and our country could lose its domestic sugar supply.

This would force the American housewife and other U.S. consumers to depend almost entirely on foreign sources for sugar, just as American consumers are overdependent on foreign oil, coffee, and certain strategic materials. We do not want American consumers to be at the mercy of foreign sugar suppliers.

My concern, therefore, is not only for American farmers but equally for consumers and those workers who depend on the sugar industry for jobs.

Without sugar production, sugar plants would close down, resulting in loss of jobs and economic depression in sugar-producing communities. Sugar factories are very expensive, and, once a plant closes down in an area, it seldom reopens.

In those areas where sugar farmers could switch to other crops, such a

switch could cause disruption in farm prices for the alternative crops. In some areas, there is no alternative crop for sugar growers.

Mr. President, under the provisions of this bill a determination of how much sugar will be needed by consumers in the continental United States is made each year. The determination is announced during October for the following year and must be revised as the year progresses to achieve the price objective in the act. This establishes the amount of foreign sugar that may be imported and the amount of domestic sugar that may be marketed in the United States during the year. After the overall requirements have been determined, each domestic and foreign area supplying the United States with sugar is assigned a quota or share of the U.S. market.

Mr. President, I am a strong advocate of the free market system and would prefer to let the price of sugar be determined in the marketplace rather than rely on quotas. Nevertheless, in the case of this commodity, we cannot change existing world marketing practices.

In reality, the world free market price is actually a residual or marginal price at which only a small part—about 12 percent—of the world's sugar production is sold.

Most sugar is consumed in the countries where it is produced and usually the growers and processors in these countries are paid a much higher price for their product than the world market price.

The quota system serves to eliminate both the extremely high prices for sugar, which would hurt U.S. consumers, and the extremely low prices that could be disastrous to U.S. producers. While assuring U.S. consumers an adequate supply of sugar, the U.S. system also enables the United States to carry out the role of a good neighbor to many foreign sugar-producing areas, particularly in the Western Hemisphere. The program assures these areas of a stable market for their sugar at remunerative and stable prices with a resulting favorable impact on an extremely important sector of their foreign trade.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 674

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Sugar Act Extension of 1977".

SEC. 2. Section 412 of the Sugar Act of 1948 is amended by inserting "(a)" after "Sec. 412." and by adding at the end thereof the following new subsection:

"(b) Notwithstanding the provisions of subsection (a), the powers vested in the Secretary under this Act are reinstated effective January 1, 1978, except that, for purposes of making the determination under section 201 and establishing quotas under section 202 for the calendar year 1978, such powers are reinstated effective October 1, 1977. Such powers shall terminate on March 31 of the year of termination (after the date of the enactment of the Sugar Act Extension of 1977) of the tax imposed by section 4501(a) of the Internal Revenue Code of 1954, except that the Secretary shall have power to make payments under title III under programs applicable to crop years preceding the calendar year in which such tax so terminates."

SEC. 3. (a) Section 4501 of the Internal Revenue Code of 1954 (relating to manufacturers excise tax on sugar) is amended by adding at the end thereof the following new subsection:

"(c) Reinstatement of Tax.—Notwithstanding the provisions of subsection (b), the tax imposed under this subchapter shall apply to the manufacture or use of sugar or articles composed in chief value of sugar after December 31, 1977, except that no tax shall be imposed on such manufacture or use after June 30 of the first year commencing after the effective date of any law (enacted after the date of the enactment of the Sugar Act Extension of 1977) limiting payments under title III of the Sugar Act of 1948, as amended, or with respect to unsold sugar held by a manufacturer on such date or sugar or articles composed in chief value of sugar held in customs custody or control on such date.".

(b) The second sentence of section 4501 (b) of such Code is amended by striking out "or June 30 of the first year commencing after the effective date of any law limiting payments under title III of the Sugar Act of 1948, as amended, whichever is the earlier date,".

Mr. HANSEN. Mr. President, I am pleased to cosponsor with my colleague from Nebraska, Senator CURTIS, a bill to reinstate the provisions of the Sugar Act of 1948.

The reason for introduction of this legislation is this: sugar producers in the United States are spending more to produce their crops than they are receiving for them. They are losing money, and no one can continue a business for very long under such circumstances.

Sugar beet producers in Wyoming and other States are getting this year less than half what they got last year for their crops. Sugar cane growers face a similar problem.

In order to address the problem of unfair competition from cheaper foreign sugar, former President Ford issued an order last summer tripling the tariff on imported sugar. At that same time, the Senate Finance Committee, on which I serve, approved a resolution directing the U.S. International Trade Commission to conduct an investigation of the sugar market to determine whether quotas should be imposed for imported sugar. That investigation is still ongoing. But beyond these steps, what we need is a national sugar policy aimed at insuring a dependable, reasonably priced supply for American consumers, and an opportunity for a living wage for American producers.

Without such a policy, domestic producers will go out of business and we will become increasingly dependent on foreign sources for sugar, just as we have done with respect to oil, coffee, and other materials.

By Mr. BENTSEN:

S. 675. A bill to amend the Internal Revenue Code of 1954 to encourage greater use of insulation and to promote the development of solar and geothermal energy; to the Committee on Finance.

INSULATION, SOLAR ENERGY, AND GEOTHERMAL ENERGY TAX INCENTIVES

Mr. BENTSEN. Mr. President, the current energy crisis demonstrates the need for greater energy conservation by both individuals and businesses and the importance of developing alternative sources of energy. Last year, as part of the comprehensive tax reform legislation, the Senate approved temporary tax incentives to encourage greater use of insulation and to stimulate the development of solar and geothermal energy. Unfortunately, these important provisions were dropped from the bill during the House-Senate conference. I am today reintroducing these provisions which were formulated by the Senate Finance Committee after lengthy hearings and markup.

My bill includes four incentives.

First, individual taxpayers would be entitled to a refundable credit against income tax for certain insulation expenses such as the costs of purchasing and installing weatherstripping or storm windows. The credit would equal 30 percent of the first $750 of eligible insulation expenses for a maximum credit of $225. The credit would be effective until the end of 1979.

Second, individual taxpayers would be allowed a refundable income tax credit for solar and geothermal energy equipment. The credit would equal 40 percent of the first $1,000 of qualified expenditures, plus 25 percent of the next $6,400 for a maximum credit of $2,000. The credit would be available for equipment which uses solar or geothermal energy to heat or cool a building or to provide hot water for the building. With respect to solar energy, the equipment must meet the performance criteria prescribed under the Solar Heating and Cooling Demonstration Act of 1974. Geothermal energy equipment would be defined pursuant to the 1970 Geothermal Steam Act. This credit would be effective through 1981.

Third, the 10-percent investment tax credit would be made available until 1982 for insulation which is installed in business properties.

Fourth, a 20-percent investment tax credit would be provided until 1982 for the costs of solar and geothermal equipment.

Mr. President, a substantial portion of our domestic energy consumption is used to heat or cool residences. Currently, about 20 percent of our domestic consumption, or about 6 percent of total world demand, is used in the United States for residential purposes.

Because of the substantial energy savings that may be effected by proper insulation of homes, this legislation includes a refundable tax credit to give homeowners and tenants an incentive to conserve energy by immediate installations of insulation to reduce heat loss in the winter and to reduce heat gain in the summer. It is estimated that this tax credit will save between 50,000 and 100,000 barrels of oil per day by 1980. In addition, significant energy savings can be

achieved through greater insulation efforts by business.

Solar and geothermal energy represent a major area of possible future fossil fuel conservation and should, over a period of time, substantially aid in meeting the problem of decreasing fossil fuels. At the same time, it must be acknowledged that the solar and geothermal equipment industries are still fledgling industries. In view of this, there is a need to encourage these industries through tax incentives.

The provisions I am introducing today would be temporary so that Congress will have an opportunity to carefully evaluate the effectiveness of the incentives after a few years.

Mr. President, I urge my colleagues to enact these important energy incentives.

By Mr. BENTSEN:

S. 677. A bill to amend the Tariff Schedules of the United States to raise the value limit for personal articles which may be imported duty free by returning residents, and for other purposes; to the Committee on Finance.

Mr. BENTSEN. Mr. President, I have been concerned for some time that insufficient attention has been paid to one of the most important facets of our foreign policy, our bilateral relationship with Mexico. Too low a priority has been given to political and economic developments in Mexico and their impact on the 2,000-mile-long border our countries share. As one who was born and reared in the Rio Grande Valley, I am all too aware of the implications of ignoring the serious problems that are arising along the border as a result of actions taken—or not taken—by Washington and Mexico City.

Mr. President, I hope that each of the new administrations in Washington and Mexico City will focus on working to improve our bilateral relationship.

A number of problems between our countries are festering and must be addressed urgently. The most recent difficulty along the border has arisen out of Mexico's faltering peso and the devaluation which has stimulated serious economic depression, resulting in the loss of thousands of jobs and hundreds of millions of dollars in exports and retail sales. Official figures show retail sales from Brownsville and Matamoros to Chula Vista and Tijuana have dropped 60 to 75 percent, according to the area. Dozens of merchants in border communities in both Mexico and the United States have either gone broke or have gone deeply into debt. Unemployment in most of these areas is expected to rise 20 to 25 percent unless remedies are found.

The best solution to the peso devaluation problem is to strengthen the economies of each of the countries involved. The sooner stability in the Mexico peso is restored, the better chance we will see for a long-term improvement in the economic situation along the border. And the sooner our own country pulls out of the recession, the better chance we will have to reduce the increasingly serious rates of unemployment and low productivity along the border.

Mr. President, although each Government must find the strength and courage to take the tough steps necessary to solve its own internal problems, there are things we can do to help each other out.

I am today introducing legislation to raise the exemption on duty-free personal imports in order to increase the amount of merchandise U.S. tourists can bring back from Mexico. The main effect of this legislation, which a number of U.S. mayors along the border have asked me to support, will have the effect of making more dollars available to Mexicans to spend in this country, thereby stimulating retail purchases along the border. It will also have the effect of reducing Mexico's whopping $2.5 billion trade deficit with the United States.

In addition, Mr. President, I am introducing a second bill, which would authorize the Small Business Administration to provide up to $10 million of direct loans to small businessmen who have suffered substantial economic injury as a result of the devaluation of the Mexican peso. The terms of these loans would be the same as other SBA direct loans which are currently provided at 6⅝ percent. These loans will make it easier for small businessmen, hard hit by this devaluation, to cope with the crisis.

Devaluation of the Mexican peso has meant disaster for the economies of U.S. border cities just as surely as if they had been hit by a flood or any other natural calamity. This legislation will provide some needed relief for this serious economic problem.

I urge my colleagues to promptly enact this important legislation.

By Mr. PEARSON:

S. 679. A bill to provide equal educational opportunities for students in the Nation's elementary and secondary schools; to the Committee on Human Resources.

NATIONAL EDUCATIONAL OPPORTUNITIES ACT OF 1977

Mr. PEARSON. Mr. President, the goal of our national education policy should be to assure equal access to the best possible education for all our children within the framework of a unified school system. Busing does little to reach this goal. Neighborhood agreement on redrawn district lines, a federally assisted planning council made up of local parents and a concentrated compensatory education program to equalize resources among schools come much closer. But the legislative focus continues to center on busing, ignoring the mechanisms for conciliation and cooperation.

I have supported most proposals identified as probusing, in the belief that the transportation of students would rectify unjust policies of racial isolation without unnecessary additional injury to the public welfare. In some situations it may be that busing has a solely palliative effect. But many of our cities have demonstrated the painful evidence that such is not always the case. Assessing this evidence at its worst, it indicates that busing stimulates the flight of white students to private schools or to public schools in suburbs outside the economic reach of most blacks. So, in fact, busing may militate against integration. The evidence shows no measurable improvement in the quality of the education available to blacks and some indicators suggest it has lowered the standards of education avaliable to all children. Our busing experience shows little contribution to racial harmony and, in fact, has produced strains and divisions within our communities.

Though I do not believe that decades of injustice can be remedied without significant and painful readjustment, this evidence alone might be sufficient cause for abandoning involuntary busing. But what is more troubling is that busing, as an issue, has obscured its objectives.

Busing has come to represent the end it was intended to serve. Racial isolation, opportunity for educational improvement, and even deliberate segregation have been overshadowed by the legislative battles over busing. The focus in Congress has been on busing in and of itself. We have just not been addressing the continuing problems busing was initially designed to solve.

To me, desegregation is not merely required by law, it is a moral and social imperative. The chosen means for obtaining that end blinds us. Debate over busing must give way so desegregation may be readdressed. In this Chamber, I have heard the search for an "alternative to busing" treated as if there were some magical tool long awaiting invention. This is merely another example of the folly that has led us to our present condition. There is no single alternative other than to confront the underlying reality to which the courts have been reacting in their resort to the busing remedy.

Mr. President, Alexander Bickel, an esteemed constitutional legal scholar, recognized the congressional dilemma and offered sound advice:

> Congress and the President should address themselves not to the courts but to the problems of primary and secondary education. These problems—affecting many private as well as public schools—include poor educational results as well as racial isolation. Busing and racial balance won't solve them in most places. And there is no panacea that will solve them everywhere. Hence no categorical national policy is possible. What is possible is federal help for coherent, well-planned local efforts to improve primary and secondary education.

Professor Bickel backed that advice up with a concrete legislative proposal. His proposal became the skeleton of a bill introduced in the past by Mr. PREYER of North Carolina. Representative PREYER has worked with this legislation for some time, improving and updating its provisions. The bill I offer today is a companion to Mr. PREYER's proposal. I am convinced that the bill directly addresses the obstacles to equality and quality in education. I am confident a majority of the Members of both Houses will be similarly persuaded.

The principal advantage of this legislation is found in its recognition of local solutions to local problems. Each State would be required to submit a plan to the Secretary of Health, Education, and Welfare within 1 year. The plan would be developed in consultation with a State advisory council and with local educa-

tional agencies. These councils would be appointed by the Governor and be constructed so that the parents of public school children make up a majority of its members, with a proportionate representation by minority-group parents. Each State plan would have to assure that substantial progress is made each year and that the defined goals for equal educational opportunity are met within 5 years. Should the Secretary of HEW find that there is a failure to comply substantially with the requirements of State plans, the Secretary would be required to end Federal financial assistance under the act.

The bill specifies three components, at least two of which would have to be included in a State plan. A State which places primary and substantial emphasis on the second component listed would be eligible for supplemental funds.

First. A majority/minority transfer plan on both an intradistrict and interdistrict basis. This provision would offer a student the opportunity to enroll in a school outside the district in which he resides. The school district to which he is transferred would be compensated for added expenditure of local funds.

Second. A school district reorganization plan. This could include, on the one hand, redrawing zone boundaries within districts, pairing and clustering schools, and establishing magnet schools; and on the other, cooperative arrangements between districts for common use of existing school facilities and for construction of new joint facilities.

Third. An approved, concentrated compensatory education program. Expenditures under this program would be made only in schools with at least 25 percent low-income enrollment. The State would have to insure that average per pupil expenditures in schools or school districts participating in such a program would increase with the proportion of low-income students in these schools or school districts.

Additionally, the act would define the desegregated unitary system, in conformity with court decisions, and repeat the requirement that all States maintain unitary systems.

Also, the act would grant any student the right to transfer voluntarily from a school in which his race is a majority to one in which it is the minority within his school district. Such a right is enforceable through a civil action, and a denial of that right would also constitute a violation of the Civil Rights Act.

The bill would further require equalization of resources among schools within a district in eight very specific ways, such as pupil-teacher ratio, class size, school building and materials, teacher quality, and textbooks.

To assist States in developing and implementing State plans, the bill would authorize $200 million in fiscal year 1978 and $400 million in each of the following 4 fiscal years. In fiscal year 1978, 85 percent would go to States according to the proportion of the Nation's minority-group children each State contains. In the succeeding years, 65 percent of any appropriations would be similarly apportioned to qualifying States as basic grants, 30 percent as supplemental funds, and 5 percent to public and private agencies to assist the States in implementing and evaluating the plans.

Mr. President, we have divided ourselves bitterly over the busing of children to achieve racial balance when we should address ourselves to the real question: How to provide each child equal access to a quality education. The bill I introduce addresses just that problem. It makes available resources to provide quality education to those who are in the best position to judge whether or not their children do, in fact, have access to quality educational resources. Those persons are parents, local and State school officials. And I state unequivocally that local control of public schools does not mean that the Constitution of the United States can be ignored. Local control of schools under this bill will no longer be a code word for local discrimination.

We cannot supplant busing unless we correct the underlying problems that prevent a new and more compatible design for desegregation from emerging. Until the instruments for conciliation are in place, until the mechanisms and resources for community cooperation are set to work, there is little hope for the informed consent essential to successful voluntary action.

By Mr. SCHWEIKER:

S. 680. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit to employers for wages paid to youths 21 years of age or under or to persons unemployed for 15 weeks or more who have been hired to increase the work force of the employer; to the Committee on Finance.

NEW JOBS TAX CREDIT ACT

Mr. SCHWEIKER. Mr. President, I send to the desk for appropriate reference a bill to amend the Internal Revenue Code of 1954 to provide an income tax credit to employers for wages paid to youths 21 years of age or under or to persons unemployed for 15 weeks or more who have been hired to increase the work force of the employer.

Mr. President, although the unemployment rate declined in January to 7.3 percent, there were still nearly 7 million workers unemployed in this country. This figure is appalling enough in itself. But upon closer examination it becomes clear that certain groups suffer disproportionately from the ravages of high unemployment. More than one-third of those unemployed in January were between the ages of 16 and 21. This means that 2,408,000 young people were being denied the chance to work during a critical developmental stage—their early years in the job market.

In addition, a substantial portion of unemployment is long term. There had been 2,283,000 individuals out of work for 15 weeks or more in January. If you add the number of older workers unemployed for 15 weeks or more to the unemployed between the ages of 16 and 21, you arrive at a devastating figure of roughly 4 million. Nearly 60 percent of the jobless in this country are either young or have been unemployed for over 15 weeks.

As we continue our discussions of the most effective strategies to reduce unemployment and to stimulate a sluggish economy, I believe we must attend very closely to the needs of those groups hardest hit by adverse economic conditions—youths and the long-term unemployed. Members of these groups will not benefit as substantially as other unemployed workers from implementation of traditional fiscal and monetary policies. These individuals are plagued by disadvantages such as inexperience and a lack of readily marketable skills which will not disappear with increases in aggregate demand. In the past we have attempted to neutralize these disadvantages through job training and public service employment programs designed to facilitate transitions to regular employment in the private sector. President Carter proposes to continue this approach and to expand training and youth programs under CETA by 346,000 positions and public service employment by 415,000 jobs. I have consistently supported CETA and believe that the programs authorized by that act can play an important role in our battle against unemployment.

However, I believe we must begin now to recognize the limitations of these programs. They should not be relied upon as our primary weapon against the problems of youth and long-term unemployment. Even under the ambitious and expensive program proposed by President Carter, millions of youths and long-term unemployed workers would be left with neither jobs nor training. At the very best, with 761,000 new slots, only a fraction of the roughly 4 million unemployed youths and long-term unemployed workers would be reached by the Carter program. What does the President propose we do with those who would be left unserved?

I will continue to support much-needed training programs under CETA. But I believe the funds President Carter has earmarked for an additional 415,000 public service jobs, over and above the 310,000 we have now under titles II and VI of CETA could be put to better use. We owe it both to those who would be left unserved by the Carter program and to the American taxpayers to explore new approaches to old problems.

The bill I introduce today embodies a new approach both to the problems of youth and long-term unemployment. This New Jobs Tax Credit Act would provide employers with an income tax credit of 20 percent up to $2,000 for wages paid to youths 21 years of age or under, or to persons unemployed for 15 weeks or more, who have been hired as additions to an employer's work force over a previously established base level. The credit would be available during taxable years 1977 and 1978 and an employer could receive the credit for 12 months for each eligible new employee. In addition, if an employer had insufficient tax liability to subtract the full credit, he would receive the credit as a tax refund.

Our ultimate objective should be to put people to work in the private sector where they can contribute most significantly to the economic well-being of this Nation. I believe we must begin to do more than pay lip-service to the value of private sector participation. Certainly we must do more than provide employers with a choice between a credit equal to 4 percent of social security payroll taxes or a 2 percent increase in the investment tax credit, as President Carter has proposed. In my view this is woefully inadequate.

By providing employers with a substantial tax credit for hiring the hard-to-employ, we would allow the employer to enjoy considerable savings in wage costs. These savings would neutralize the disadvantages brought to the workplace by youths and the long-term unemployed and would enable employers to provide these workers with the experience and training they so desperately need. President Carter's plan to more than double the number of public service jobs is an unimaginative, worn-out proposal which at best creates temporary government jobs at high costs with little assurance of permanent employment. I believe strongly that we should seek, to the greatest extent possible, to provide work experience and training through the private rather than the public sector. An individual hired as a result of the new jobs tax credit would stand a far better chance of keeping the regular long-term job that a CETA employee or trainee can only hope to obtain.

The cost of a tax credit job, aside from its other inherent advantages, would compare favorably with the cost of a public service job. And I believe the level of the credit would be sufficient to stimulate substantial hiring. It should be noted that the income tax credit would reduce the effective rate of the minimum wage to $1.84 an hour for employers while still providing the new employees with at least the $2.30-an-hour minimum wage in covered industries.

Mr. President, I believe the innovative approach of this New Jobs Tax Credit Act deserves careful consideration as we begin a serious review of the various proposals before us. I hope that my colleagues will study this bill, offer their suggestions, and ultimately act favorably on it as part of a concerted effort to remedy the economic ills which afflict this Nation.

By Mr. HEINZ:

S. 681. A bill to amend the Wild and Scenic Rivers Act of 1968 by designating a portion of the Allegheny River, Pennsylvania, for potential addition to the National Wild and Scenic Rivers System; to the Committee on Energy and Natural Resources.

Mr. HEINZ. Mr. President, I am today introducing legislation to authorize a study of a portion of Pennsylvania's Allegheny River for possible inclusion in the National Wild and Scenic Rivers System.

A similar bill was once offered by my distinguished predecessor, Senator Hugh Scott, and was passed by the Senate in 1975. Unfortunately, the House did not take action on the bill.

The Upper Allegheny River currently retains most of its natural environment, free from intruding developments. One of the remarkable scenic values of this segment of river is its more than 60 islands. A variety of birds and game animals inhabit the timber and shrub cover on these islands.

In addition to the islands, the natural beauty and usefulness of the river is enhanced by 147 creeks and streams emptying into it. All of the creek valleys are heavily forested, and the Pennsylvania Fish Commission stocks many of the streams with trout. The crucial economic value of sport fishing to this area has been documented in a report prepared for the State Department of Environmental Resources by Henry Bramer from the Pittsburgh firm of Datagraphics, Inc.

According to George Reese, member of the board of directors of the Allegheny River Protective Association, the economic health of the greater part of the river corridor is chiefly dependent upon recreational activities such as fishing, hunting, boating, and camping. Thus, the existing natural environment is a basic source of the Allegheny River's economic strength.

The need for protection from adverse use has been answered to a large extent by the policies of the department of environmental resources, the practices of the State fish commission, and the Western Pennsylvania Conservancy, all of whom are working successfully to curtail developments which detrimentally affect the ecological balance of this river system. These separate efforts could be integrated and extended by an overall management provided by the National Wild and Scenic Rivers System.

Mr. President, I ask that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 681

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (a) of section 5 of the Wild and Scenic Rivers Act (82 Stat. 906), as amended, is further amended by adding at the end thereof the following:

"(59) Allegheny, Pennsylvania: The main stem from Kinzua Dam downstream to East Brady."

By Mr. MAGNUSON:

S. 682. A bill to amend the Ports and Waterways Safety Act of 1972; to increase the use of vessels of the United States to carry imported oil; and for other purposes; to the Committee on Commerce, Science, and Transportation.

TANKER SAFETY ACT OF 1977

Mr. MAGNUSON. Mr. President, I introduced for appropriate reference a bill entitled "The Tanker Safety Act of 1977." The bill is a very complex bill, and is also the result of quite lengthy hearings on this very, very important matter.

There have been several bills introduced in the Senate and in the House on this matter. But, as the Senator from Alaska knows, this is another bill which is sort of the consensus of the Commerce Committee after all the hearings and research on the bill.

The bill itself is an attack upon the problem of oil pollution throughout the domestic and international waters. I do not know whether we will have too many further hearings on the bill because we have covered practically the whole subject, but I expect we can get it out of the Commerce Committee and quickly expedite the matter, and get it on the floor because the matter is urgent.

This bill has been prepared in response to the hearings conducted last month by the Senate Commerce Committee into the recent tanker accidents in and around U.S. waters. The bill has two basic goals: First, to provide for increased safety of all tankers operating in U.S. waters; and second, to increase the share of U.S. vessel participation in the carriage of imported oil.

The general conclusion of the Commerce Committee hearings, which I chaired, was that more can and should be done to improve tanker safety in our waters. The Ports and Waterways Safety Act of 1972 is the basic statute for this purpose. That act empowers the Secretary of Transportation to control tightly vessel traffic in U.S. navigable waters and to prescribe standards for the design, construction, operation, and manning of vessels carrying oil and hazardous materials in bulk. Despite the sweeping powers afforded the Secretary under the act, the U.S. Coast Guard, which is responsible for developing policy under the act, has been reluctant to move quickly and independently. The Coast Guard claims that "foreign policy considerations" prevent full use of their powers under the Ports and Waterways Safety Act.

For the past 4½ years since the enactment of the Ports and Waterways Safety Act, the Commerce Committee has closely monitored the sporadic unfolding of rules and regulations by the Coast Guard. In March of last year, during oversight hearings, I indicated that regulations applicable to tankers in the domestic U.S. trade did not go as far as Congress had intended. In addition, the Coast Guard seemed to be relying heavily on the industry it was supposed to regulate in drawing up these rules.

Moreover, it appeared as though the Coast Guard has deferred to international standards even though the United States had ample legal authority to establish standards more stringent than those agreed upon internationally. In short, the cause of tanker safety can be advanced much farther by more aggressive policies.

Shortly after the Coast Guard issued rules applicable to foreign tankers in December, this country witnessed a most incredible series of tanker accidents. The Nation watched as a foreign-flag vessel, miles off course, split apart and polluted one of the Nation's most important fishing grounds. Shortly thereafter, another completely disappeared in the same area. Another, as a result of the unconscionable greed of its owners, tried to carry one

more last cargo rather than sailing empty to meet its date with the scrapyard, and then went adrift at sea. The crew of this vessel headed for the nearest church upon reaching port under a Coast Guard tow. For a few weeks, the entire oil transportation system seemed to be reaching a breaking point.

But those of us who have followed this subject know that these events were not highly unusual, but were rather part of a short-term upsurge in the general growth in tanker accidents. Last year was the worst year on record for tanker accidents, even without the *Argo Merchant*, the *Golden Jason*, and the others. And it is bound to get worse, unless strong measures are taken to reduce the steadily rising risk of vessel accident.

The first thing this Nation must do is prescribe the most stringent standards for vessel safety it can reasonably devise. And we should do it without waiting for any international body to act. We must assert our national interest in clean beaches and unspoiled natural resources in terms strong enough to bring about meaningful change. I believe that the bill I am introducing today is a step in that direction.

The bill has two main features. Title I is entitled the "Ports and Waterways Safety Act Amendments of 1977." Title II would create the Equitable Cargo Share Act of 1977. Both will improve tanker safety in our waters.

The Ports and Waterways Safety Act amendments expand and strengthen the basic act. In particular, congressional intent is spelled out more clearly in a new "declaration of policy" provision. The amendments create a new 200-nautical-mile "maritime safety zone" in which discharges of oil and hazardous materials are prohibited, traffic control systems are to be set up, and expanded enforcement can occur. The amendments also establish minimum requirements for tankers in addition to those prescribed by regulation by the Secretary of Transportation. These include: Dual radar, collision avoidance systems, the latest navigation systems, retrofitting of segregated ballast and gas inerting systems, double bottoms or double hulls for new tankers, back-up boilers, and others.

Also created by the amendments would be: a program of preventing substandard vessels from entering U.S. waters or loading cargo in U.S. ports; an improved national program of inspection and enforcement; more stringent rules for federally licensed pilots; authority for the Secretary to issue more improved manning and personnel requirements; and creation of a cadre of "maritime safety officers" to enforce the provisions of the act.

Mr. President, this legislation will make U.S. vessel safety legislation among the toughest in the world.

Title II of the bill deals with another chronic problem which has contributed to a lowered level of safety in our waters. Testimony before the Commerce Committee established the fact that approximately 85 percent of all maritime accidents are caused by human error. Some conclude from this statistic that nothing much can be done to combat this problem. I strongly disagree. One thing we can do is to require improved technology to assist the personnel on the ship. This is accomplished in title I of this bill. The other thing we can do is increase the quality of the crews of the vessels operating in our waters. By increasing the share of oil cargoes carried by U.S. vessels, we can be assured that oil tankers are manned and operated in a manner which best protects the marine environment. And with more U.S. vessels will come greater accountability for pollution. If we continue to rely on foreign vessel crews who care little about taking extra safety precautions necessary to protect U.S. waters, then more accidents will occur.

Therefore, Mr. President, title II contains provisions to increase the U.S. vessels' share of oil cargoes to 30 per cent. With no international control over manning of tankers and with so many nations doing little—except what the vessel owner wants—we are at the mercy of flag-of-convenience vessels. By reducing our dependence on these vessels, we correspondingly increase our control over tanker safety.

The Senate Commerce Committee is making the issue of improved tanker safety one of its top priorities in this Congress. I plan further hearings in the next few weeks on this issue and on bills introduced to deal with this subject.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 682

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Tanker Safety Act of 1977".

TITLE I—AMENDMENTS TO THE PORTS AND WATERWAYS SAFETY ACT

SECTION 1. SHORT TITLE.

This title may be cited as the "Ports and Waterways Safety Act Amendments of 1977".

SEC. 2. DECLARATION OF POLICY AND DEFINITIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by inserting the following new section after the short title and immediately before title I:

"SEC. 2. FINDINGS, PURPOSES, AND POLICY.

"(a) FINDINGS.—The Congress finds and declares the following:

"(1) Navigation and vessel safety and protection of the marine environment are matters of major national importance. Increased vessel traffic in the Nation's ports and waterways creates substantial hazard to life, property, and the marine environment of the United States.

"(2) International standards for navigation and vessel safety and protection of the marine environment are incomplete and fail to provide adequate protection of the marine environment of the United States. The Federal Government should seek to require more stringent such standards for all vessels operating in the navigable waters of the United States.

"(3) Standards developed under this Act shall incorporate the best available technology. Such standards shall be required unless clearly shown to create undue economic hardship and such hardship is not outweighed by environmental benefits.

"(4) Increased regulatory and enforcement efforts by the Federal Government are necessary to reduce the possibility of vessel or cargo loss, or damage to life, property, or the marine environment of the United States.

"(b) PURPOSES.—It is therefore the purposes of Congress in this Act—

"(1) to authorize a comprehensive regulatory and enforcement program for increased navigation and vessel safety and enhanced protection of the marine environment;

"(2) to direct that the Federal Government establish stringent standards for the design, construction, equipment, maintenance, alteration, repair, operation, and manning of all vessels which operate in the navigable waters of the United States;

"(3) to create a 200-nautical mile maritime safety zone for the purpose (A) of preventing discharges of oil or hazardous materials from vessels and (B) providing for increased navigation safety;

"(4) to establish a program of preventing any substandard vessel from entering the navigable waters of the United States; and

"(5) to provide for an improved program of vessel inspection and enforcement.

"(c) POLICY.—It is further declared to be the policy of the Congress in this Act—

"(1) to maintain without change the existing territorial jurisdiction of the United States for all purposes other than navigation and vessel safety and protection of the marine environment, as provided for in this Act;

"(2) to authorize no impediment to, or interference with, recognized legitimate uses of the high sea, except as necessary for navigation and vessel safety and protection of the marine environment, as provided for in this Act; and

"(3) to support and encourage continued active United States efforts to obtain international agreements concerning navigation and vessel safety and protection of the marine environment.

"SEC. 3. DEFINITIONS.

"As used in this Act, unless the context otherwise requires:

"(1) The term 'discharge' means any spilling, leaking, pumping, pouring, emptying, or dumping, however caused, in unlawful quantities or at an unlawful rate.

"(2) The term 'domestic trade' means trade between ports or places in the United States, its territories or possessions, either directly or via a foreign port, including trade on the navigable waters of the United States.

"(3) The term 'foreign trade' means any trade other than the domestic trade.

"(4) The term 'foreign vessel' or 'vessel of a foreign nation' means any vessel documented under the laws of any nation other than the United States.

"(5) The term 'hazardous material' means any material or substance which is—

"(A) inflammable or combustible;

"(B) designated a hazardous polluting substance under section 12(a) of the Federal Water Pollution Control Act (33 U.S.C. 1162); or

"(C) in a quantity or form which may pose an unreasonable risk to health and safety, or property, when transported in commerce.

"(6) The term 'high seas' means all waters beyond the territorial sea of the United States and beyond the territorial sea of any foreign nation, to the extent that such sea is recognized by the United States.

"(7) The term 'marine environment' means the coastal zone, defined in section 304(1) of the Coastal Zone Management Act of 1972 (16 U.S.C. 1453(1); the seabed, subsoil, natural resources, and waters of the territorial sea of the United States; the waters and fishery resources of any zone over

which the United States asserts exclusive fishery management authority; the waters of the high seas; and the seabed and subsoil of and beyond the Continental Shelf.

"(8) The term 'maritime safety zone' means the maritime safety zone established by section 301.

"(9) The term 'navigable waters of the United States' means the waters of the Untied States, including inland waters and the territorial sea.

"(10) The term 'oil' means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil.

"(11) The term 'person' means any individual (whether or not a citizen or national of the United States), or any corporation, partnership, association, or other entity (whether or not organized or existing under the laws of any State), and any Federal, State, local, or foreign government or any entity of any such government.

"(12) The term 'public vessel' means a vessel which—

"(A) is owned, or chartered by demise, and operated by the United States or any foreign government; and

"(B) is not engaged in commercial service.

"(13) The term 'Secretary' means the Secretary of Transportation.

"(14) The term 'State' means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, and any other commonwealth, territory, or possession of the United tSates.

"(15) The term 'United States', when used in the geographical context, means all the States thereof.

"(16) The term 'vessel' means every description of watercraft or other artificial contrivance used as a means of transportation through or on water.

"(17) The term 'vessel of the United States' means any vessel documented under the laws of the United States.".

SEC. 3. NAVIGATIONAL AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT.

Title I of the Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221–1227) is amended to read as follows:

"TITLE I—NAVIGATION AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT

"SEC. 101. VESSEL TRAFFIC CONTROL.

"(a) IN GENERAL.—The Secretary is authorized and directed, in the ports, harbors, the navigable waters of the United States, and the waters of the maritime safety zone, to—

"(1) establish, operate, and maintain vessel traffic systems or services, in accordance with section 103;

"(2) require any vessel, which operates within waters subject to any vessel traffic system or service, to utilize or comply with any such system or service, including requiring the installation and use of any electronic or other device necessary for such utilization or compliance;

"(3) control vessel traffic by—

"(A) specifying times of entry, movement, or departure;

"(B) establishing vessel traffic routing schemes;

"(C) establishing vessel size and speed limitations and vessel operating conditions; and

"(D) restricting operation, in any hazardous area or under hazardous conditions, by any vessel which has particular operating characteristics or capabilities, in a manner deemed necessary for safe operation under the circumstances; and

"(4) direct the anchoring, mooring, or movement of any vessel when necessary to prevent damage to or by that vessel or her stores, cargo, supplies, or fuel.

The Secretary shall publish and distribute any relevant information with regard to actions taken under this section to all interested persons, including foreign citizens.

"(b) EXCEPTIONS.—This title shall not apply to—

"(1) any vessel of any foreign nation that is in transit through the waters of the maritime safety zone, and that is destined for any port or place outside the United States; or

"(2) any vessel of any foreign nation that is in transit through navigable waters of the United States which form a part of any international strait, and that is destined for any port or place outside the United States.

"SEC. 102. WATERFRONT SAFETY.

"The Secretary is authorized and directed to take such action as is necessary to prevent damage to, or the destruction or loss of, any dock, bridge, or other structure on or in the navigable waters of the United States, or any structure on land or in any shore area immediately adjacent to any such waters, including, but not limited to—

"(1) establishing procedures, measures, and standards for the handling, loading, unloading, storage, stowage, and movement on any such structure, including the emergency removal, control, and disposition, of any oil or hazardous material;

"(2) prescribing minimum safety equipment requirements for any such structure to assure adequate protection from fire, explosion, natural disasters, and other serious accidents or casualties;

"(3) establishing water or waterfront safety zones, or other measures for limited, controlled, or conditional access and activity when necessary for the protection of any vessel, structure, waters, or shore area; and

"(4) establishing procedures for inspection to assure compliance with minimum safety requirements for structures.

"SEC. 103. CONSIDERATIONS BY SECRETARY.

"The Secretary shall, in carrying out his duties and responsibilities under this title, take into account all relevant factors concerning navigation and vessel safety and protection of the marine environment, including, but not limited to—

"(1) the scope and degree of the risk or hazard involved;

"(2) vessel traffic characteristics and trends, including traffic volume, the sizes and types of vessels involved, potential interference with the flow of commercial traffic, the presence of any unusual cargoes, and other similar factors;

"(3) port and waterway configurations and variations in local conditions of geography, climate, and other similar factors;

"(4) the proximity of fishing grounds, oil and gas drilling operations, or any other potential or actual conflicting activity;

"(5) environmental factors;

"(6) economic impact and effects;

"(7) existing vessel traffic control systems and services; and

"(8) local practices and customs, including voluntary arrangements and agreements within the maritime community.

"SEC. 104. PILOTAGE.

"(a) IN GENERAL.—The Secretary may require pilots on any self-propelled vessel of the United States engaged in the foreign trade and any foreign vessel, operating in the navigable waters of the United States in areas and under circumstances where a pilot is not otherwise required by State law, or in waters of the maritime safety zone. Such pilot shall be required until the State involved establishes a requirement for a pilot in any such area or under the circumstances involved.

"(b) QUALIFICATIONS.—(1) Section 4442 of the Revised Statutes is amended by deleting the entire section and inserting in lieu thereof the following new language:

"'(a) The Commandant of the United States Coast Guard is authorized and directed, in accordance with subsection (b) of this section, to establish eligibility requirements for the issuance of a license to pilot any steam vessel.

"'(b) No person may be issued a license to pilot any steam vessel unless he—

"'(1) is at least 21 years of age;

"'(2) is of sound health and has no physical limitations which would hinder or prevent the performance of a pilot's duties;

"'(3) agrees to have a thorough physical examination each year while holding a pilot's license;

"'(4) demonstrates, to the Commandant's satisfaction, that he possesses the requisite general knowledge and skill to hold a pilot's license;

"'(5) maintains adequate knowledge of the waters to be navigated as a pilot;

"'(6) demonstrates, to the Commandant's satisfaction, his ability to handle any vessel of the type and size which he may be endorsed to pilot; and

"'(7) meets any other requirement which the Commandant considers reasonable and necessary.

"'(c) No license to pilot any steam vessel shall be valid for a term longer than 3 years. Upon expiration of any such license, the holder may reapply for an additional term and may be reissued a license if he meets the requirements under subsection (b) of this section.

"'(d) The Commandant may revoke or suspend any license to pilot any steam vessel upon satisfactory evidence of—

"'(1) negligence;

"'(2) unskillfulness;

"'(3) failure to adhere to any requirements for a license;

"'(4) willful violation of tiltle 52 of the Revised Statutes; or

"'(5) other just cause related to the performance of pilot duties.

"'(e) For the purposes of this section, the term—

"'(1) "coastwise vessel" means a vessel which is enrolled and licensed for domestic trade and operate solely between ports or places in the United States; and

"'(2) "seagoing coastwise vessel" means any coastwise vessel which operates in waters in which the International Rules of the Road must be observed.'.

"(C) UNIFORM STANDARDS.—The Secretary shall develop, and shall seek adoption by the States of uniform, minimum standards relating to the regulation of pilotage at least equal to those required of federally licensed pilots.

"SEC. 105. INVESTIGATORY POWERS.

"(a) The Secretary, or the National Transportation Safety Board, may investigate any incident, accident, or act which—

"(1) results in any loss or destruction of, or damage to, any structure or vessel; or

"(2) affects, or may affect, the navigation or vessel safety or environmental quality of the ports, harbors, and navigable waters of the United States, or the waters of the maritime safety zone.

"(b) In any such investigation, the Secretary or the Board may issue subpenas to require the attendance of any witness and the production of any document or other evidence relating to any such incident, accident or act. If any person refuses to obey any subpena, the Secretary or the Board may request the Attorney General to invoke the aid of the appropriate district court of the United States to compel compliance. Witnesses may be paid fees for travel and attendance at such rates not exceeding those allowed in a district court of the United States.

"SEC. 106. PROHIBITION.

"No vessel shall enter or operate in the navigable waters of the United States, or load cargo in, or destined for, any port or place in the United States if such vessel—

"(1) has a record of accidents or serious repair problems which, as determined by the Secretary, creates reason to believe that such vessel may be unsafe or create a threat to the marine environment; or

"(2) fails to comply with any applicable regulation issued under this Act or other law or treaty.

No such vessel shall enter or operate in the navigable waters of the United States, or load cargo in, or destined for, any port or place in the United States, unless and until the owner of such vessel proves, to the satisfaction of the Secretary, that such vessel is (A) no longer unsafe or a threat to the marine environment, or (B) complies with the applicable regulation, as appropriate.

"SEC. 107. APPLICATION OF TITLE.

"This title shall not be applicable to the Panama Canal. The authority granted to the Secretary under sections 101 and 102 shall not be delegated with respect to the Saint Lawrence Seaway to any agency other than the Saint Lawrence Seaway Development Corporation. Any other authority granted the Secretary under this title shall be delegated to the Saint Lawrence Seaway Development Corporation to the extent the Secretary determines such delegation is necessary for the proper operation of the Seaway.".

"SEC. 4. VESSELS CARRYING CERTAIN CARGOES IN BULK.

Section 201 of the Ports and Waterways Safety Act is amended to read as follows:

"SEC. 201. Section 4417a of the Revised Statues of the United States (46 U.S.C. 391a) is amended to read as follows:

"SEC. 4417a. (1) APPLICABILITY.—Except as provided in subsection (2), this section shall apply to any vessel—

"'(A) regardless of tonnage, size, or manner of propulsion;

"'(B) whether self-propelled or not;

"'(C) whether carrying freight or passengers for hire or not;

"'(D) which is documented under the laws of the United States or which enters the navigable waters of the United States; and

"'(E) which carries oil or any hazardous material in bulk.

Any such vessel shall be deemed to be a steam vessel for the purpose of title 52 of the Revised Statutes of the United States and shall be subject to the provisions thereof.

"'(2) EXCEPTIONS.—This section shall not apply to—

"'(A) any public vessel;

"'(B) any vessel having on board oil or any hazardous material for use only as stores, fuel, or in drums, barrels, or other packages;

"'(C) any vessel of not more than 500 gross tons documented in the service of oil exploitation which are not tank vessels and which would be subject to this section only because of the transfer of fuel from fuel supply tanks of such vessel to offshore drilling or production facilities; or

"'(D) any vessel of any foreign nation that is in transit in navigable waters of the United States which form a part of any international strait and that is destined for any port or place outside the United States.

"'(3) SAVING CLAUSE.—Nothing contained in this section shall be deemed to amend or modify the provisions of section 4 of Public Law 90-397 with respect to certain vessels of not more than 500 gross tons.

"'(4) STANDARD-SETTING AUTHORITY.

"'(A) The Secretary shall establish, for any vessel to which this section applies, such additional standards governing the design, construction, alteration, repair, manning, and maintenance of any vessel as may be necessary for increased navigation and vessel safety and enhanced protection of the marine environment, including, but not limited to, standards with respect to—

"'(i) superstructures, hulls, cargo holds or tanks, fittings, equipment, appliances, propulsion machinery, auxiliary machinery, and boilers;

"'(ii) the handling or stowage of cargo, the manner of such handling or storage of cargo, and the machinery and appliances used in such handling or stowage;

"'(iii) equipment and appliances for life saving, fire protection, and prevention and mitigation of damage to the marine environment;

"'(iv) requirements for the manning of such vessels and the duties and qualifications of the officers and crew, in accordance with subsection (7);

"'(v) improvements in vessel maneuvering and stopping ability and other features which reduce the possibility of collision, grounding, or other accidents;

"'(vi) the reduction of cargo loss in the event of a collision, grounding, or other accident; and

"'(vii) the reduction or elimination of discharges during ballasting, deballasting, cargo handling, or other such activity.

"'(B) In establishing such standards, the Secretary shall give due consideration to the kinds and grades of cargo permitted to be on board any such vessel.

"'(5) MINIMUM STANDARDS.—In addition to any standards prescribed by the Secretary pursuant to paragraph (4), or any other law, any vessel to which this section applies, shall, after January 1, 1978, be equipped with—

"'(A) a radar system with short-range and long-range capabilities and with true-north features;

"'(B) a collision avoidance system;

"'(C) a loran-C long-range navigation aid;

"'(D) satellite navigation capability;

"'(E) a transponder which can automatically report position and identification;

"'(F) adequate communications equipment;

"'(G) a fathometer;

"'(H) two gyrocompasses;

"'(I) up-to-date charts;

"'(J) a segregated ballast system and a gas inerting system, if such vessel carries oil in bulk and is of a size in excess of 20,000 deadweight tons;

"'(K) a double bottom fitted throughout the cargo length of such vessel or a double hull, if the construction of such vessel is contracted for, or actually commenced, after June 30, 1977;

"'(L) a redundant propulsion source; and

"'(M) shaft horsepower in the ratio of 1 horsepower to each 2½ deadweight tons.

"'(6) CERTIFICATE OF COMPLIANCE.—(A) No vessel, to which this section applies, shall enter the navigable waters of the United States unless such vessel has been issued a certificate of compliance by the Secretary. The Secretary shall issue such certificate if, after an inspection pursuant to section 403 of the Ports and Waterways Safety Act, as amended, he determines that such vessel is in compliance with—

"'(i) the provisions of title 52 of the Revised Statutes of the United States, and

"'(ii) the rules and regulations applicable to such vessel under this section, or any other law or treaty.

"'(B) The Secretary shall issue such a certificate to any vessel of a foreign nation, to which this section applies, if such nation has issued to such vessel a valid certificate of inspection recognized under law or treaty by the United States.

"'(C) No vessel may carry any kind or grade of cargo unless its certificate of compliance is endorsed to allow such carriage. No such endorsement may allow any vessel to carry any material prohibited by subsection (3) of section 4472 of this title.

"'(D) A certificate of compliance, or an endorsement, issued under this subsection shall be valid for a period of time not to exceed 1 year, as specified by the Secretary. Such certificate or endorsement shall be revoked if the Secretary finds that the vessel involved no longer complies with the conditions upon which such certificate or endorsement was issued.

"'(7) MANNING AND TRAINING REQUIREMENTS.—The Secretary shall prescribe standards for the manning of any vessel subject to the provisions of this Act and the duties, qualifications, and training of the officers and crew thereof. Such standards shall include, but need not be limited to:

"'(A) Instruction in vessel and cargo handling and vessel navigation under normal operating conditions in coastal and confined waters and on the high seas.

"'(B) Instruction in vessel and cargo handling and vessel navigation in emergency situations, under accident or potential accident conditions.

"'(C) License qualifications by specific class and size of vessels.

"'(D) Measurement of qualification for licenses by use of simulators developed for the training of marine oriented skills.

"'(E) Health and physical fitness criteria for all personnel.

"'(F) Periodic retraining, and special training for upgrading positions, changing vessel class or size, or assumnig new responsibilities.

"'(G) Determination of licenses, conditions of licensing, and period of licensing by reference to experience, amount of training completed, and regular performance testing.

"'(H) Recordation of safety and/or pollution control violations on licenses.

"'(I) Suspension of personnel with an unsatisfactory record of compliance with safety and pollution control standards.'".

SEC. 5. NAVIGATIONAL SAFETY AUTHORITY OF THE UNITED STATES.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by adding the following new title:

"TITLE III—MARITIME SAFETY AUTHORITY OF THE UNITED STATES

"SEC. 301. MARITIME SAFETY ZONE.

"There is established a zone contiguous to the territorial sea of the United States to be known as the maritime safety zone. The inner boundary of the maritime safety zone is a line coterminous with the seaward boundary of the territorial sea of the United States, and the outer boundary of such zone is a line drawn in such a manner that each point on it is 200 nautical miles from the baseline from which the territorial sea is measured.

"SEC. 302. MARITIME SAFETY AUTHORITY.

"The United States shall exercise authority in the maritime safety zone to assure navigation and vessel safety and protection of the marine environment by—

"(1) prohibiting any discharge, by any vessel (except a public vessel), of any oil or hazardous material;

"(2) enforcing the provisions of any international agreement to which the United States is a party concerning navigation and vessel safety or protection of the marine environment;

"(3) prescribing vessel traffic control, pursuant to section 101; and

"(4) inspecting any vessel destined for any port or place in the United States, pursuant to section 401.

"SEC. 303. EFFECTIVE DATE.

"This title shall take effect January 1, 1978.".

SEC. 6. INSPECTION AND ENFORCEMENT.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by adding the following new title:

"TITLE IV—INSPECTION AND ENFORCEMENT

"SEC. 401. MARITIME SAFETY OFFICERS.

"(a) AUTHORIZATION.—The Secretary may authorize any person to serve as a maritime safety officer with the powers set forth in subsection (b).

"(b) POWERS.—Any person authorized by the Secretary under subsection (a) to serve as a maritime safety officer may, with or without a warrant or other process—

"(1) arrest any person, if he has reasonable cause to believe that such person has committed an act prohibited by section 402;

"(2) board and inspect any vessel which is subject to the provisions of this Act;

"(3) order any vessel to operate or anchor in a manner he directs if—

"(A) he has reasonable cause to believe such vessel does not comply with any regulation issued under this Act or any other applicable law or treaty;

"(B) by reason of weather, visibility, sea conditions, or the condition of such vessel, its equipment or its cargo, he is satisfied that such directive is justified in the interests of safety;

"(4) enter and inspect any shore area, place, or premises, containing any dock, bridge, or other structure, which is subject to the provisions of this Act;

"(5) execute any warrant or other process issued by any court of competent jurisdiction; and

"(6) exercise any other lawful authority.

"SEC. 402. PROHIBITED ACTS.

"It is unlawful—

"(1) for any person—

"(A) to violate any provision of this Act or any regulation issued pursuant to this Act;

"(B) to refuse to permit any officer authorized to enforce the provisions of this Act (as provided for in section 401) to board any vessel, or enter any shore area, place, or premises, under such person's control for purposes of inspection pursuant to this Act;

"(C) to discharge any oil or hazardous material into the waters of the maritime safety zone from any vessel subject to the provisions of this Act;

"(D) to fail to report any discharge of oil or hazardous material into the waters of the maritime safety zone to the United States Coast Guard;

"(E) to refuse to obey any lawful directive of a maritime safety officer pursuant to section 401; or

"(F) to resist a lawful arrest for any act prohibited by this section;

"(2) for any vessel subject to the provisions of this Act—

"(A) to operate in the navigable waters of the United States, or in the waters of the maritime safety zone, as appropriate, while not in compliance with any provision of this Act or any regulation issued pursuant to this Act;

"(B) to discharge any oil or hazardous material into the waters of the maritime safey zone; or

"(C) to fail to comply with any lawful directive of a maritime safety official pursuant to section 401.

"SEC. 403. INSPECTION.

"(a) NATIONAL PROGRAM.—(1) The Secretary shall establish a national program for inspection of any vessel subject to the provisions of this Act. Each such vessel shall be inspected at least once each year. Any such vessel over 10 years of age shall undergo a special structure inspection, as determined by the Secretary.

"(2) An inspection may be conducted by—

"(A) a maritime safety officer appointed by the Secretary pursuant to section 401; or

"(B) any agent of a qualified inspection organization approved by the Secretary.

"(3) The owner of any vessel inspected by a maritime safety officer shall reimburse the Secretary for the cost of such inspection.

"(4) No vessel may be issued a certificate of compliance under section 4417a(6) by the Secretary unless he determines that such vessel is in compliance with the requirements of such section. If any vessel does not so comply, the Secretary shall notify the owner of such vessel and indicate how such vessel may be brought into compliance.

"(b) VESSEL DOCUMENTS.—(1) Any vessel subject to the provisions of this Act shall have on board such documents as the Secretary deems necessary for inspection or enforcement under this Act, including, but not limited to, documents indicating—

"(A) the kind, grade, and approximate quantities of any cargo on board such vessel;

"(B) the shipper and consignee of such cargo;

"(C) the points of origin and destination of such vessel; and

"(D) the name of any person with an ownership interest in such vessel and the name of an agent in the United States authorized to accept legal process.

"(c) RECIPROCITY.—The Secretary may accept, as evidence of compliance with the provisions of this Act, any certificate or document issued by any foreign nation pursuant to any treaty, convention, or other international agreement to which the United States is party.

"SEC. 404. PENALTIES.

"(a) CIVIL PENALTY.—(1) Any person who is found by the Secretary, after notice and an opportunity for a hearing in accordance with section 554 of title 5, United States Code, to have committed an act prohibited by section 402 shall be liable to the United States for a civil penalty. The amount of the civil penalty shall not exceed $25,000 for each violation. Each day of a continuing violation shall constitute a separate offense. The amount of such civil penalty shall be assessed by the Secretary, or his designee, by written notice. In determining the amount of such penalty, the Secretary shall take into account the nature, circumstances, extent, and gravity of the prohibited acts committed and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require.

"(2) Any person against whom a civil penalty is assessed under paragraph (1) may obtain review thereof in the appropriate court of the United States by filing a notice of appeal in such court within 30 days from the date of such order and by simultaneously sending a copy of such notice by certified mail to the Secretary. The Secretary shall promptly file in such court a certified copy of the record upon which such violation was found or such penalty imposed, as provided in section 2112 of title 28, United States Code. The findings and order of the Secretary shall be set aside by such court if they are not found to be supported by substantial evidence, as provided in section 706(2) of title 5. United States Code.

"(3) If any person fails to pay an assessment of a civil penalty after it has become a final and unappealable order, or after the appropriate court has entered final judgment in favor of the Secretary, the Secretary shall refer the matter to the Attorney General of the United States, who shall recover the amount assessed in any appropriate district court of the United States. In such action, the validity and appropriateness of the final order imposing the civil penalty shall not be subject to review.

"(4) The Secretary may compromise, modify, or remit, with or without conditions, any civil penalty which is subject to imposition or which has been imposed under his subsection.

"(b) CRIMINAL PENALTY.—(1) A person is guilty of an offense if he willfully and knowingly commits any act prohibited by section 402.

"(2) Any offense described in paragraph (1) is punishable by a fine of not more than $50,000, or imprisonment for not more than 6 months, or both; except that if in the commission of any such offense the person uses a dangerous weapon, engages in conduct that causes bodily injury to any officer authorized to enforce the provisions of this Act (as provided for in section 401), or places any such officer in fear of imminent bodily injury, the offense is punishable by a fine of not more than $100,000, or imprisonment for not more than 10 years, or both.

"(3) There is Federal jurisdiction over any offense described in this section.

"(c) IN REM LIABILITY.—Any vessel subject to the provisions of this Act and found to be in violation of this Act shall be liable in rem and may be proceeded against in the United States district court for any district in which such vessel may be found.

"(d) INJUNCTION.—The United States district courts shall have jurisdiction to restrain violations of this Act or regulations issued hereunder, for cause shown.".

SEC. 7. MISCELLANEOUS PROVISIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by adding the following new title at the end thereof.

"TITLE V—MISCELLANEOUS PROVISIONS

"SEC. 501. REGULATIONS.

"The Secretary is authorized to issue regulations to carry out the purposes and provisions of this Act, in accordance with the provisions of section 553 of title 5, United States Code. Such regulations shall provide for full consultation and cooperation with all other interested Federal agencies and departments (in particular the Environmental Protection Agency and the Department of Commerce), and the States, and for consideration of views presented by any members of the general public, including representatives of the maritime community, environmental groups, consumer organizations, and persons concerned with navigation and vessel safety and protection of the marine environment.

"SEC. 502. REPORT.

"Within 6 months after the end of each fiscal year, the Secretary shall submit to the Congress (1) a report on the administration of the Ports and Waterways Safety Act during the fiscal year; (2) a summary of inspection and enforcement activities; and (3) recommendations to the Congress for any additional legislative authority necessary to improve navigation and vessel safety and protection of the marine environment.

"SEC. 503. SAVINGS CLAUSE.

"Regulations previously issued under statutory provisions repealed, modified, or amended by this Act shall continue in effect as though promulgated under the authority of section 4417a of the Revised Statutes of the United States (46 U.S.C. 391a) or the Ports and Waterways Safety Act, as amended by this Act, until expressly abrogated, modified, or amended by the Secretary. Any proceeding under section 4417a or the Ports and Waterways Safety Act for a violation which occurred before the effective date of this

Act may be initiated or continued to conclusion as though such section or Act had not been amended hereby.

"SEC. 504. INTERNATIONAL AGREEMENTS.

"(a) TRANSMITTAL OF REGULATIONS.—The Secretary shall transmit regulations promulgated under this Act to the appropriate international organizations or forums for consideration as international standards.

"(b) NEGOTIATIONS.—The Secretary of State—

"(1) shall enter into negotiations, in cooperation with the Secretary of Commerce, with any adjacent or opposite foreign nation to establish the boundaries of the maritime safety zone in relation to any such nation;

"(2) shall enter into negotiations, in cooperation with the Secretary, with Canada and Mexico, and any other neighboring nation, to establish compatible vessel standards and vessel traffic control systems in appropriate areas and circumstances; and

"(3) may enter into such other negotiations as may be necessary and appropriate to further the purpose, policy, and provisions of this Act.

"SEC. 505. AUTHORIZATION OF APPROPRIATIONS.

"There are authorized to be appropriated to the Secretary, for the purpose of carrying out the provisions of this Act, such sums as may be necessary.".

TITLE II—INCREASED USE OF UNITED STATES VESSELS

That this title may be cited as the "Equitable Cargo Share Act of 1977".

SEC. 2. CARGO SHARE PROGRAM.

Section 901 of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1241), is amended by adding at the end thereof the following new subsection:

"(d)(1) The Secretary of Commerce shall take such steps as are necessary to assure that a quantity equal to not less than 20 percent of the gross tonnage of all oil transported on ocean vessels (whether transported directly from the original point of production or indirectly from such point to and from any intermediate points used for storage, refining, processing, packaging, unloading, or reloading of oil) for import into the United States shall be transported on privately owned United States-flag commercial vessels (to the extent that such vessels are available at fair and reasonable rates for such vessels), and to insure fair and reasonable participation of such vessels in such transportation from all geographical areas in which such oil is produced or refined or both. With respect to any period beginning after June 30, 1978, the quantity of such oil required to be transported on privately owned United States-flag commercial vessels shall be equal to not less than 25 percent of the gross tonnage of all oil transported on ocean vessels for import into the United States, and for any period beginning after June 30, 1980, such quantity shall be equal to not less than 30 per cent of such gross tonnage; except that if (1) the Secretary of Commerce finds and determines 6 months prior thereto, in the exercise of his sole discretion, that the tonnage of privately owned United States-flag commercial vessels, including vessels on order and scheduled to be ready for commercial service by such date, will be adequate to carry such quantity; and (2) in the event that such tonnage is not found to be adequate to carry such quantity, there shall be carried on such vessels the basic 20 percent requirement together with any excess over such requirement, but not to exceed the applicable percent requirement, for which such Secretary finds that adequate tonnage will be available.

"(2) The Secretary of Commerce may by rule establish a system of reasonable classification of persons and imports subject to the provisions of this subsection, and such Secretary shall treat all persons in the same such classification in substantially the same manner. If any person alleges—(A) that he has been incorrectly classified under any such rule;

(B) that there is no reasonable basis in fact for any such classification; or

(C) that as a consequence of any agency action,

he is or may be treated substantially differently from any other person in the same classification, such person may request, and, upon a reasonable showing, obtain, a hearing in accordance with section 554 of title 5, United States Code. Upon an agency decision, such person may request judicial review in the United States Court of Appeals for the District of Columbia. The scope of such review shall be governed by section 706 of title 5, United States Code.

"(3) The Secretary of Commerce is authorized to grant credits toward the fulfillment of the requirements of paragraph (1) of this subsection in the case of oil transported by privately owned United States-flag commercial vessels, over 100,000 deadweight tons, between foreign ports until such time as an oil discharge facility, capable of discharging fully laden vessels of over 20,000 deadweight tons, is in operation on any coast of the United States; except that the Secretary of Commerce shall take all reasonable steps to assure that the authority provided in this paragraph not encourage, directly or indirectly, the construction, operation, or maintenance of a fleet of privately owned United States-flag commercial vessels different in numbers, types, or sizes than the fleet that would otherwise result.

"(4) As used in this subsection—

"(A) 'oil' means crude oil and the following products refined or derived from crude oil: unfinished fuels, gasoline, kerosene, aviation fuels, naphtha, cracking stocks, distillate heating oil, diesel oil, and residual oils;

"(B) 'privately owned United States-flag commercial vessel' are vessels of United States registry (or if at any time documented under the laws of any foreign nation, then documented under the laws of the United States for not less than the 3 previous years), built in the United States, which are not more than 20 years old or which have been reconstructed and are not beyond their economic lives (as determined by the Secretary of Commerce), and with respect to which the owner or lessee thereof has entered into a capital construction fund agreement with such Secretary pursuant to which such vessel shall be replaced at the end of its 20-year life, or at the end of its extended economic life in case of reconstruction, and such agreement includes a mandatory deposit schedule to finance such replacement; and

"(C) 'United States' means any of the several States, the District of Columbia, and the Commonwealth of Puerto Rico.

"(5) Each department, agency, or other instrumentality of the United States which is affected by any obligation imposed under this subsection, and any officer or employee thereof, shall take all appropriate action to assure compliance with such obligation and with regulations which shall be issued by the Secretary of Commerce to implement and enforce the provisions of this subsection. Each citizen of the United States and each person subject to the jurisdiction of the United States shall comply with such obligation and any applicable regulations issued by such Secretary under this subsection.

"(6) The Secretary of Commerce shall review, evaluate, and report annually to the Congress and the President on the implementation of the provisions of this subsection and the effectiveness of such provisions. Each such report shall include, but not be limited to, a study of (1) the adequacy and availability of construction and reconstruction facilities in the United States for the vessels needed to meet the provisions of paragraph (1) of this subsection and (2) the reasonableness of the prices charged and delivery dates for the construction and reconstruction of such vessels."

SEC. 3. EXCEPTIONS FOR SMALL REFINERS.

The provisions of this Act shall not apply to any further refiner whose total refinery capacity (including the refinery capacity of any person who controls, is controlled by, or is under common control with such refiner) does not exceed 30,000 barrels per day; except the total quantity of such oil imported by or for such refiner does not in any year exceed the rated refining capacity of such refiner.

SEC. 4. LICENSE FEES.

License fees payable pursuant to Presidential proclamation for imports of crude oil imported into the United States shall be reduced by 15 cents per barrel for a period of 5 years from the date of enactment of this Act if the Secretary of the Treasury determines—

(a) such crude oil is transported by privately owned United States-flag commercial vessels; and

(b) the amount resulting from the nonpayment of such license fees is passed on to the ultimate consumers of such crude oil in whatever form it is when ultimately consumed.

By Mr. McINTYRE:

S. 683. A bill to amend the Tariff Act of 1930 and the Tariff Schedules of the United States to reduce the burden of paperwork involved in the customs entry process for travelers and goods entering the United States; to the Committee on Finance.

CUSTOMS PAPERWORK REDUCTION ACT OF 1977

Mr. McINTYRE. Mr. President, as most of my colleagues know, for the past 7 years I have been very much involved in efforts to eliminate the Federal paperwork burden imposed upon businesses and individuals by the Federal Government. My Subcommittee on Government Regulation of the Small Business Committee has conducted a wide range of hearings on the various problems affecting small businesses' ability to comply with Federal reporting and recordkeeping requirements. Out of our hearings have grown many suggestions and legislative concepts. One such piece of legislation, to establish a Commission on Federal Paperwork, was passed by the Congress and signed by the President. I serve as its cochairman.

A major goal of the Commission is to minimize the paperwork burden imposed by Government on the American public, while at the same time to assure that Government's needs for information are met.

We have one opportunity in the area of international travel. The legislation which I am introducing today, known as the Customs Paperwork Reduction Act of 1977, will cut paperwork in international trade and travel.

This bill would simplify the procedures we use to classify merchandise imported

for the personal use of international travelers. By changing these procedures, I believe that inordinate amounts of processing time now involved in Customs inspections can be greatly reduced. This processing time today has created an aggravating bottleneck in Customs' offices. It is based on unnecessary redtape and poses an undue burden on all travelers.

My bill will apply a flat 10-percent rate of duty for all personal goods, valued under $500, brought into the country by international travelers. We anticipate that there would be a threefold increase in the number of travelers the U.S. Customs Service processes with a minimum increase in inspection personnel. By even the roughest calculation, if this new rate allowed each visitor passing through Customs to save an average of 5 minutes processing time, both travelers and Government inspectors would share in an estimated 3 million hours time savings.

To the weary traveler, cutting 5 minutes out of a Customs line is very significant. No sleepy traveler wants to stand waiting to go through Customs. He wants to go home.

The second section of this legislation is also important from the viewpoint of the Paperwork Commission. It would raise the limit of informal entry of commercial shipments into the United States from $250 to $500. The $250 limit was set by congressional action in 1953. This proposed increase is intended to reflect, in an approximate way, the inflationary changes in value of products from 1953 to 1977—a 24-year span with no adjustment.

This portion of the legislation will result in major cost savings for businessmen in America who import small quantities of merchandise. Present laws require formal entry documents to be filed for such shipment over $250. This change will reduce, by at least 200,000 filings per year, the more complicated formal documents—thus eliminating large amounts of paperwork. The resulting savings are estimated to be $6 million annually—$5 million in brokers' fees and surety bonds, and $1 million to the Government in simplified processing savings.

As these statistics indicate, this single legislative item serves the immediate needs of both travelers and small businesses.

The third section of the legislation provides that the same type of statistics can be collected for goods valued between $250 and $500, imported commercially under informal entry procedures, as is presently required for goods entering under formal procedures, to which the Customs Service has assented.

I urge my colleagues in the Senate to act on this legislation quickly and let us proceed to reduce paperwork where possible. This bill is a positive action which will have a significant impact in reducing unnecessary reporting on our citizens, small businesses and our foreign guests.

I ask unanimous consent that the text of the Customs Paperwork Reduction Act of 1977 and an analysis prepared by the Commission on Federal Paperwork be inserted in the RECORD at this point.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 683

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Customs Paperwork Reduction Act of 1977".

SEC. 2(a) Schedule 8 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by redesignating "Part 6" as "Part 7", changing the phrase "Part 6 headnote" to "Part 7 headnote", and inserting a new part 6 to read:

" PART 6.—NONCOMMERCIAL IMPORTATIONS OF LIMITED VALUE

Part 6 headnote:			
	1. For the purposes of this part the rates of duty for articles provided for in this part shall be assessed in lieu of any other rates of duty except free rates of duty on such articles.		
	Articles for personal or household use, or as bona fide gifts, not imported for sale or for the account of another person:		
S69.00	Accompanying a person, arriving in the United States and valued in the aggregate (exclusive of duty-free articles) not over $500 fair retail value in the country of acquisition	10% of the fair retail value	10% of the fair retail value

(b) The amendment made by this section shall take effect with respect to persons and articles arriving in the United States on or after the thirtieth day following the date of enactment.

Sec. 3. Sec. 498(a)(1) of the Tariff Act of 1930 (19 U.S.C. 1498(a)(1)), as amended, is hereby further amended by striking "$250" and substituting "$500", and by adding the following after the semicolon:

"Provided however that such regulations shall require the submission, as part of any declaration with respect to any shipment of merchandise which exceeds $250 in aggregate value, of an accurate statement specifying kinds and quantities of all articles imported in such shipment and the value of the total quantity of each kind of article."

ANALYSIS OF THE CUSTOMS PAPERWORK REDUCTION ACT OF 1977

Section 2(a) would amend the Tariff Schedules of the United States (19 U.S.C. 1202) by redesignating Part 6 of Schedule 8 as Part 7 and introducing a new Part 6 dealing with noncommercial importations of limited value. The new provision would apply to articles intended for personal or household use and not for resale, and not imported for another person, if valued not over $500 fair retail value and accompanying a person arriving in the United States. In such circumstances, a flat rate of duty of 10 percent of fair retail value would be assessed in lieu of any other rate of duty except a free rate of duty. The flat rate would not apply to commercial entries nor to articles in any shipment not accompanying the person.

The proposed Part 6 contains a controlling headnote and a new rate provision. Headnote 1 to the new Part provides that the rate of duty for articles provided for in the Part shall be assessed in lieu of any other rates of duty except free rates of duty on such articles. For example, if a returning resident brought in articles worth $700, $200 of which were free of duty as antiques, the flat rate or duty provided in the proposed amendment would apply to articles valued at only $400 ($700 less $100 tourist exemption, less $200 duty-free articles).

The basic prerequisite for classification if imported articles in the Part, as stated in the superior heading to the proposed provision, is that such articles are intended for personal or household use and not for sale or other commercial use.

Proposed new item 869.00 provides for a flat rate of duty of 10 percent of the fair retail value of the article accompanying a person arriving in the United States and valued in the aggregate (exclusive of duty-free articles) not over $500 fair retail value in the country of acquisition. The average rate of duty now assessed on the wholesale value of articles arriving in passengers' baggage is approximately 15 percent. The 10 percent rate of duty on retail value would represent an equivalent rate.

Under existing law, the classification and rate of duty on an imported article is not affected by the commercial or noncommercial nature of its importation with certain minor exceptions, the most notable of which are the personal exemptions for residents and nonresidents, and the provisions granting free entry of unsolicited gifts, the value of which does not exceed $10. A returning resident is entitled to an exemption from duty for articles accompanying him of up to $100 aggregate value ($200 from the insular possessions of the United States). Dutiable articles over the $100 limitation are subject to duty at the rate prescribed in the applicable provisions of the Tariff Schedules of the United States.

The application of tariff classification procedures to merchandise imported by persons arriving into the United States for personal use requires an inordinate amount of processing time, compared to the amount of duty collected, and creates an aggravating bottleneck in the processing of persons entering the country.

The proposed legislation would contribute substantially to the elimination of this bottleneck without adverse effects on customs revenue collections. It would establish a single rate of 10 percent of fair retail value for use in assessing and collecting duty on persons arriving into the United States. Very few passengers fall outside the $500 limitation.

Application of the 10 percent flat rate of duty will enable Customs to process an anticipated threefold increase in dutiable declarations in coming years with a minimum increase in Customs inspectional personnel. The time expended under existing law in determining the classification of such noncommercial importations and in computing the amount of duty owed would be available for more thorough baggage inspections and more effective enforcement of laws prohibiting the importation of narcotics, dangerous drugs, and other contraband.

Section 2(b) sets forth the effective date of the amendment as the 30th day following the date of enactment.

Section 3 would amend section 498(a)(1) of the Tariff Act of 1930, as amended (19 U.S.C. 1498(a)(1)), to increase from $250 to $500 the maximum aggregate value of shipment which may, in accordance with rules prescribed by the Secretary, be entered through informal entry procedures.

Informal entry may be made under a simpler procedure than that required for a formal entry. The informal entry document may be filled out by the customs officer for the importer, no bond is required, and there is no formal appraisement of the goods which are evaluated by the customs officer who examines and releases the merchandise to the importer or prepares a mail entry for collection of duty by the U.S. Postal Service. Liquidation is accomplished by the payment of duties by the importer or the release of

the merchandise to the importer by customs or the postmaster when goods are free of duty and internal revenue tax. Information concerning such entries is furnished to the Import Statistics Section, Foreign Trade Division, Bureau of the Census.

The Customs Service will establish procedures whereby Customs will submit to the Census Bureau a statistical copy with each commercial informal entry valued between $250 and $500 with the 7-digit TSUSA reporting number, countries of origin and exportation, quantities, entered and transaction values, transportation charges, and if appropriate, the equivalent value. The documents will be submitted directly to Census according to the small schedule applicable to formal entries.

This section is designated to achieve administrative and operational efficiencies by granting customs officers greater operational flexibility and will contribute substantially to the effort of the U.S. Customs Service to decrease the backlog of unappraised and unliquidated formal entries.

Furthermore, the change will permit significant improvement in the reliability of formal entry data. A reduction in formal entries of approximately 200,000 per year is expected to result from this proposed amendment. While this will result in some loss of statistical data on imports, the estimated savings in time, money, and manpower is believed to outweigh the loss.

A change in the value figure from the original figure of $100 to $250 was made by the Customs Simplification Act of 1953 (67 Stat. 157) based on the value of the dollar at the time the informal entry procedure was first specifically authorized by the Congress in 1922. This proposal to increase the value to $500 like the earlier change reflects in an appropriate way the change in the value of the dollar from 1953 to today.

By Mr. PROXMIRE:

S. 684. A bill to establish a Federal Bank Commission to administer all Federal laws relating to the conduct of the banking business, both foreign and domestic, including such laws relating to the chartering of banking institutions and their branching activities, bank holding companies and their activities, Edge Act corporations and their activities, and the examination, supervision, and regulation of banking institutions under Federal law; to the Committee on Banking, Housing and Urban Affairs.

FEDERAL BANK COMMISSION ACT OF 1977

Mr. PROXMIRE. Mr. President, I am today introducing for reference to the Committee on Banking, Housing and Urban Affairs, a bill to establish a Federal Bank Commission. This bill is substantially identical to S. 2298 which I introduced in the 94th Congress but to which I have added significant new provisions designed to strengthen the role of the States in bank regulation and thereby the dual banking system; and to strengthen the role of the Federal Reserve in obtaining bank supervisory information which it may need to conduct the monetary policy of the Nation. The statements I made on the floor of the Senate in introducing that bill on September 5, 1975, are fully applicable to this legislation. Under the bill, the Federal Bank Commission would administer all Federal laws relating to the conduct of the banking business both foreign and domestic, including such laws relating to the chartering of banking institutions and their branching activities, bank holding companies and their activities, Edge Act corporations and their activities, and the examination, supervision, and regulation of banking institutions under Federal law.

The Office of the Comptroller of the Currency would be abolished and all of its functions and personnel transferred to the Federal Bank Commission. Similarly, all of the functions and personnel of the Federal Deposit Insurance Corporation would be transferred to the Commission and its Board of Directors abolished. However, the FDIC would be retained as a corporate entity within the Commission and under the sole control of the Commission for the accounting purpose of holding the insurance fund established to protect commercial bank depositors and which now total in excess of $6 billion. In this regard the relationship between the Commission and the FDIC would be similar to the relationship between the Federal Home Loan Bank Board which supervises and regulates federally insured savings and loan associations and the Federal Savings and Loan Insurance Corporation which insures the deposits in such institutions. Finally, all of the supervisory and regulatory authority of the Federal Reserve Board would be transferred to the Commission. The Federal Reserve would retain supervisory and regulatory authority over interest rate ceilings, and margin requirements and retain the authority to make loans to banks through the "discount window." Relieving the Federal Reserve Board of bank and bank holding company supervisory responsibility will enhance its ability to concentrate on conducting the monetary policy of the Nation which is its primary responsibility.

Unsafe or unsound conditions in our banking system have proliferated in the past 15 years as banks have changed their orientation toward go-go banking, a high profile syndrome and high profits. In the process the capitalization of our Nation's banks has declined precipitously since 1960, particularly among the largest banks. The numbers of problem banks—banks which are categorized by regulatory authorities as possibly requiring aid from their shareholders because of their condition or banks which are in danger of failing—have increased in size and in numbers. Massive credits are extended by banking institutions to persons having insider relationships with banks: officers, directors, or stockholders and the companies they control.

Last year, after public disclosure that there existed large numbers of problem banks in the banking system, the Congress requested the General Accounting Office to audit the three bank regulatory agencies to find out how well they were exercising their bank supervisory and regulatory responsibilities. GAO filed its report with the Senate Banking Committee on January 31, 1977. In my view, the GAO report reveals that regulatory permissiveness, fostered by the split in Federal bank regulatory authority, has been the principal reason why a substantial number of the Nation's banks in the banking system have deteriorated.

In its report, the GAO found that during the period 1971–75, the number of problem banks increased from at least 352 to 607 with the number of problem banks whose deposits exceeded $100 million increasing from 13 to 83. GAO data shows that the numbers and size of bank failures have also increased recently. For example, during the past 4 years bank failures have averaged $937 million in deposits each year, an increase of 21 times over the average of $45 million in deposits at failed banks during the previous 13 years. Moreover, the recent failures were the largest in the history of the Nation. I refer, of course, to the failures of the Franklin National Bank, the U.S. National Bank, the Security National Bank and Hamilton Bankshares, Inc. The assets of each one of these banking organizations exceeded a billion dollars.

Why, Mr. President, are the numbers of problem banks and bank failures increasing? The answer I believe is poor Government regulation. GAO found that bank examiners in most cases identify bank problems 2 years before banks fail; and the primary cause of the bank failures were bad management practices—not economic conditions. But the bank regulatory agencies, GAO found, delayed requiring banks to correct their problems until it was too late, even though problem banks exhibit many of the types of problems which can be cured by tough enforcement action. But the banking agencies failed even to communicate clearly to bank managements the needed corrective measures.

Mr. President, the principal problem with bank regulation is the hydra-headed bank regulatory structure at the Federal level which moves in three separate directions. GAO hit home when it said in its report that no mechanism exists to insure that the agencies act in concert to operate effectively and efficiently. For example the GAO notes that:

First. The three agencies do not have common criteria for determining which banks should be treated as problem banks or for taking enforcement action against problems which are discovered by examiners.

Second. Each of the agencies is developing its own separate monitoring and early warning system to improve bank examinations.

Third. Loans to corporations in which banks regulated by each of the three agencies participate are reviewed and treated differently by each of the three agencies even though essentially only one extension of credit is involved.

Fourth. The agencies operate separate and to a large extent duplicate computer systems.

Fifth. There is no procedure for coordinated examinations of holding companies and their subsidiary banks regulated by three different agencies.

Sixth. Separate systems for enforcing the consumer protection laws are in effect at the agencies.

Seventh. Loans to the same foreign borrowers are treated differently by the agencies. Time and money are wasted by the agencies in separate examinations of foreign branches and subsidiaries.

Eighth. The agencies maintain three separate examiner training centers. As a result three separate government disciplines are brought to bear on common bank problems.

The Comptroller charters and supervises national banks. But deposits in those banks are insured by the FDIC and all national banks are required to be members of the Federal Reserve. The Federal Reserve regulates State-chartered banks which choose to become members of the Federal Reserve. But deposits in such banks are insured by the FDIC. The FDIC insures all federally insured banks but supervises only those State-chartered banks which are not members of the Federal Reserve. The Federal Reserve regulates all bank holding companies regardless of which of the three agencies regulates the principal banking subsidiaries of the bank holding company. None of these agencies will invade the bureaucratic turf of the other agencies even though the consequences of poor regulation by one agency will be felt by the other agency. For example, the Federal Reserve has loaned billions of dollars to national banks in distress which are supervised by the Comptroller. This has complicated monetary policy and misallocated bank reserves to speculative uses. The FDIC has had to underwrite the losses of banks which are regulated by the other agencies in the amount of hundreds of millions. The FDIC and the Comptroller have had banks which they supervise deteriorate to the point of distress because of poor regulation of their holding companies by the Federal Reserve.

Former Vice-Chairman of the Federal Reserve, J. L. Robertson testified before the Senate Banking Committee that there is an "institutional reluctance among the regulators to pull the rug out from under their own banks." This institutional reluctance arises in part from the ability of banks to switch regulators. It also arises from the fact that the greater the number of banks regulated the greater the justification for a bigger bureaucracy. When this is combined with the fact that the Federal banking agencies derive their funds not from Government appropriations but from private assessments on the banks they regulate with no congressional oversight the results are pernicious. Even without actual charter switching former Governor Bucher testified that the subtleties of divided authority are always with the agencies whenever they made a decision. Thus, in my view, instead of tough regulation we get Government bureaucrats living high off the hog in plush offices and traveling first-class with their wives around the country to attend bankers association meetings. Only by eliminating this institutional reluctance to take action will we ever have any hope of bringing decent government to the banking field.

In a speech to the American Bankers Association, the distinguished Chairman of the Federal Reserve Board stated with respect to the structure of bank regulation at the Federal level that:

> I am inclined to think that the most serious obstacle to improving the regulation and supervision of banking is the structure of the regulatory apparatus. That structure is exceedingly complex. * * * At the Federal level, every bank whose deposits are insured is subject to supervision and regulation, but authority is fragmented. The Comptroller of the Currency charters and supervises national banks. The Federal Reserve System supervises State chartered member banks, regulates activities of Edge Act corporations, regulates all bank holding companies, and controls the reserves and other operating features of all member banks. The Federal Deposit Insurance Corporation insures nearly all banks, but supervises only State-chartered banks that are non-members of the Federal Reserve. The FDIC also has certain regulatary powers that apply to insured non-member banks.
>
> Those of you who have been intimately concerned with regulatory matters will realize that I have oversimplified, that our system of parallel and sometimes overlapping regulatory powers is indeed a jurisdictional tangle that boggles the mind.
>
> There is, however, a still more serious problem. The present regulatory system fosters what has sometimes been called "competition in laxity." Even viewed in the most favorable light, the present system is conducive to subtle competition among regulatory authorities, sometimes to relax constraints, sometimes to delay corrective measures, I need not explain to bankers the well-understood fact that regulatory agencies are sometimes played off against one another. Practically speaking, this sort of competition may have served a useful purpose for a time in loosening overly cautious banking restrictions imposed in the wake of the Great Depression. But at this point, the danger of continuing as we have in the past should be apparent to all objective observers.
>
> I recognize that there is apprehension among bankers and students of regulation concerning over-centralized authority. Providing for some system of checks and balances is the traditional way of guarding against arbitrary or capricious exercise of authority. But this principle need not mean that banks should continue to be free to choose their regulators. And it certainly does not mean that we should fail to face up to the difficulties created by the diffusion of authority and accountability that characterizes the present regulatory system. * * * Some will doubtless conclude that the proper approach lies in improved coordination among the multiple bank regulatory agencies, together with harmonization of divergent banking laws. My own present thinking, however, is that building upon the existing machinery may not be sufficient, and that substantial reorganization will be required to overcome the problems inherent in the existing structural arrangement.

I am in agreement with this statement of Chairman Burns. The ability of banks to pick and choose their regulators as Chairman Burns says means that they have the ability to play off one Federal agency against the other. This results in poor and ineffective regulation and an inability of the Federal Government to deal with the tough issues because the bank agencies compete with one another to see which can regulate the least. Such competition in laxity has resulted in low public confidence in the bank regulatory agencies. The public is no longer willing to continue to be served by regulation at the lowest common denominator level among Federal agencies. Competition in laxity can only be eliminated by eliminating its base of operations: The threefold fragmented division of regulatory authority, into a single agency.

The benefits of a single bank regulatory agency, such as the Federal Bank Commission, which eliminates the competition in laxity among the three bank regulatory agencies would be enormous. Former Governor Holland of the Federal Reserve listed four such benefits as follows:

> (a) Such an agency would bring about uniformity in Federal regulation, supervision and examination of banks. In addition it would result in uniformity on decisions concerning merger and branching applications.
>
> (b) * * * such a consolidation would eliminate some duplication of efforts and lead to a more efficient use of supervisory and examination personnel. It would also remove any problems arising out of consultations between the agencies and resulting delays in decision-making.
>
> (c) We also believe there could be advantages from the development of consistent data which would permit fuller analysis of the banking industry as a whole and permit more prompt identification of developments which might affect the stability of the banking system.
>
> (d) Finally, the consolidation of three Federal agencies into one would preclude the possibility of banks changing their organizational status in order to obtain more favorable treatment from a different Federal supervisor.

Former Chairman Wille of the Federal Deposit Insurance Corporation listed eight as follows:

First. Simplification of administration; improved internal and external communication.

Second. Elimination of conflicting goals.

Third. Economy and efficiency of operation.

Fourth. Elimination of actual or potential policy conflicts.

Fifth. Facilitating the handling of failing banks.

Sixth. Improved regulation of bank holding companies, their affiliates, and certain other bank relationships.

Seventh. Gains to banks and bank customers from a single Federal agency.

Eighth. Adjusting to a rapidly changing environment.

This bill will also strengthen the hand of the Federal Reserve in conducting monetary policy. The Federal Reserve Board's testimony before the Senate Banking Committee was that the Board needs the bank supervisory responsibility discipline in order to be able to conduct monetary policy. Serious disagreement with this view was taken before the committee by former Vice Chairman of the Federal Reserve Robertson who served at the Board for 20 years and by former Governor Bucher.

This legislation places a member of the Federal Reserve directly on the five-man Federal Bank Commission. Thus under this bill the Federal Reserve will have more direct input into bank supervision and regulation than it now has; and, under the bill, the Board will have more direct and immediate access to such information than it now has. Thus, under the theory of the Federal Reserve, this bill should enhance the Board's ability to conduct monetary policy.

One of the most important features of this bill are the provisions designed

to strengthen the dual banking system of the Nation under which we have federally chartered and regulated banks which compete side by side with State chartered and regulated banks. Two essential features of this system must be strengthened if we are to retain a viable dual banking system. First, Federal insurance should not be used as a veto to the chartering of State banks. Second, State supervisory functions should not be co-opted by the Federal Government either by design or by default as it is in too many cases.

Section 312(d)(2) requires the Federal Bank Commission to grant insurance to institutions chartered by a State whose operations are adequate to assure a safe and sound banking system. This provision is designed to eliminate the veto power now enjoyed by the FDIC over State chartered banks and to assure that the Federal Bank Commission which will also charter national banks will not favor the chartering of national banks in any State over the State banking system. Under the current fragmented regulatory authority there is no doubt that the Comptroller of the Currency has historically sought to induce State chartered banks to switch to national charters, particularly among the larger banks. This bill will put an end to this practice.

Section 312(d)(2) also provides that where State examiners make adequate examinations of State chartered banks the Federal Bank Commission may suspend Federal examinations and reimburse the State supervisory authority for the cost of examination. This provision will give the State's supervisory authorties the economic means to upgrade their supervisory positions.

Finally, section 4(a) of the bill provides that at all times, one member of the Federal Bank Commission shall be an individual who has had direct State bank regulatory experience. There is no counterpart to this provision in the present law and as a practical matter direct State supervisory experience is not a quality which is sought by the bank regulating agencies. This provision will insure that State experience will have a direct representation in all bank supervision in the Nation thereby strengthening the dual banking system.

This bill will also subject the Federal Bank Commission to periodic performance audits by the General Accounting Office and require the Commission's yearly expenditures to be with limitations set by an appropriations act of the Congress.

I ask unanimous consent that the section-by-section analysis of the bill along with the text of the legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 684

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Federal Bank Commission Act of 1977".

FINDINGS AND PURPOSES

SEC. 2. (a) Congress finds that—

(1) the existing structure of regulation of banking institutions under Federal law, consisting primarily of the Federal Reserve System with respect to member State banks, bank holding companies, and Edge Act corporations, the Comptroller of the Currency with respect to the domestic and foreign activities of national banks, and the Federal Deposit Insurance Corporation respecting insured State banks which are not members of the Federal Reserve System, if reorganized, will better insure the safe and sound operation of the commercial banking system of the Nation in the future;

(2) a safe and soundly operated banking system is basic and necessary to support the commercial and industrial needs of the Nation and that the line between banking and commerce and industry should be preserved; and

(3) the Federal Reserve System will be better equipped to fulfill its primary responsibility to conduct the monetary policy of the Nation by having one of its members serve on the Federal Bank Commission which will have authority to examine and supervise all federally chartered and insured banking institutions and bank holding companies.

(b) It is therefore hereby declared to be the policy of the Congress—

(1) to provide for the uniform, fair, impartial, and efficient administration of Federal banking laws by eliminating present overlapping jurisdictional authority and fragmentation of responsibility which has led to conflicts of policy resulting in inadequate supervision and regulation of banking institutions in foreign and domestic activities and in uneven application of laws dealing with mergers and acquisitions under Federal law;

(2) to preserve and strengthen in principle the dual banking system by consolidating authority over the administration of Federal banking laws in consonance with that principle and providing significant new authority for the State regulatory system; and

(3) to enable the Federal Reserve System to concentrate its efforts solely upon its primary responsibility to conduct the monetary policy of the Nation by relieving the Federal Reserve of the additional burdens of functioning as an administrative tribunal and supervisory agency.

ESTABLISHMENT OF THE COMMISSION; QUORUM

SEC. 3. There is established a Federal Bank Commission (hereafter in this Act referred to as the "Commission") which shall consist of five members, four of whom shall be appointed by the President, by and with the advice and consent of the Senate. One of such members shall be designated at the time of appointment to chair the Commission. One member of the Commission shall be designated by the Chairman of the Board of Governors of the Federal Reserve System from among the members of the Board of Governors of the Federal Reserve System and shall serve as a member of the Commission without additional compensation. Three members of the Commission shall constitute a quorum for the conduct of business.

QUALIFICATIONS OF MEMBERS; TERMS OF OFFICE

SEC. 4. (a) The members of the Commission shall be appointed without reference to political affiliation. In selecting members of the Commission, the President and the Chairman of the Board of Governors of the Federal Reserve System shall consider solely the fitness of any individual to perform the office with due regard to the financial, economic, and legal matters on which the Commission must exercise its statutory responsibilities. At all times, one member of the Commission shall be an individual who has had direct State bank regulatory experience.

(b) The members shall be initially appointed for terms expiring on June 30 of the second, third, fourth, and fifth years beginning after the effective date of this section, as designated by the President at the time of nomination. Any member appointed after the initial appointments have been made shall be appointed for a term expiring seven years after the expiration of the term for which his predecessor was appointed, except that the term of a member appointed to fill a vacancy (other than a vacancy in the chair) shall expire at the end of the term for which his predecessor was appointed. A vacancy in the chair may be filled either as other vacancies or by appointing a member of the Commission to chair the Commission, by and with the advice and consent of the Senate, for the remainder of the term for which he was appointed as a member, and by appointing a new member for the unexpired portion of the previous occupant of the chair. A member shall not continue to serve after the expiration of his term, except that any member appointed to fill a vacancy of not more than two years' duration shall be eligible to serve a full term.

(c) A member of the Board of Governors who is designated to serve on the Commission may not serve more than seven years as a member of the Commission and may not serve as chairman. The Chairman of the Board of Governors of the Federal Reserve System may not serve as a member of or chairman of the Commission.

FUNCTIONS TRANSFERRED TO THE COMMISSION

SEC. 5. (a) All bank examining and other banking supervisory functions, except functions dealing with the examination and supervision of any Federal Reserve bank, of the Board of Governors of the Federal Reserve System and the several Federal Reserve banks are transferred to the Commission.

(b) All functions of the Board of Governors of the Federal Reserve System under the Bank Holding Company Act, the Banking Act of 1933, the Securities and Exchange Acts (except those dealing with margin requirements) the Consumer Credit Protection Act, the Bank Merger Act, and the Edge Act, are transferred to the Commission.

(c) All functions of the Comptroller of the Currency are transferred to the Commission, except that any such functions which relate to currency issue and redemption are transferred to the Secretary of the Treasury.

(d) All functions of the Board of Directors of the Federal Deposit Insurance Corporation are transferred to the Commission.

CERTAIN INTERESTS AND EMPLOYMENT PROHIBITED

SEC. 6. (a) No member of the Commission may hold or vote stock in or be an officer, director, or employee of any bank, trust company, bank holding company, or any other company or institution subject to the jurisdiction of the Commission. Each member, before entering upon his duties, shall certify in writing under oath that he is in compliance with this requirement and such certification shall be filed with the Commission.

(b) The prohibition contained in subsection (a) except for involuntary stock acquisitions shall also apply to any former member for two years after termination of his term whether or not he served the full term of his appointment.

EXECUTIVE FUNCTIONS VESTED IN THE COMMISSION; DELEGATION OF FUNCTIONS BY THE COMMISSION; REVIEW BY THE COMMISSION

SEC. 7. (a) The Commission is vested with all administrative powers including the power to appoint and supervise employees and the distribution of business among members, employees, and administrative units.

(b) Subject to the provisions of chapter 5 of title 5, United States Code, and to the remaining subsections of this section, the Commission may, in its discretion, by published order or rule, delegate any function to one or more Commissioners, employees, or administrative law judges.

(c) The Commission shall review any action taken at a delegated level—

(1) upon the application of any institution whose status as a national bank or as an institution whose deposits are insured by

the Federal Deposit Insurance Corporation is terminated by such action;

(2) upon the application of any person removed from office as a director or officer of any bank by such action;

(3) upon the application of any institution against which a cease and desist order has been issued;

(4) upon the affirmative vote of any Commissioner upon an application for review by any person adversely affected by such action; or

(5) upon the affirmative vote of any Commissioner that the Commission review such action on its own motion.

The Commission shall by regulation prescribe reasonable time limits and procedural rules respecting such review.

(d) The Commission shall not delegate its rulemaking functions or any function of making regulations of general applicability, but the Commission may delegate the function of making statements or orders of particular applicability or interpretation or implementation of policies expressed in statute law or in the published rules or regulations of the Commission.

(e) Action taken at the delegated level shall be deemed as action of the Commission for all purposes, including appeal and review, if the Commission declines to review such action, or if no review by the Commission is sought pursuant to the Commission's rules for seeking review.

REPORTS TO CONGRESS

SEC. 8. The Commission shall make a report to the Congress of its activities and recommendations as soon as practicable after the close of each calendar year.

AUTHORIZATION

SEC. 9. (a) There are authorized to be appropriated out of the funds of the Federal Deposit Insurance Corporation as operating costs and expenses not to exceed $5,000,000 for the purpose of defraying all of the costs and expenses of the Commission until the effective date of section 5. Any funds remaining unexpended at that time shall revert to the Federal Deposit Insurance Corporation.

(b) The Federal Bank Commission shall make expenditures for office space, employees' salaries and expenses, travel and other administrative expenses, including payments to State authorities under the provisions of section 10(g) of the Federal Deposit Insurance Act, but such expenditures shall not exceed the limitation provided for such expenditures for that year in an appropriation Act, except expenditures of the Commission for loans to, the purchase of assets of, or deposits in insured banks, or for the payment of insured deposits.

SEC. 10. (a) The Board of Governors of the Federal Reserve System, by published order or rule, shall designate the rules and regulations for which it will retain jurisdiction and authority after the transfer of functions pursuant to section 5.

(b) Any rules and regulations of the Board of Governors of the Federal Reserve System which are not designated by the Board pursuant to subsection (a) and which are in effect immediately prior to the effective date of section 5 of this Act shall thereafter remain in effect until withdrawn by the Federal Bank Commission or superseded by such rules and regulations as it may prescribe.

SEC. 11. All rules and regulations of the Comptroller of the Currency which are in effect immediately prior to the effective date of section 5 shall thereafter remain in effect until withdrawn by the Federal Bank Commission or the Secretary in the case of rules and regulations concerning currency issue or redemption or superseded by such rules and regulations as the Commission or the Secretary may prescribe.

SEC. 12. All rules and regulations of the Federal Deposit Insurance Corporation or the Board of Directors thereof which are in effect immediately prior to the effective date of section 5 of this Act shall thereafter remain in effect until withdrawn by the Federal Bank Commission or superseded by such rules and regulations as it may prescribe.

SEC. 13. Any reference to the Board of Governors of the Federal Reserve System, the Board of Directors of the Federal Deposit Insurance Corporation, or the Comptroller of the Currency in any rule or regulation remaining in effect pursuant to section 10(b), 11, or 12 after the effective date of section 5 of this Act shall where appropriate be deemed after such date to be a reference to the Secretary of the Treasury, or the Federal Bank Commission.

SEC. 14. The Comptroller of the Currency shall transmit to the Board of Governors of the Federal Reserve System the original organization certificates of the Federal Reserve banks.

SEC. 15. The Board of Governors of the Federal Reserve System and the several Federal Reserve banks shall transfer to the Federal Banks Commission all records kept by them in connection with functions transferred to the Commission by this Act, except that the Board or the banks may transfer copies of any such records for which they anticipate a continuing need in connection with other functions.

SEC. 16. (a) The Secretary of the Treasury, on the basis of prior consultation with the Comptroller of the Currency, shall designate and assume control of the personnel, property, records, and funds which were employed, held, or used for currency issuance or redemption functions of the Office of the Comptroller of the Currency immediately prior to the effective date of this section.

(b) All funds and property held by the Comptroller of the Currency immediately prior to the effective date of this section which are not designated pursuant to subsection (a) of this section are transferred to the Federal Deposit Insurance Corporation. All records of the Comptroller of the Currency and all personnel employed under him immediately prior to such date, unless designated pursuant to subsection (a) of this section, are transferred to the Federal Bank Commission.

SEC. 17. All records and all officers and employees (other than the Board of Directors) of the Federal Deposit Insurance Corporation are transferred to the Federal Bank Commission.

SEC. 18. The Board of Governors of the Federal Reserve System, after consultation with the Federal Bank Commission and with the appropriate officials of the several Federal Reserve banks, shall designate by name the employees of the Board of Governors and the employees of each bank who are engaged in the performance of functions transferred to the Federal Bank Commission by or as a result of this Act and who will not be transferred to other duties with the Board or the bank. Such designations shall be made, as far as practicable, before the effective date of section 5 of this Act, and all authority to make such designations shall expire six months after that date. The Board of Governors shall certify to the Federal Bank Commission the name of each employee designated pursuant to this section, together with such other information as may be necessary to enable the Commission to comply with section 19(a), and shall so notify in writing each such employee.

SEC. 19. (a) The Federal Bank Commission shall make, to each employee designated pursuant to section 18, a written offer of full-time employment not limited as to tenure—

(1) commencing in the same locality as such employee's employment with the bank or the Board, as the case may be;

(2) commencing immediately upon the termination of his employment with the bank or the Board;

(3) at a rate of pay which, for the first year of his employment with the Commission, shall not be less than the rate at which he is being paid at the termination of his employment with the bank or the Board; and

(4) with retirement rights to be determined in accordance with his election under subsection (b) of this section.

(b) Any acceptance of an offer of employment made pursuant to subsection (a) of this section shall be in writing in such form as the Board of Governors may prescribe, and shall include, at the election of the employee, either—

(1) an expression of such employee's intention to retain whatever rights he may have acquired under the retirement plan for employees of the Federal Reserve System, and to have none of his service giving rise to such rights counted as creditable service for the purposes of chapter 83 of tite 5, United States Code, or

(2) effective upon the commencement of such employment, his application for withdrawal from membership in the retirement plan for employees of the Federal Reserve System and his assent to the payment to the Secretary of the Treasury of any funds (other than a refund of additional contributions with interest thereon) which would otherwise be due him from the said retirement plan upon such withdrawal.

(c) The Board of Governors and the several Federal Reserve banks shall act as agents of the Federal Bank Commission to transmit offers and receive acceptances under this section.

(d) Any employee to whom an offer is made pursuant to subsection (a) may accept such offer at any time within the sixty-one-day period which begins on the date on which he receives such offer. Any employee who, because of illness or other cause which in the judgment of his employer (the Federal Reserve bank concerned or the Board of Governors, as the case may be) is reasonable, fails to accept such offer within such sixty-one-day period may thereafter accept such offer within such reasonable time as his employer may allow, but in no event later than one year after his receipt of such offer.

(e) Wherever applicable the Federal Bank Commission shall treat employees from the Comptroller of the Currency and the Federal Deposit Insurance Corporation on the same basis as employees from the Federal Reserve Board in applying these provisions.

SEC. 20. (a) With respect to each person who accepts an offer of employment made pursuant to section 19(a) and elects the option described in clause (2) of section 19(b), the Board of Governors of the Federal Reserve System shall pay to the Secretary of the Treasury, as an agency contribution for the credit of the civil service retirement and disability fund, an amount determined by the Civil Service Commission as equal to 6½ per centum of the total salary of such person for any service after June 30, 1957, to December 31, 1969, plus 7 per centum of the total salary of such person for any service after December 31, 1969; which is made creditable service by the chapter 83 of title 5, United States Code. Any person with respect to whose service payment is required to be made by this section shall be deemed, for the purposes of the chapter 83 of title 5, United States Code, to have performed such service while subject to that Act.

(b) The Board of Governors of the Federal Reserve System, on behalf of itself and the Federal Reserve banks, shall certify to the Civil Service Commission such information respecting service and pay of employees who accept offers of employment with the Federal Bank Commission pursuant to section 19 as may be required by the Civil Service Commission to enable it to determine the rights and benefits of such employees under the chapter 83 of title 5, United States

Code, and to determine the amount of the payments to be made by the Board of Governors pursuant to subsection (a) of this section.

(c) So much of the payments required to be made by subsection (a) of this section as is attributable to service performed in the employ of the Board of Governors of the Federal Reserve System shall be made from funds derived from assessments pursuant to the third paragraph of section 10 of the Federal Reserve Act, and so much of such payments as is attributable to service performed in the employ of the Federal Reserve banks shall be made from funds derived from a special assessment which is hereby authorized to be made upon each such bank in the amount of the payments due with respect to service performed in the employ of that bank.

SEC. 21. The Secretary of the Treasury is authorized to receive for the credit of the civil service retirement and disability fund any payment made to him by the Federal Reserve banks. Any payment received by the Secretary of the Treasury under authority of this section shall be deemed, for the purposes of chapter 83 of title 5, United States Code, to be a sum deposited by the assenting employee.

SEC. 22. (a) Section 5314 of title 5, United States Code, is amended by striking out clause (19) and clause (30).

(b) Section 5315 of title 5, United States Code, is amended by striking out clause (58) and inserting in lieu thereof the following:

"(58) Members, Federal Bank Commission.".

(c) Section 5314 of title 5, United States Code, is amended by adding at the end thereof the following:

"(62) Chairman, Federal Bank Commission.".

(d) Section 5363 of title 5, United States Code, is amended by striking out "sections 248, 481, and 1819" and inserting in lieu thereof "section 248".

SEC. 23. The provisions of this Act become effective on the date of enactment of this Act, except that sections 5, 16, 17, and the provisions of title II shall take effect upon the expiration of one year following such date of enactment.

TITLE II—CONFORMING AMENDMENTS

SEC. 201. The following sections of the Revised Statutes of the United States are repealed:

(1) Section 325 (12 U.S.C. 2, relating to the appointment and term of office of the Comptroller of the Currency).

(2) Section 326 (12 U.S.C. 3, relating to the oath and bond of the Comptroller).

(3) Section 327 (12 U.S.C. 4, relating to Deputy Comptrollers).

(4) Section 328 (12 U.S.C. 8, relating to the employment of clerks by the Comptroller).

(5) Section 329 (12 U.S.C. 11, prohibiting the Comptroller from having an interest in a national bank).

(6) Section 330 (12 U.S.C. 12, relating to the seal of the Comptroller).

(7) Section 331 (12 U.S.C. 13, relating to the assignment of rooms to the Comptroller).

(8) Section 333 (12 U.S.C. 14, requiring an annual report by the Comptroller).

SEC. 202. Section 324 of the Revised Statutes (12 U.S.C. 1, relating to issuance of national currency and Federal reserve notes) is amended by striking out "shall be called the Comptroller of the Currency and".

SEC. 203. So much of the provisions of the Treasury Department Appropriations Acts of February 17, 1922, 42 Stat. 375) and January 3, 1923 (42 Stat. 1096) relating to the Office of the Comptroller of the Currency as reads "The Comptroller of the Currency may designate a national bank examiner to act as chief of the examining division in his office." (12 U.S.C. 7) is repealed.

SEC. 204. Subsection (b) of section 209 of the Act of March 4, 1923, entitled "An Act to provide additional credit facilities for the agricultural and livestock industries of the United States; to amend the Federal Farm Loan Act; to amend the Federal Reserve Act; and for other purposes" (12 U.S.C. 9 and 10) is repealed.

(D) strike out subsection (q) and insert in lieu thereof the following:

"(q) The term 'appropriate Federal banking agency means the Federal Bank Commission.".

"CONVERSIONS, MERGERS, AND CONSOLIDATIONS

"SEC. 4. A State bank, resulting from the conversion of an insured national bank, shall continue as an insured bank. A State bank, resulting from the merger or consolidation of insured banks, or from the merger or consolidation of a noninsured bank or institution with an insured State bank, shall continue as an insured bank.".

(3) Strike out section 5 (12 U.S.C. 1815) and insert in lieu thereof the following:

"APPLICATIONS

"SEC. 5. Any National or State bank may apply to the Commission to become an insured bank. Before approving any such application, the Commission shall give consideration to the factors enumerated in section 6 of this Act, and shall determine upon the basis of a thorough examination of such bank, that its assets in excess of its capital requirements are adequate to enable it to meet all of its liabilities to depositors and other creditors as shown on the books of the bank.".

(4) In section 6 (12 U.S.C. 1816), strike out "Board of Directors" and insert in lieu thereof "Commission".

(5) The first sentence of section 7(a)(1) (12 U.S.C. 1817(a)(1)) is amended to read as follows: "Each insured bank shall make to the Commission reports of condition which shall be in such form and contain such information as the Commission may require.".

(6) Such section is further amended by striking out "Corporation" and "Board of Directors" each place either term appears and inserting in lieu thereof "Commission".

(7) Section 7(a)(2) of such Act is amended to read as follows:

"(2) The Commission may accept any report made by or to any State banking supervisory agency and may furnish to the Board of Governors of the Federal Reserve System or any Federal Reserve bank, reports of examinations and reports of condition made or accepted by the Commission. The Commission may furnish to any State banking supervisory agency reports of examination and reports of condition made or accepted by the Commission with respect to any bank under the jurisdiction of such State agency.".

(8) The first sentence of section 7(a)(3) of such Act is amended to read as follows: "Each insured bank shall make to the Commission four reports of condition each year upon dates selected by the Commission.".

(9) In section 7(a)(6), strike out "Board of Directors, after consultation with the Comptroller of the Currency and" and insert in lieu thereof "Commission after consultation with".

(10) In paragraphs (5) and (6) of subsection (b) of such section, strike out "Board of Directors" and insert in lieu thereof "Commission".

(11) In the last sentence of subsection (b)(6), strike out "Corporation" and insert in lieu thereof "Commission".

(12) In subsection (c), strike out "Board of Directors" each place it appears and insert in lieu thereof "Commission".

(13) Strike out paragraph (5) of subsection (j)(b)(1) Section 8(a) of such Act (12 U.S.C. 1818(a)) is amended—

(A) by striking out each reference to the "Corporation" and "Board of Directors" and by inserting "Federal Bank Commission" in their place;

(B) by striking out in the second sentence "Comptroller of the Currency in the case of a national bank or a district bank", "and to the Board of Governors of the Federal Reserve System in the case of a State member bank"; and

(C) by striking out in the third sentence "the Comptroller of the Currency in the case of a national bank, or the Board of Governors of the Federal Reserve System in the case of a State member bank as the case may be".

(2) Such section is amended—

(A) by striking out in subsection (b)(3) "(other than a bank)" and "in the same manner as they apply to a State member insured bank"; and by striking out in subsection (e)(1) "State" and "(other than a District bank)";

(B) by repealing subsection (e)(2); and by striking out in subsection (e)(3) "State" and "(other than a District bank" each time they appear; and by repealing subsection (e)(4);

(C) by striking out in subsection (e)(5) "State" and "(other than a District bank)";

(D) by repealing subsection (e)(6);

(E) by repealing subsection (e)(7);

(F) by striking out in subsection (f) "or (e)(7)" each time it appears, and by inserting "or" after "(e)(1)";

(G) by striking out in subsection (g)(1) "(2),";

(H) by inserting "or";

(I) by striking out "(4), or (7)";

(J) by striking out in subsection (g)(2) "Comptroller of the Currency" and by inserting "Federal Bank Commission";

(K) by striking out in subsection (h) "or Board of Governors of the Federal Reserve System"; and

(L) by striking out in subsection (j) "(e)(7)".

(3) The first sentence of subsection (o) of such section is amended to read as follows: "Whenever the insured status of an insured bank shall be terminated by action of the Federal Bank Commission its membership in the Federal Reserve System shall terminate and in the case of a national bank a receiver for the bank shall be appointed by the Federal Bank Commission.".

(4) Subsections (p) and (q) of such section are amended by striking out each reference to "Corporation" and "Board of Directors" and by inserting in lieu thereof "Federal Bank Commission".

(c) Section 9 of such Act (12 U.S.C. 1819) is amended—

(1) by striking out the first sentence of paragraph Fourth and inserting "To sue and be sued, complain and defend, through the Federal Bank Commission, in any court of law or equity, State or Federal";

(2) by striking out "Board of Directors" in the fourth sentence of paragraph Fourth and inserting "Federal Bank Commission";

(3) by striking out in paragraph Fifth "appoint by its Board of Directors such" and "in this chapter" and inserting "act through such personnel as the Federal Bank Commission may designate. The Federal Bank Commission shall have power to appoint such" and "by law" in their places and inserting after "compensation" in the first sentence "in accordance with chapter 51 and subchapter III of chapter 53 of title 5, United States Code";

(4) by striking out in paragraph Sixth ", by its Board of Directors," and inserting "upon approval of the Federal Bank Commission";

(5) by striking out in paragraph Seventh "by its Board of Directors," and inserting "under authority of the Federal Bank Commission,";

(6) by striking out from paragraph Eighth "To" and inserting "The Federal Bank Commission may"; and by adding at the end of paragraph Ninth "under the authority of the Federal Bank Commission"; and

(7) by amending paragraph Tenth to read as follows:

"Tenth. The Federal Bank Commission may prescribe such rules and regulations as it may deem appropriate in the performance of its functions.".

(d)(1) Section 10 of such Act (12 U.S.C. 1820) is amended—

(A) by striking out each reference to the "Board of Directors" and "Board of Directors of the Corporation" and "Corporation" and by inserting "Federal Bank Commission" in their places;

(B) by amending the first sentence of subsection (b) to read as follows: "The Federal Bank Commission shall appoint examiners who shall have power, on behalf of the Commission, to examine any insured bank or any bank making an application to become an insured bank, whenever in the judgment of the Federal Bank Commission an examination is necessary,"; and

(C) by repealing the second sentence to subsection (b).

(2) Such section is amended by adding at the end thereof the following:

"(f) The Commission shall adopt rules and regulations which provide for the insurance under section 5 of State-chartered banks not members of the Federal Reserve System based solely upon the grant of a charter by any

State which the Commission finds to be a State whose operations and management of supervisory authority over State-chartered banks is adequate to assure the safety and soundness of banks within its jurisdiction and a State in which due consideration is given in the granting of bank charters to the factors enumerated in section 6.

"(g) During any period in which examinations made by a State banking supervisory authority are, in the judgment of the Commission, adequate to determine the condition of any State nonmember insured bank, the Commission may suspend the making of Federal examinations of State nonmember banks in such State and in lieu thereof accept reports of examinations made by or on behalf of the State agency. No such supervision shall affect the right of the Commission to make special examinations of individual banks in such State at any time. Copies of any report of an examination made or accepted by the Federal Bank Commission may, in the discretion of the Commission, be furnished to the State authorities having supervision of the bank examined, to officers, directors or the receiver of such bank, and to any other proper persons. The Commission shall have authority to enter into contracts with such State supervisory authorities to implement the purposes of this subparagraph and to reimburse such State supervisory authorities for part or all of the cost of examinations of State nonmember insured banks from Federal Deposit Insurance Corporation funds.".

(e)(1) Section 11(a) of such Act (12 U.S.C. 1821) is amended by striking out "Corporation" and inserting "Federal Bank Commission". Subsection (c) of such section is amended to read as follows:

"(c) Notwithstanding any other provision of law, the Federal Bank Commission shall not appoint a receiver other than itself of any insured bank except for the appointment of a conservator pursuant to the Bank Conservation Act.".

(2) Subsection (d) of such section is amended—

(A) by striking out from the first sentence "Corporation" and inserting "Federal Bank Commission" in its place;

(B) by striking out from the second sentence "Corporation" and "itself for its own account" and inserting "Federal Bank Commission" and "the Corporation" in their places;

(C) by striking out from the third sentence "Corporation" and "Corporation itself or" and inserting "Federal Bank Commission" and "Federal Bank Commission or Corporation" in their places;

(D) by striking out each reference to the "Corporation" in the last sentence and by inserting "Federal Bank Commission" in their places and by striking out "or the Comptroller of the Currency".

(3) Subsection (e) of such section is amended by striking out each reference to the "Corporation" and inserting "Federal Bank Commission" in their place.

(4) Subsection (f) of such section is amended by striking out ": *Provided*, That the Corporation" and inserting ". The Federal Bank Commission"; by striking out "where the Corporation" and by inserting "where the Federal Bank Commission".

(5) Subsection (h) of such section is amended by striking out "Corporation" and inserting "Federal Bank Commission".

(6) Subsection (i) of such section is amended by striking out each reference to the "Corporation", "Board of Directors of the Corporation" and "Comptroller of the Currency" and inserting in their place the "Federal Bank Commission".

(7) Subsection (k) of such section is amended by striking out each reference to the "Board of Directors" and "Corporation" and "Comptroller of the Currency" and by inserting "Federal Bank Commission" in their places; and by striking out ", without certification to or approval by the Corporation".

(8) Subsection (l) of such section is amended by striking out "Board of Directors" wherever it appears and "Comptroller of the Currency" and by inserting "Federal Bank Commission" in their place.

(f)(1) Section 12(a) of such Act (12 U.S.C. 1822) is amended by striking out "Corporation" and by inserting in lieu thereof "Federal Bank Commission" each place it appears.

(2) Subsection (c) of such section is amended by striking out "Board of Directors" and inserting "Federal Bank Commission".

(g)(1) Section 13(c) of such Act (12 U.S.C. 1823(c)) is amended by striking out "Corporation" the first time it appears and "Board of Directors" each time it appears and by inserting "Federal Bank Commission" in their place.

(2) Subsection (d) of such section is amended by striking out "in its discretion" in the last sentence and by inserting "in the discretion of the Federal Bank Commission" and by striking out "Corporation" the last time it appears and by inserting "Federal Bank Commission".

(3) Subsection (e) of such section is amended by striking out "Board of Directors" and by inserting "Federal Bank Commission".

(h) Section 14 of such Act (12 U.S.C. 1824) is amended by striking out "Board of Directors of the Corporation" and by inserting "Federal Bank Commission".

(i)(1) Section 17(a) of such Act (12 U.S.C. 1827(a)) is amended by striking out "Corporation" and inserting "Federal Bank Commission" and by adding at the end thereof "which report shall include a report on the operations of the Corporation".

(2) Subsection (b) of such section is amended to read as follows:

"(b) The Comptroller General of the United States shall, under such rules and regulations as he shall prescribe, audit the Federal Bank Commission. In making the audit, representatives of the General Accounting Office shall have access to books, accounts, records, reports, files, and all other papers, things, and property belonging to or in use by the Commission, including reports of bank examinations and related papers, from whatever source. Such representatives shall also be afforded full facilities for verifying transactions and activities with balances or securities held by depositaries, fiscal agents, and custodians.".

(3) Subsection (c) of such section is amended to read as follows:

"(c) The Comptroller General shall report to the Congress on the results of his audit work relating to the Federal Bank Commission. A copy of each report made under this subsection shall be sent to the President of the United States, and to the Commission. In addition to any other matters the report shall include such comments and recommendations as the Comptroller General may deem advisable including recommendations for attaining a more economical and efficient administration of the Commission, and the report shall specifically show any program, financial transaction, or undertaking observed in the course of the audit which in the opinion of the Comptroller General has been carried out without authority of law.".

(j)(1) Section 18(a) of such Act (12 U.S.C. 1828(a)) is amended by striking out "Board of Directors" each time it appears and by inserting "Federal Bank Commission"; and by striking out "Corporation may recover for its use" and by inserting "Federal Bank Commission may recover for the Corporation".

(2) Subsection (c) of such section is amended by providing that "In every case the responsible agency shall be the Federal Bank Commission"; and by striking out "Corporation" and by inserting "Federal Bank Commission" in subparagraph (1) and in subparagraph (2) by striking out "be—" and all of section (A), (B), and (C) and by inserting "in every case be the Federal Bank Commission"; and in subsections (4) and (6) by striking out "and the other two banking agencies referred to in this subsection" and "and the other two banking agencies" each time they appear; and in subsection (a) by striking out "Each of the responsible agencies" and by inserting "the Federal Bank Commission" and striking out "responsible agency" and inserting 'Commission".

(3) Subsections (d), (e), (f), and (h) of such section are amended by striking out "Corporation" each time it appears and by inserting "Federal Bank Commission".

(4) Subsection (g) of such section is amended by striking out each reference to the "Board of Directors" and "Corporation" and by inserting "Board of Governors of the Federal Reserve System" in their place.

(5) Paragraph (2) of subsection (l) of such section is amended to read as follows:

"(2) No insured bank shall convert into an insured State bank if its capital stock or its surplus will be less than the capital stock or surplus, respectively, of the converting bank at the time of the shareholders' meeting approving such conversion, without the prior written consent of—

"(A) the Federal Bank Commission if the resulting bank is to be a district bank or a State nonmember insured bank; or

"(B) Board of Governors of the Federal Reserve System if the resulting bank is to be a State member bank.".

(k) Section 19 of such Act (12 U.S.C. 1829) is amended by striking out "Corporation" and inserting in lieu thereof "Federal Bank Commission".

(l) Section 21 of such Act (12 U.S.C. 1831) is amended by striking out "Board of Directors" and inserting in lieu thereof "Commission".

SEC. 317. Section 3(a)(34) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(34)) is amended—

(1) in subparagraph (A)(i) by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission";

(2) in subparagraph (A)(iii) by striking out "Federal Deposit Insurance Corporation" the first place it appears therein and inserting in lieu thereof "Federal Bank Commission";

(3) in subparagraph (B)(i) by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission";

(4) in subparagraph (B)(iii) by striking out "Federal Deposit Insurance Corporation" the first place it appears therein and inserting in lieu thereof "Federal Bank Commission";

(5) in subparagraph (C)(i) by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission";

(6) in subparagraph (C)(iii) by striking out "Federal Deposit Insurance Corporation" the first place it appears therein and inserting in lieu thereof "Federal Bank Commission";

(7) in subparagraph (D)(i) by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission".

(8) in subparagraph (D)(iii) by striking out "Federal Deposit Insurance Corporation" and inserting in lieu thereof "Federal Bank Commission";

(9) in subparagraph (F)(i) by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission"; and

(10) in subparagraph (F)(iii) by striking out "Federal Deposit Insurance Corporation" and inserting in lieu thereof "Federal Bank Commission".

SEC. 318. Section 321(b) of the Trust Indenture Act of 1939 (15 U.S.C. 77iii(b)) is amended by striking out "Comptroller of the Currency" and inserting in lieu thereof "Federal Bank Commission".

SEC. 319. Section 12(i) of the Securities Exchange Act of 1934 (15 U.S.C. 781) is amended—

(1) by striking out "Comptroller of the Currency", "Board of Governors of the Federal Reserve System" and "Federal Deposit Insurance Corporation" each place they appear and inserting in lieu thereof "Federal Bank Commission."

SEC. 320. (a) Section 103 of the Truth in Lending Act (15 U.S.C. 1602) is amended by adding at the end thereof the following:

"(5) The term 'Commission' means the Federal Bank Commission.".

(b) Section 105 of such Act is amended by striking out "Board" each place it appears and inserting in lieu thereof "Commission".

(c) Section 106(d), section 107(a), section 107(b), section 107(c), section 107(d), section 107(e) of such Act are each amended by striking out "Board" each place it appears and inserting in lieu thereof "Commission".

(d) Section 108(a)(1)(A) of such Act is amended by striking out "Comptroller of the Currency" and inserting in lieu thereof "Commission".

(e) Section 108(a)(1)(B) of such Act is amended to read as follows:

"(B) State member banks of the Federal Reserve System by the Board.".

(f) Section 108(d) of such Act is amended by striking out "Board" each place it appears and inserting in lieu thereof "Commission".

(g) Sections 109, 110, 112, 114, 121, 122, 123, 125(a), 125(d), 126, and 127(a) of such Act are amended by striking out "Board" each place it appears and inserting in lieu thereof "Commission".

(h) Section 130(f) of such Act is amended by striking "Board" each place it appears and inserting in lieu thereof "Commission", and by striking out "Federal Reserve System" and inserting in lieu thereof "Commission".

(i) Section 143 of such Act is amended by striking out "Board" and inserting in lieu thereof "Commission".

(j) Section 161 of such Act is amended by striking out "Board" and inserting in lieu thereof "Commission".

(k) Section 163(b) of such Act is amended by striking out "Board" and inserting in lieu thereof "Commission".

(l) Section 167(b) of such Act is amended by striking out "Board" and inserting in lieu thereof "Commission".

(m) Section 171 of such Act is amended by striking out "Board" and inserting in lieu thereof "Commission".

SEC. 321. (a) Section 621(b)(1)(A) of the Fair Credit Reporting Act (15 U.S.C. 1681s) is amended by striking out "Comptroller of the Currency", "Federal Reserve Board" and "Federal Deposit Insurance Corporation" and inserting in lieu thereof "Federal Bank Commission".

SEC. 322. (a) Section 702(c) of the Equal Credit Opportunity Act (15 U.S.C. 1691) is amended to read as follows:

"(c) The term 'Commission' means the Federal Bank Commission.".

(b) Section 703, section 704(d), and section 706(f) of such Act are each amended by striking out "Board" each place it appears and inserting in lieu thereof "Commission".

(c) Section 70(a)(1)(A), (B) and (C) of such Act is amended by striking out "Comptroller of the Currency", "Board" and "Federal Deposit Insurance Corporation" and inserting in each place "Federal Bank Commission".

(e) Section 704(c) of such Act is amended to read as follows:

"(c) Except to the extent that enforcement of the requirements imposed under this title is specifically committed to some other Government agency under subsection (a), the Commission shall enforce such requirements. For the purpose of the exercise by the Commission of its functions and powers under the Federal Trade Commission Act, a violation of any requirement imposed under this title shall be deemed a violation of a requirement imposed under that Act. All of the functions and powers of the Federal Trade Commission under the Federal Trade Commission Act are available to the Commission to enforce compliance by any person with the requirements imposed under this title, irrespective of whether that person is engaged in commerce or meets any other jurisdictional tests in the Federal Trade Commission Act.".

SEC. 323. Each reference to the "Comptroller of the Currency", the "Board of Governors of the Federal Reserve System" and the "Federal Deposit Insurance Corporation" in title 18 of the United States Code shall be deemed a reference to the "Federal Bank Commission".

SECTION-BY-SECTION ANALYSIS

Section 1. This section provides a short title for the bill: The Federal Bank Commission Act of 1977.

Section 2. This section provides the basic findings and policy declarations relating why this legislation is necessary. Congress finds that the existing structure of regulation of banking institutions under Federal law if reorganized will better insure the safe and sound operation of the commercial banking system. Congress finds that a safe and sound banking system is necessary to support the industrial needs of the Nation. Congress finds that the Federal Reserve System will be better equipped to fulfill its primary responsibility to conduct the monetary policy of the Nation by having one of its members serve on the Federal Bank Commission. The Congressional policy enunciated is to preserve and strengthen the dual banking system; and to provide for uniform, fair, impartial and efficient administration of Federal banking law.

Section 3. Establishes a Federal Bank Commission consisting of a Chairman and four other members, four appointed by the President by and with the advice and consent of the Senate, and one designated by the Chairman of the Federal Reserve. This section also provides that at all times one member of the Commission shall be an individual who has had direct state bank regulatory experience.

Section 4. Provides that the members of the Commission shall be appointed without reference to political affiliation and with due regard to the financial, economic, and legal matters on which the Commission must exercise its statutory responsibilities. Terms of office for members of the Commission are five years.

Section 5. All functions of the Comptroller of the Currency (except those dealing with currency issue and redemption which are transferred to the Secretary of the Treasury) are transferred to the Commission. All functions of the Board of Directors of the Federal Deposit Insurance Corporation are transferred to the Commission. All bank examining and other supervisory functions of the Federal Reserve System along with the Federal Reserve's responsibilities under the Bank Holding Company Act, the Consumer Credit Protection Act, Clayton Act, and Securities Acts (except those dealing with margin requirements) are transferred to the Commission.

Section 6. This section prohibits any Commissioner from holding stock in or being an officer, director, or employee of any institution subject to the jurisdiction of the Commission. These prohibitions apply to any Commissioner for two years after termination of his or her term except for involuntary stock acquisition.

Section 7. This section vests in the full Commission all administrative powers including the appointment and supervision of Commission employees. The Commission is empowered to delegate one or more of its functions and provision for review is made for any action taken at the delegated level. The Commission may not delegate its policy making functions.

Section 8. This section requires the Commission to make an annual report to the Congress.

Section 9. This section provides funds for the Commission to operate during the preparation and planning period referred to in Section 8 and for yearly Congressional appropriations ceilings for administrative expenses.

Section 10. This section requires the Federal Reserve System to designate the rules relating to its functions which it will retain after the effective date of the transfer of its functions to the Commission. All Federal Reserve Rules relating to transferred functions remain in effect until withdrawn or superseded by rules of the Commission.

Section 11. This section provides for the carrying forward of the rules of the Comptroller of the Currency until withdrawn or superseded by rules of the Commission.

Section 12. This section provides for the

carrying forward of the rules of the Federal Deposit Insurance Corporation until withdrawn or superseded by the rules of the Commission.

Section 13. This section provides that rules of the Federal Reserve System, Comptroller of the Currency and Federal Deposit Insurance Corporation which remain in effect after the transfer of functions to the Commission shall be deemed rules of the Commission.

Section 14. This section provides that the Comptroller of the Currency shall transmit to the Board of Governors of the Federal Reserve System the organization certificate of the Federal Reserve banks.

Section 15. This section provides that the Federal Reserve System shall transfer records to the Commission relating to functions transferred to the Commission.

Section 16. This section transfers from the Comptroller of the Currency to the Secretary of the Treasury all property, records, and funds held for currency issuance or redemption functions. All other records are transferred to the Commission and all other property and funds held by the Comptroller are transferred to the Federal Deposit Insurance Corporation which continues as an entity under the control of the Commission.

Section 17. All records, officers and employees of the Federal Deposit Insurance Corporation are transferred to the Commission.

Section 18. This section provides for the transfer of employees from the Federal Reserve System to the Commission.

Sections 19, 20 and 21. These sections provide terms upon which Federal Reserve employees shall be employed by the Commission.

Section 22. This section among others makes provision for Commission employees to be covered by rules applicable to other government employees.

Section 23. This section provides for effective dates for various provisions of the Act. The Commission is established immediately and a period of one year is provided before the actual functions of the three agencies are transferred to the Commission.

Conforming Amendments Sections 201–323. These sections amend the sections of statutory law which are necessary to effectuate the transfer of authority from the Federal Reserve System, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation to the Federal Bank Commission.

The Office of the Comptroller is abolished and all of its powers are transferred to the Commission. The Federal Deposit Insurance Corporation continues as a finanical entity for insurance purposes under the control of the Commission; and, all of its powers are transferred to the Commission. The Federal Reserve System continues as an entity to conduct the monetary policy of the Nation, and all of its supervisory and regulatory powers are transferred to the Commission. The Conforming Amendments with three exceptions are not designed or intended to change the substantive law which currently applies to national banks, member State Banks of the Federal Reserve System or non-member State insured banks under the jurisdiction of the FDIC. These provisions are designed solely to effectuate the transfer of statutory responsibility now exercised by the three bank regulatory agencies to the Commission under the findings and policies set forth in Section 2 of the bill.

The three areas in which significant changes have been made in the law are as follows:

1. Section 9(b) requires the Commission to make expenditures for office space, employees' salaries and expenses, and travel and other administrative expenses within yearly appropriations ceilings set by the Congress. This section is designed to bring the Commission within the Congressional appropriations review process. The Federal Reserve System, the Comptroller of the Currency and the Federal Deposit Insurance Corporation are now exempt from that process. The exemption is retained for expenditures by the Commission for payments to insured depositors and payment made in connection with liquidating or failing banks.

2. Section 312 contains amendments which would make clear that all of the Commission's activities are subject to full auditing by the Government Accounting Office. The GAO is required by these provisions to submit an audit of the Commission's activities each year to the Congress.

3. Section 312 also contains two provisions designed to strengthen the dual banking system. First, the Commission would be required to insure any state chartered bank whose supervisory authority operated in a manner to assure the safety and soundness of banks within its jurisdiction. Second, the Commission could accept state bank examinations in lieu of its own examinations of state chartered banks and reimburse the state authority for all or part of the cost of such examinations.

By Mr. MATHIAS:

S. 685. A bill to amend the Tax Reform Act of 1976 to conform the termination date for certain tax deductions for transfers of partial interests in property for conservation purposes with the termination dates of related provisions; to the Committee on Finance.

Mr. MATHIAS. Mr. President, one of the most constructive provisions of the Tax Reform Act of 1976 is section 2124 (e), which recognizes for income, gift and estate tax purposes the reduction in market value of land when a conservation or preservation easement for a period less than perpetuity is granted by the owner to a governmental or charitable body. Such easements are vital for purposes of environmental protection and historic preservation. It is rarely practicable to make them perpetual, as the law required before the 1976 act. When not recognized by the tax law, easements are actually subjected to tax penalties—that is, a gift tax is imposed on a charitable donation—and thus are rendered impossible. Section 2124(e) of the 1976 act, one of the provisions originated by our former colleague, J. Glenn Beall, recognizes easements of 30 years or more in duration.

However, the provision as enacted contains an expiration date of June 14, 1977, while all the other related provisions of Senator Beall's amendment have dates of June 14, 1981. I am placing in the record a letter from Senator Beall to me dated December 29, 1976, which explains the discrepancy was due to inadvertence and the June 14, 1981, date should have applied to section 2124(e) as well.

Obviously a trial period of less than 9 months from the date of enactment is wholly inadequate to amass experience sufficient for review, and could not have been rationally intended. Most affected persons will not even learn of the provision until it is too late. Thus, the incorrect date renders this salutary provision virtually useless.

It is important that this mistake be corrected as quickly as possible. I am informed that donee organizations in my own State, including agencies of the State government, are expecting more offers of easements than their facilities can handle before the deadline. I am sure the same problem will exist in other States. Negotiation, drafting, and approval of easements take time. Under the gun of the June 14, 1977, expiration date, mistakes will be made and wholly unnecessary burdens will be imposed. The solution is prompt correction of the mistake by changing the expiration date of section 2124(e) to June 14, 1981, in conformity with the related provisions. I am today introducing this bill to accomplish that result.

I ask unanimous consent that the letter I referred to be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON
LABOR AND PUBLIC WELFARE,
Washington, D.C., December 29, 1976.

Hon. CHARLES MCC. MATHIAS, JR.,
Russell Senate Office Building, Washington, D.C.

DEAR MAC: Enclosed please find a draft bill which would make a small technical change in the Historic Structures Tax provision which was incorporated into the Tax Reform Act of 1976.

During the Senate consideration of Amendment No. 1905, I indicated that "as a member of the Budget Committee, I believe that tax expenditures should be periodically reviewed by the Finance Committee just as other federal programs are reauthorized from time to time." Thus, I provided for a 5-year termination date on the provisions of Amendment No. 1905. Inadvertently the last provision in the amendment which was entitled "Transfers of Partial Interests in Property for Conservation Purposes" carry a termination date of June 14, 1977. This should have read "June 14, 1981". The enclosed legislation would correct this error.

I would appreciate it if you would introduce this measure early in the 95th Congress. I would expect that there will be legislation passed early in the 95th Congress making technical corrections in the Tax Reform Act of 1976, and I would hope that this proposal could be included at that time.

With best wishes, I am

Sincerely yours,

J. GLENN BEALL, JR.

By Mr. CHURCH (for himself and Mr. WILLIAMS):

S. 686. A bill to provide financial assistance to utility regulatory bodies and electric utilities to carry out energy conservation demonstration projects, and for other purposes; to the Committee on Energy and Natural Resources.

ENERGY SAVINGS DEMONSTRATION ACT

Mr. CHURCH. Mr. President, on behalf of myself and Senator WILLIAMS I introduce for appropriate reference the Energy Savings Demonstration Act.

Our recordbreaking cold wave has dramatically emphasized the necessity to develop a comprehensive national energy policy. Equally important—as President Carter stressed in his fireside chat—our Nation must make every effort to conserve energy and cut back on wasteful consumption.

All Americans have been affected in one form or another by rising energy costs. But recent information brought to the attention of the Senate Committee on Aging—of which I am chairman—makes it clear that older Americans have been especially hard hit.

We have received reports about elderly persons in the Midwest and elsewhere who now pay $200 to $300 a month to

heat their homes. Yet, they are struggling on limited social security checks.

The average social security benefit for a retired worker is $218 a month. In the case of an elderly couple, monthly benefits average $372.

The net impact is that many older Americans do not have the sufficient margin between income and outgo to withstand these enormous heating costs.

In addition, health care problems intensify the energy cost squeeze for aged and aging Americans. Quite frequently, this affects their tolerance to lower room temperatures to reduce energy costs.

Prior hearings conducted by the Committee on Aging have revealed that older Americans are among those experiencing the greatest deprivation and hardship because of rising energy costs. Several important points were made at those hearings, including:

The aged poor spend a much higher proportion of their income on energy than other groups, although their consumption is less.

Everyday necessities—such as cooking and heating—account for the bulk of the elderly poor's energy costs.

Low-income older Americans pay a higher per unit cost for electricity and natural gas than other groups.

A comprehensive and coordinated national energy policy is urgently needed.

President Carter will soon make recommendations to implement this objective. But in the meantime, important preliminary steps can be taken to provide the body of information for making key decisions in developing an all encompassing energy policy, as well as to promote conservation and stabilize energy costs.

The Energy Savings Demonstration Act can help to test out a number of concepts to provide the underpinnings for a national strategy.

First, the bill would authorize demonstration projects concerning peak pricing, effective load management techniques, lifeline rates, and other innovative approaches to make energy costs more equitable and less burdensome. Some pilot projects have already yielded useful data, but much more remains to be done.

Under the lifeline approach, for instance, consumers would be guaranteed a basic amount of electricity at a fixed rate to meet their everyday needs. Higher charges would be imposed for consumption above this level.

I am fully aware that the lifeline service may benefit some consumers, while posing problems for others. But these problems—such as the impact upon farmers, rural cooperatives, and others—can be addressed in a thoughtful and systematic manner. And perhaps solutions can be developed to take into account their special needs.

Peak pricing would encourage consumers to use energy during the hours of the day and the seasons when demand is lower. Rates, for example, would be lower during the evenings or weekends. But during higher demand periods, consumers would pay more for their energy.

Second, the bill would examine several ongoing alternatives to protect individuals when their power is turned off or about to be terminated.

Finally, the Energy Savings Demonstration Act would provide the means to obtain effective information upon which to make sound judgments. Studies would be authorized on consumption patterns by age, income, and region. This information is essential for an effective national policy, but is not now available.

During the past 3½ years, heating costs have increased at about three times the overall inflationary rate. From June 1973 to December 1976, home heating fuel oil costs rose by 100 percent. Residential natural gas rates leaped forward by more than 93 percent and with no end in sight.

Utility costs also increased at an accelerated rate. Electricity rates jumped by 46 percent in the past 3½ years. This is nearly 1½ times the increase in the Consumer Price Index, the Government's inflation yardstick.

The energy crisis is clearly one of our most pressing problems today. It requires immediate and thorough attention. I strongly believe that the Energy Savings Demonstration Act can provide essential data for developing effective solutions to come to grips with this dilemma. It is, however, just one of the steps which should be taken. I am also examining ways to provide emergency help to older persons and others in need of immediate assistance to relieve suffering and even to assure survival.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD at the close of my statement.

An article in the New York Times describes in human terms the harsh impact of the energy shortage on the elderly and poor.

Mr. President, I ask unanimous consent that this account entitled "A Harsh Winter Lashes Elderly and Poor," be printed in the RECORD together with the text of the Energy Savings Demonstration Act.

There being no objection, the bill and article were ordered to be printed in the RECORD, as follows:

S. 686

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Energy Savings Demonstration Act."

FINDINGS OF FACT AND DECLARATION OF POLICY DEFINITIONS

SEC. 2. As used in this Act—

(1) "Administrator" means the Administrator of the Federal Energy Administration;

(2) "electric utility company" means any person, who owns or operates facilities used for the generation, transmission, or distribution and sale of electric energy for use other than resale;

(3) "State" means any of the several States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, Guam, the Virgin Islands, and the Trust Territories of the Pacific.

(4) "State regulatory commission" means the agency, commission, or establishment of any State, which has the responsibility for establishing and administering rules and regulations relating to the operation of and rates charged by an electric utility company; and

(5) "applicant" means an electric utility company, State regulatory commission, or other person that the Administrator approves for assistance under section 4(a) of this Act.

ENERGY SAVINGS DEMONSTRATION ASSISTANCE

SEC. 3. (a)(1)(A) The Administrator is authorized to provide financial assistance to State regulatory commissions, electric utilities, and such other appropriate persons as the Administrator in his discretion may approve, to enable them to initiate electric utility rate structures and load management demonstration projects involving life-line service rates, peak-load pricing and management and other proposals to realine the pricing structure of electric utilities to provide an equitable distribution in allocation of costs for electrical energy between and among all consumers of such energy.

(B) Such demonstration projects shall consider—

(i) the groups or interests which would be benefited thereby;

(ii) the effects of realining the pricing structure of electric utility rates upon consumers and other special interests;

(iii) the effect of specific utility rate structures or pricing programs on specific interest groups or consumers of electric power including, but not limited to, farmers, residential homeowners, industrial users, and such other persons as the Administrator may include; and

(iv) measures which might be taken to overcome any undesirable effects of such structures or programs on such groups or concerns.

(C) In implementing the provisions of this paragraph the Administrator shall consult with—

(i) the Department of the Interior;

(ii) the Department of Labor;

(iii) the Department of Housing and Urban Development;

(iv) the Federal Power Commission;

(v) the Energy Research and Development Administration;

(vi) the Community Services Administration; and

(vii) the Administration on Aging, Department of Health, Education, and Welfare.

(2) The Administrator is authorized to provide financial assistance to State regulatory commissions, State governments, or general or special purpose units of local government or nonprofit organizations to study alternative financing schemes, including, but not limited to, emergency grants, loans, and deferred payment schedules to protect or assist consumers who because of their financial circumstances are in jeopardy of losing their access to or use of electrical power which is generated by an electric utility company or which is subject to the regulation of a State regulatory commission or both.

(b) Assistance may be furnished under this section only pursuant to an application submitted by an application and approved by the Administrator. In such application the applicant shall—

(1) certify that it is an eligible applicant within the meaning of this Act;

(2) describe, in such form and detail as the Administrator may by regulation require, a program for the development of an electric utility rate structure or load management demonstration project if the applicant seeks financial assistance under subsection (a)(1), or an appropriate program of study if the applicant seeks financial assistance under subsection (a)(2); and

(3) furnish such assurances as the Administrator may require to assure that funds made available under this Act will be in addition to and not in substitution for, the

amount of funds made available to any such applicant from other sources.

REPORTS

SEC. 4. Not later than the last day in December in each year following the date of enactment of this Act the Administrator shall transmit to the Congress a report containing a statement of the progress made under this Act and recommendations as to the need for and types of further Federal legislation.

AUTHORIZATION OF APPROPRIATIONS

SEC. 5. There are authorized to be appropriated not to exceed $10,000,000 for fiscal year 1978 and not to exceed $15,000,000 for fiscal year 1979 for the purpose of carrying out the provisions of section 3 of this Act.

[From the New York Times, Feb. 2, 1977]

A HARSH WINTER LASHES ELDERLY AND POOR

(By Murray Schumach)

The two tired women in the basement of the church were symbols of the city's worst victims of the bitter winter—the elderly and the poor.

They were also evidence of how community groups and aroused neighbors, more than overburdened and often impersonal city agencies, have often become the last hope of the helpless trapped in sub-freezing weather in apartments without heat or water.

The two women—the younger with two little children—had turned up one night last week at the Bethel Gospel Tabernacle, at 110-25 New York Boulevard, in Jamaica, Queens, after the city had discontinued it as a shelter for dozens of the poor and elderly.

"The city said the program was finished," said the Rev. Roderick Caesar, who founded the church more than 40 years ago. "The social workers left. The Red Cross left. The police left."

When the women and the children came one night, Mildred Williams, a member of the congregation, received them.

"We just couldn't turn them away into the cold," she said. "We had to take them in. This is what Jesus wanted. You can't just preach what Jesus wanted. You have to put it in practice."

She removed cots and blankets from cartons, made the beds and slept in the church with the women and two children instead of going home. In the morning, with another church worker, Harold Johunn, she cooked food and fed the guests.

"We are not doing this for any glory," said Mr. Johunn. "We thank God we are able to do this."

In some parts of the city, community groups are fighting to save not only people and apartments, but even entire neighborhoods. The freeze has converted tension and hostility between tenant and landlord into open warfare.

The tenants, sometimes with ice in hallways and falling ceilings, say they are fighting for survival. Landlords, some of them with no more identity than a corporate name and a post office box number, say they can no longer afford to pay for the services they need to supply.

At the city's headquarters of the Central Complaint Bureau in Harlem, Doretha Powell, the director, consulted records and reported that in January her office received 128,313 complaints, compared with 92,376 last January. There were days last month, she said, when the 45 operators in her office were handling as many as 1,800 calls an hour.

"What gets to you," she said, "is the elderly and the poor. Particularly the elderly."

The inevitable lesson of the frigid weather in New York City is that unless there is close cooperation between city agencies and community groups, apartment houses that now are home to thousands of people will be abandoned by Spring.

It is in this context that the story of the two women in the Queens church—they asked that their names be withheld—is so significant.

The older woman, pale and weak-voiced, talked haltingly of her experience. She and her brother have lived since the 1920's in a two-story house that they inherited from their parents. For a number of years they rented one floor to tenants. This helped to pay off the mortgage. Then, as the neighborhood declined, they could no longer get tenants. In 1972 her older brother lost his job as an elevator operator when the elevator was automated. He was not old enough for Social Security.

"We have been living on our savings," she said. "We are trying to keep off welfare."

To economize, they did not make needed repairs. They could not afford fuel. The house became freezing. Her brother did the meager shopping in a nearby store.

"I stayed in bed to keep warm and to keep from being sick," she said. "My brother used to sit by the oven."

One night she noticed that his feet looked strange. He was taken to Queens General Hospital. She said frostbite had been followed by gangrene and some of his toes might have to be amputated.

"Off and on I slept at the hospital," she said. "There was this pastor there. He brough me here. They've been very nice. It's the first time I've ever slept anywhere except our house. We're trusting in the Lord."

The younger woman, occasionally petting the year-old child in the stroller or the 3-year-old boy who was munching on cookies and seemed happy and energetic, said:

"There was just no heat and the landlord didn't seem to care any more. I didn't know where to go. Then someone told me about this church. So we got out of the house in the night and just came here."

At 44 West 175th Street, the Bronx, the ice on the hall door was at least 6 inches thick and the ice on the floor was thicker than on the sidewalk. As heat went off and apartments became vacant, vandals began removing pipes. Floods poured down the stairs and through floors and ceilings. Plaster rained down on tenants and the steps were icy.

This used to be a sturdy apartment house that, under ordinary maintenance, could have lasted many years. Now a van was outside and a tenant was having furnishings put into storage. Over the mail boxes was a notice from Con Edison that it intended to cut off service to the building by Feb. 18 if the landlord did not pay the bill.

In one of the apartments, Edward McKenzie said that the only reason there was heat at the moment was that he had turned on the boiler after fuel had been received by order of the city. A representative of the landlord had demanded he give up keys to the boiler room.

People from the Morris Heights Neighborhood Improvement Association had shown him how to operate a boiler. His mother added that the $185 a month rent had been paid through February.

"We can't go anywhere," said her son. "This is the scene. All the work that was done in this apartment—even the locks—was by me. We get no service at all."

Still, this was a fortunate part of the building. Only the upper floors on the other side had been flooded.

Annie Davis lived on the ground floor of that other side. A boy was sweeping plaster from the floor. Large chunks of ceiling were missing. The gas stove was going full blast.

"We don't have any hot water," she said. "We have to heat the water on the stove. And we have to pay the bills for that gas."

In the street nearby, women and children were fetching water from a hydrant because there was no water in their buildings.

The desperate conditions this winter have spurred the Morris Heights neighborhood group to step up organization of buildings into tenant groups.

Betty Terrell, president of the organization, said it had organized about 110 buildings, of which about 50 were "active." The organization tries to find apartments for tenants who are leaving buildings that are being abandoned.

It is possible, merely by walking through this area, which several years ago was a solid neighborhood, to tell which buildings are operated by tenant groups. They are usually the ones without broken windows and with heat.

In such buildings most of the tenants pay the rent to the tenant group, which buys the fuel, hires repairmen and painters. Sometimes arrangements are worked out with fuel companies so that tenant groups pay about half the fuel money during the winter and the rest during the summer, when fuel needs are low.

Mary Heath is the head of such a tenant group, where painters were working in apartments, paid by the tenant group. She and her husband, Andrew, have been in their building eight years.

They fled from the South Bronx when that neighborhood crumbled.

"I'm one of the last of the old tenants," she says. "The Jewish people moved to Co-Op City."

There are three tenants in the apartment house who still pay rent to the landlord.

"They are afraid," she says. "But if the people don't band together in this neighborhood we will soon have nothing but abandoned buildings."

Daniel Savino, director of the Emergency Service Division of the City's Housing Development Administration, says:

"We are only a stopgap, trying to keep buildings going a little bit longer."

Many landlords, he says, are trying to force buildings to be vacated on the assumption that they can get them rehabilitated and rent them at much better rents. There are also tenants, he says, who damage buildings on the assumption that the city will relocate them in better apartments.

"We just can't keep up with the demands," he says. "Contractors are completely saturated with jobs and we are a week behind. The contractors who work for us also have private customers."

How an aroused neighbor can be more effective than city agencies in helping the elderly was illustrated by a woman who had moved to the Bensonhurst section of Brooklyn from Canada and was looking for furniture. She saw an advertisement in a neighborhood paper that an elderly couple was preparing to move to Florida and wanted to sell furniture.

She called on them and arranged for the purchase. But while there she realized that both were sickly. She kept in touch with them by phone.

"They did not have food," she said. "He was recovering from open heart surgery and she was diabetic and anemic. The grocer wouldn't make deliveries unless they purchased $20 or $30."

She telephoned a nearby church. The priest said he could do nothing. She rebuked him and called the priest in her own parish who said he would arrange to have the couple cared for. She also called the Salvation Army, which responded at once, bringing food.

"What would have happened to these two people," she wondered, "if I hadn't been looking for furniture?"

By Mr. MAGNUSON:

S. 687. A bill to establish a uniform and comprehensive legal regime governing liability and compensation for damages and cleanup costs caused by oil pollution, and for other purposes; to the Committees on Commerce, Science, and Transportation; and Environment and

Public Works, jointly, by unanimous consent.

NATIONAL OIL POLLUTION LIABILITY AND COMPENSATION ACT OF 1977

Mr. MAGNUSON. Mr. President, I introduce for appropriate referral a bill entitled "National Oil Pollution Liability and Compensation Act," a very important bill. Long hearings have been held, and the bill is a result of the consensus of the Commerce Committee.

I also ask unanimous consent that the bill be jointly referred to the Committee on Commerce, Science and Transportation, which is now the new name, and the Environmental and Public Work Committee.

The PRESIDING OFFICER. Without objection——

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, has this clearance been agreed to by the chairmen of the respective committees?

Mr. MAGNUSON. Yes, and we will work out the details.

The PRESIDING OFFICER. Does the Senator withdraw his objection? Is there objection? The Chair hears none, and it is so ordered.

Mr. MAGNUSON. Mr. President, this bill, I believe, offers a solution to the present and evergrowing problem of compensation for damages and cleanup costs resulting from oil pollution caused by supertankers and oil facilities. Ever since the catastrophe of the *Torrey Canyon*, in March of 1967, there has been much international concern with the dangers associated with the transportation, producing, and handling of oil and petroleum products. However, the more recent disaster of the *Argo Merchant* has reignited our national interest in solving these problems.

Foreseeably, we, as a nation, face a substantial increase in the transportation and handling of oil along with an increase in the size of the tankers and facilities used. With this in mind, it is apparent that the time for action is growing short. It is incumbent upon Congress to enact a meaningful and comprehensive law governing oil pollution liability and compensation. The existing law with respect to liability and compensation for oil pollution damages and cleanup costs is inconsistent, inadequate, and inequitable.

Currently, an owner and operator of an oil tanker or facility are subject to three narrow bases of liability for an unlawful discharge of oil. The first basis of liability, of an owner or operator for oil pollution, is controlled by the limitation of Liability Act of 1851. That act, in essence, states that the liability of the owner of any vessel, for damage done without his privity or knowledge, shall be limited to the value of the owner's interest in that vessel and her freight. However, after enactment of that law the Supreme Court decided that the value of the vessel and freight are to be calculated after the collision or accident has taken place. Therefore, if a vessel discharges its entire cargo of oil, but is totally destroyed, a damaged claimant could recover nothing. Any recovery sought from the owner of a polluting vessel, whether based on a Federal or State statute or a common law action, is limited by the dictates of this 1851 law.

The second basis of liability, to which an owner or operator may be subject, is created by the Federal Water Quality Improvement Act, as amended by the Federal Water Pollution Control Act Amendments of 1972. But this law is limited. It imposed strict liability upon the owners and operators of polluting vessels for the expenses incurred by the Federal Government in the removal of spilled oil. The FWQIA set an upper limit of liability of $14 million if the discharge was not shown to be the result of willful negligence or willful misconduct within the privity and knowledge of the owner or operator. If there was such a showing of negligence or misconduct there would be no limitation of liability.

Further, the FWQIA provided that if an owner or operator could show that the discharge was caused solely by an act of God, an act of war, negligence on the part of the U.S. Government, an act or omission of a third party without regard to the third party's fault, or a combination of any of these causes, then liability would be avoided. Nothing, as a result of these laws, has been done to improve the position of the injured property owner whose recovery of damages is still confined by the Limitation of Liability Act.

The last basis of liability, to which an owner or operator may be subjected, is the common law action on a tort theory of trespass, negligence, or nuisance. The tort theory of liability for a discharge of oil is patently inadequate for the reason that any recovery allowed will be limited by the value of the vessel and its freight after the accident.

Mr. President, my intention in introducing this legislation is to attempt to eradicate the existing inequities, and to minimize the environmental risks to our navigable and ocean waters, that arise from the transportation, production, and handling of oil. This bill, in my opinion, will create an incentive for all persons dealing with oil to take the necessary and appropriate steps to prevent any discharge of oil. It establishes, for the first time, a strict liability standard for damages as well as cleanup costs resulting from a discharge of oil. This legislation creates a single and all-inclusive compensation fund to pay for all the damages and cleanup costs. The fund will then provide an adequate amount of money and an expeditious procedure to compensate those injured by a discharge of oil. Further, the fund will be used for the restoration and rehabilitation of any of our natural resources that are damaged or destroyed by oil pollution.

Mr. President, in conclusion I must add that lately I have been approached by a number of people who have told me how amazed they are by all the recent oil tanker accidents. My only response to such a statement is that I am amazed that there have not been many more of these disasters. Mr. President, I believe that unless we act now on this legislation there will be many more tanker mishaps of an even greater magnitude.

I ask unanimous consent that the bill be printed in its entirety at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 687

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Oil Pollution Liability and Compensation Act of 1977".

SEC. 2. DECLARATION OF POLICY.

(a) FINDINGS.—The Congress finds and declares the following:

(1) The transportation, production, and handling of oil in, on, or near navigable and ocean waters create environmental risks, and may impair the rights of shoreline property owners and harm the general health and welfare of citizens of the United States.

(2) The damages and cleanup costs resulting from oil pollution are matters of major national concern.

(3) Existing law with respect to liability and compensation for oil pollution damages and cleanup costs is inconsistent, inadequate, incomplete, inefficient, and inequitable.

(4) The legal rules applicable to oil pollution liability and compensation need to be rationalized and reformed to assure that adequate and timely compensation is available for oil pollution from all sources.

(b) PURPOSES.—It is therefore declared to be the purpose of the Congress in this Act to—

(1) enact a comprehensive national law governing oil pollution liability and compensation;

(2) maximize the incentive for all persons producing, transporting, or handling oil to take all steps necessary or appropriate to prevent the discharge of oil;

(3) establish a strict liability standard for damages and cleanup costs resulting from the discharge of oil;

(4) create a single and all-inclusive compensation fund to pay for all damages and cleanup costs resulting from such a discharge:

(5) provide adequate funds and an expeditious procedure to compensate those injured by such a discharge; and

(6) provide for the restoration and rehabilitation of any natural resources damaged or destroyed by such a discharge.

SEC. 3. DEFINITIONS.

As used in this Act—

(1) The term "barrel" means 42 United States gallons at 60 degrees Fahrenheit.

(2) The term "claim" means a claim for compensation under this Act for damages or cleanup costs suffered by a claimant as a result of a discharge of oil.

(3) The term "claimant" means any person who presents a claim for compensation under this Act for damages or cleanup costs resulting from a discharge of oil.

(4) The term "cleanup costs" means all actual costs of any person incurred in—

(A) removing or attempting to remove oil, or

(B) taking other measures to prevent, reduce, or mitigate oil discharge damages to public health or welfare, including public or private property, shorelines, beaches, or natural resources.

(5) The term "damages" means the damages for which compensation may be claimed as set forth in section 6, but does not include cleanup costs.

(6) The term "discharge" includes any spilling, leaking, pumping, pouring, emptying, or dumping of oil, however caused, in unlawful quantities or at an unlawful rate.

(7) The term "facility" means a structure or group of structures (other than a vessel or vessels which are not an integral part of any such structure or structures) used for the purpose of transporting, producing, processing, storing, transferring, or handling oil.

(8) The term "fund" means the National

Oil Pollution Compensation Fund established pursuant to section 4.

(9) The term "guarantor" means any person that provides a guarantee to, or surety bond for, the owner or operator of a vessel or a facility, in accordance with section 9.

(10) The term "incident" means any occurrence, or series of occurrences, involving one or more vessels, an onshore or offshore facility, or any combination thereof, which results in a discharge of oil.

(11) The term "insurer" means any person that provides insurance for the owner or operator of a vessel or a facility, in accordance with section 9.

(12) The term "natural resources" means land, fish, wildlife, biota, air, water and other such resources owned, managed, held in trust, or otherwise controlled by the Federal Government (including the fishery resources of the fishery conservation zone established by section 101 of the Fishery Conservation and Management Act (16 U.S.C. 1811)), any State or local government, or any foreign government.

(13) The term "navigable waters" means the waters of the United States, including the territorial sea.

(14) The term "ocean waters" means all waters beyond the navigable waters.

(15) The term "offshore facility" means any facility, other than an onshore facility, subject to the jurisdiction of the United States.

(16) The term "oil" means oil of any kind (except animal or vegetable oils) or in any form, including petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredge spoil.

(17) The term "onshore facility" means any facility located in, on, or under any land (other than submerged land) within the United States.

(18) The term "operator" means—

(A) with respect to a facility, any person operating such facility, whether by lease, permit, contract, license, or other form of agreement; and

(B) with respect to a vessel, any person operating or chartering by demise such vessel.

(19) The term "owner" means, with respect to any facility or vessel, any person owning, or having any financial interest in, such facility or vessel.

(20) The term "person" means an individual, a public or private corporation, partnership or other association, or a government entity.

(21) The term "Secretary" means the Secretary of Transportation.

(22) The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, and any other commonwealth, territory, or possession of the United States.

(23) The term "vessel" means every description of watercraft or other artificial contrivance used as a means of transportation through or on water.

SEC. 4. NATIONAL OIL POLLUTION COMPENSATION FUND.

(a) ESTABLISHMENT.—There is established in the Treasury of the United States a National Oil Pollution Compensation Fund. The fund shall be jointly administered by the Secretary and the Secretary of the Treasury in accordance with the provisions of this Act.

(b) CONTENTS.—(1) The Secretary of the Treasury shall collect from the owner of each facility a fee, not to exceed 3 cents per barrel—

(A) when oil is loaded on or off a vessel at such facility, and

(B) when oil is transferred from a well to a pipeline or a vessel.

All collections shall be deposited in the fund. Any oil upon which a fee has been levied and collected under this paragraph shall not be subject to a subsequent such levy and collection.

(2) Any person obligated to pay any fee under paragraph (1) who fails to pay all or part of such fee, shall be liable to the Secretary of the Treasury for—

(A) the amount of the fee;

(B) interest at prevailing rates on such fee, from the date on which the payment is due; and

(C) a civil penalty not to exceed $10,000. The Attorney General shall, upon the request of the Secretary of the Treasury, commence a civil action in the name of the fund against any person who fails to pay any such amount. All amounts received under this paragraph shall be credited to the fund.

(3) The Secretary of the Treasury shall, by regulation, establish the amount of the fee required under paragraph (1). Such Secretary may from time to time adjust such amount to assure that the fund has total assets of not more than $200,000,000.

(4) All moneys recovered by right of subrogation, pursuant to section 7, shall be credited to the fund.

(c) INVESTMENT.—The Secretary of the Treasury may invest any portion of the moneys in the fund that the Secretary determines is not immediately required to meet the obligations of the fund. Such investments shall be made only in interest-bearing special obligations of the United States. Any such obligations that are issued to the fund may be redeemed at any time, in accordance with the terms of the special issue and regulations promulgated by such Secretaries. The interest on, and the proceeds from the sale of, any such obligations shall be credited to the fund.

(d) INSUFFICIENCY.—If the money available in the fund is not sufficient to pay any amount which the fund is obligated to pay under this Act, the Secretary shall issue to the Secretary of the Treasury notes or other obligations (only to such extent and in such amounts as may be provided for in appropriation Acts) in such forms and denominations, bearing such maturities, and subject to such terms and conditions as the Secretary of the Treasury prescribes. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury on the basis of the current average market yield on outstanding marketable obligations of the United States on comparable maturities during the month preceding the issuance of such notes or other obligations. Any sums received by the Secretary through such issuance shall be credited to the fund. The Secretary of the Treasury shall purchase any notes or other obligations issued under this paragraph, and for this purpose such Secretary may use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act (31 U.S.C. 774 et seq.), as now or hereafter in force. The purposes for which securities may be issued under that Act are extended to include any purchase of notes or other obligations issued under this subsection. The Secretary of the Treasury may at any time sell any of the notes or other obligations so acquired under this subsection. All redemptions, purchases, and sales of such notes or other obligations by the Secretary of the Treasury shall be treated as public debt transactions of the United States.

(e) DISBURSEMENTS.—Amounts in the fund shall be disbursed solely for the following purposes:

(1) Administrative and personnel expenses of the fund, after appropriation in an appropriation bill.

(2) The payment of any amount which the fund is obligated to pay under this Act.

(f) RECORDKEEPING.—Each person liable to pay any fee levied under subsection (b)(1) shall keep such records and furnish such information as the Secretary shall by regulation prescribe.

SEC. 5. LIABILITY.

(a) VESSELS.—Notwithstanding any other provision of law and except as provided in subsection (d)(1), the owner and operator of a vessel shall be jointly and severally liable in accordance with this subsection, without regard to fault, for damages and cleanup costs which result from a discharge of oil. Such liability shall not exceed (1) $150 for each gross ton of any vessel which does not carry oil in bulk; or (2) $300 for each gross ton, or $30,000,000, whichever is less, of any vessel which carries oil in bulk, except that if it can be shown—

(A) that such discharge was the result of gross negligence or willful misconduct, within the privity and knowledge of the owner or operator; or

(B) that such discharge was the result of a violation of applicable safety standards or regulations,

such owner or operator shall be jointly and severally liable for the full amount of such damages and cleanup costs.

(b) FACILITIES.—Notwithstanding any other provision of law and except as provided in subsection (d)(1), the owner and operator of any facility shall be jointly and severally liable in accordance with this subsection, without regard to fault, for damages and cleanup costs which result from a discharge of oil. The Secretary shall establish, by regulation, the limits of liability for various classes of facilities, except that such limits shall not exceed $100,000,000. In establishing such limits the Secretary shall take into account the size, type, location, storage and handling capacity, and other matters affecting the size and possibility of an oil discharge from such class of facilities.

(c) FUND.—The fund shall be liable, except as provided in subsection (d)(2), for all damages and cleanup costs resulting from a discharge of oil which are not compensated under subsections (a) and (b) or any other provision of law.

(d) DEFENSES.—(1) The owner or operator of a facility or a vessel shall not be liable for any claimant's damages or cleanup costs under subsection (a) or (b) if such owner or operator can establish that such damages or cleanup costs were solely the result of—

(A) an act of war;

(B) the negligence or willful act of such claimant;

(C) an act or omission of a third party; or

(D) a natural phenomenon of an exceptional, inevitable, and irresistible character.

(2) The fund shall not be liable under subsection (c) if it establishes that the damages or cleanup costs of any claimant were caused solely by such claimant's negligence or willful act.

(e) INTEREST.—(1) The owner or operator of a vessel or a facility, and the fund, shall be liable to any claimant for interest on any amount paid to such claimant by such owner, operator, or fund under subsection (a), (b), or (c). Such interest shall cover the period beginning on the date upon which the claim presented and ending on the date upon which the claim was paid. Such interest shall not cover any period beginning after the date upon which the owner, operator, or the fund offers to the claimant an amount equal to or greater than the amount finally paid in satisfaction of the claim and ending on the date upon which the claimant accepts such offer. If the owner, operator, or the fund, within 60 days of the date upon which the claim was presented, offers to the claimant an amount equal to or greater than the amount finally paid in satisfaction of the claim, the owner, operator, or the fund shall be liable for interest only from the date upon which the offer was accepted by the claimant to the date upon which payment is made to the claimant.

(2) The interest provided for in paragraph (1) shall be calculated by the Secretary as the average of the highest rate for com-

mercial and finance company paper of maturities of 180 days or less, obtaining on each of the days for which interest must be paid.

SEC. 6. RECOVERABLE DAMAGES.

Damages may be recovered under this Act for each of the following items of loss:

(1) The value of any loss, at the time such loss is incurred, with respect to any real or personal property damaged or destroyed as a result of a discharge of oil.

(2)(A) The cost of restoring, repairing or replacing any real or personal property damaged or destroyed as a result of a discharge of oil;

(B) any income necessarily lost during the time such property is being restored, repaired, or replaced; and

(C) any reduction in the value of such property thereafter, by comparison with its value prior to such discharge.

(3) Any loss of income or impairment of earning capacity resulting from any damage to or destruction of real or personal property, including natural resources, as a result of a discharge of oil.

(4) Any loss of tax, royalty, rental, or net profits share revenue by the Federal Government or any State or local government, for a period of not to exceed 1 year, resulting from a discharge of oil.

SEC. 7. SUBROGATION.

(a) GENERAL.—Any person or Government entity, including the fund, who shall pay compensation to any claimant for damages or cleanup costs resulting from a discharge of oil, shall be subrogated to all rights, claims, and causes of action such claimant has under this Act or any other law.

(b) ACTION TO RECOVER.—Upon request of the Secretary, the Attorney General may commence an action on behalf of the fund to recover any compensation paid by the fund pursuant to this Act. Such an action may be commenced against any owner or operator, or against any other person or government entity who is liable, pursuant to any law, to the compensated claimant or to the fund, for the damages for which the compensation was paid.

SEC. 8. CLAIMS PROCEDURES.

(a) IN GENERAL.—The Secretary shall prescribe, and may from time to time amend, regulations for the filing, processing, settlement, and adjudication of claims for damages and cleanup costs resulting from a discharge of oil.

(b) NOTIFICATION.—(1) Whenever the Secretary receives a claim from any claimant he shall notify the owner and operator of any facility or vessel involved. Such owner or operator may, within 10 days after the date of receipt of such notification, deny the allegation of damages set forth in such claim, or deny liability for damages for any reason set forth in section 5(d)(1).

(2) Any denial made pursuant to paragraph (1) shall be adjudicated in accordance with the provisions of subsection (f).

(c) PUBLICATION OF PROCEDURES.—(1) If a denial is not made pursuant to subsection (b)(1), the owner and operator (or such owner's or operator's insurer or guarantor) shall advertise, in accordance with regulations promulgated by the Secretary and in any area where damages may occur or cleanup costs may be incurred, the procedures under which claims may be presented to such owner, operator, insurer, or guarantor. The Secretary shall publish the text of such advertisement, in abbreviated form if necessary, in the Federal Register. If any person fails to make any advertisement so required, the Secretary shall do so, and such owner, operator, insurer, or guarantor shall pay the costs of such advertisement.

(2) If a denial is made pursuant to subsection (b)(1), the Secretary shall advertise and publish procedures under which claims may be presented to the Secretary for payment by the fund.

(3) Any advertisement made under this subsection shall commence no later than 15 days after the date of notification required pursuant to subsection (b)(1) and shall continue for a period of not less than 30 days. Such advertisement shall be repeated thereafter in such modified form as may be necessary, but not less frequently than once each calendar quarter for a total period of 5 years.

(d) PRESENTATION.—(1) Any claim presented—

(A) to any person under paragraph (3); or

(B) to the Secretary for payment from the fund under paragraph (4),

shall be presented within 1 year after the date the cleanup costs were incurred or the date of discovery of any damages for which such claim is made, except that no such claim may be presented after the end of the 5-year period beginning on the date on which advertising was commenced pursuant to subsection (c).

(2) All of the damage and cleanup cost claims of a single person that arise from one incident shall be presented to the Secretary shall be presented in one form, which may be amended to include new claims as they are discovered. Damages or cleanup costs which are known, or reasonably should be known, and which are not included in the claim at the time compensation is made, shall be deemed to have been waived.

(3) Except as provided in paragraph (4), all claims shall be presented—

(A) to the owner and operator of the vessel or facility involved; or

(B) to such owner's or operator's insurer or guarantor.

Any person to whom a claim has been presented pursuant to this paragraph shall promptly notify the claimant of such claimant's rights under this Act and notify the Secretary of receipt of such claim.

(4) Any claim which has been presented to any person pursuant to subsection (b)(1) may be submitted to the Secretary for payment from the fund, if such person—

(A) has not accepted liability for such claim for any such reason;

(B) submits to the claimant a written offer for settlement of the claim, which the claimant rejects for any reason; or

(C) has not settled such claim by agreement with the claimant within 60 days after the date on which such claim was presented, or advertising was commenced pursuant to subsection (c), whichever is later.

In the case of a claim which has been presented to any person under paragraph (3) and which may be presented to the Secretary under this paragraph, such person shall, within 2 days after a request by the claimant, transmit such claim directly to the Secretary together with such other supporting documents as the Secretary may by regulation prescribe. Any such claim shall be deemed presented to the Secretary for payment by the fund.

(e) CLAIMS ADMINISTRATION.—The Secretary may use the facilities and services of private insurance and claims adjusting organizations in administering this section and may contract to pay compensation for such facilities and services. A payment to a claimant for single claim in excess of $100,000, or two or more claims aggregating in excess of $200,000, shall be first approved by the Secretary.

(f) DISPUTE SETTLEMENT.—If any of the following matters are in dispute, such dispute shall be submitted to the Secretary who shall cause such matter to be adjudicated pursuant to the provisions of this section:

(1) Upon the petition of a claimant, in the case of a claim which has been presented to the Secretary for payment by the fund, and in which the Secretary—

(A) has, for any reason, denied liability for such claim; or

(B) has not settled such claim by agreement with such claimant within 90 days after the date on which—

(i) such claim was presented to the Secretary, or

(ii) advertising was commenced pursuant to subsection (c), whichever date is later.

(2) Upon the petition of an owner and operator (or such owner's or operator insurer or guarantor) who is or may be liable for damages or cleanup costs under this Act—

(A) any denial made pursuant to subsection (b)(1); and

(B) the amount of any payment, or proposed payment, by the fund which may be recovered from such owner, operator, insurer or guarantor.

(g) HEARINGS.—(1) The Secretary shall promptly refer any matter submitted for adjudication pursuant to subsection (f) to an administrative law judge. Such judge shall promptly adjudicate the case and render a decision in accordance with section 554 of title 5, United States Code.

(2) For purposes of any hearing conducted pursuant to this subsection, the administrative law judge shall have the power to administer oaths and subpena the attendance and testimony of witnesses and the production of books, records, and other evidence relative or pertinent to the issues presented for determination.

(3) A hearing conducted under this subsection shall be conducted within the judicial district of the United States within which the matter in dispute occurred, or, if such matter occurred within two or more such districts, in any of the affected districts or, if such matter in dispute occurred outside any district, in the nearest such district.

(h) DISPERSAL.—Upon a decision by the administrative law judge under subsection (g), and in the absense of a notice of intent to petition for judicial review, any amount to be paid from the fund shall be certified to the fund by such judge. The fund shall promptly disburse such amount. A decision rendered under subsection (g) shall not be reviewable by the Secretary.

SEC. 9. FINANCIAL RESPONSIBILITY.

(a) EVIDENCE.—Financial responsibility may be established by any one, or any combination, of the following methods:

(1) An insurance policy.

(2) A guarantee.

(3) A surety bond.

(4) Qualification as a self-insurer.

Any bond filed shall be issued by a bonding company authorized to do business in any State.

(b) VESSELS.—(1) The owner or operator of any vessel over 300 gross tons shall establish and maintain, in accordance with regulations promulgated by the Secretary, evidence of financial responsibility sufficient to satisfy the maximum amount of liability applicable to that vessel under section 5(a). The Secretary shall certify to such owner or operator that the requirements of this subsection have been complied with.

(2) The Secretary of the Treasury shall refuse the clearance required by section 4197 of the Revised Statutes of the United States (46 U.S.C. 91) to any vessel subject to this subsection, which does not have a valid certificate of compliance issued by the Secretary under paragraph (1).

(3) The Secretary, in accordance with regulations promulgated by him, shall—

(A) deny entry to any port or place in the United States or navigable waters; and

(B) detain at the port or place in the United States, from which it is about to depart for any other port or place in the United States,

any vessel subject to this subsection which, upon request, does not produce a valid certificate of compliance issued by the Secretary under paragraph (1).

(c) FACILITIES.—The owner or operator of each facility shall establish and maintain, in accordance with regulations promulgated by the Secretary, evidence of financial responsibility sufficient to satisfy the maximum amount of liability applicable to such facility under section 5(b).

(d) DIRECT ACTION.—Any claim under this Act may be asserted directly against any insurer or guarantor of an owner's or operator's liability under this Act. In defending any such claim, any insurer or guarantor—

(1) shall be entitled to invoke all rights and defenses which would be available to the owner or operator under this Act;

(2) but shall not be entitled to invoke any other defense which he might have been entitled to invoke in proceedings brought by the owner or operator against him.

(e) PREEMPTION.—No owner or operator of a facility or vessel who establishes and maintains evidence of financial responsibility in accordance with this section shall be required under any State law, rule, or regulation to establish any other evidence of financial responsibility in connection with liability for the discharge of oil from such facility or vessel. Evidence of compliance with the financial responsibility requirements of this section shall be accepted by a State in lieu of any other requirement of financial responsibility imposed by such State in connection with liability for the discharge of oil from such facility or vessel.

SEC. 10. TRUSTEE OF NATURAL RESOURCES.

The Secretary, or the authorized representative of any State, shall act on behalf of the public as trustee of the natural resources to recover for damages to, and the clean-up of, such resources. Sums recovered shall be used to restore, rehabilitate, or acquire the equivalent of such natural resources by the appropriate agencies of the Federal Government, or such State.

SEC. 11. CONSOLIDATED ACTIONS.

(a) ACTIONS BY ATTORNEY GENERAL.—The Attorney General may act on behalf of any group of damaged persons the Secretary determines would be more adequately represented as a group in the recovery of claims under this Act. Sums recovered shall be distributed to the members of any such group.

(b) OTHER ACTIONS.—If, within 90 days after the date of a discharge of oil, the Attorney General fails to act on behalf of a group the members of which may be entitled to compensation under this Act, any member of such group may maintain a consolidated action to recover such damages on behalf of such group. Failure of the Attorney General to act in accordance with this subsection shall have no bearing on any action maintained under this subsection.

(c) NOTICE.—If the number of members of any such group exceeds 1,000, publishing notice of the action in the Federal Register and in local newspapers serving the areas in which the damaged persons reside shall be deemed sufficient to fulfill the requirement for public notice established by rule 23(c)(2) of the Federal Rules of Civil Procedure.

SEC. 12. FOREIGN CLAIMS.

Claims for compensation of damages and cleanup costs may be made under this Act by any citizen of a foreign nation or by any foreign nation if such damages or cleanup costs resulted from a discharge of oil originating from—

(1) a facility located in the United States or subject to the jurisdiction of the United States; or

(2) a vessel incident occurring in waters subject to the jurisdiction of the United States.

SEC. 13. JUDICIAL REVIEW.

(a) GENERAL.—Any person who suffers legal wrong or who is adversely affected or aggrieved by any decision of an administrative law judge under section 8(g) may, not later than 60 days after the date of publication of such decision, petition for judicial review of such decision in the United States court of appeals for the circuit in which the damage occurred or cleanup costs were incurred, or in the United States Court of Appeals for the District of Columbia.

(b) ATTORNEYS FEES.—In any case in which (1) the person responsible for the discharge of oil, or (2) the fund seeks judicial review under this section, attorneys' fees and court costs shall be awarded to the claimant if the decision of the administrative law judge is affirmed.

SEC. 14. JURISDICTION AND VENUE.

(a) JURISDICTION.—Except as provided in section 13, the district courts of the United States shall have original jurisdiction over all controversies arising under this Act, without regard to the citizenship of the parties or the amount in controversy.

(b) VENUE.—Venue shall lie in any Judicial district (1) wherein the cleanup costs were incurred or the damage complained of occurred, or, if such costs were incurred or such damage occurred outside of any district, in the nearest district, or (2) wherein the defendant resides, may be found, or has its principal office. For the purposes of this section, the fund shall be deemed a resident of the District of Columbia.

SEC. 15. PUBLIC ACCESS TO INFORMATION.

(a) GENERAL.—Copies of any communication, document, report, or information transmitted between any official of the Federal Government and any person concerning liability and compensation for damages or cleanup costs resulting from a discharge of oil shall be made available to the public for inspection, and shall be available to the public upon identifiable request, for the purpose of reproduction at a reasonable cost.

(b) RELEASE.—Nothing contained in this section shall be construed to require the release of any information of the kind described in subsection (b) of section 552 of title 5, United States Code, or which is otherwise protected by law from disclosure to the public.

SEC. 16. ANNUAL REPORT BY SECRETARY.

Within 6 months after the end of each fiscal year, the Secretary shall submit to the Congress (1) a report on the administration of the fund during such fiscal year and (2) recommendations for such additional legislative authority as may be necessary to improve the management of the fund and the administration of the liability provisions under this Act.

SEC. 17. RELATIONSHIP TO OTHER LAW.

(a) STATE LAW.—(1) Except as provided in section 9(e), this title shall not be interpreted to preempt the field of liability or to preclude any State from imposing additional requirements or liability for damages and cleanup costs, within the jurisdiction of such State, resulting from a discharge of oil.

(2) Any person who receives compensation for damages or cleanup costs pursuant to this Act shall be precluded from recovering compensation for the same damages or cleanup costs pursuant to any State law. Any person who receives compensation for damages pursuant to any State law shall be precluded from receiving compensation for the same damages or cleanup costs under this Act.

(b) FEDERAL LAW.—In the case of conflict or inconsistency, the provisions of this Act shall supersede all other provisions of Federal law.

SEC. 18. CONFORMING AMENDMENTS.

(a) TRANS-ALASKA PIPELINE ACT.—The Act of November 17, 1973 (87 Stat. 586), the Trans-Alaska Pipeline Authorization Act, is amended as follows:

(1) Subsection (b) of section 204 of such Act is amended, in the first sentence, (A) by inserting after the words "any area" the words "in the State of Alaska"; (B) by inserting after the words "any activities" the words "related to the Trans-Alaska Oil Pipeline"; and (C) by inserting at the end of the subsection the following new sentence: "This subsection shall not apply to cleanup costs covered by the National Oil Pollution Liability and Compensation Act of 1977.".

(2) Subsection (c) of section 204 of such Act is repealed.

(b) INTERVENTION ON THE HIGH SEAS ACT.—Section 17 of the Act of February 5, 1974 (88 Stat. 10), the Intervention on the High Seas Act, is amended to read as follows:

"SEC. 17. The fund established under section 4 of the National Oil Pollution Liability and Compensation Act of 1977 shall be available to the Secretary for actions taken under section 5 of this Act.".

(c) FEDERAL WATER POLLUTION CONTROL ACT.—Section 311 of the Federal Water Pollution Control Act (33 U.S.C. 1321) is amended as follows:

(1) Subsection (a) is amended by replacing the period following clause (14) thereof with a semicolon and adding a new clause (15) to read as follows:

"(15) 'person in charge' means the individual having immediate operational responsibility.".

(2) Paragraph (1) of subsection (c) is amended by (A) deleting the comma after the words "contiguous zone" and inserting in lieu thereof the words "or from an artificial island or fixed structure operating under authority of the Outer Continental Shelf Lands Act," and (B) adding after the word "vessel," the words "artificial island or fixed structure,".

(3) Clause (II) of paragraph (2) of subsection (c) is amended by inserting after the words "of this section" the words "or the fund established under section 4 of the National Oil Pollution Liability and Compensation Act of 1977, as appropriate,".

(4) Subsection (d) is amended by deleting all after the words "incurred under this subsection" and inserting in lieu thereof "shall be reimbursed from the fund established under subsection (k) of this section or the fund established under section 4 of the National Oil Pollution Liability and Compensation Act of 1977, as appropriate. Any expense incurred thereunder for which reimbursement may be had from the fund established under subsection (k) of this section shall be recoverable from the owner or operator of the vessel in accordance with subsection (f) of this section.".

(5) Subsections (f), (g), (h), (l), and (o) are amended by inserting after the word "oil" wherever it appears the words "(other than oil as defined in section 3(16) of the National Oil Pollution Liability and Compensation Act of 1977)".

(6) Subsection (f) is amended, in the last sentence of paragraph (1), by inserting a comma after the word "vessel" and by adding immediately thereafter "or against any insurer or guarantor of an owner's or operator's liability under the National Oil Pollution Liability and Compensation Act of 1977".

(7) Subsection (g) is amended, by inserting in the last sentence, after the word "party" the words "or against any insurer or guarantor of an owner's or operator's liability under the National Oil Pollution Liability and Compensation Act of 1977".

(8) Subsection (k) is amended to read as follows:

"(k) There is hereby authorized to be appropriated to a revolving fund to be established in the Treasury not to exceed $35,000,000 to carry out the provisions of subsections (c), (d), (i), and (l) of this section respecting discharges or imminent discharges of oil

and hazardous substances. Any other funds received by the United States under this section respecting such discharges shall also be deposited in this fund for these purposes. All sums appropriated to, or deposited in, the fund shall remain available until expended.".

(9) Subsection (l) is amended by deleting the period at the end of the second sentence and by inserting in lieu thereof the words "respecting discharges or imminent discharges of oil.".

(10) Paragraph (1) of subsection (p) is amended by deleting the words "Any vessel over 300 gross tons, including any barge of equivalent size, but not including any barge that is not self-propelled and that does not carry oil or hazardous substances as cargo or fuel," and inserting in lieu thereof the words "Any non-self-propelled barge over 300 gross tons that carries oil (other than oil as defined in section 3(16) of the National Oil Pollution Liability and Compensation Act of 1977) or hazardous substance,".

(11) Subsection (p) is amended by deleting the words "vessel" or "vessels", wherever they appear, and inserting in lieu theerof "barge" or "barges", respectively.

(d) DEEPWATER PORT ACT.—The Deepwater Port Act of 1974 ((Public Law 93-627), 88 Stat. 2126) is amended as follows:

(1) In section 4(c)(1) strike "section 18 (l) of this Act;", and insert in lieu thereof "section 9 of the National Oil Pollution Liability and Compensation Act of 1977";".

(2) Subsections (b), (d), (e), (f), (g), (h), (l), (j), (l), (n), and clause (1) of subsection (m) of section 18 are deleted.

(3) Clause (3) of subsection (c) of section 18 is amended by striking "Deepwater Port Liability Fund established pursuant to subsection (f) of this section.", and inserting in lieu thereof "fund established under section 4 of the National Oil Pollution Liability and Compensation Act of 1977.".

(4) Subsection (k) of section 18 is amended to read as follows:

"(c) This section shall not be interpreted to preclude any State from imposing additional requirements, not inconsistent with the provisions of the National Oil Pollution Liability and Compensation Act of 1977, for any discharge of oil from a deepwater port or a vessel within any safety zone.".

(5) Subsections (c), (k), and (m) of section 18 are redesignated (b), (c), and (d), respectively, and clauses (2), (3), and (4) of subsection (m) are redesignated (1), (2), and (3), respectively.

SEC. 19. AUTHORIZATION OF APPROPRIATIONS.

(a) SECRETARY.—There is authorized to be appropriated to the Secretary for administration of this Act $10,000,000 for the fiscal year ending September 30, 1978; $5,000,000 for the fiscal year ending September 30, 1979; and $5,000,000 for the fiscal year ending September 30, 1980.

(b) THE FUND.—There are also authorized to be appropriated to the fund from time to time such amounts as may be necessary to carry out the purposes of the applicable provisions of this Act.

By Mr. CANNON (for himself and Mr. KENNEDY):

S. 689. A bill to amend the Federal Aviation Act of 1958 to encourage, develop, and attain an air transportation system which relies on competitive market forces to determine the variety, quality, and price of air services, and for other purposes; to the Committee on Commerce, Science, and Transportation.

AIR TRANSPORTATION REGULATORY REFORM ACT OF 1977

Mr. CANNON. Mr. President, I am sending to the desk a bill entitled "The Air Transportation Regulatory Reform Act of 1977," cosponsored by Senator KENNEDY.

Mr. President, this bill provides a framework for a major restructuring of the regulatory system which regulates the Nation's domestic airlines. It is designed to change the direction of regulation rather than abolish it. The intent of this bill is to revitalize the airline industry with competition so as to make it reasonably profitable and efficient which will make the system more responsive to the public's need for a variety of air transport services at reasonable fares.

Our airline system today is showing all the signs of incipient failing health. Poor earnings over the years, wasteful service competition, rigid price regulation and restrictive entry policies have created an airline system which basically provides good service—but often wasteful service, without returning a fair profit to the airline companies themselves and service in many instances which is excessively priced. If the current regulatory pattern continues—one founded 38 years ago when the industry was struggling to get onto its feet—my fear is that our airline system will go the way of the railroad industry with enormous Federal bailouts required and finally Government ownership.

Fortunately, there is still time to take remedial action. The cornerstone of this bill is to encourage and promote efficiency rather than waste. The keys to efficiency are pricing freedom without the rigidities of CAB control and the opportunity for new entry which will promote competition, increase efficiency and hopefully provide the public with service alternatives containing an array of services at prices reflecting the quality of service.

The bill is the product of weeks of hearings my Subcommittee on Aviation held last year and is similar to S. 3830, a bill I introduced last September on the issue of regulatory reform in air transportation and reflects my best present judgment on where the system should be directed in the future.

In reviewing this legislation, I point out to my colleagues that one area of considerable interest in the regulatory reform debate is the future of airline service to small communities. While the bill does not appear to deal with the problem specifically, we will develop specific provisions on this issue following hearings I plan to hold beginning March 21.

While I strongly support this bill, my views are not cast in stone, and I am anxious to explore with Government leaders, with industry, and with members of the public whether this bill is the best available vehicle to reform the regulatory system which governs our domestic airlines system. I think our hearings in March will provide an appropriate forum which will prepare the subcommittee for developing a final bill this spring.

Mr. President, I ask unanimous consent that the bill and a section-by-section analysis be printed in the RECORD.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 689

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Air Transportation Regulatory Reform Act of 1977".

AMENDMENTS TO FEDERAL AVIATION ACT OF 1958

SEC. 2. Except as otherwise specified, wherever in this Act an amendment is expressed in terms of an amendment to a section or other provision, the reference shall be considered to be made to a section or provision, of the Federal Aviation Act of 1958, as amended.

TABLE OF CONTENTS

SEC. 3. The table of contents for titles I, IV, VIII and X of the Act is amended to read as follows:

"TITLE I—GENERAL PROVISIONS

"Sec. 101. Definitions.
"Sec. 102. Declaration of policy: The Board.
"(a) Interstate and overseas air transportation.
"(b) Foreign air transportation.
"Sec. 103. Declaration of policy: The Administrator.
"Sec. 104. Public right of transit.
"Sec. 105. Federal preemption.

"TITLE IV—AIR CARRIER ECONOMIC REGULATION

"Sec. 401. Certificates issued by the Board.
"(a) Certificates or exemption required.
"(b) Application for certificate.
"(c) Notice of application.
"(d) Issuance of certificate.
"(e) Terms and conditions of certificate.
"(f) Effective date and duration of certificate.
"(g) Continuing requirements, suspension or revocation.
"(h) Transfer of certificate prohibited.
"(i) Certain rights not conferred by certificate.
"(j) Termination or suspension of service.
"(k) Compliance with labor legislation.
"(l) Requirement as to carriage of mail.
"(m) Application for new mail service.
"(n) Insurance and bonding.
"Sec. 402. Permits to foreign air carriers.
"(a) Permit required.
"(b) Issuance of permit.
"(c) Application for permit.
"(d) Notice of application.
"(e) Terms and conditions of permit.
"(f) Authority to modify, suspend, or revoke.
"(g) Transfer of permit.
"Sec. 403. Tariffs of air carriers.
"(a) Filing of tariffs required.
"(b) Observance of tariffs; rebating prohibited.
"(c) Notice of tariff changes.
"(d) Filing of divisions of rates and charges required.
"Sec. 404. Rates for carriage of persons and property.
"(a) Carrier's duty to provide service, rates, and divisions.
"(b) Discrimination.
"Sec. 405. Transportation of mail.
"(a) Postal rules and regulations.
"(b) Mail schedules.
"(c) Maximum mail load.
"(d) Tender of mail.
"(e) Foreign postal arrangement.
"(f) Transportation of foreign mail.
"(g) Evidence of performance of mail service.
"(h) Emergency mail service.
"(i) Experimental airmail service.
"(j) Free travel for postal employees.
"Sec. 406. Rates for transportation of mail.
"(a) Authority to fix rates.
"(b) Ratemaking elements.
"(c) Payment.
"(d) Treatment of proceeds of disposition of certain property.

"(e) Statement of Postmaster General and carrier.
"(f) Weighing of mail.
"(g) Availability of appropriations.
"(h) Payments to foreign air carriers.
"SEC. 407. Accounts, records, and reports.
"(a) Filing of reports.
"(b) Disclosure of stock ownership.
"(c) Disclosure of stock ownership by officer or director.
"(d) Form of accounts.
"(e) Inspection of accounts and property.
"SEC. 408. Consolidation, merger, and acquisition of control.
"(a) Filing required.
"(b) Power of the Attorney General.
"(c) Certificates.
"(d) Exemptions.
"SEC. 409. Repealed.
"SEC. 410. Loans and financial aid.
"SEC. 411. Methods of competition.
"SEC. 412. Pooling and other agreements in foreign air transportation.
"(a) Filing of agreements in foreign air transportation required.
"(b) Approval by Board.
"SEC. 413. Form of control.
"SEC. 414. Legal restraints.
"SEC. 415. Inquiry into air carrier management.
"SEC. 416. Classification and exemption of carriers.
"(a) Classification.
"(b) Exemptions.
"SEC. 417. Special operating authorizations.
"(a) Authority of Board to issue.
"(b) Terms of authorization.
"(c) Procedure.
"TITLE VIII—OTHER ADMINISTRATIVE AGENCIES
"SEC. 801. The Department of State.
"SEC. 802. Weather Bureau.
"TITLE X—PROCEDURES
"SEC. 1001. Conduct of proceedings.
"SEC. 1002. Complaints to and investigations by the Administrator and the Board.
"(a) Filing of complaints authorized.
"(b) Investigations on initiative of Administrator or Board.
"(c) Entry of orders for compliance with Act.
"(d) Power to prescribe rates.
"(e) Standards for Board ratemaking.
"(f) Removal of discrimination in foreign air transportation.
"(g) Suspension of rates.
"(h) Power to prescribe divisions of rates.
"(i) Power to establish through air transportation service.
"(j) Suspension and rejection of rates in foreign air transportation.
"SEC. 1003. Joint boards.
"(a) Designation of boards.
"(b) Through service and joint rates.
"(c) Jurisdiction of boards.
"(d) Power of boards.
"(e) Judicial enforcement and review.
"SEC. 1004. Evidence.
"(a) Power to take evidence.
"(b) Power to issue subpena.
"(c) Enforcement of subpena.
"(d) Contempt.
"(e) Deposition.
"(f) Method of taking depositions.
"(g) Foreign depositions.
"(h) Fees.
"SEC. 1005. Orders, notices, and services.
"(a) Effective date of orders; emergency orders.
"(b) Designation of agent for service.
"(c) Other methods of service.
"(d) Suspension or modification of order.
"(e) Compliance with order required.
"(f) Form and service of orders.
"SEC. 1006. Judicial review of orders.
"(a) Orders of Board and Administrator subject to review.
"(b) Venue.
"(c) Notice to Board or Administrator; filing of transcript.
"(d) Power of Court.
"(e) Findings of fact conclusive.
"(f) Certification of certiorari.
"SEC. 1007. Judicial enforcement.
"(a) Jurisdiction of court.
"(b) Application for enforcement.
"SEC. 1008. Participation in court proceedings.
"SEC. 1009. Joinder of parties.
"SEC. 1010. Procedures for title IV applications.".

DEFINITIONS

SEC. 4. Section 101 of the Act is amended—

(a) by striking out paragraphs (35) and (36);

(b) by redesignating paragraphs (13) through (32), (33), and (34), and (37) and (38) as paragraphs (15) through (34), (36) and (37), and (38) and (39), respectively; and

(c) by inserting in the appropriate places the following new paragraphs:

"(13) 'Charter air transportation' means charter trips, including inclusive tour charter trips combining air transportation and land arrangements, advance booking charter trips whereby air transportation is sold on an advance purchase basis, and other charter trips under regulations prescribed by the Board."

"(14) 'Charter trip' means air transportation performed under regulations prescribed by the Board in which the entire capacity of an aircraft has been engaged for the movement of persons, property, or mail by one or more persons, each of whom has engaged a substantial portion of such capacity. Board regulations shall not restrict the marketability, flexibility, accessibility or variety of charter trips except to the extent required by the public convenience and necessity, and shall in no event be more restrictive than those regulations regarding charter air transportation in effect on the date of enactment of this provision.

"(35) 'Scheduled air transportation' means flights in regular route service which are not charter trips.".

DECLARATION OF POLICY

SEC. 5. Section 102 of such Act is amended to read as follows:

"DECLARATION OF POLICY: THE BOARD

"Interstate and Overseas Air Transportation

"SEC. 102. (a) In the exercise and performance of its powers and duties under this Act with respect to interstate and overseas air transportation, the Board shall consider the following, among other things, as being in the public interest, and consistent with the public convenience and necessity:

"(1) The maintenance of an efficient air transportation system responsive to the present and future needs of the public, of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense.

"(2) The encouragement, development and attainment of an air transportation system which relies on competitive market forces to determine the variety, quality, and price of air services.

"(3) Reliance on actual and potential competition to provide a variety of efficient and innovative low-cost transportation services.

"(4) The encouragement of new carriers;

"(5) The provision of a variety of adequate, economic, and low-cost services by air carriers without unfair or deceptive practices.

"(6) The promotion of safety in air commerce.

"Foreign Air Transportation

"(b) In the exercise and performance of its powers and duties under this Act with respect to foreign air transportation, the Board shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity:

"(1) The encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense.

"(2) The regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by air carriers.

"(3) The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices.

"(4) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense.

"(5) The promotion of safety in air commerce.

"(6) The promotion, encouragement, and development of civil aeronautics.".

FEDERAL PREEMPTION

SEC. 6. Title I of the Act is amended by adding at the end the following new section:

"FEDERAL PREEMPTION

"SEC. 105. No State including the Commonwealth of Puerto Rico, the Virgin Islands, Guam, the District of Columbia, the territories or possessions of the United States, political subdivision of a state, or political agency of two or more states, shall enact any law, regulation, or standard relating to rates, routes, services, or other matters regulated by the Board in interstate, overseas or foreign air transportation or the transportation of mail by aircraft. Nothing in this section shall be construed to limit the authority of any state or political subdivision over intrastate air transportation or intrastate air carriers."

CERTIFICATE OR EXEMPTION REQUIRED

SEC. 7. Subsection 401(a) of such Act is amended to read as follows:

"Certificate or Exemption Required

"(a)(1) No air carrier shall engage in any air transportation unless there is in force a certificate issued by the Board authorizing such air carrier to engage in such air transportation or unless under another provision of this Act such air carrier is exempted from obtaining a certificate.

"(2) An air carrier holding or applying for any certificate under this Act or exempted from any provision of this Act may hold or apply for any additional certificate or exemption under this Act.

NOTICE OF APPLICATION

SEC. 8. Subsection 401(c) of the Act is amended to read as follows:

"Notice of Application

"(c)(1) Upon the filing of any application for a certificate to engage in interstate or overseas air transportation, the Board shall give due notice thereof to the public by posting a notice of such application in the office of the secretary of the Board and to such other persons as the Board may by regulation determine. Any interested person may file with the Board a written protest or memorandum of opposition to or in support

of the issuance of a certificate. The Board shall dispose of such application in accordance with procedures set forth in section 1010 of this Act.

"(2) Upon the filing of any application for a certificate to engage in foreign air transportation, the Board shall give due notice thereof to the public by posting a notice of such application in the office of the secretary of the Board and to such other persons as the Board may by regulation determine. Any interested person may file with the Board a protest or memorandum of opposition to or in support of the issuance of a certificate. Such application shall be set for a public hearing, and the Board shall dispose of such application as speedily as possible.".

ENTRY

SEC. 9. Subsection 401(d) of such Act is amended to read as follows:

"Issuance of Certificate for Scheduled Passenger Service

"(d)(1) In the case of an application for a certificate to engage in scheduled interstate or overseas passenger air transportation, the Board shall issue a certificate authorizing the whole or any part thereof (or, in the case of an application for a temporary certificate, for such periods as the Board may specify) if it finds that the applicant is fit, willing and able properly to perform such transportation, and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board hereunder, unless the Board finds that such transportation is not consistent with the public convenience and necessity.

"Issuance of Certificate for Foreign Air Transportation

"(2) In the case of an application for a certificate to engage in foreign air transportation, the Board shall issue a certificate authorizing the whole or any part of the transportation covered by the application (or, in the case of an application for a temporary certificate, for such periods as the Board may specify) if it finds that the applicant is fit, willing, and able properly to perform such transportation, and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board hereunder, and that such transportation is required by the public convenience and necessity; otherwise such application shall be denied.

"Issuance of Certificate for Charter Passenger Service

"(3) In the case of an application for a certificate to engage in charter interstate or overseas passenger air transportation, the Board shall issue a certificate authorizing the whole or any part thereof (or, in the case of an application for a temporary certificate, for such periods as the Board may specify) if it finds that the applicant is fit, willing, and able properly to perform such transportation, and to conform to the provisions of this Act and the rules, regulations and requirements of the Board hereunder, unless the Board finds that such transportation is not consistent with the public convenience and necessity.

"Issuance of Certificate for All-Cargo Service

"(4) In the case of an application for a certificate to engage in interstate or overseas all-cargo air transportation, the Board shall act in accordance with the following provisions:

"(A) Upon the effective date of this paragraph but before January 1, 1979, the Board shall issue a certificate authorizing the whole or any part thereof (or, in the case of an application for a temporary certificate, for such periods as the Board may specify) if it finds that the applicant is fit, willing, and able properly to perform such transportation, and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board hereunder, unless the Board finds that such transportaion is not consistent with the public convenience and necessity; and

"(B) Beginning January 1, 1970 and thereafter, the Board shall issue a certificate authorizing the whole or any part thereof (or, in the case of an application for a temporary certificate, for such periods as the Board may specify) if it finds that the applicant is fit, willing, and able properly to perform such transportation and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board hereunder.

"(5)(A) Proceedings upon applications for a certificate under paragraphs (1), (3), and (4)(A) of this subsection shall be governed by the following provisions:

"(i) Any person applying for the certificate shall have the burden of proving that it is fit, willing and able properly to perform the transportation applied for, and to conform to the provisions of this Act, and the rules, regulations, and requirements of the Board;

"(ii) Any person opposing the issuance of a certificate shall have the burden of proving that the proposed transportation is not consistent with the public convenience and necessity;

"(iii) The Board may not find that the proposed transportation is not consistent with the public convenience and necessity unless such a finding is supported by a preponderance of the evidence;

"(iv) Any reviewing court shall apply its independent judgment when reviewing on an agency record a Board decision that a preponderance of the evidence supports a finding that the proposed transportation is not consistent with the public convenience and necessity;

"(B) In determining whether applications for a certificate under paragraphs (1), (3) and (4)(A) of this subsection are consistent with the public convenience and necessity, the Board shall be guided by the following standards:

"(i) The issuance of a certificate is consistent with the public convenience and necessity if to do so would result in new, innovative or more efficient methods of operations in air transportation or in significant reduction in rates, fares or charges below rates, fares or charges in effect in the markets in question or in comparable markets;

"(ii) The issuance of a certificate is not consistent with the public convenience and necessity if to do so would tend to create undue economic concentration in the airline industry, or would lead to excessive domination in any section, region or market of the country by a single firm, the effect of which would, over a period of time, lessen competition;

"(iii) In considering whether to issue a certificate, diversion of revenue or traffic from another air carrier is not of itself a factor that is inconsistent with the public convenience and necessity.

"Issuance of Certificate for Dormant Authority

"(6)(A) If an air carrier holding nonstop authority to engage in scheduled interstate or overseas air transportation between any two points listed on its certificate does not exercise that authority by providing such transportation pursuant to published flight schedules for a minimum of 5 round trips per week for at least 180 days during the immediately preceding 12-month period, upon application the Board shall issue a certificate authorizing such transportation to any applicant that is fit, willing, and able properly to perform such transportation, and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board hereunder. The number of certificates issued pursuant to this paragraph for any pair of points shall not exceed the number of certificates issued for such pair of points pursuant to other provisions of this Act that are not being used as provided in the first sentence of this paragraph. If the Board must choose among qualified applicants for authority to serve one pair of points, the Board shall make its selection in conformity with subsection 102(a).

"(B) Upon the filing of any such application, the Board shall promptly give notice thereof to the public by posting a notice of such application in the office of the secretary of the Board and to such other persons as the Board may by regulation determine. Any person seeking the same authority pursuant to this paragraph shall file an application for such authority within 30 days of the date on which notice of the initial application was published. If no additional application is received within the 30-day period, and if the initial applicant holds a certificate issued by the Board, the Board shall issue its final order granting the authority within 60 days of the date on which notice of the application is published. If, at the end of the 30-day period after notice of the initial application is published, more than one application has been filed for the same authority, or if any applicant does not hold a certificate under this Act, the Board shall issue its final order in accordance with the procedures and deadlines set forth in section 1010 of this Act.

"Issuance of Certificate for Restricted Discretionary Service

"(7) Any air carrier may apply to the Board during the month of January under this paragraph for a restricted discretionary certificate to serve additional pairs of points not then included in such air carrier's certificate or certificates, if any. Unless the Board shall find the applicant is not fit, willing, and able properly to perform such transportation or to conform to the provisions of this Act and the rules, regulations and requirements of the Board hereunder, the Board on or before April 1 of the same year in which the application was filed shall issue a restricted discretionary certificate authorizing the applicant to engage in scheduled passenger air transportation between additional pairs of points except as follows:

"(A) For any carrier which operated in excess of twenty-five billion available seat-miles in interstate and overseas scheduled air transportation during the preceding calendar year, (i) such carrier may file an application under this paragraph beginning on the first day of the second January following the effective date of this paragraph, (ii) the number of additional pairs of points for each year shall not exceed one, and (iii) the cumulative air miles between such points for each year shall not exceed 2,000 statute miles;

"(B) For any carrier certificated by the Board under any section of this Act which has operated passenger service pursuant to that authority for at least 12 months and is not a carrier described in subparagraph (7)(A) of this subsection, or for any air carrier engaging in intrastate air transportation which is certificated or licensed by a state regulatory authority and operated in excess of one hundred million available seat-miles in scheduled passenger air transportation in

the previous calendar year, (i) such carrier may file an application under this paragraph beginning on the first day of the first January following the effective date of this paragraph, (ii) the number of additional pairs of points for each year shall not exceed four, and (iii) the cumulative air miles between all the points for each year shall not exceed 4000 statute miles;

"(C) If the Board receives more than one application for a restricted discretionary certificate to serve one pair of points pursuant to this paragraph, the Board shall authorize no more than one applicant to serve such pair and it shall make its selection among qualified applicants (i) on or before July 1 of the same year in which the applications were filed, (ii) by giving preference to applicants described in subparagraph (7)(B) of this subsection over those described in subparagraph (7)(A) of this subsection, and (iii) in conformity with section 102 of the Act;

"(D) An applicant pursuant to this paragraph may not apply for a restricted discretionary certificate to serve any pair of points for which a restricted discretionary certificate has been granted pursuant to this paragraph within the preceding two calendar years;

"(E) An applicant under this paragraph may specify alternative choices which the Board must consider should the applicant's preferred choices not be granted.

"(F) Air carriers providing service under this paragraph shall not with respect to such service—

"(i) increase any fare, rate or charge for that service except upon sixty days notice filed with the Board, and the Board may, if the public interest so requires, order an air carrier filing such notice not to implement the proposed increase for a period not to exceed one hundred and eighty days, except that the Board shall allow the proposed increase to be implemented if and to the extent it is reasonably designed to provide revenues for increases in costs incurred since the implementation of the then effective rate, fare or charge, or (ii) substantially reduce the level of capacity between any two points except upon sixty days notice filed with the Board, and the Board may, if the public interest so requires, order the carrier not to implement the proposed substantial capacity reduction between such points for a period not to exceed one hundred and eighty days, except that the Board shall allow the proposed reduction to be implemented if and to the extent it is reasonably designed to adjust capacity to reflect a decline in demand for air service between such points that occurred since the then current level of capacity was initially offered;

"(G) Any carrier engaging continuously for eighteen consecutive months in scheduled passenger air transportation pursuant to authority conferred in this paragraph and with respect to which the Board has not suspended a proposed fare increase or a proposed substantial capacity reduction under subparagraph (7)(F) of this subsection, may apply to the Board for a certificate conferred pursuant to paragraph (1) of this subsection authorizing unrestricted nonstop scheduled air transportation between such points. Within thirty days of the date of application, the Board shall grant such application and issue the certificate as requested unless the Board determines that the applicant has not conformed to the provisions of the Act with respect to the service in question. Breaks in service occasioned by labor disputes in which the carrier has acted in good faith or by factors beyond the control of the carrier shall not destroy the continuity of services rendered before or after the break in service, but such periods of time shall not be counted toward meeting the requirement that service be offered for eighteen consecutive months."

TERMS AND CONDITIONS OF CERTIFICATES

SEC. 10. Subsection 401(e) of such Act is amended to read as follows:

"(e)(1) Each certificate issued pursuant to paragraphs (d)(1), (d)(6) and (d)(7) of this section to engage in interstate or overseas scheduled passenger air transportation shall specify the terminal points and intermediate points, if any, between which the air carrier is authorized to engage in air transportation and the service to be rendered. Each such certificate shall authorize the holder to carry and transport mail and cargo on flights operated pursuant to the certificate.

(2) Each certificate issued under paragraph (d)(2) of the section to engage in foreign air transportation shall, insofar as the operation is to take place without the United States, designate the terminal and intermediate points only insofar as the Board shall deem practicable, and otherwise shall designate only the general route or routes to be followed. Any air carrier holding such a certificate for foreign air transportation shall be authorized to handle and transport mail of countries other than the United States. The Board may attach to the exercise of the privilege granted by the certificate, or amendment thereto, such reasonable terms, conditions and limitations as the public interest may require, except on flights operated in scheduled foreign air transportation an air carrier may engage in scheduled interstate or overseas air transportation between any United States coterminal points named in its certificate for such foreign air transportation.

"(3) Each certificate issued under paragraph (d)(3) of this section to engage in interstate or overseas charter passenger air transportation shall designate the terminal and intermediate points only insofar as the Board shall deem practicable and otherwise shall designate only the geographical area or areas within or between which the service may be rendered. Each such certificate shall authorize the holder to carry and transport mail and cargo on flights operated pursuant to the certificate.

"(4) Each certificate issued under paragraph (d)(4) of this section to engage in interstate or overseas all-cargo air transportation shall designate the terminal or intermediate points, if any, only insofar as the Board shall deem practicable and find to be required by the public convenience and necessity, and otherwise shall designate only the geographical area or areas within or between which service may be rendered. Each such certificate shall authorize the holder to carry and transport mail on flights operated pursuant to the certificate.

"(5)(A) The Board may attach to the exercise of the privileges granted by each certificate issued under paragraphs (d)(1), (d)(3), (d)(4), (d)(6) or (d)(7) of this section to engage in interstate or overseas air transportation, or any amendment to such a certificate, such reasonable terms, conditions and limitations as the Board finds to be required by the public convenience and necessity, except that the Board may not impose on any new certificate, or amendment to a new or existing certificate, a closed door restriction.

"(B) Within 30 days after the effective date of this provision, the Board shall eliminate all closed door restrictions attached to any existing certificate.

"(6) Upon application of any carrier seeking the removal of any term, condition or limitation attached to a certificate to engage in interstate or overseas air transportation, or upon the application of any carrier which provides scheduled interstate or overseas air transportation between pairs of points seeking the lifting of any intermediate stop requirement imposed because the points are named in separate route certificates, or upon its own initiative, the Board within 90 days of any such application or initiative shall eliminate the term, condition, limitation or requirement, unless the Board determines that the public convenience and necessity requires the term, condition, limitation or restriction to be retained.

"(7) No term, condition, or limitation of a certificate shall restrict the right of an air carrier to add to or change schedules, equipment, accommodations, and facilities for performing the authorized transportation and service as the development of the business and the demands of the public shall require.

"(8) No air carrier shall be deemed to have violated any term, condition, or limitation of its certificate by landing or taking off during an emergency at a point not named in its certificate or by operating in an emergency, under regulations which may be prescribed by the Board, between terminal, intermediate points, or geographical areas other than those specified in its certificate.

"(9) Any air carrier other than a charter air carrier may perform charter trips pursuant to regulations prescribed by the Board, including off-route charter trips not to exceed in any calendar year 3 percent of the total number of revenue plane miles operated by such carrier in scheduled air transportation during the previous calendar year. Such percentage limitation may be increased as the Board from time to time finds in the public interest."

EFFECTIVE DATE AND DURATION OF CERTIFICATE

SEC. 11. Subsection 401(f) of the Act is amended to read as follows:

"Effective Date and Duration of Certificate

"(f) Each certificate shall be effective from the date specified in the certificate and shall continue in effect until suspended or revoked, or until the Board shall certify that operation under the certificate has ceased."

CONTINUING REQUIREMENTS, SUSPENSION OR REVOCATION

SEC. 12. Subsection 401(g) of the Act is amended to read as follows:

"Continuing Requirements, Suspension and Revocation

"(g)(1) Every holder of a certificate shall be under a continuing obligation to maintain its fitness, willingness, and ability to perform air transportation which it is authorized to perform by its certificate and which it holds itself out to the public as performing, and to conform to the provisions of this Act, and the rules and regulations thereunder.

"(2) The Board may by order, entered after notice and hearing on the record, suspend or revoke any certificate for failure of the holder to fulfill the requirements as set forth in paragraph (1) of this subsection: *Provided*, That no such certificate shall be suspended or revoked, except as provided in paragraph (3) of this subsection, unless the holder thereof fails to comply, within a reasonable time to be fixed by the Board, with an order of the Board commanding obedience to the requirements of paragraph (1) or to the order (other than an order issued in accordance with this provision), rule, or regulation found by the Board to have been violated.

"(3) If the Board determines that the failure of a carrier to fulfill the requirements as set forth in paragraph (1) of this subsection requires, in the interest of the rights, welfare, or safety of the public, immediate suspension of such carrier's certificate, the

Board shall temporarily suspend such certificate without notice or hearing, for not more than thirty days.

"(4) Upon temporarily suspending a carrier's certificate pursuant to paragraph (3) of this subsection, the Board shall immediately enter upon a hearing on the record to determine whether such certificate should be suspended or revoked and, pending the completion of such hearing, the Board may further temporarily suspend such certificate for additional thirty-day periods aggregating not more than an additional sixty days.

"(5) If a carrier whose certificate has been suspended pursuant to paragraph (3) of this subsection removes the disability which occasioned the emergency suspension, the Board shall immediately terminate the suspension of such certificate and may terminate any pending proceeding commenced under paragraph (4) of this subsection, but nothing in this paragraph shall preclude the Board from conducting proceedings pursuant to paragraph (2) of this subsection or from imposing on such carrier a civil penalty for any violation of the provisions of this title or the regulations or orders of the Board thereunder."

TRANSFER OF CERTIFICATE PROHIBITED

SEC. 13. Subsection 401(h) is amended to read as follows:

"Transfer of Certificate Prohibited

"(h) No certificate may be exchanged, sold or transferred by any means, except transfers incidental to transactions specified in and in compliance with the provisions of section 408 of this Act."

TERMINATION OR SUSPENSION OF SERVICE

SEC. 14. Subsection 401(j) of such Act is amended to read as follows:

"Termination or Suspension of Service

"(j)(1) No air carrier shall terminate any interstate or overseas air transportation service required by its certificate except upon a minimum of 90 days notice filed with the Board and served upon each community directly affected by such termination. The Board may, upon complaint or upon its own initiative, suspend such termination for a period not to exceed 360 days after notice is filed with the Board, in order to allow arrangements to be made for alternative service. The Board may, by regulation or otherwise, authorize such temporary suspension of service as may be in the public interest.

"(2) No air carrier shall abandon any route or part thereof, for which a certificate to engage in foreign air transportation has been issued by the Board, unless, upon the application of such air carrier, after notice and hearing, the Board shall find such abandonment to be in the public interest. Any interested person may file with the Board a protest or memorandum of opposition to or in support of any such abandonment. The Board may, by regulations or otherwise, authorize such temporary suspension of service as may be in the public interest.".

INSURANCE AND BONDING

SEC. 15. Subsection 401(n) is amended to read as follows:

"Insurance and Bonding

"Insurance

"(n)(1) Each air carrier shall comply with regulations issued by the Board governing the filing and approval of policies of insurance or plans for self-insurance, in the amounts prescribed by the Board, conditioned to pay, within the amount of such insurance, amounts for which the certificate holder may become liable for bodily injuries to or the death of any person, or for loss of or damage to property of others, resulting from the operation or maintenance of aircraft.

"Bonding

"(2) The Board may, by regulation or otherwise, require any air carrier to file a performance bond or equivalent security arrangement, in such amount and upon such terms as the Board shall prescribe, to be conditioned upon such air carrier making appropriate compensation to travelers and shippers by aircraft, as prescribed by the Board, for failure on the part of such carrier to perform air transportation services in accordance with agreements to do so."

NOTICE OF CHANGES

SEC. 16. Amend subsection 403(c) to read as follows:

"Notice of Tariff Change

"(c)(1) No change shall be made in any rate, fare, or charge, or any classification, rule, regulation, or practice affecting such rate, fare, or charge, or the value of the service thereunder, specified in any effective tariff of any air carrier except after reasonable notice, as the Board shall determine by regulation, of the proposed change filed, posted, and published in accordance with subsection 403(a) of this section. Such notice shall plainly state the change proposed to be made and the time such change will take effect.

"(2) If the effect of any proposed tariff change would be to institute a rate, fare, or charge that is not within the range of fares which the Board is prohibited by law from suspending under section 1002, then such proposed change shall not be implemented except after sixty days' notice filed in accordance with regulations prescribed by the Board.

"(3) In exercising its power to suspend tariffs under subsection 1002(g), the Board shall file and deliver the statement in writing of its reasons for such suspension, as required under subsection 1002(g), at least thirty days before the time when the affected tariff would otherwise go into effect."

FEDERAL SUBSIDY PROGRAM

SEC. 17. There shall be a federal subsidy program under this Act. The program shall be designed and administered to provide adequate air service to those communities which require but cannot otherwise obtain access to a national air transportation network.

MERGERS, AGREEMENTS, CONTROL RELATIONSHIPS AND POWER TO CONFER ANTITRUST IMMUNITY

SEC. 18. (a) Section 408 of the Act is amended to read as follows:

"CONSOLIDATION, MERGER, AND ACQUISITION OF CONTROL

"Filing Required

"SEC. 408. (a) Every person desiring to engage in any of the following transactions shall file a notification of such transaction with the Attorney General, containing such information as the Attorney General by regulation may require, at least 30 days prior to the effective date of such transaction:

"(1) the consolidation or merger, of the properties, or any part thereof, of two or more air carriers, or of any air carrier and any other common carrier or any other person engaged in any other phase of aeronautics, into one person for the ownership, management, or operation of the properties theretofore in separate ownerships;

"(2) the purchase, lease, or contracting to operate the properties, or any substantial part thereof, of any air carrier, by any other air carrier, any person controlling an air carrier, any other common carrier, or any person engaged in any phase of aeronautics;

"(3) the purchase, lease, or contracting to operate the properties, or any substantial part thereof, of any person engaged in any phase of aeronautics, by any air carrier or person controlling an air carrier;

"(4) the acquisition of control of any air carrier in any manner whatsoever, by any other air carrier or any person controlling an air carrier, any other common carrier, any person engaged in any phase of aeronautics, or any other persons, or

"(5) the acquisition of control of any person engaged in any phase of aeronautics otherwise than as an air carrier, by an air carrier or person controlling an air carrier.

"Power of the Attorney General

"(b) If the Attorney General reasonably believes that a transaction which is the subject of a notification filed pursuant to subsection (a) may violate the antitrust laws, he shall notify the Board, the parties to the transaction, and other interested persons of this fact within 30 days. If such notice is given the transaction shall be stayed for 60 days or until the disposition of any proceedings brought by the Attorney General. Within 60 days following notice by the Attorney General he may institute a suit for relief under the antitrust laws in an appropriate district court. The Board may intervene as of right as a party or as an amicus curiae, in any such suit brought by the Attorney General.

"Certificates

"(c) If any transaction specified in subsection (a) goes into effect, the Board shall issue as a matter of course any certificates required by section 401 of this Act.

"Exemptions

"(d)(1) The Attorney General may by regulation determine that a class of transactions specified in subsection (a) does not affect the control of an air carrier directly engaged in the operation of aircraft in air transportation, does not result in creating a monopoly, and does not tend to restrain competition. Such a class of transactions shall be exempt from the premerger notification provision of subsection (a).

"(2) The Attorney General may, in individual cases, terminate the waiting period specified in subsection (b) of this section and allow any person to proceed with any transaction subject to this section, and promptly shall cause to be published in the Federal Register a notice that the Attorney General does not intend to take any action within such period with respect to such acquisition."

(b) Section 409 of the Act is repealed in its entirety.

(c)(1) The side heading of section 412 of such Act is amended to read as follows:

"POOLING AND OTHER AGREEMENTS IN FOREIGN AIR TRANSPORTATION

"Filing of Agreements in Foreign Air Transportation Required"

(2) Section 412(a) is amended by inserting the term "foreign" between the terms "affecting" and "air transportation".

(d) Section 414 of the Act is amended by striking the last letter "s" in the word "section", by striking "408," by striking "409,", and by striking the word "or" where it first appears.

EXEMPTION AUTHORITY

SEC. 19. (a) Section 416(b)(1) is amended to read as follows:

"Exemptions

"(b)(1) The Board, from time to time and to the extent necessary, may (except as provided in paragraph (2) of this subsection) exempt from the requirements of this title or any provision thereof, or any rule, regu-

lation, term, condition, or limitation prescribed thereunder, any person or class of persons if it finds that the exemption is consistent with the public interest."

"(b) Section 416(b) is amended by adding at the end the following new paragraph:

"Commuter Air Transportation

"(3) Any air carrier that engages in interstate or overseas air transportation solely with aircraft having a capacity of less than fifty-six passengers or 18,000 pounds of property shall not be required to obtain a certificate if that carrier conforms to such financial responsibility and reporting requirements as the Board may by regulation impose. The Board shall by regulation increase the passenger or property capacities specified in this paragraph when the public interest so requires. Air transportation pursuant to this paragraph is not subject to section 403, 404, 405(b), (c) and (d), except for the provisions regarding joint fares and through rates."

PRESIDENTIAL AUTHORITY

SEC. 20. Title VIII of the Act is amended by repealing in its entirety and by redesignating Section 801 of the Act is repealed, and sections 802 and 803 of the Act as sections 801 and 802, respectively.

RATES, FARES AND CHARGES

SEC. 21. (a) Subsection 1002(d) of the Act is amended to read as follows:

"Power to Prescribe Rates

"(d) Whenever, after notice and hearing on the record, upon complaint, or upon its own initiative, the Board shall determine that any individual or joint rate, fare, or charge demanded, charged, collected, or received by an air carrier for interstate or overseas air transportation, or any classification, rule, regulation or practice affecting such rate, fare, or charge, is or will be unjust or unreasonable, or unjustly discriminatory, or unduly preferential, or unduly prejudicial, the Board shall determine and prescribe the maximum or minimum lawful rate, fare, or charge thereafter to be demanded, charged, collected or received, or the lawful classification, rule, regulation, or practice thereafter to be made effective: *Provided however*, That (i) the Board may not find any rate, fare, or charge in interstate or overseas air transportation to be unjust or unreasonable on the basis that it is too high unless the rate, fare, or charge is, with respect to determinations before January 1, 1980, more than 10 percent higher, or after December 31, 1979, more than 20 percent higher than the rate, fare, or charge in effect for the service at issue one year prior to the filing of the rate, fare or charge; (ii) a rate above direct costs may not be found to be unlawful on the basis that it is too low, and the Board may not require an air carrier to charge, demand, collect, or receive compensation in excess of that carrier's direct costs for the service at issue. 'Direct Costs' means the direct operating costs of providing service to which a rate, fare, or charge applies, and shall not include such items as general and administrative expenses, depreciation, interest payments, amortization, capital expenses, costs associated with the development of a new route or service, and other costs which do not vary immediately and directly as a result of the service at issue."

STANDARDS FOR BOARD RATEMAKING

(b) Subsection 1002(e) is amended to read as follows:

"Standards for Board Ratemaking

"(e) In exercising and performing its powers and duties under subsection (d) of this section the Board shall take into consideration, among other factors—

"(1) the criteria set forth in subsection 102(a) of this Act;

"(2) the need in the public interest for adequate and efficient transportation of persons and property by air carriers at the lowest cost consistent with the furnishing of such service;

"(3) the quality and type of service required or preferred by the public in each market;

"(4) the need of each carrier for revenue sufficient to enable such air carrier, under honest, economical, and efficient management, to provide adequate and efficient air carrier service;

"(5) the effect of rates upon the movement of traffic;

"(6) the desirability of a variety of price and service options such as peak and off-peak pricing or other pricing mechanisms to improve economic efficiency; and

"(7) the desirability that individual air carriers determine prices in response to the particular competitive market conditions experienced by the individual carrier."

SUSPENSION OF RATES

(c) Subsection 1002(g) is amended by striking the last period and inserting the following provisos: "; *Provided further*, That the Board may not suspend any proposed tariff because of a proposed rate fare or charge contained in the tariff unless the Board is authorized under subsection 1002 (d) of this Act to find the proposed rate fare or charge unlawful; *Provided further*, That the Board may not suspend any proposed tariff on the basis that a proposed rate, fare or charge contained in the tariff is too low unless the Board, after notice and hearing, first finds there to be a substantial probability that:

"(1) the proposed rate, fare or charge will be found by the Board to be unlawful under subsection 1002(d); and

"(2) the complaining party will suffer substantial injury if the proposed rate fare or charge is not suspended pending the full hearing and final order under subsection 1002(d); and

"(3) the complaining party has no adequate alternative remedy other than suspension to compensate any substantial injury if the proposed rate fare or charge is not suspended."

POWER TO ESTABLISH THROUGH AIR TRANSPORTATION SERVICE

(d) Amend subsection 1002(i) to read as follows:

"Authority to Establish Through Air Transportation Service

"(i) The Board shall, whenever required by the public convenience and necessity, after notice and hearing, upon complaint or upon its own initiative, establish through service and the maximum joint rates, fares, or charges for interstate or overseas air transportation, or the classifications, rules, regulations, or practices affecting such rates, fares or charges, and the terms and conditions under which the through service shall be operated."

FINDINGS OF FACT CONCLUSIVE

SEC. 22. Subsection 1006(e) is amended by striking the word "The" where it first appears and inserting in lieu thereof the following: "Except as provided in subparagraph (d)(5)(D) of section 401, the".

PROCEDURES FOR TITLE IV APPLICATIONS

SEC. 23. Title X of such Act is amended by adding at the end thereof the following new section 1010:

"PROCEDURES FOR TITLE IV APPLICATIONS

"SEC. 1010. (a) Whenever an application pertaining to interstate or overseas air transportation is filed with the Board pursuant to title IV of this Act, the Board shall, within 30 days of receipt of such application, determine whether the public interest requires that the application be set for a public oral evidentiary hearing.

"(b) If the Board determines that a public oral evidentiary hearing is not required, the Board shall issue an order, within 90 days of its decision not to set the application for such hearing, (1) granting or denying the application, or (2) dismissing the application. If the Board fails to make its decision within the time prescribed by this subsection the application shall be deemed granted as applied for. Any order of dismissal under this section shall be deemed a final order subject to judicial review.

"(c) If the Board determines that the application or petition should be set for a public oral evidentiary hearing, such hearing shall be conducted in accordance with the applicable provisions of title 5 of the United States Code. In such a hearing, the Administrative Law Judge or other presiding officer shall issue an initial or recommended decision within 150 days of the date of the Board's decision that the application be set for public hearing. Within 60 days of the date the initial or recommended decision of the Administrative Law Judge is issued, the Board shall make its final order with respect to such application. If the Board does not act within the 60-day time period, the initial or recommended decision of the Administrative Law Judge shall become the final decision of the Board, subject to judicial review.

"(d) Where the application raises one or more issues of unusual complexity or difficulty the Board may issue an order with a statement of the reasons therefor, extending for not more than 30 days the time period within which the Administrative Law Judge is required to issue an initial or recommended decision. In addition, the Board may extend any deadline stated in this section if delay results from the failure of an applicant to comply in a timely manner with procedural requirements of the Board, but the extension shall be for a period of time not to exceed the time of such delay.

"(e) The Board shall adopt rules pursuant to this section that:

"(1) set forth the standards to be applied in making the determination required by subsection 1010(a); and

"(2) establish expedited procedures to be followed in proceedings conducted under subsection 1010(b). The procedures shall provide for adequate notice and opportunity for all interested persons to file appropriate written evidence and arguments; and

"(3) define and limit the types of factual evidence the Board will deem relevant and material, and prescribe how that evidence shall be presented."

EFFECTIVE DATE

SEC. 24. The Air Transportation Regulatory Reform Act of 1977 shall become effective 6 months after the date of its enactment.

AIR TRANSPORTATION REGULATORY REFORM ACT OF 1977: SECTION-BY-SECTION SUMMARY

Sec. 2. Amendment to the Federal Aviation Act of 1958. This section provides that amendatory language refers to the Federal Aviation Act of 1958, as amended, ("Act") unless otherwise specified.

Sec. 3. Table of Contents. This section amends the Act's table of contents to conform to the changes made by this bill.

Sec. 4. Definitions. This section amends

section 101 of the Act to define "charter air transportation," "charter trip" and "scheduled air transportation." The effect of these new definitions is to guarantee by statute the availability of flexible and marketable charter trips, and to remove any legal cloud hanging over liberal charter rules.

Sec. 5. Declaration of Policy. This section amends section 102 of the Act by revising the policy the Board must follow when regulating domestic ("interstate and overseas") air transportation. Foreign air policy remains unchanged. The new domestic policy places significantly greater emphasis on maximum competition. The new domestic policy statement reads as follows:

"(a) In the exercise and performance of its powers and duties under this Act with respect to interstate and overseas air transportation, the Board shall consider the following, among other things, as being in the public interest, and consistent with the public convenience and necessity:

"(1) The maintenance of an efficient air transportation system responsive to the present and future needs of the public, of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense.

"(2) The encouragement, development, and attainment of an air transportation system which relies on competitive market forces to determine the variety, quality, and price of air services.

"(3) Reliance on actual and potential competition to provide a variety of efficient and innovative low-cost transportation services.

"(4) The encouragement of new carriers.

"(5) The provision of a variety of adequate, economic, and low-cost services by air carriers without unfair or deceptive practices.

"(6) The promotion of safety in air commerce.

Sec. 6. Federal Preemption. This section amends Title I of the Act by adding a new section 105 that makes explicit the Board's authority to exercise exclusive jurisdiction over interstate and foreign air transportation. This section is not intended to change the state-federal relationship over matters not regulated by the Board or to allow federal interstate transportation.

Sec. 7. Certificate or Exemption Required. This section amends subsection 401(a) of the Act to make it clear that there is no statutory bar to air carriers performing or applying for authority to perform different classes of service, whether through certificates, exemptions or both. At one time the Board was of the view that a supplemental carrier could not also hold a scheduled certificate. This and similar multi-authority situations are explicity authorized by this section.

Sec. 8. Notice of Application. This section amends subsection 401(c) to distinguish between domestic applications and foreign applications. In the former situation this section provides that special procedures must be followed (see sec. 23, section 1010).

Sec. 9. Entry. This section substantially changes the substantive and procedural provisions governing the entry of new and existing carriers into domestic markets. It amends section 401(d) of the Act to conform to and fully implement the new domestic policy guidelines of section 102. Entry into foreign markets remains substantially unchanged. The major new provisions of FAA section 401 (d) of the Act are summarized as follows:

First, applications to perform domestic scehduled passenger service, domestic charter passenger service, or domestic all-cargo service before January 1, 1979, must be approved if the applicant is "fit, willing and able" and if the proposed service is "consistent" with the "public convenience and necessity." Applications for all-cargo authority beginning January 1, 1979 must be approved if the applicant is fit, willing, and able.

Second, Board proceedings upon applications to perform domestic scheduled passenger service, domestic charter passenger service, or domestic all-cargo service before January 1, 1979, must follow strict guidelines, specified in Section 401(d)(5): The party opposing the application has the burden of proving that the proposed transportation is not consistent with the public convenience and necessity; a Board's finding to that effect must be supported by a preponderance of the evidence and any reviewing court must use its independent judgment in reviewing the agency record on that finding; in addition to the definition of "public convenience and necessity" put forth in the new section 102, factors in applications that are consistent with the public convenience and necessity include the introduction of new air service, lower fares, and increased efficiency. Factors inconsistent with the public convenience and necessity include the tendency to create a monopoly or excessive concentration. The tendency to divert business from a carrier as a result of new entry is not itself a factor inconsistent with the public convenience and necessity.

Third, the Board must authorize service to applicants who are "fit, willing and able" to perform service in markets where nonstop service is already authorized but not performed.

Fourth, existing carriers are authorized to add automatically several new points to existing routes annually. Extremely large carriers have less flexibility under this provision than smaller carriers. This provision does not become effective until the first January following the effective date of this Act. Service performed under this provision is restricted as to rate increases and capacity reductions, but continuous service for 18 months entitles the carrier to a conventional certificate that is not specially restricted.

Sec. 10. Terms and Conditions of Certificates. This section amends subsection 401(e) of the Act to forbid the imposition of closed-door restrictions, require the removal of existing closed-door restrictions including those imposed on U.S. carriers performing domestic portions of foreign flights, and requires expeditious review and removal of all other existing restrictions that are not required by the public convenience and necessity, and require the Board to slightly increase off-route charter authority for scheduled carriers.

Sec. 11. Effective Date and Duration of Certificate. This section amends subsection 401(f) of the Act concerning effective dates of certificates.

Sec. 12. Continuing Requirements, Suspension or Revocation. This section amends FAA subsection 401(g) of the Act to modernize the Board's certificate suspension procedures and criteria.

Sec. 13. Transfer of Certificates. This section amends subsection 401(h) to prohibit transfers of certificates unless incidental to mergers that are performed in accordance with the provisions of FAA section 408 of the Act.

Sec. 14. Termination or Suspension of Service. This section amends section 401(j) of the Act to require 90 days notice to cease service and allow the Board to suspend service terminations for 360 days pending the arrangement of alternative service.

Sec. 15. Insurance and Bonding. This section amends subsection 401(n) of the Act to allow the Board to promulgate appropriate liability insurance and bonding regulations applicable to all classes of carriers.

Sec. 16. Notice of Tariff Changes. This section amends FAA subsection 403(c) of the Act to require tariff changes to be announced according to rules promulgated by the Board.

Sec. 17. Federal Subsidy. This section requires a federal subsidy program under the Act, so that small communities which require but cannot obtain adequate air service will receive adequate air service. The details of this program are to be specified at a later date.

Sec. 18. Mergers, Agreements, Control Relationships, and Power to Confer Antitrust Immunity. This section amends sections 408, 409 and 412 of the Act by repealing Board authority to confer antitrust immunity for domestic transactions, requiring premerger notification of the Justice Department by air carriers, and repealing obsolete provisions regarding interlocking relationships under FAA section 409.

Sec. 19. Exemption Authority. This section amends subsection 416(b) of the Act to allow the Board greater leeway in granting exemptions and to allow commuter airlines to operate larger aircraft without being required to obtain a certificate.

Sec. 20. Presidential Authority. This section repeals section 801 of the Act.

Sec. 21. Rates, Fares and Charges. This section amends section 1002 of the Act to allow significant pricing flexibility and to substantially reduce the Board's power to prescribe air fares. First, air carriers do not need Board authority to reduce fares to the level of their direct costs, or to raise fares as much as 10% through December 31, 1979, and 20% thereafter. Second, Board ratemaking standards are changed to require the Board to consider competitive market principles. Third, the Board's suspension authority is significantly restricted. The Board can in no event suspend rate changes falling within the zone described above (direct costs—10%/20%), and cannot suspend, pending full determination, proposed rate decreases that are claimed to fall below the direct costs standard unless there is a substantial probability that it will be found to be unlawful and the complainant will be serously injured if it is not suspended.

Sec. 22. Findings of Fact Conclusive. This section amends FAA subsection 1006(e) of the Act to conform to subparagraph 401(d)(5)(D) concerning the scope of judicial review of negative Board decisions on entry applications.

Sec. 23. Procedures For Title IV Applications. This section adds a new section 1010 to Title X of the Act to provide for expedited and streamlined procedures for the Board to follow when considering route and entry applications. This provision requires the Board in most cases to act within 120 days, if no hearing is required, and 240 days, if a hearing is required. Failure to act results in the application being automatically granted.

Sec. 24. Effective Date. This section provides that the bill takes effect 6 months after the date of enactment.

Mr. KENNEDY. Mr. President, I am pleased to join Senator CANNON in sponsoring the Air Transportation Act of 1977, a bill to reform Federal airline regulation. Senator CANNON and I have worked closely together over the past several weeks to develop joint legislation to allow airlines to compete in price, as well as service, to create an environment so that new and existing firms can offer air service in markets of their choice without undue regulatory constraints, and to provide a regulatory framework that relies primarily on competitive market forces to provide lower fares and better air service.

There is a clear consensus among Government officials, independent economists, consumer groups, and experts on the airline industry who have considered Federal economic regulation of the airlines: Federal regulation has stifled competition and needlessly raised the price of air travel. The conclusion reached is that regulation should be drastically redirected to encourage competition, innovation and lower prices. During the past Congress, Senator CANNON and I in the Senate, and Congressman GLENN ANDERSON in the House, and others have proposed different bills to meet this objective. The Air Transportation Regulatory Reform Act of 1977 takes account of the massive evidence developed over the last 3 years at hearings held by various subcommittees in both Houses of Congress and strikes an appropriate balance among the various approaches so far suggested.

The Civil Aeronautics Board fixes the prices of plane tickets, bestows the right to market air service on particular routes to chosen carriers, and exempts airlines from the antitrust laws. Recent congressional hearings and studies undertaken by several executive branch agencies have demonstrated what the consumer has long suspected: Federal economic regulation increases the cost of flying, and provides no tangible increase in convenience or safety. In short, the present form of price-and-profit regulation of the airline industry harms the consumer. Let me cite some specific examples:

In California, where airlines flying within State boundaries are not governed by the CAB's price regulations, travelers are paying about half of what we pay for airplane tickets in other parts of the country. While the traveler flying the 456 miles between San Diego and San Francisco pays $31.75 on the intrastate carrier, those of us on the east coast flying the 399 miles between Boston and Washington pay $51 for a coach seat on the CAB-regulated airlines.

In 1968 a newly formed company in Texas asked the State regulatory authority for permission to begin commercial air service within the State. After 3 years of legal battles with the federally regulated carriers—who argued that proposed operations would harm the airline industry and the public—Southwest Airlines began offering convenient service at lower fares within Texas' vast borders. Today the CAB-regulated air fare between Dallas and Houston is $35, but Southwest flies that route for $23.15 in the day and only $13.89 on evenings and weekends.

Both Boeing and Lockheed showed my Administrative Practice and Procedure Subcommittee how the planes they manufacture could be flown profitably at air fares much lower than they are now. With an all-coach seating configuration, for example, cross-country flights on jumbo jets that are 50 to 70 percent full could be ticketed for less than $100 and still turn a profit. The current fare is $187. In fact, World Airways, a charter airline, has repeatedly applied to—and been turned down by—the CAB for permission to fly scheduled service between the east and west coasts for half the regular fare.

Midway Airlines—a newly formed company—and Texas' Southwest Airlines recently proposed low-fare scheduled service from Chicago's Midway Airport to 14 other cities, including Kansas City, St. Louis, Buffalo, Las Vegas, and Detroit. Today, a morning flight between Chicago and St. Louis costs $40. That same flight would cost $25, and an evening or weekend flight would cost only $15—provided, of course, that Midway and Southwest get the green light from the regulators sitting in Washington, D.C.

This low-fare service is safe. The three intrastate airlines in Texas and California combine 41 years of operating experience without a fatality. Safety is regulated by the Federal Aviation Administration, not by the CAB.

Low-fare service is also convenient. Flight frequencies have actually increased on low-fare routes. And the lower fares cannot be explained away by arguing that CAB airlines have higher costs. When compared to the CAB carriers, the sophisticated low-fare airlines pay comparable wages to their union employees, pay more for jet fuel, about the same for jet planes, and perhaps a little less for salaried executives. They fly in rain as well as shine, get charged for landing at airports, and maintain their aircraft fleets to meet the same FAA standards imposed on the CAB carriers.

Then why the lower rates? The answer is that the relative competitive freedom given to intrastate airlines led those companies to try different types of air service at different prices. These airlines lower their fares, compete with the automobile, the bus and the train for passengers who would travel anyway, attract many other people who would not have traveled but for the lower fare, put more people in their planes than the CAB carriers, and spread the operating costs over a much greater number of passengers. The companies stay profitable, and that pleases stockholders. The fares stay low, and that pleases travelers. The Government can thus stay out of the airline business, and that should please the taxpayers.

The federally regulated airlines operate much differently. Airline fares are determined by a rigid formula. When Continental Airlines—one of the mavericks in the industry—asked to reduce its basic economy fares from their current 10 percent to a proposed 15 percent below the prices dictated by the CAB formula, the Board not only turned the company down but ordered it to cancel the 10 percent reduction as well. So much for price competition.

Since 1938, the 16 original trunk carriers have shrunk through merger to 10 trunk carriers and control 90 percent of the air travel market. Since 1950 there have been 80 applications by new firms for admission to this exclusive club, but none have been granted, and only 5 percent were even given the courtesy of a formal hearing.

With entry foreclosed and prices sky high, the airlines still are not earning excess profits. Prevented from competing in price, the big airlines channel their competitive energies into costlier service and chase the travel dollars with champagne in coach, steaks for breakfast, and lavish scheduling.

Scheduled service is frequent, but planes fly across the country half-empty. As one observer noted, the businessman might be pleased to find the seat next to him empty until he learns that he is paying not only for the seat he is sitting in but the seat his briefcase is resting on as well.

Airlines should be given the ability and incentive to compete in price, as well as service. Firms able to raise the necessary capital and meet safety and environmental standards should be allowed to enter and participate in the industry. The antitrust laws should apply in full force to corporations that sell seats on airplanes. Our nation's economy is based on the effective operation of a free and competitive open market.

Forty years ago, a then infant airline industry, dependent on a largely undeveloped technology, prevailed upon a depression weary Congress to shield airlines from the risks of our economic system. In doing so, however, Congress has deprived consumers of that system's benefits. Rigid regulation is decidedly inappropriate for the 1970's. In the case of the airlines, more competition means not only better service and lower prices, but less government bureaucracy.

The last Congress and administration began the task of returning the business of air travel to the mainstream of our economic system. This Congress and our new President should make the completion of that task the number one item on the regulatory agenda. The bill we are introducing today is the appropriate legislative vehicle to reform airline regulation. I urge my colleagues to support it and pave the way for its early passage.

By Mr. HASKELL (for himself and Mr. HART):

S. 690. A bill for the relief of the Jefferson County Mental Health Center, Inc., and 103 individuals; to the Committee on Finance.

Mr. HASKELL. Mr. President, I am today reintroducing, for myself and my colleague from Colorado, Mr. GARY HART, a private bill for the relief of the Jefferson County Mental Health Center. The center is a nonprofit hospital in Lakewood, Colorado, which provides outstanding service to three of our counties. Unfortunately, the center has become entangled in a series of misunderstandings with the IRS which can only be resolved by legislation. The matter has been reviewed by Commissioner Alexander's office and they have advised me that they have no objection to this remedy.

In brief, the problem centers around the payment of social security taxes by the center. As you may know, nonprofit organizations which are exempt from taxation under section 501(c)(3) of the Internal Revenue Code are not usually covered by the social security program, unless the organization elects to be included. A form SS-15 must be filed with the IRS waiving the exemption from coverage.

The Jefferson County Mental Health Center and its employees elected to be covered, the form was filed, and FICA taxes were deducted and paid starting in 1963. However, in the course of an IRS program evaluation, it was determined that the waiver form had never been filed.

The center was told by the IRS on February 28, 1975, that it had been improperly withholding the FICA tax, that the amounts so withheld should be returned to the employees, and that the center would be promptly reimbursed by the IRS. The center proceeded to locate the 133 employees involved and reimbursed them out of its own funds for the $17,128 withheld. Shortly after that, however, the center was informed by the IRS that the waiver form had been located and that the IRS would not reimburse the funds. Of course, it was impossible to get the money back from the employees, who had by then spent the money or were no longer employed by the center.

Unfortunately, the IRS cannot remedy what it admits is an unfortunate mistake for all concerned because it does not have the authority to expend funds without a legal obligation to do so or a statutory authorization. The Commissioner has acknowledged the dilemma and has agreed that he will not object to the bill which I am introducing today. The bill provides that the Secretary determine the amounts withheld and subsequently reimbursed and then treat those amounts as overpayments of tax which are then reimbursable to the center. I understand that this is acceptable to all concerned.

An identical bill is being introduced in the House by my colleague, Congressman WIRTH. I am hopeful that the matter can be acted upon very soon, as the center has expended a great deal of money which they desperately need to continue the vital public services to Lakewood and the surrounding areas which it has selflessly provided for many years.

Finally, Mr. President, a bill introduced by Mr. Ottinger was passed last year which sets general legislative guidelines for these problems in the future, since misunderstandings of this nature have happened to others. However, the Jefferson County Center situation is unique in that they expended their own money in reliance on the directives of the IRS, and it is not covered by the Ottinger bill, Public Law 94-563.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 690

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the waiver certificate filed by the Jefferson County Mental Health Center, Incorporated (taxpayer identification number 84-047417), under section 3121(k)(1)(A) of the Internal Revenue Code of 1954 (relating to waiver of exemption by organization) shall be deemed not to have been filed with respect to the one hundred and three individuals named in section 6 of this Act with respect to the period from January 1, 1972, through the last day of the calendar quarter in which the date of enactment of this Act occurs.

SEC. 2. The Secretary of the Treasury or his delegate, upon proof reasonably satisfactory to him that repayment has been made to the one hundred and three individuals named in section 6 of this Act by the Jefferson County Mental Health Center, Incorporated, of sums representing the amount of taxes imposed on such individuals under section 3101 of the Internal Revenue Code of 1954 (relating to rate of tax) and deducted and paid by the Jefferson County Mental Health Center, Incorporated, under section 3102 of such Code (relating to deduction of tax from wages) during the period specified in the first section of this Act, shall consider such sums paid to such employees as overpayments of tax under section 6413(b) of such Code (relating to overpayment of certain employment taxes) and shall approve a claim for a refund, credit, or adjustment filed prior to or within ninety days of the date of enactment of this Act by the Jefferson County Mental Health Center, Incorporated, under sections 6402 of such Code (relating to authority to make credits or refunds) or 6611 (a) or (b)(2) of such Code (relating to interest on overpayments).

SEC. 3. (a) Any period of limitations for filing a claim for credit or refund under section 6511 of the Internal Revenue Code of 1954 (relating to limitations on credit or refund) shall be waived with respect to any claim for refund, credit, or adjustment made by the Jefferson County Mental Health Center, Incorporated, under section 2 of this Act.

(b) Section 6514 of such Code (relating to credits or refunds after a period of limitation) shall not apply to any such claim.

SEC. 4. (a)(1) A certificate of waiver by the Jefferson County Mental Health Center, Incorporated, under section 3121(k)(1)(A) of the Internal Revenue Code of 1954 shall apply to one hundred and three individuals named under section 6 of this Act and the Jefferson County Mental Health Center, Incorporated, after the last day of the quarter in which this Act is enacted.

(2) Notwithstanding the provisions of section 3121(k)(1)(B)(iii) of such Code, the Jefferson County Mental Health Center, Incorporated, may not elect to have such certificate of waiver apply to any of the one hundred and three individuals named in section 6 of this Act for the period specified in the first section of this Act.

(b) The certificate of waiver filed by the Jefferson County Mental Health Center, Incorporated, under section 312(k)(f)(A) of such Code, or any prior corresponding provision of law, shall be inapplicable, under the provisions of this Act, only with respect to the one hundred and three individuals named in section 6 of this Act and only for the period specified in the first section of this Act.

SEC. 5. (a) The period for which any of the one hundred and three individuals named in section 6 of this Act received a repayment of the tax imposed on such individuals under section 3101 of the Internal Revenue Code of 1954 shall not be considered in any determination of eligibility for benefits under the Social Security Act. This subsection shall not apply to the determination of eligibility for benefits under the Social Security Act for any individual named in section 6 of this Act or the family of such an individual if the individual died, became disabled, or reached the age of sixty-two during such period.

(b) The provisions of this Act shall not be construed to affect the consideration given to any period of employment prior to or after the period specified in the first section of this Act in the determination of eligibility for benefits under the Social Security Act.

SEC. 6. The one hundred and three individuals affected by this Act are as follows:

By Mr. CRANSTON:

S. 691. A bill to provide for the preservation and enhancement of critical habitat for migratory waterfowl and other wetlands-dependent migratory birds of the Pacific flyway in the grasslands area of the San Joaquin Valley, Calif.; to the Committee on Environment and Public Works.

Mr. CRANSTON. Mr. President, I introduce for appropriate reference a bill to provide for the permanent preservation and enhancement of critical waterfowl habitat in the grasslands area of the San Joaquin Valley in the State of California.

This legislation is identical to H.R. 2865 introduced in the House by Congressmen BERNIE SISK and HAROLD JOHNSON.

Mr. President, the grasslands area of the San Joaquin Valley is one of the most important wintering areas for waterfowl in the Pacific flyway and the Nation. The area supports about 50,000,000 waterfowl use-days annually.

There are two national wildlife refuges in this portion of the San Joaquin Valley, but over half of the managed waterfowl lands are controlled by private property owners such as the members of the 46,000-acre Grassland Water District.

In 1954, Congress reauthorized the Central Valley project to incorporate fish and wildlife conservation as a specific project purpose. The 1954 act also authorized the Secretary of Interior to deliver water to public agencies in the grasslands area for the purpose of developing and maintaining suitable habitat for migratory waterfowl at a charge not to exceed the prevailing rate for class 2 agricultural water.

The Grassland Water District purchases water from the Central Valley project in accordance with the provisions of the 1954 act.

While this law has been fairly successful in preserving lands in the Grassland Water District for waterfowl conservation, there are growing economic pressures on the landowners to convert their lands to more economically attractive uses. There are strong indications that this conversion will occur unless there are additional economic incentives for the private owners to maintain their land for waterfowl.

I understand the grasslands area is so important to waterfowl that the Secreary of Inerior would move to acquire the private lands of the Grassland Water District, using existing authority, if the landowners diverted their property from wildlife conservation. However, a land acquisition program would be very costly to the Federal Government and would adversely impact State and local tax rolls.

The legislation I am introducing today is designed to provide an incentive to private property owners to maintain their waterfowl habitat by providing a continued water supply at no cost to them. The bill amends the 1954 act by removing the charge for Central Valley project water delivered to the Grassland Water District.

The bill also authorizes the Secretary of Interior to enter into the necessary contracts to obtain this objective.

Mr. President, both the House and Senate passed this legislation last year, but final action was not completed before Congress adjourned. I hope that the 95th Congress can move forward to enact this bill.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 691

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of August 27, 1954 (68 Stat. 879), is amended by deleting the last sentence of section 6 and inserting in lieu thereof the following: "If and when available, such water shall be delivered from the Central Valley project to the contracting entity, and the cost of furnishing the water shall not be reimbursable or returnable under the Federal reclamation laws: *Provided,* That, in order for the delivery of such water to continue on a nonreimbursable or nonreturnable basis:

"(a) The public organizations or agencies contracting with the Secretary of the Interior, excluding the State of California, shall deliver annually to the United States Fish and Wildlife Service (hereinafter referred to as the 'Service'), at no cost to the United States, not less than three thousand five hundred acre-feet of water during the period October 1 through November 30, inclusive, and not less than four thousand acre-feet of water during the period May 1 through September 30, inclusive, if available: *Provided,* That such amounts of water and times of delivery may be changed upon approval of the Secretary of the Interior; and

"(b) The public organizations or agencies, excluding the State of California, shall construct, operate, and maintain any water conveyance facilities necessary to deliver the water referred to in section 6(a) of this Act to a point or points within the boundaries of such public organization or agency as designated by the Service, or to such points as may be mutally agreed upon by the public organization or agency and the Service. The Service shall be responsible for delivering the water from such point or points to appropriate locations within lands under its jurisdiction; and

"(c) Any contract entered into by the Secretary of the Interior and any public organization or agency pursuant to this Act shall provide that in the event the public organization or agency for any reason fails to carry out the obligations imposed upon it by said contract or by this Act, the rights of use of any facilities referred to in subsection (b), and the rights to all water contracted for by the organization or agency pursuant to this Act shall revert to the Secretary of the Interior for migratory waterfowl purposes in accordance with the laws of the State of California; and

"(d) In accordance with existing or future contracts, the use of lands located within the boundaries of the public organizations or agencies shall be restricted by covenents requiring that such lands be used only for the purpose of waterfowl and wildlife habitat conservation or other uses as may be mutually agreed upon by the public organizations or agencies and the Service.".

SEC. 2. The Act of August 27, 1954 (68 Stat. 879), is further amended by adding at the end thereof the following new section:

"SEC. 8. The Secretary is hereby authorized to negotiate amendments to existing contracts to conform said contracts to the provisions of this Act.".

By Mr. HUMPHREY:

S. 693. A bill to provide that certain land of the United States shall be held by the United States in trust for certain communities of the Mdewakanton Sioux in Minnesota; to the Committee on Indian Affairs.

MDEWAKANTON SIOUX INDIAN LANDS

Mr. HUMPHREY. Mr. President, I am today introducing legislation which will change the land status of the Mdewakanton Sioux Indian lands on the Shakopee, Prairie Island, and Lower Sioux Reservations in Minnesota.

The legislation is intended to convert the title of these lands from the "United States of America" to the "United States of America in trust for" the respective organized communities.

By making this change, the tribal governments of these reservations will have jurisdiction over these lands, allowing them to participate in State and Federal programs which will assist them in their efforts to achieve self-determination.

Resolutions by the tribal councils of the affected communities have been passed requesting that the title of these Mdewakanton Sioux lands be changed in order that they may manage their own affairs.

I urge early action on this legislation

which would make these tribes eligible for participation in Federal programs and to allow them to better govern themselves.

By Mr. KENNEDY:

S. 694. A bill to adjust the status of Indochinese refugees to that of lawful permanent residents of the United States, and for other purposes; to the Committee on the Judiciary.

ADJUSTING THE STATUS OF INDOCHINA REFUGEES

Mr. KENNEDY, Mr. President, I am introducing today special legislation to provide refugees from the Indochina Peninsula with the opportunity to adjust their nonimmigrant status to that of permanent resident alien.

Specifically, the bill provides that the status of refugees from Vietnam, Cambodia, and Laos may be adjusted by the Attorney General if, first, the alien makes an application for such adjustment; second, the alien is otherwise eligible to receive an immigrant visa and is otherwise admissible to the United States; and, third, the alien has been physically present in the United States for at least 2 years.

The bill further provides that "the Attorney General shall establish a record of the alien's admission for permanent residence as of April 15, 1975, or the date of the alien's arrival in the United States, whichever date is later"; and that adjustments of status under this bill are exempt from the statutory numerical ceiling on the annual admission of aliens for permanent residency. The bill also exempts refugees who adjust their status from the payment of any fees.

The bill closely follows similar special legislation previously enacted in behalf of refugees from Hungary and Cuba, and it is also in accord with the treatment of the several thousand refugees who regularly enter the United States in conditional entry status under the annual immigration ceiling and refugee provisions of the Immigration and Nationality Act, as amended. The bill reflects consultations with others in Congress, officials in the executive branch, and representatives of the voluntary resettlement agencies associated with the American Council of Voluntary Agencies and the American Immigration and Citizenship Conference in New York.

Mr. President, nearly 2 years have passed since the first Indochinese refugees began arriving on our shore, and current estimates suggest that over the coming months and years at least 160,000 men, women, and children will be eligible for adjustment of status under the proposed legislation. The bulk of these people—currently some 145,000—have been paroled into the United States by the Attorney General, following consultations with the leadership and the Judiciary Committees of the Senate and the House, under section 212(d)(5) of the Immigration and Nationality Act, as amended. The remainder, some 15,000 persons, are nationals of Vietnam, Cambodia, or Laos who entered the United States as nonimmigrants prior to the events which brought about the collapse of their governments in 1975, and who were, upon application as refugees, granted permission to remain in this country indefinitely.

Given the severe limitations of present law in providing refugee parolees with opportunities for adjustment of status, there are some very practical legislative reasons for the special measure I propose today. And I should add, Mr. President, that I am hopeful the limitations of present law will be studied and remedied during the course of this Congress, so as to avoid the need for special legislation in behalf of other refugee groups in the future.

But the justification for the proposed legislation goes far beyond the mere constraints of present law. Enactment of this bill is a logical extension of the Indochinese refugee program, established by Congres in 1975, and it is also an important ingredient in accomplishing the full objective of this program, which is to help the refugees help themselves to become productive members of their adopted communities across our land.

Providing the new arrivals from Vietnam, Cambodia, and Laos with the opportunity for regular immigrant status is simply another step to help them on their difficult road of adjusting their lives in a new land.

As we know from our experience with other groups, removing refugees from the limbo status of parolee helps to give them a greater sense of belonging in our society, and it also helps to encourage them in learning and assuming the responsibilities of eventual American citizenship. And I would like to emphasize this point; because for any refugee family the sense of belonging, which is conferred by permanent resident status, helps to dispel some needless anxieties over the future and is an important psychological boost in coping with the many problems in building new lives.

For many of the refugees, adjustment of status will also facilitate durable employment. And it will help to open up new job opportunities for those who are unemployed or underemployed. In many skills and professions, for example, State licensing laws often require citizenship or permanent residency for job applicants, and most Indochinese refugees do not qualify.

The situation varies from State to State, but it generally is posing problems for many refugees. And the same is true for possible job and service opportunities in many Federal and local government agencies and in most firms under Government contract.

Moreover, in some States adjustment of status will ease the burden of tuition fees among refugee students, who are now required to pay nonresident rates, because of their immigration status as parolees. Adjustment of status will also facilitate the membership of refugees in labor unions, professional groups, and other organizations.

In short, Mr. President, adjustment of status will help to bring the refugees into the mainstream of our society and speed the process of normalizing their lives in the communities in which they live.

As the latest report to Congress by the HEW Refugee Task Force states:

> The refugee resettlement program continues to move forward. However, economic self-sufficiency, job training, English fluency and other acculturation needs to be supported by a change from the status of parolee. As parolees or persons in indefinite voluntary departure status, they cannot aspire to citizenship, are barred from employment opportunities, and, perhaps most important of all, have a prevailing sense of rootlessness.

And the report goes on to say that adjustment of status "would do much to bolster (the refugees) morale," and it would "hasten the time when they will become full and productive members of American society."

Mr. President, as all Americans know, the new arrivals from the Indochina Peninsula entered this country in very trying and difficult circumstances—more trying and difficult, perhaps, than those attending any other recent movement of people to our country. But like those who came before them, these new arrivals are hard working and conscientious and, as chairman of the Subcommittee on Refugees, I can report to the Senate that they are making important strides in adjusting to a new life in a new land. Enactment of the bill I am introducing today would be appropriate recognition of their efforts. And it would also be a significant contribution toward helping the refugees help themselves and toward bettering the welfare of the refugee families and the communities in which they live.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 694

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the status of any alien who is a native or citizen of Vietnam, Laos, or Cambodia or whose last habitual residence was in Vietnam, Laos, or Cambodia, and who has been inspected and admitted or paroled into the United States, may be adjusted by the Attorney General, in his discretion and under such regulations as he may prescribe, to that of an alien lawfully admitted for permanent residence if—

(1) the alien makes an application for such adjustment;

(2) the alien is otherwise eligible to receive an immigrant visa and is otherwise admissible to the United States for permanent residence; and

(3) the alien has been physically present in the United States for at least two years.

SEC. 2. Upon approval of an application for adjustment of status under the first section, the Attorney General shall establish a record of the alien's admission for permanent residence as of April 15, 1975 or the date of the alien's arrival in the United States, whichever date is later. The provisions of this Act shall be applicable to the spouse and child of any alien described in the first section, regardless of their citizen-

ship and place of birth, who are residing with such alien in the United States.

SEC. 3. In the case of an alien otherwise eligible for permanent residence under any provision of this Act, the exclusion grounds specified in paragraphs (14), (15), (20), and (21) of Section 212(a) of the Immigration and Nationality Act shall not be applicable.

SEC. 4. When an alien is granted the status of having been lawfully admitted for permanent residence pursuant to the provisions of this Act, the Secretary of State shall not be required to reduce the number of visas authorized to be issued under the Immigration and Nationality Act, and the Attorney General shall not be required to charge the alien any fee.

SEC. 5. Except as otherwise specifically provided in this Act, the definitions contained in the Immigration and Nationality Act shall apply in the administration of this Act. Nothing contained in this Act shall be held to repeal, amend, alter, modify, effect, or restrict the powers, duties, functions, or authority of the Attorney General in the administration and enforcement of the Immigration and Nationality Act or any other law relating to immigration, nationality, and naturalization. The fact that an alien may be eligible to be granted the status of having been lawfully admitted for permanent residence under this Act shall not preclude him from seeking such status under any other provision of law for which he may be eligible.

By Mr. PROXMIRE (for himself, Mr. BAYH, Mr. BROOKE, Mr. BURDICK, Mr. FORD, Mr. HUMPHREY, and Mr. METZENBAUM):

S. 695. A bill to amend the Defense Production Act of 1950, as amended; to the Committee on Governmental Affairs.

DEFENSE PRODUCTION ACT AMENDMENTS OF 1977

Mr. PROXMIRE. Mr. President, today I am offering a much needed revision to the Defense Production Act of 1950. I ask that this bill be referred jointly to the Government Operations and Banking Committees on tomorrow. This bill would correct one of the most serious lapses in current law. It would inhibit conflicts of interest by those Government employees who award and supervise the billions of dollars in contracts and grants that the Government awards each year.

I have introduced similar legislation many times since I first came to the Senate nearly 20 years ago. However, the need for such legislation has never been more pressing that it is today. Never before has the Federal Government been responsible for awarding more money to American industry. Never before has it been more important that this money be spent wisely.

With the tight budgetary constraints, and the efforts of the new administration to balance the budget, it is vital that we make every effort possible to assure that the taxpayers get fair value for their tax dollars.

Considering the decrease of citizens' faith in the Government, it is important that we take every step we can to reestablish trust. One way we can do this is to exercise vigorous oversight of Federal programs. Another equally critical way is to assure that no Federal employee will be placed in a situation where he might feel tempted to favor his own private economic interests over the interests of the Government and the taxpayers in achieving maximum efficiency.

PRIOR STUDIES

This bill would go a long way toward attainment of this goal. It would prohibit the most insidious type of conflict of interest—that which occurs when a Government official responsible for supervising the Government's contractual obligations is faced with the knowledge that he might improve his opportunities for lucrative employment outside the Government by providing some assistance to the company over whose programs he exerts some responsibility.

This can happen in many ways that might never be noticed in the normal course of events. An individual could approve a minor relaxation in specifications that might affect a contractor's profits by millions of dollars. Or he could approve reimbursement for an improvement that should be paid for by the contractor. Or he could approve the acceptance of substandard products.

The Joint Committte on Defense Production found such examples when it investigated the procurement of the Navy's Condor missile. The committee found that several individuals within the Department of Defense had exerted unusual influence on behalf of the contractor, up to the point of advising the contractor on how to lobby for continued congressional appropriations. In this case, the effort was aimed at assuring the survival of a controversial program and assuring that the normal operational tests would not be too severe.

FITZHUGH REPORT

The Fitzhugh Commision, and many present and former government officials, have pointed to the danger of conflict of interests. In its report, issued nearly 7 years ago, the Fitzhugh Commission concluded with regard to certain types of contracting officers that:

First, the temptation to curry favor with the contractor in the expectation of future and hopefully lucrative employment is present. In this regard, one of the on-site surveys of the Civil Service Commission reported allegations that the plant representative (responsible for protecting the government's interest) at a major aircraft company had failed to pursue the Government's interest diligently in a number of instances in the hope of gaining post-retirement employment with the company, and he was in fact subsequently employed by that defense contractor.

A number of years ago, an Air Force officer argued the same point in a memorandum to his superior:

In formulating a broad management improvement plan for Minuteman, I believe you should consider the problem posed by the mass migration of Air Force officers into the management ranks of contractors with whom they have dealt. The Air Force Plan Representative who revoked our clearances at Autonetics is now a division manager at Autonetics. His predecesor, equally protective of the contractor's interest, is also now employed by North American Aviation. The program officer who blocked access by the Minuteman Program Control Office to Autonetics contract negotiation records is now employed by North American Aviation. The immediate superior of the project officer who was excluded from Autonetics' plant is now employed by Autonetics. The officer cited to me as responsible for killing the cost reduction project I contracted to perform at Autonetics is now employed by North American Aviation . . . It is perfectly clear to me that these same officers studiously avoided any action which might offend their ultimate employer.

Close analysis reveals that this pattern is common throughout the Government contracting community. Two recent independent studies confirm this problem. One, by the Council on Economic Priorities, reveals that, during a 5-year period, nearly 300 individuals left the employment of a single Government agency to accept employment with contractors over whose programs they had exerted significant responsibility.

Another study, by Common Cause, confirms that this is a serious problem in other Federal agencies. Mr. President, I ask unanimous consent to enter an excerpt from the CEP study in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PROCUREMENT

Procurement officials can affect decisions in favor of a contracter without violating any law. There is general agreement that this can be done in two ways:

1) While on active duty, military or civilian DOD personnel with procurement authority may make decisions favorable to a certain contractor or to industry in general: production shortcomings may be overlooked, favorable contract terms written, or recommendations may be made for procurement from a specific contractor in preference to another.

2) After retirement, a person may exercise his knowledge of DOD procedures or personal friendships with active duty officers for the benefit of his employer.

Obviously, in the second instance, it would be necessary for the transferee to hold a position, formally or informally, in sales or customer liaison. Conflict of interest legislation has on the whole aimed to control this type of abuse. Nevertheless, all employment transfers of retirees to the defense industry deserve scrutiny. A high-ranking position with the company is not the only important matter. In its grossest sense, any position held with a contractor by a former procurement official could be considered a payoff; the conflict would have existed while the official was on active duty. Viewing the situation this way is particularly pertinent, if only because it has been generally neglected by legislation.

The office

Procurement officers at the DOD exercise control over vast sums of money. Some major weapons programs are funded at over $100 million per year. There are numerous stages in the procurement process wherein decisions favorable to a contractor can result in the payment of hundreds of thousands of dollars. In Arming America, J. Ronald Fox, a former Assistant Secretary of the Army for procurement, professor at the Harvard Business School and consultant to military contractors, pointed out some of the factors that may lead to unconscious favoritism toward contractors by procurement officials:

"A military officer who is a capable manager but who is eventually passed over for promotion to the rank of general or admiral may use his skills after retirement from

the service in a position in private industry. Despite the urgent need for competent acquisition managers within the military, there are at present few incentives for qualified officers to remain in the service after 20 years. The defense industry, on the other hand, provides a compelling incentive for a knowledgeable officer to leave the service: rewarding salary scale and career status. The availability of jobs in industry can have a subtle, but debilitating effect on an officer's performance during his tour of duty in a procurement management assignment. If he takes too strong a hand in controlling contractor activity, he might be damaging his opportunity for a second career following retirement. Positions are offered to officers who have demonstrated their appreciation for industry's particular problems and commitments." [9]

In its survey of DOD-industry employment interchanges for the period July 1968 through June 1973, CEP found ample evidence that this is a potentially troublesome area. Although, as has been mentioned, a large majority of former military personnel exhibited no possibility of having exerted influence on behalf of a contractor, evidence of potential abuse was found to exist for over one-quarter of all reporting transferees from the DOD (379 out of a total of 1,406).

A description of some of these instances might demonstrate this point: *

Lieutenant Colonel Richard Auger, the former commander of the Burlington Army Ammunition Plant, responsible for maintaining surveillance of contractor performance, accepted employment a week after his retirement in January 1970 with Chamberlain Manufacturing Company, the operator of that arsenal.

Nearly every major systems contractor has hired former DOD plant representatives who immediately before their retirement had been in the position of evaluating the performance of their present employers (for a discussion of plant representatives, see p. 21). At least two Air Force Boeing plant representatives, Major Roy Boyd and Colonel Albert Lehner, accepted employment with that company. Major James Drumgool, former Air Force G.E. plant representative and Lieutenant Colonel John Rigling, former Syracuse Defense Contract Administration Service director, were hired by G.E. (for a discussion of the Defense Contract Administration Service, see Appendix I). Lockheed hired Edward Currie and Commander Richard Allen, two former Navy Lockheed plant representatives. McDonnell Douglas hired two Navy McDonnell Douglas plant representatives, Captain John Kane and Lieutenant Commander Harold Simpson, and also hired Major John Bennett, a former Air Force officer who had served as chief of the Defense Contract Administration Service office at its St. Louis plant. Grumman hired one former Navy Grumman plant representative, Commander William Burgess, Rockwell International hired Captain Donald Walton, a Navy plant representative from the Columbus, Ohio, plant. Hughes Aircraft hired Robert Lucas, who had served as chief of the Air Force plant representative's office at a Hughes plant. Westinghouse hired Lieutenant Commander Edgar Lewis, a Navy plant representative who had served as project manager for Westinghouse's controversial and costly Mk48 torpedo project. Philco Ford hired Major Ronald Wright, a Marine Corps officer who had served as technical representative from the Naval Electronics Laboratory on a Philco project.

General Howell Estes, the former commander of the Military Airlift Command, upon his retirement was appointed Executive Vice President of World Airways, a major military charter flier.

Colonel Rob Greenley, a former Air Force program director for Remotely Piloted Vehicles (RPVs), a major new development effort, accepted employment upon retirement with Lear Siegler and Northrop, two of the companies most active in RPV development.

Rockwell International, prime contractor for the B–1 Bomber, hired Lieutenant Colonel Henry Gaynor, chief of the Air Force B–1 Configuration Identification Division upon his retirement. It also hired two former officials of the Air Force Contract Management Division. One, Colonel Thomas McGuire, had been Comptroller—prime financial overseer—of the Los Angeles office, and the other, Colonel Robert Mitchell, had been Special Assistant to the Division Commander for Minuteman management. His special duties had involved administration of Minuteman guidance and control system development. Rockwell's Autonetics Division, post-retirement employer of Colonel Mitchell, is the producer of Minuteman guidance and control systems.

Colonel Joseph Smith, who served as chief of the Production Requirements Division of the Defense Communications Planning Group, development agency for the controversial "automated battlefield," was hired upon his retirement by Honeywell, a major automated battlefield contractor.

Air Force Colonel Robert Gruetzmacher, who commanded the Aerospace Defense Command DEW Line office, directed operation of the DEW Line, and monitored performance of the operating contractor, ITT Arctic Services, was hired by ITT upon his retirement from the Air Force.

Air Force Brigadier General McLean Elliott, who had served as Assistant Director of Defense Research and Engineering with responsibility for budget planning and programming for DOD test ranges, was hired several weeks before his retirement by Kentron Hawaii (a subsidiary of LTV), operator of one of the major missile test ranges.

Boeing, prime contractor for the Airborne Warning and Control System (AWACS), hired Colonel William Jones, former AWACS project director of engineering, upon his retirement from the Air Force.

Rockwell International hired Brigadier General Robert Meyer, who had held two positions in which he could affect Rockwell operations. The first was the position of Air Force Director of Procurement Policy. Subsequently, he served as Director of Aircraft and Missiles in the Office of the Assistant Secretary of Defense for Installations and Logistics. His duties in this job included monitoring the production status of Army, Navy and Air Force aircraft and missile programs and recommending action where appropriate. The B–1, a Rockwell project, is potentially the largest aircraft procurement project ever.

Raytheon, prime contractor for the Hawk anti-aircraft missile, hired Colonel Harry Buzzett, Hawk program manager, upon his retirement from the Air Force. It also hired Lieutenant Colonel Eugene Naegele, former research and development coordinator in the Air Defense and Missiles Division of the Army Chief of Research and Development.

Gould, ultimate winner of a competition with Westinghouse to build the Mk48 torpedo, hired Navy Captain Charles Almy, who had served as Director of the Naval Ordnance Systems Command Torpedo Division and Mk48 Torpedo project officer.

General Electric, a producer of antisubmarine warfare (ASW) systems, hired two Navy captains on the same day who had worked in management positions in the Navy's antisubmarine warfare development structure. One, Thomas Auger, had been Director of the Submarine Systems Engineering Group and Director of the Advanced Submarine Systems Division in the ASW Systems Project Office, procurement agency for ASW systems. The other, Charles Helme, had served as Director of Technical Appraisals and Requirements in the Office of the Director of ASW Programs.

The TACFIRE artillery fire direction system, a complex computer system, has been one of the most widely criticized defense systems in the past few years because of the apparent inability of Litton, its contractor, to control costs or build a system that works. Litton hired Lieutenant Colonel John Harte, former Deputy Director of the TACFIRE system and Major Francis O'Leary, a former TACFIRE deputy who had been responsible for translating Army requirements into technical language.

CONFLICT OF INTEREST IS A SITUATION

Mr. PROXMIRE. Mr. President, I am not arguing that the individuals did anything wrong in each of these cases. What I am saying is that the potential for wrongdoing exists and is aggravated by the number of Government contracting officials who pass through the revolving door into private industry.

An official responsible for a Government contract is faced with this temptation every day. And the opportunity for lucrative employment that is so well documented by the Fitzhugh commission and others makes this temptation much stronger.

Conflicts of interest are not only created by the act of wrongdoing, they are encouraged by the situation of temptation. Conflict-of-interest law cannot catch every person in the act of wrongdoing, but it should give assurances that people are not placed in a situation of temptation. This conclusion was best expressed by the New York City Bar Association:

A conflict of interest does not necessarily presuppose that . . . the official will in fact resolve the conflict to his own personal advantage rather than the government's. If a man is in a position of conflicting interests, he is subject to temptation however he resolves the issue. Regulation of conflicts of interest seeks to prevent situations of temptation from arising . . . Perhaps the individual's personal interest in the matter would not affect his discharge of his official duty; but the experience of centuries indicates that the contrary is more likely, and that affairs should be so arranged as to prevent a man from being put in such an equivocal position.

This is exactly what my legislation will do. It does not say that individuals will be punished only if they take an action to the detriment of the Government,

* CEP has chosen to provide the names of these individuals as examples only. As a matter of policy, CEP considers the problem discussed here to be primarily structural—the responsibility of contractors and the Government—and not solely the responsibility of these individuals. Contractors hiring practices and the inadequacy of conflict of interest legislation are the major concerns of CEP. There is no evidence, except when mentioned elsewhere as being in apparent violation of the criminal selling statute, of any willful violation of the law. The names of those personnel in apparent conflict are available to the public at the CEP New York office.

[9] J. Ronald Fox, Arming America: How the U.S. Buys Weapons, Harvard University Press, 1974, pp. 460–461.

because such actions are often much too difficult to disclose and prove. Rather, it says that, to the maximum extent possible, Government procurement officials will not be placed in a situation where they are subject to the temptation that could be exerted by the anticipation of a lucrative job outside the Government.

It accomplishes this goal by a very simple means. My legislation stipulates that officials will be temporarily prohibited from accepting employment with any firm over whose contracting programs they exerted substantial authority. Therefore, by removing the possibility of an immediate reward, it improves the chances that such officials will act in an objective manner, without regard for the opportunity for personal gain.

SECTIONAL EXPLANATION

The first section of this bill prohibits the acceptance of any compensation by a person who took part in the design, development, award, or administration of a Government contract, for a 2-year period, with any contractor working on that contract. It further prohibits, for an additional 3 years acceptance of employment that was directly funded by decisions made by that person. These provisions would prevent Government officials from creating jobs for themselves or creating a job opportunity through their official decisions.

The section also prevents procurement officials from making decisions which affect a current financial interest, by prohibiting them from holding stock in contractors affected by their official decisions, and, for the first time, legislatively establishes the principle that Government officials should not accept benefits from contractors, in the form of entertainment, gifts or transportation, unless specifically authorized by departmental directive.

The second section establishes a Conflict of Interest Review Board, to be independent of the major governmental purchasers of supplies. The creation of this Board fulfills two purposes. First, it provides a central focal point to allow consistent application of the law throughout the Federal Government. Second, it allows for the provision of advice to individuals who are uncertain whether proposed employment would violate the intent of this act, and allows for exceptions to the provisions of this act in extraordinary circumstances.

The Board will be made up of the Chairman of the Civil Service Commission, who will serve as chairman, the Attorney General, and the Comptroller General. These persons were selected because of the prior expertise of their agencies in conflict-of-interest law enforcement and to minimize the cost to the Government of this new body. All three of the Board members are currently involved in review of selected conflict-of-interest matters, so the need to assemble a new, large support staff is largely obviated.

This section also spells out the procedures that must be followed and the criteria that must be met in order to allow the Board to meet to consider granting an advisory opinion. Formal notice must be provided both before any such hearings and after a decision is made to assure that such decisions will not be made in back rooms, away from public notice. Interested parties must be allowed to present testimony, to assure that all points of view will be heard.

The Board must present a statement of findings of fact with its opinion, and must keep its record of hearings available for public inspection, so that record of the Board's deliberations and precedents will be available.

This Board will be an advisory group, not an investigative or enforcement agency or a judicial body. It will not be authorized to conduct independent inquiries into the conduct of Government personnel, which might raise the specter of harassment and might require a large expenditure of money. However it will be authorized to bring independently discovered information to the attention of appropriate enforcement authorities.

The concept of a central conflict of interest advisory group has been endorsed by numerous organizations and individuals, including, perhaps most notably, the Blue Ribbon Defense Panel, or Fitzhugh Commission, which in 1970 recommended a very similar structure empowered to grant advisory opinions on matters of law or regulation.

The third section of the conflict bill provides for disclosure by both officials coming to the Government from Government contractors and those leaving the Government to accept employment with contractors. It is similar to legislation which already applies this disclosure requirement to NASA and Department of Defense personnel. It sets no substantive prohibitions but simply requires that any person passing through the revolving door must submit a report describing his duties. These reports, like the ones currently filed with DOD and NASA, would be available for public inspection, and an annual summary would be prepared for the Congress.

LOOPHOLES IN CURRENT LAW

It may seem difficult to believe, but there is no provision of law which in any way prohibits or controls the type of employment restricted by this bill. All of the conflict-of-interest laws which relate to former Government employees seek to control an equally serious, but totally different problem, which is the use by a former Government employee of his retained influence with those who are still employed by the Federal Government.

I agree that the potential for damage in this regard is great. Yet, if Congress is concerned about the use of influence by a former Government employee, how much more concerned should it be about the potentially much greater influence that a person currently employed by the Government can exert on behalf of a potential employer. The legislation which I am proposing is much more reasonable and goes much further toward protecting the Government's and the taxpayers' interests.

I must point out, though, that this legislation will not have the effect of denying future employment to individuals simply because they worked for the Federal Government. The limitation applies only to officials who exerted procurement authority over some contractor, thus removing most Government employees from its restrictions.

Even those to whom the law applies would not be denied the right to seek employment with all Government contractors. The bill simply states that such individuals could not accept employment during a limited period from that single contractor or small group of contractors over which that person had exerted significant authority as a Federal employee. Nothing would stop that person from seeking employment with another company in the same industry, where he would be allowed to make use of his skills.

This bill is the product of intensive discussions among more than a dozen persons from my office, the Joint Committee on Defense Production, other congressional offices, and private organizations. I believe that the product of those meetings is a useful piece of legislation. The same bill will be introduced in the House by Representative CHARLES BENNETT, who has been concerned about ethical standards in Government for many years.

Mr. President, I would like to take note of the cosponsors of this bill, Senators BROOKE, BURDICK, FORD, HUMPHREY, METZENBAUM, and particularly Senator BAYH who has worked closely with me on this legislation. And I would like to call attention to the remarks by my friend and distinguished colleague from Ohio (Mr. METZENBAUM) who also has examined this problem carefully.

Mr. BAYH. Mr. President, I rise today to join with the distinguished senior Senator from Wisconsin (Mr. PROXMIRE), in the introduction of legislation amending the Defense Production Act by adding a new title designed to enhance greatly our efforts to curtail the so-called "revolving door syndrome" in Government service. The need for prompt and effective action in this direction is all too clear both from the standpoint of restoring public trust and respect in Government and to make certain that procurement decisions are not tainted by possible future financial gains.

Senator PROXMIRE has for many years endeavored to inform the public of existing and potential conflicts of interests surrounding officials of the Federal Government and high ranking employees of major Government contractors.

Despite the untiring efforts of my distinguished friend and colleague, apparent and potential conflicts of interest in connection with Government service remain a major unresolved problem. It is heartening that President Carter has endeavored to set high ethical standards as preconditions for appointees in his administration. To insure full terms of service for top ranking officials in the

executive branch and to remove in a commonsense way the appearance and reality of conflicts of interests.

Despite this laudable action by the President, there remains a need to take action of a permanent character to prevent to the maximum extent possible the exploitation of public trust for private gain. In just one area, for example, the total number of former high level private contractor personnel working in the Department of Defense has grown dramatically in recent years, increasing by 65 percent during fiscal year 1975. In addition, the number of former senior DOD officials working for private defense contractors increased by a like percentage that same year.

The bill which is being introduced today is aimed specifically at that small minority of appointed Federal officials and employees who would use Federal positions of trust and responsibility as springboards to lucrative jobs with private industry.

This legislation prohibits a former Federal contracting officer from accepting compensation for any contractor or subsidiary as long as the officer remains a Federal employee. It also places a 2-year moratorium on employment by such a company of a former Federal contracting officer who was associated with Federal procurement contracts during his last 3 years of Government service. A 5-year moratorium is placed on acceptance of employment in a position which was the result of his contracting activities. The bill proposes criminal penalties for violation of the statute.

A Conflict of Interest Review Board is also established to provide a means for former Government employees to obtain guidance in considering employment with firms which hold Federal contracts. The Board would issue advisory opinions on the applicability of the act on a case-by-case basis. The Chairman of the Civil Service Commission, serving as Chairman, the Attorney General of the United States, and the Comptroller General would comprise the Board's membership.

The final section of this legislation establishes a reporting requirement for all Government employees accepting employment with companies having contracts with the agencies for which they worked or coming from Federal contractors to work for agencies holding contracts from their prior employer. These disclosure procedures pertain to contracts over $1 million as opposed to the $10 million triggering figure which is already required for NASA and DOD personnel. This Conflict of Interest Review Board would receive these reports instead of the employing agency and is required to review compliance with this provision. Reviews under this section would also be reported to the Congress.

It is clear that the time for substantive action is here. It is time that we move decisively to end abuses by those few persons who would, for personal gain, exploit their Government office and experience. The American people will not tolerate inaction on this vital issue which is so essential to reestablishing that invaluable working relationship between Government and people.

While this is a significant first step we must not be complacent about the need for other comprehensive measures designed to insure absolute honesty and integrity at all levels of the Federal Government. I urge my colleagues to join with us in this endeavor.

Mr. METZENBAUM. Mr. President, I am pleased to be a cosponsor of the bill entitled Defense Production Act Amendments of 1977 which my distinguished colleague from Wisconsin, Senator PROXMIRE, has introduced today. Senator PROXMIRE has explained admirably the bill's provisions and why its passage is so important. I would like to add only that this bill, by imposing on procurement personnel an extended time period during which they may not work for defense contractors, strengthens the chances for honest and objective Defense Department management.

Defense Department purchases account for 66 percent of all taxpayer dollars which are spent on Government procurement. In 1976 this amounted to $46 billion. I know that the taxpayers in my State and throughout the Nation want assurance that this money is being spent only if the item is needed, and the price is right. Unfortunately, far too often this has not been the case in the past, resulting in the sacrifice of needed dollars for other military purposes and our domestic needs.

Pentagon procurement personnel is charged with the responsibility for watching over billions of dollars. Their commitment to good management and integrity must be beyond question. But as long as so many thousands of them are permitted to jump directly from Government jobs to much better paying jobs with defense firms, the taxpayers of this Nation have reason to question their objectivity.

We need to guarantee that when procurement officials are negotiating a defense contract for the Government, they will not be thinking about a possible new job after retirement with the defense firm sitting across the table. I want our procurement officials to watch for mismanagement and come down hard on firms which waste our money.

This bill prohibits procurement personnel from working for contractors for a period of 2 years, lessening the temptations which presently invite possible compromise, and it sets up machinery to enforce that ban. I hope my colleagues will join me in voting for this bill when it reaches the floor.

By Mr. BENTSEN:

S. 697. A bill to amend the Clean Air Act in order to establish a National Commission on Air Quality; to the Committee on Environment and Public Works.

NATIONAL COMMISSION ON AIR QUALITY

Mr. BENTSEN. Mr. President, I am today introducing the National Commission on Air Quality Act, a measure to establish a National Air Quality Commission under the authority of the Clean Air Act. This is the same legislation that passed the Senate last year, but was cancelled by the failure of the conference report to gain congressional approval.

I believe it is particularly appropriate that this legislation be introduced the day hearings begin on this year's version of the Clean Air Act, for it is an absolutely essential component of that legislation.

Although the entire provision establishing the Commission is important, I want to concentrate on one section, the one establishing a study on photochemical oxidants and the extent to which hydrocarbons contribute to their levels in the atmosphere.

Mr. President, I have been a member of the Public Works Committee for 6 years, and in that time, we have had repeated hearings on the Clean Air Act. Although several provisions of the act are questionable, I know of no other provision producing a greater degree of uncertainty than that establishing National primary and secondary standards for oxidants.

Mr. President, to resolve these doubts, to clarify the problem and the possible means for its solution, and to give credence to whatever effort may be required, I am proposing in this legislation that the National Commission on Air Quality be charged with the responsibility of analyzing the problem. My bill requires the Commission, within a 2-year period, to analyze and describe the various pollutants commonly referred to as a "photochemical oxidants"; enumerate those which should be regulated and from which the American people should be protected; recommend strategies for their attainment; determine what effect the control of hydrocarbons will have on oxidant formation and concentrations; and clarify the degree to which background levels of oxidants contribute to those concentrations.

The problem is important in Texas and throughout the Nation. In Texas, there are a couple of cities that have some very serious problems on the control of oxidants, and we are willing to pay the price that has to be paid to have the clean air that we want in our State and in our country. In fact, Mr. President, the Houston Chamber of Commerce, on its own initiative, has invested over $1 million for a Houston area oxidant study, which will explore in depth the unique problems with oxidant control in the Houston-gulf coast area. This indicates the level of concern in my part of the country over this section of the Clean Air Act.

The oxidant problem is a complex one, and we are a long way from the days in 1971 when EPA suggested that controlling hydrocarbon emissions would allow us to control oxidant levels. Many persons intimately involved in this subject charge that far too little is known about the precise relationship between hydro-

carbons and oxidants. They ask whether a major reduction of hydrocarbons will result in a significant, or even appreciable, decrease in photochemical oxidant readings. I am not convinced that we now have a truly accurate answer to that question.

And yet, that answer affects much of the clean air strategy for urban America. Stringent transportation controls have already been proposed to reduce hydrocarbon emissions in a number of our largest cities. For instance, 1973, EPA proposed sweeping plans for a number of Texas cities, including requirements that vehicle miles traveled in Houston be reduced by 75 percent; and in Dallas by 66 percent.

Such reductions were to be accomplished by a number of means, one of which was the rationing of gasoline. The impact of such controls and the reaction of the people to them can easily be imagined.

Furthermore, my State has already adopted stringent controls for the control of hydrocarbon emissions from stationary sources. During the last 3 years, it has reduced hydrocarbon emissions from stationary sources—refineries, petrochemical plants, and the like—in Houston by no less than 85 percent. Yet the hydrocarbon reduction has had no appreciable affect on the oxidant level. Charles Barden, administrator of the board, told the Senate last year that:

> We have seen no effect whatsoever on oxidant reductions and we have seen very little effect on reducing visibility problems.

Mr. Barden went on to say:

> It is not now possible scientifically to determine the degree of control needed to attain the photochemical oxidant standard or even to state with certainty that the standard is attainable.

Mr. President, I believe the American people will comply with laws which they understand and which they believe are fair. But the uncertainty over the linkage between hydrocarbons and oxidants has put the rationale behind the oxidant control program in serious doubt. Public acceptance would not be possible to obtain.

There are, in fact, too many imponderables in the whole equation creating oxidant levels. We do not know, for example, how much of the oxidant problem is caused by background sources—vegetation, altitude, air currents—that may be beyond the control of man. One scientist, Dr. Peter Coffey of the New York State Department of Environmental Conservation, reported that oxidant readings on White Mountain, a 4,900-foot peak in the Adirondacks, frequently were above the national standard. Others have said that air samples in the middle of the Gulf of Mexico may also exceed the standard.

What we are dealing with there, then, is a standard very much in dispute and a control strategy that may not achieve it in any case. And what could be the economic consequences if we proceeded on our present course? EPA has indicated that it intends to enforce section 110 of the 1970 act, which provides that no new major hydrocarbon emitting sources should be built in areas that are not attaining the national standards for oxidants. That means that no refinery, no petrochemical complex, no offshore or onshore petroleum transfer point, or any other major hydrocarbon-emitting facility could be constructed. Continued economic growth in Houston would thus be all but precluded.

I believe our Government has more sense than to follow such a policy, particularly when the background data is vague and contradictory.

The Air-Quality Commission study should restore a level of sanity and good sense to national environmental policy. It will answer questions that have perplexed scientists and Government officials for many years. It will include input from the States themselves, which have often been overlooked in the establishment of Federal laws having a direct effect on them. I commend this measure to my colleagues for their consideration, and I shall be working to assure that it is part of any Clean Air Act that moves through this Congress.

By Mr. CRANSTON:

S. 700. A bill to amend the act of October 13, 1949, relating to the conveyance of certain land to the city and county of San Francisco, Calif.; to the Committee on Armed Services.

Mr. CRANSTON. Mr. President, I introduce for appropriate reference a bill to amend the conditions under which the Secretary of the Army conveyed certain lands under his jurisdiction to the city and county of San Francisco.

Mr. President, the land in question comprises 42 acres immediately south of the San Francisco Zoo. In 1949, by act of Congress, this property was conveyed to the city and county of San Francisco for park and recreation use only.

San Francisco has now determined that this property is the best site for its southwest water pollution control plant. The city urgently needs such a sewage treatment facility in order to meet and comply with Federal, State, and local pollution control regulations.

A little over a year ago, San Francisco voters passed a ballot resolution which favored this location for a new southwest treatment plant, I understand that the Army supports the city's plans for this site.

But because of the restrictions on the deed, San Francisco needs an amendment to the 1949 act conveying the property to the city. The legislation I am introducing today amends Public Law 81–354 to permit the city and county of San Francisco to use the former Army property for other than park purposes. Both the city and county have requested the legislation.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 700

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act authorizing the Secretary of the Army to convey certain lands to the city and county of San Francisco", approved October 13, 1949 (63 Stat. 844), is amended by striking out "for public park and recreational purposes," and inserting in lieu thereof "for public purposes,".

SEC. 2. The Secretary of the Army shall issue such written instructions, deeds, or other instruments as may be necessary to bring the conveyance made to the city and county of San Francisco, California, under authority of the Act of October 13, 1949 (63 Stat. 844), into conformity with the amendment made by the first section of this Act.

By Mr. PELL:

S. 701. A bill to provide Federal financial assistance to educational institutions in order to assist such institutions to meet the emergency caused by the high costs of fuel and fuel shortages and harsh weather conditions, and for other purposes; to the Committee on Human Resources.

EMERGENCY EDUCATIONAL ASSISTANCE ACT

Mr. PELL. Mr. President, today, I am introducing the Emergency Educational Assistance Act. This is a bill designed to help schools, colleges, and universities across the Nation deal with the increases in fixed expenses due to the cost of energy.

I have talked, over the past 2 weeks, about the cutbacks school systems have been forced to make in their programs this winter. These reductions have hurt the education of hundreds of thousands of students. Furthermore, the financial reserves of elementary, secondary, and postsecondary institutions throughout the Nation have been strained to the limit. This is something that will hurt not for just 1 year but for many years ahead.

I want to emphasize once again the losses that we are suffering this winter because of energy wasteful buildings, inefficient operating techniques, and spiraling fuel costs. Even without the increased demand for fuel, which this unusually cold spell has produced, there would be more money spent on energy than ever. Last year school districts actually cut their energy use a fraction, yet the amount public schools spent on energy rose over 40 percent. Public schools spent an estimated $514 million more on fuel than they did the year before. At current salary rates, that represents the salary of 43,000 teachers. It is a shocking figure.

There are scores and hundreds of examples that I could use to further illustrate what I am saying, but I think the issue has been well enough publicized. Every Member of this body is well aware of the crisis facing us.

What I want to do today is to stress the importance of this bill to every Senator. It is crucial to all of our States because school budgets are the largest item on virtually every local budget. Thus, taxpayers are directly affected by the losses which I have mentioned.

What is hopeful is that there are easy ways for us to make improvements and that, more immediately, we can start to save through the quick implementation of some very low-cost programs. School administrators and college administrators report that commonsense programs can be put in practice which can cut energy use by 20 to 30 percent. Nationwide, such savings, if put into effect, could save millions of dollars for each State.

Three years ago I held a hearing on the subject of the effects of the energy crisis on education. At that time the Nation was reacting to the Arab oil embargo, and the effects were severe. Now we are not under any embargo, but the situation is worse. Needs are greater. Expenses are higher. Everywhere we look the situation is deteriorating.

Dr. Helen Wise, then president of the National Education Association, testified before my subcommittee at that time. She said that she felt this problem was crucial and that the Federal Government should lead the way in energy conservation. She offered the help of her association, and said that the National Education Association would support all reasonable and effective means to conserve energy in the operation of schools, so long as such measures were not inconsistent with insuring that pupils get a full year of schooling and that contracts of school employees were honored. Her recommendation was not heard, and what we see now is a combination of school closings and teacher layoffs. Also, the voice of education has not been listened to in Federal councils.

The result has been a disaster for education.

It is alarming that the Federal Government has done so little in this regard. Most of the energy agencies established in Washington are busy running studies and conducting, often duplicating, rather esoteric work. What is doubly saddening is that schools and education in general have been given a low priority. Nothing has been done. This is unthinkable when we realize that education is one of the largest energy consuming sectors of the economy. Over 10 percent of the energy this Nation consumes is spent in the educational sector, and so we will not only save schools but we will help save the Nation when we cut the waste out of this area.

I am also doing this because I think that we must take action now rather than suffer, as we have often done, and wait for better weather. I waited once for the Government to act and nothing happened. Now I will go ahead on my own. Our schools will not be able to stand much more delay, and I will not sit and watch students shortchanged for the mistakes we make. I urge the Members of the Senate to support the bill. I welcome cosponsors, and I offer my help to anyone who is concerned with this issue. Above all else, though, we must move ahead.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 701

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Educational Assistance Act".

STATEMENT OF FINDINGS

SEC. 2. (a) The Congress finds that—

(1) educational institutions throughout the Nation need emergency assistance to continue delivering educational services to students in the face of the increased costs of operating school facilities;

(2) the maintenance and operation of elementary, secondary and post-secondary school facilities is extraordinarily costly and the proportion of expenditures used for physical plant has increased faster than that of any other educational expenditure;

(3) many older school facilities can be remodeled or renovated so that the cost of their operation can be reduced;

(4) school and university administrators can be helped through technical assistance to reduce the operating costs of school facilities;

(5) educational personnel throughout the Nation can benefit from a demonstration program which shows how specific remodeling, renovation and management projects can produce savings; and

(6) the emergency now facing many States, localities, and educational institutions, due to the continuing rise in fixed expenses, threatens the quality of education throughout the Nation.

(b) It is the purpose of this Act (1) to make basic grants to educational institutions to enable them to undertake measures to make school facilities more efficient to operate, (2) to make demonstration grants to State agencies and educational institutions for projects which show great promise of meeting the needs described in subsection (a) of this section and (3) to provide technical assistance to such agencies and institutions.

BASIC GRANTS AUTHORIZED

SEC. 3. (a) The Commissioner shall in, accordance with the provisions of this Act, make basic grants to educational institutions to pay the Federal share of the costs related to energy conservation measures undertaken by any such institution, including the cost of insulation, remodeling, and renovation of school facilities.

(b) For the purpose of making such grants, there is authorized to be appropriated $300,000,000 for the fiscal year 1978 and for each of the succeeding fiscal years ending prior to October 1, 1981.

ALLOTMENTS FOR BASIC GRANTS

SEC. 4. (a) (1) From the sums appropriated pursuant to section 3(b), the Commissioner shall allot not more than one percent among Guam, American Samoa, the Virgin Islands and the Trust Territory of the Pacific Islands according to their respective needs.

(2) From 80 percent of the remainder of such sums the Commissioner shall allot to each State an amount which bears the same ratio to such 80 percent as the population of the State bears to the population of all States.

(3) The remainder of the sums appropriated under section 3 (b) shall be available to the Commissioner for making basic grants under this Act.

(b) (1) The amount by which any allotment to a State for a fiscal year under subsection (a) exceeds the amount which the Commissioner determines will be required for such fiscal year for applications approved under section 6 within such State shall be available for reallotment to other States in proportion to the original allotments to such States under subsection (a) for that year, but with such proportionate amount for any such State being reduced to the extent it exceeds the sum the Commissioner estimates such State needs and will be able to use for such year; and the total of such reductions shall be similarly realloted among the States whose proportionate amounts were not so reduced. Any amounts realloted to a State under this subsection during a fiscal year shall be deemed part of its allotment under subsection (a) for such year.

(2 In order to afford ample opportunity for all educational institutions in a State to submit applications for assistance under this title, the Commissioner shall not fix a date for reallotment, pursuant to this subsection, of any portion of any allotment to a State for a fiscal year which date is earlier than 90 days prior to the end of such fiscal year.

(3) Notwithstanding the provisions of paragraph (1) of this subsection, no portion of any allotment to a State for a fiscal year shall be available for reallotment pursuant to this subsection unless the Commissioner determines that the applications for assistance under this Act for basic grants which have been filed by educational institutions in that State for which a portion of such allotment has not been reserved (but which would necessitate use of that portion) are applications which do not meet the requirements of this Act or which set forth programs or projects of such insufficient promise for achieving the objective of this Act that their approval is not warranted.

(c) The population of a State and of all States shall be determined by the Commissioner on the basis of the most recent satisfactory data available to him from the Department of Commerce.

USES OF BASIC GRANTS

SEC. 5. Payments made for basic grants under this Act to any educational institution may be used in accordance with applications approved under section 6(b) by that institution for the Federal share of the cost related to energy conservation measures undertaken by that institution including the costs of insulation, remodeling and renovation of school facilities of that institution.

APPLICATIONS

SEC. 6. (a) Payments may be made for basic grants under this Act only upon application to the Commissioner at such time, in such manner, and containing or accompanied by such information as the Commissioner may reasonably require. Each such application shall—

(1) provide assurances that because of—

(A) the high cost of energy,

(B) the energy shortage, or

(C) unusually harsh and persistent adverse weather conditions,

the applicant is in need of assistance;

(2) provide a full description of the energy conservation measures to be taken by that institution, and assurances that payments made under this Act for basic grants will be used for the purposes set forth in section 5;

(3) set forth policies and procedures to assure the Federal funds made available for basic grants under this Act for any fiscal year will be used so as not to supplant the level of State and local funds that would otherwise be available for the purposes described in section 5;

(4) provide that effective procedures will be adopted for evaluating the effectiveness of the assistance given for basic grants under this Act;

(5) provide that fiscal control and fund accounting procedures will be established as may be necessary to ensure the proper disposal of, and accounting for Federal funds paid to the educational institution under this Act; and

(6) provide that reasonable reports will be furnished in such form and containing such information as the Commissioner may rea-

sonably require and such records will be kept and access furnished thereto as the Commissioner may find necessary to assure the correctness and verification of such reports.

(b) Applications for financial assistance for basic grants under this Act may be approved by the Commissioner only if—

(1) the application meets the requirements set forth in subsection (a); and

(2) the application has been submitted to the appropriate State agency for comment before being submitted to the Commissioner.

(c) Amendments of an application shall, except as the Commissioner may otherwise provide, be subject to approval in the same manner as the original application.

DEMONSTRATION PROJECTS

SEC. 7. (a) The Commissioner is authorized to make grants to State educational agencies, State energy offices, other appropriate State agencies, local educational agencies, and institutions of higher education for demonstration projects which involve the development and use of energy conservation measures which show unusual promise of promoting the objectives of this Act.

(b) To the extent practicable the Commissioner shall approve applications for payments under this section in such manner as will most nearly provide an equitable distribution of financial assistance among the States.

(c) No payment may be made under this section unless the Commissioner determines that the payment is to be used for a project for which assistance is necessary because of the high cost of energy, the shortage of energy, or unusually harsh and persistent adverse weather conditions.

(d) No payment may be made under this section unless an application is submitted to the Commissioner at such time, in such manner, and containing or accompanied by such information as the Commissioner may reasonably require. Each such application shall include provisions that—

(1) assure that the project will be economically feasible;

(2) set forth the rate of return based upon the energy management component of the project compared with the rate of return based upon the remodeling or renovation component of the project; and

(3) describe whether it is feasible to use the results of the project in other communities.

(e) There are authorized to be appropriated to carry out the provisions of this section $50,000,000 for the fiscal year 1978 and for each of the succeeding fiscal years ending prior to October 1, 1981.

TECHNICAL ASSISTANCE

SEC. 8. (a) The Commissioner is authorized to make grants to State educational agencies, State energy offices, other appropriate State agencies, local educational agencies, and institutions of higher education to pay the Federal share of the cost of providing technical assistance for energy conservation measures.

(b) Such technical assistance may include—

(1) the temporary employment of specially qualified personnel necessary for—

(A) the planning and implementation of energy conservation or energy management projects including energy use evaluations, and

(B) the planning and development of remodeling, renovation, repair, replacement, or insulation projects;

(2) the conduct of specialized studies on the implementation of building management or maintenance projects;

(3) the conduct of feasibility studies on energy management and energy remodeling or renovation projects; and

(4) the conduct of energy use evaluations.

(c) No payment may be made under this section unless the Commissioner determines that the payment is to be used for technical assistance which is necessary because of the high cost of energy, the shortage of energy, or unusually harsh and persistent adverse weather conditions.

(d) No payment may be made under this section unless an application is submitted to the Commissioner at such time, in such manner and containing or accompanied by such information as the Commissioner may reasonably require. Each such application, in the case of a local educational agency, shall contain provisions designed to assure that the technical assistance for which assistance is sought will, to the greatest extent practicable, be shared with private elementary and secondary schools in the school district of such agency.

(e) There are authorized to be appropriated to carry out the provisions of this section $150,000,000 for the fiscal year 1978 and for each of the succeeding fiscal years ending prior to October 1, 1981.

PAYMENTS

SEC. 9. (a)(1) From the amount allotted to each State under section 4(a) the Commissioner shall pay to each educational institution within such State having an application approved under section 6(b), an amount equal to the Federal share of the cost of carrying out the application of such institution.

(2) The Federal share of the cost of carrying out the application of an educational institution for basic grants under section 6 shall be 50 percent for any fiscal year.

(b)(1) From the amounts appropriated pursuant to section 7(e) the Commissioner shall pay to the agency, office or institution having an application approved under section 7(d) the Federal share of the cost of carrying out its application.

(2) The Federal share of the cost of carrying out the application of an agency, office or institution for demonstration grants under section 7 shall be 66⅔ percent in any fiscal year.

(c)(1) From the amount appropriated pursuant to section 8(e) the Commissioner shall pay to any agency, office or institution having an application approved under section 8(d) an amount equal to the Federal share of the cost of carrying out its application.

(2) The Federal share of the cost of carrying out the application of an agency, office or institution for technical assistance under section 8 shall be 50 percent for any fiscal year.

(d) Whenever the Commissioner determines that an educational institution with an approved application for a basic grant under section 6(b) or an educational institution with an approved application for technical assistance under section 8 is suffering from extreme financial need and cannot, because of the limitation of federal financial assistance to 50 percent of the cost of the approved application, carry out the project described in that application the Commissioner may waive such limitation and may pay the full cost of carrying out the approved application.

WITHHOLDING

SEC. 10. Whenever the Commissioner, after reasonable notice and opportunity for hearing to any agency, office or institution receiving assistance under this Act, finds that there has been a failure to comply substantially with the provisions set forth in the application approved under section 6(b) or section 7(d) or section 8(d), the Commissioner shall notify the agency, office or institution that further payments will not be made to the agency, office or institution under this Act until he is satisfied that there is no longer any such failure to comply. Until he is so satisfied no further payments shall be made to the agency, office or institution under this Act.

ADMINISTRATION

SEC. 11. (a) Nothing contained in this Act shall be construed to authorize the making of any payment under this Act for religious worship or instruction.

(b) Prior to the promulgation of any regulations under this Act for the submission and approval of applications, the Commissioner shall consult with mechanical contractors, professional engineers, business officials of elementary and secondary schools and institutions of higher education, officials having responsibility for energy conservation and energy use in such schools and institutions, and officials of the Federal Energy Administration and the Energy Research and Development Administration.

(c) In administering the provisions of this Act the Commissioner is authorized to use the services and facilities of any agency of the Federal government and any other public or nonprofit agency or institution in accordance with appropriate agreements and to pay for such services either in advance or by way of reimbursement as agreed upon.

DEFINITIONS

SEC. 12. As used in this Act—

(1) The term "Commissioner" means the Commissioner of Education.

(2) The term "educational institution" means any local educational agency and any institution of higher education.

(3) The term "elementary school" means a day or residential school which provides elementary education, as determined under State law.

(4) The term "institution of higher education" means an educational institution in any State which (A) admits as regular students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such a certificate, (B) is legally authorized within such State to provide a program of education beyond secondary education, (C) provides an educational program for which it awards a bachelor's degree or provides not less than a two-year program which is acceptable for full credit toward such a degree, (D) is a public or other nonprofit institution, and (E) is accredited by a nationally recognized accrediting agency or association or, if not so accredited, (i) is an institution with respect to which the Commissioner has determined that there is satisfactory assurance, considering the resources available to the institution, the period of time, if any, during which it has operated, the effort it is making to meet accreditation standards, and the purpose for which this determination is being made, that the institution will meet the accreditation standards of such an agency or association within a reasonable time, or (ii) is an institution whose credits are accepted, on transfer, by not less than three institutions which are so accredited, for credit on the same basis as if transferred from an institution so accredited. Such term also includes any school which provides not less than a one-year program of training to prepare students for gainful employment in a recognized occupation and which meets the provision of clauses (A), (B), (D), and (E). For purposes of this subsection, the Commissioner shall publish a list of nationally recognized accrediting agencies or associations which he determines to be reliable authority as to the quality of training offered.

(5) The term "local educational agency" means a public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public elementary or secondary schools of a city, county, township, school

district, or other political subdivision of a State, or such combination of school districts or counties as recognized in a State as an administrative agency for its public elementary or secondary schools. Such term also includes any other public institution or agency having administrative control and direction of a public elementary or secondary school.

(6) The term "secondary school" means a day or residential school which provides secondary education, as determined under State law.

(7) The term "school facilities" includes classrooms and related facilities of an elementary school, secondary school, or an institution of higher education, and initial equipment, machinery, and utilities necessary or appropriate for educational purposes; but does not include athletic stadiums, or structures or facilities intended primarily for athletic exhibitions, contests, or games or other events for which admission is to be charged to the general public.

(8) The term "State" includes in addition to the several States of the Union, the Commonwealth of Puerto Rico, the District of Columbia, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

(9) The term "State educational agency" means the State board of education or other agency or officer primarily, responsible for the State supervision of public elementary or secondary schools, or if there is no such officer or agency, an officer or agency designated by the Governor or by State law.

By Mr. HUDDLESTON:

S. 702. A bill to amend section 1114, title 18, United States Code, so that Federal mine safety inspectors will be protected by criminal statutes; to the Committee on Human Resources.

Mr. HUDDLESTON. Mr. President, today I am reintroducing legislation to make it a Federal crime to assault or threaten Federal mine safety inspectors. This bill gives mine inspectors no new or additional authority. It merely extends to them the same protections under Federal law already afforded many other Federal employees in other departments carrying out similar security or safety functions.

The Federal Coal Mine Health and Safety Act of 1969 requires that every operating coal mine in the United States must be inspected several times a year. To make these inspections, the Mining Enforcement and Safety Administration, MESA, at the Department of the Interior employs some 1,400 coal mine safety inspectors with authority to assess violations and, where violations are particularly dangerous, to order the mine operation shut down until the condition is abated.

This is dangerous work—in many ways as dangerous as mining itself. And, for the inspector there is the added danger of abuse from one of a few operators who unfortunately still consider themselves above the law. In its report on a comparable bill last year, the Labor and Public Welfare Committee found that since 1972 there have been 31 documented cases of assaults upon or threats to Federal mine inspectors while in the performance of their duties. Absent the protection which would be afforded by this bill inspectors are now instructed to withdraw from a mine where they meet resistance, thus endangering the miners who continue to work until a court order can be obtained to continue the inspection.

These assaults and threats are a serious problem to everyone concerned. They are an intolerable hazard to the inspectors; a threat, to the health and safety of working miners who are denied, however temporarily, the protections of the Coal Mine Health and Safety Act; and an affront to the vast majority of coal operators who are honestly and responsibly trying to meet Federal safety standards.

The exact language of this bill has been approved by the Senate twice in the past past—first as part of the strip mining bill vetoed in 1975, and most recently as a separate bill which I introduced in March of last year. It is urgently needed, and I strongly request that it be considered and passed at the earliest possible date.

By Mr. PELL (for himself, Mr. GOLDWATER, and Mr. MATHIAS):

S. 703. A bill to improve the administration and operation of the Overseas Citizens Voting Rights Act of 1975, and for other purposes; to the Committee on Rules and Administration.

Mr. PELL. Mr. President, in 1975, the Congress enacted the Overseas Citizens Voting Rights Act, intended to increase participation in Federal elections by U.S. citizens living abroad.

That act, which I had the pleasure of cosponsoring with the distinguished senior Senator from Maryland (Mr. MATHIAS) and the distinguished senior Senator from Arizona (Mr. GOLDWATER) and others, was effective for the first time during the 1976 Federal elections and resulted in a very substantial increase in overseas voter participation in a democratic process.

Our experience in the 1976 elections also indicates, however, that improvements in the 1975 act are necessary to assure maximum overseas voter participation. For that reason, I am today introducing, with the distinguished senior Senator from Maryland (Mr. MATHIAS) and the distinguished senior Senator from Arizona (Mr. GOLDWATER) a bill to improve the administration and operation of the Overseas Citizens Voting Rights Act of 1975.

The Subcommittee on Privileges and Elections expects to hold hearings early in March, at which time the subcommittee will review the operation of the Overseas Citizens Voting Rights Act, and will welcome comments on the bill introduced today.

January 2, 1976, marked the culmination of the efforts of many of my colleagues and myself when the President signed into law the Overseas Citizens Voting Rights Act of 1975 (P.L. 94-203) to guarantee the constitutional right to vote, and to provide uniform procedures for absentee voting in Federal elections in the case of citizens residing outside of the United States.

Now that we have the elections of 1976 behind us, we must take a close look to determine whether this new law achieved the purpose for which it was intended—enfranchising our citizens who, for one reason or another, reside outside the country—and what changes might be required or recommended to improve the law's administration and operation.

The bill I am introducing today will improve the administration and operation of the law in many respects. First of all, it will vest the authority and responsibility for collecting and disseminating absentee voting information to citizens overseas in the President's designee under the Federal Voting Assistance Act of 1955 (50 U.S.C. 1451-1476), who is now the Secretary of Defense. The enforcement of the Overseas Citizens Voting Rights Act is vested in the Department of Justice and should remain there. No one, however, was given the responsibility of collecting and diseminating relevant information to citizens covered by that law. The Federal Voting Assistance Division of the Department of Defense, acting as the President's designee under the Federal Voting Assistance Act of 1955, has been performing this informational function for over 20 years for military personnel and since 1968 for civilians temporarily residing overseas. It would appear, therefore, that they could perform the same function for all overseas citizens at a minimal increase in manpower and expense.

The bill would also amend the 1975 act to facilitate the performance of this function and assure uniformity with the duties of the President's designee under the 1955 act. For example, the bill would authorize utilization of the same ballot application and free airmail postage provisions presently contained in the Federal Voting Assistance Act of 1955 for all citizens residing overseas. The President's designee under the 1955 act, furthermore, would be given the authority to revise the absentee registration and ballot application forms currently recommended for use under the 1955 act by military personnel and civilians temporarily residing abroad, and to develop a single form which could also be used by citizens covered by the Overseas Citizens Voting Rights Act. As under the 1955 act these forms will only be recommended for adoption by the States, not mandated.

In addition, the bill provides that any balloting material sent from the United States to persons covered by either act or returned by them to this country, shall be sent by priority airmail or by the most expeditious postal service available. The bill specifically states that such balloting material may be sent by civilians overseas from an overseas Armed Forces post office. Because of the often severe time limitations, the need to provide for the most expeditious form of transportation of balloting material is obvious. Toward the same end, the bill directs the Postmaster General to publicize and notify appropriate State election officials of the availability of free postage and the expedited mail delivery of balloting material. Section 9 of the bill would provide the necessary authorization of appropriations for the Postal Service to fulfill its responsibilities for handling the additional election materials for citizens covered by the Overseas Citizens Voting Rights Act.

Finally, section 4 of the bill provides that the exercise of any right to register or vote in Federal elections by any citizen outside the United States, and the retention by that citizen of any State or district as his or her voting residence or voting domicile solely for this purpose, shall not affect the determination of his or her place of residence or domicile for purposes of any tax imposed under Federal, State or local law.

A similar section was part of S. 95, as it passed the Senate in the 94th Congress, but was eliminated from the bill by the House of Representatives. One of the primary reasons large numbers of overseas citizens have declined to vote in elections back home has been the fear that they would be subjected to State taxation. Accordingly, I believe this provision is necessary to clarify their tax status.

The bill introduced today attempts to resolve a number of problems which arose during the 1976 elections. It is anticipated that other problems will be reviewed during hearing before the Subcommittee on Privileges and Elections, and will be addressed in legislation reported by the subcommittee where appropriate.

I ask unanimous consent that the text of the bill be printed at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 702

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Overseas Citizens Voting Rights Act of 1975 (42 U.S.C. 1973dd) is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof a semicolon and "and"; and

(3) by adding at the end thereof the following new paragraph:

"(4) 'official postcard' means a postcard application for registration to vote and for an absentee ballot in the form provided in section 204(c) of the Federal Voting Assistance Act of 1955 (50 U.S.C. 1464 (c)).".

SEC. 2. Section 4 of the Overseas Citizens Voting Rights Act of 1975 (42 U.S.C. 1973dd-2) is amended by adding at the end thereof the following new subsection:

"(c) In carrying out the provisions of this section, it is recommended that each State—

"(1) accept any official postcard which is duly executed by any person who meets the requirements in section 3 of this Act as a simultaneous application for registration under such State's election laws and for an absentee ballot under such State's absentee balloting laws;

"(2) if a special application is required for registration by mail, provide that the necessary forms will be sent with the absentee ballot and may be returned with it;

"(3) authorize and instruct the State or local election officials, upon receipt of any official postcard application or any other application for registration to vote or for an absentee ballot, to mail immediately to the applicant a ballot, instructions for voting and returning the ballot, and a self-addressed envelope; and

"(4) provide that there be printed across the face of each envelope in which a ballot is sent two parallel horizontal red bars, each one-quarter inch wide, extending from one side of the envelope to the other side, with an intervening space of one-quarter inch, the top bar to be one and one-quarter inches from the top of the envelope, and with the words 'Official Election Balloting Material—via Air Mail', or similar language, between the bars; that there be printed in the upper right corner of each such envelope in a box, the words 'Free of U.S. Postage, Including Air Mail'; that all printing on the face of each such envelope be in red; and that there be printed in red in the upper left corner of each State ballot envelope an appropriate inscription or blanks for return address of sender.".

SEC. 3. The Overseas Citizens Voting Rights Act of 1975 (42 U.S.C. 1973dd) is amended—

(1) by redesignating sections 5, 6, 7, and 8 as sections 7, 8, 9, and 10, respectively; and

(2) by inserting immediately after section 4 the following new sections:

"CURRENT ABSENTEE VOTING INFORMATION

"SEC. 5. (a) The Presidential designee under section 201 of The Federal Voting Assistance Act of 1955 (hereafter in this Act referred to as the 'Presidential designee') shall request, annually or more often when appropriate, each State to furnish him with information on the current absentee registration and voting procedures of each State pertaining to citizens entitled to vote in Federal elections under this Act. Such information shall include election dates, officers to be elected, other matters to be voted on, any provisions under such State's law requiring the removal of the name of any person from such State's voter registration roll (for whatever reason), information related to the number of absentee voters in a State, and any other information relevant to Federal elections. Where consistent with their respective duties, the Attorney General and the Federal Election Commission shall assist the Presidential designee in collecting such information. The Presidential designee shall make available such information to any person who meets the requirements in section 3 of this Act, the Department of Justice, the Department of State, and any other appropriate department or agency of the Federal Government in a position to assist in the dissemination of such information. The Attorney General, the Secretary of State, and the head of any such department or agency are authorized to reprint such information and are directed to assist and cooperate with the Presidential designee in distributing such information to such persons.

"(b) The Presidential designee shall publicize, in the manner best designed to reach the persons meeting the requirements in section 3 of this Act, the right of such persons to vote in Federal elections and the procedures available to such persons to enforce that right, as provided in this Act.

"PRINTING AND TRANSMITTING OF POSTCARDS; FREE POSTAGE; PUBLICITY

"SEC. 6. (a) The Administrator of General Services shall cause to be printed and distributed to the Department of Justice, the Department of State, and any other appropriate department or agency of the Federal government official postcards for use in accordance with the provisions of this Act as directed by the Presidential designee. Such departments or agencies shall deliver or make available such postcards to persons meeting the requirements in section 3 of this Act no later than August 15 immediately before any general Federal election for use in such election. To the extent practicable, such postcards shall also be made available at appropriate times to such persons for use in special or primary Federal elections.

"(b)(1) The Postmaster General, the Attorney General, the Secretary of State, and the head of any other appropriate department or agency of the executive branch shall facilitate the transmission of balloting material, including official postcards, absentee ballotts, voting instructions, and envelopes for the return of such ballots, to and from persons meeting the requirements of section 3 of this Act.

"(2) Any balloting material sent from the United States to any person meeting the requirements of section 3 of this Act shall be sent by priority airmail or by the most expedited postal service available.

"(3) Any balloting material sent to the United States by any person meeting the requirements of section 3 of this Act shall be returned by priority airmail or by the most expedited service available, wherever practicable. Such material may be mailed from any Armed Forces post office in an overseas area established as provided in section 406 of title 39, United States Code. In the case of ballots executed outside the United States by any person, such ballots may be segregated from other forms of mail and placed in special bags marked with special tags printed and distributed by the Postmaster General for this purpose.

"(C) Official postcards, ballots, voting instructions, and envelopes for the return of such ballots, whether transmitted individually or in bulk, shall be free of postage, including airmail postage, in the United States mails.

"(d) In order to encourage the maximum use of the procedures set forth in this Act, the Postmaster General shall publicize, in the manner best designed to reach persons meeting the requirements in section 3 of this Act, and notify all appropriate State election officials regarding the availability of free postage and expedited mail delivery of balloting material under this Act.".

SEC. 4. Section 9 of the Overseas Citizens Voting Rights Act of 1975 (42 U.S.C. 1973dd-5), as redesignated by this Act, is amended—

(1) by inserting "(a)" immediately before "Nothing";

(2) by adding at the end thereof the following:

"(b) The exercise of any right to register or vote in Federal elections by any citizen outside the United States and the retention by such citizen of any State or district as his voting residence or voting domicile solely for the purpose of exercising such right shall not affect the determination of such citizen's place of residence or domicile for purposes of any tax imposed under Federal, State, or local law.".

SEC. 5. Section 202 of The Federal Voting Assistance Act of 1955 (50 U.S.C. 1462) is amended by inserting immediately after "voting procedures," the following: "any provisions under such State's law requiring the removal of the name of any person from such State's voter registration roll (for whatever reason), information related to the number of absentee voters in a State,".

SEC. 6. Section 203 of the Federal Voting Assistance Act of 1955 (50 U.S.C. 1463) is amended—

(1) by striking out "and" at the end of paragraph (2); and

(2) by striking out paragraph (3) and inserting in lieu thereof the following new paragraphs:

"(3) the Postmaster General and the heads of the departments and agencies concerned to facilitate the transmission of balloting materials to and from persons to whom this Act is applicable. Any balloting material sent from the United States to such persons shall be sent by priority airmail or by the most expedited postal service available. Any balloting material sent to the United States by such persons shall be returned by priority airmail or by the most expedited service available, wherever practicable. In the case of ballots executed outside the United States by any such person, such ballots may be segregated from other forms of mail and placed in special bags marked with special

tags printed and distributed for this purpose; and

"(4) the Postmaster General, in order to encourage the maximum use of the procedure set forth in this Act, to publicize, in the manner best designed to reach persons to whom this Act is applicable, and to notify all appropriate State election officials regarding the availability of free postage and expedited mail delivery of balloting material under this Act.".

SEC. 7. Section 204 of the Federal Voting Assistance Act of 1955 (50 U.S.C. 1464) is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding the provisions of subsections (a) and (b), the Presidential designee shall design for purposes of carrying out the provisions of this Act and the Overseas Citizens Voting Rights Act of 1975 a single form of postcard application for registration to vote and for an absentee ballot. The Presidential designee is empowered to promulgate such form by regulation and upon adoption of such form, subsections (a) and (b) of this section shall have no effect."

SEC. 8. (a) Section 2401(c) of title 39, United States Code, is amended—

(1) by inserting after "title" a comma and the following: "the Overseas Citizens Voting Rights Act of 1975,"; and

(2) by striking out "Act" immediately before the period and inserting in lieu thereof "Acts".

(b) Section 3627 of title 39, United States Code, is amended by striking out "or under the Federal Voting Assistance Act of 1955" and inserting in lieu thereof "under the Federal Voting Assistance Act of 1955, or under the Overseas Citizens Voting Rights Act of 1975.".

Mr. MATHIAS. Mr. President, I am delighted to join with Senators PELL and GOLDWATER in introducing a package of amendments to the Overseas Citizens Voting Act of 1975, and the Federal Voting Assistance Act of 1955.

As my colleagues may recall, the passage of the Overseas Citizens Voting Act of 1975 was the result of a bipartisan effort, in which the distinguished senior Senators from Rhode Island and Arizona and I were at the forefront. The enactment of this important legislation removed the major impediments to the participation in Federal elections of thousands of American citizens living abroad and signaled Congress intent to end discrimination against private citizens overseas seeking access to the Federal franchise.

The Overseas Citizens Voting Rights Act clearly represented a major advance in the efforts of civilian Americans to secure the franchise in Federal elections. The experiences of the recent election, however, indicate the need for further refinements in the law. The bill which we now introduce is in part a result of the problems encountered by Americans seeking to vote in the 1976 Presidential and congressional elections.

Perhaps the most important provision in the proposed bill is section 4, which would clarify the Federal and State tax status of Americans voting pursuant to the provisions of the Overseas Citizens Voting Rights Act of 1975. A similar provision was contained in the Senate-passed version of S. 95, but was dropped at the insistence of the House. At the time that the Senate completed final action on S. 95, I indicated my dissatisfaction over the deletion of this provision. I stated then that Congress in the future might well want to incorporate this provision into Federal law to insure that the fear of State taxation did not discourage a significant number of Americans living overseas from participating in the electoral process.

The bill we are introducing today seeks to deal with the principal problems that have developed since the first experience with the act in the 1976 election. I pledge my best efforts to extend the full exercise of the right to vote to all our citizens, whether at home or abroad.

Mr. PELL. Mr. President, I ask unanimous consent that a statement by the Senator from Arizona (Mr. GOLDWATER), who is a cosponsor of this bill, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GOLDWATER

IMPROVING VOTING PROCEDURES FOR OVERSEAS CITIZENS

I am delighted to join today with the distinguished Chairman of the Senate Subcommittee on Privileges and Elections, Mr. Pell, in introducing legislation to correct the last remaining barriers to voting by Americans who are outside the United States.

There has been sizable advances in extending voting opportunities for Americans who cannot be in the country on Election Day. The Federal Voting Assistance Act of 1955 was the first major step in obtaining absentee registration and balloting privileges for United States citizens who cannot be physically present in the State of their voting domicile at the time of the election.

Then, in 1970, an amendment which I offered together with several other Senators, including the now senior Senator from Rhode Island, mandated uniform absentee registration and balloting rights for American citizens, who wish to vote for President and Vice-President, wherever they may be in the world. This provision, section 202 of the Voting Rights Act Amendments of 1970, helped to increase the number of absentee ballots cast in the 1972 Presidential election by 26% over the 1968 election.

Finally, two years ago, we enacted a new law aptly named the Overseas Citizens Voting Rights Act of 1975. I was privileged to cosponsor that proposal. It had the effect of extending the vote to all Americans outside the United States in Congressional, as well as Presidential, elections. It also cleared up a problem which had arisen under the 1970 law when some States refused to permit Americans abroad to vote unless they were rich enough to maintain two homes, one in the State and one abroad, during their absence.

Thus, the basic work has been accomplished of establishing uniform rights of voting and registering absentee for all Americans outside the country, whether for temporary or lengthy reasons and regardless of whether they continue to maintain an abode in their former State. Unfortunately, these laws have not been enough.

Citizens now have the technical right to register and vote by absentee ballot, but many thousands of them are effectively denied the franchise by administrative failures. Letter after letter has poured into my office documenting the fact that citizens who badly wanted to vote did not even receive an acknowledgment of their request for an absentee ballot. Other citizens receivd ballots, but too late to do them any good. In one county alone, Brevard, Florida, 600 absentee ballots arrived too late to be counted in the November 2nd general election. Most of these ballots arrived only one day too late and all were returned within a week after the polls closed.

It was not the fault of the voters. The absentee ballots were not mailed to them until October 18, leaving only two weeks for distributing the ballots overseas to voters and getting them back. Multiply the deprivation of votes in the case of these 600 citizens, who properly applied for and returned ballots, by the 3,099 counties and parishes throughout the nation, and you can see that the outcome of many elections may have been affected by procedural defects.

The bill we are introducing today is designed to correct as many of these administrative problems as possible. The legislation will serve as the basis for hearings out of which I anticipate many additional suggestions will be forthcoming which we can incorporate in a later version of the bill.

In short, the bill recommends a single application form for all elections, general, primary and special. It expedites the sending of ballots and balloting material, provides for free mailing in U.S. mails of ballot materials to and from the voter, and allows any citizen overseas, military or civilian, to use Armed Forces Post Office facilities. All such mail will be given priority handling treatment. Moreover, the bill seeks to prevent State governments from imposing income taxes on absentee voters for no reason other than the fact that they should exercise their right to vote.

I realize there are other features that may have to be included in the bill if it is to cover all the problems that have been brought to my attention. I will assist in having these additional issues raised at the hearings. For example, the hearings will allow consideration of the possibility of extending the deadlines for receiving absentee ballots in each State until a week after Election Day in situations where ballots have not been printed and distributed at least 20 days before the election. Or, in the alternative, the hearings might explore a uniform requirement that no changes in ballots be made within 20 days of an election. This would give State elections offices time to have absentee ballots printed and mailed to voters early enough to be returned by their usual statutory deadlines.

I am not concerned about the power of Congress to act in this field. It is well established that Congress can regulate federal elections, Congressional, as well as Presidential. The case of Buckley against Valeo is but the latest of several decisions by the Supreme Court to recognize broad Congressional power to legislate in connection with federal elections. Moreover, it is well established that both the right to vote and the freedom to travel are directly secured by the Constitution and can be protected by Congress.

There are over one million United States citizens, who may enjoy a greater certainty of obtaining an absentee ballot and having that ballot count under the legislation we are introducing today. If the bill were to be amended to extend the ballot receipt date or to prohibit changes in the ballot after the 20 days preceding an election; it might benefit over five million citizens. These Americans have a distinct and a direct interest in federal elections even if they are outside the United States.

If we in Congress truly wish to accomplish election reform, I suggest we act promptly to pass legislation which can help guarantee the vote to these millions of citizens who are fully qualified to vote, but are disenfranchised by mere administrative technicalities or failings. We can accomplish this reform immediately and simply by a statute of Congress, rather than a Constitutional Amendment. I urge that we act favorably upon this proposal.

By Mr. HEINZ (for himself and Mr. BIDEN):

S. 704. A bill to offset the human and economic hardships created by critical shortages of energy supplies of unusually severe weather conditions; to the Committees on Human Resources; Banking, Housing, and Urban Affairs; Small Business; and Governmental Affairs, jointly, by unanimous consent.

ENERGY AND WEATHER EMERGENCY ADJUSTMENT ASSISTANCE ACT OF 1977

Mr. HEINZ. Mr. President, in recognition of the grave human and economic hardships that have been created by recent shortages of critical energy supplies and unusually severe weather conditions, I am introducing the "Energy and Weather Emergency Adjustment Assistance Act of 1977." The distinguished Senator from Delaware (Mr. BIDEN), who shares my concern for those whose livelihoods have been threatened by the emergency conditions that persist across our Nation, joins me in sponsoring this legislation.

The ravages of this winter have been plain for all to see. Large and small businesses have been forced to close or curtail their operations. Hundreds of thousands of workers have been laid off from their jobs. The budgets of local governments have been depleted by expenditures to meet the exigencies of the energy and weather emergency.

The "Energy and Weather Emergency Adjustment Assistance Act of 1977" is designed to provide quick relief to working people, businesses, and communities through a combination of cash assistance, grants and loans. It is modelled after the adjustment assistance provisions in the Trade Act of 1974, and the bill addresses itself to the need for preventing this emergency from slowing the long term economic recovery.

Title I of this legislation creates adjustment allowances for working people who have been laid off because their companies have been adversely affected by energy shortages or severe weather conditions. These workers will be eligible to receive up to 85 percent of their average weekly salaries for each week during their first 3 months of unemployment, and up to 70 percent of their salaries during the second 3 months they are unemployed. If lay-offs are likely to be of a permanent nature, workers will be entitled to an additional allowance to defray the costs of participating in qualified training programs or job searches. Of course, the amount of any worker's weekly adjustment allowance would be reduced by the compensation he receives from unemployment insurance plans.

Title II of the bill is designed to help businesses cope with the effects of the weather and energy crisis. Under this legislation, severely impacted firms could receive grants to help repair physical damage caused by severe weather conditions or fuel shortages. Small businesses would be eligible to receive low-interest loans to help them meet their operating expenses, and thus headoff the potential tragedy of bankruptcy. Larger firms can, apply for loan guarantees to help insure that the current emergency does not destroy their ability to compete in the marketplace.

The third title of the Energy and Weather Emergency Adjustment Assistance Act is specifically geared to help already overburdened local governments offset the drains on their treasuries caused by bad weather or by energy shortages. This bill provides grants to help local communities repair damage to public facilities and to help them defray the costs of renting or purchasing equipment and supplies for emergency purposes. Additionally, communities would be eligible to receive low-cost loans to help make up temporary losses of tax revenues and to restore themselves to preemergency conditions.

This bill is clearly an emergency measure. It is warranted because a clear emergency exists in many parts of our country. I have been concerned about the way government and bureaucracy reacts to emergencies and to the human suffering that they engender. It is obvious to me that under dire conditions like those we are now experiencing, we cannot afford to proceed with business as usual. We need to act quickly and compassionately to help people face the personal and economic threats posed to them by difficult times.

Mr. President, I ask unanimous consent that the text of the Energy and Weather Emergency Adjustment Assistance Act of 1977 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 704

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Energy and Weather Emergency Adjustment Assistance Act of 1977".

TITLE I—ADJUSTMENT ASSISTANCE FOR WORKERS

PART A—CERTIFICATION OF ELIGIBILITY

SEC. 101. A petition for a certification of eligibility to apply for adjustment assistance under this title may be filed with the Administrator of the Federal Disaster Assistance Administration (hereinafter in this title referred to as the "Administrator") by a group of workers or by their certified or recognized union or other duly authorized representative.

SEC. 102. The Administrator shall certify a group of workers as eligible to apply for adjustment assistance under this title if he determines—

(1) that a significant number or proportion of the workers in such workers' firm or an appropriate subdivision of the firm have become totally or partially separated,

(2) that sales or production, or both, of such firm or subdivision have decreased absolutely, and,

(3) that critical shortages of energy supplies or unusually severe weather conditions contributed importantly to such total or partial separation, or threat thereof, and to such decline in sales or production.

SEC. 103. At the time of submitting a petition under section 101 of this title, or within six months thereafter such petition has been submitted, a group of workers may further petition the Administrator to further certify that a significant number or proportion of the workers in such workers' firm or an appropriate subdivision of the firm are likely to become totally separated on a permanent basis.

SEC. 104. (a) As soon as possible after the date on which a petition is filed under sections 101 or 103 of this title, but in any event not later than 15 days after that date, the Administrator shall determine whether the petitioning group meets the requirements of this title for certification of eligibility and shall issue a certification of eligibility to apply for assistance under this title covering workers in any group which meets such requirements. Each certification shall specify the date on which the total or partial separation began or threatened to begin.

(b) Whenever the Administrator determines, with respect to any certification of eligibility he may have issued under paragraph (a) of this section, that a substantial change of circumstances causes such certification to be no longer warranted, he shall terminate such certification and notify the affected group of such termination.

PART B—ADJUSTMENT ASSISTANCE ALLOWANCES

SEC. 105. Payment of an adjustment allowance shall be made to an adversely affected worker covered by a certification under section 104(a) of this title who files an application for such allowance for any week of unemployment which begins after the date specified in such certification, if the following conditions are met—

(1) Such worker's last total or partial separation before his application under this part occurred—

(A) on or after the date, as specified in the certification under which he is covered, on which total or partial separation began or threatened to begin in the adversely affected employment, and,

(B) before the termination date (if any) determined pursuant to section 104(b) of this title;

(2) Application for an adjustment allowance is made by such worker within three months of the time the certification under which he is covered had been issued; and,

(3) Such worker had, in the 52 weeks immediately preceding such total or partial separation, at least 26 weeks of employment at wages of $50 or more a week in adversely affected employment with a single firm or subdivision of a firm.

SEC. 106. For each week during the first three months a worker is entitled to receive an adjustment allowance under section 105 of this title, he shall receive 85 percent of his average weekly wage (but not in excess of the weekly manufacturing wage), reduced by—

(1) Remuneration received for services performed during the time of his entitlement, and,

(2) Any amount of unemployment compensation he receives or would receive if he applied for such compensation.

SEC. 107. For each week during the second three months a worker is entitled to receive an adjustment allowance under section 105 of this title, he shall receive 70 percent of his average weekly wage (but not in excess of the weekly manufacturing wage) reduced by—

(1) Remuneration received for services performed during the time of his entitlement, and,

(2) Any amount of unemployment compensation he receives or would receive if he applied for such compensation.

SEC. 108. Unless a worker is covered by a certification resulting from a petition made under section 103 of this title, he shall not be entitled to receive an adjustment allowance under this part for a period of time exceeding six months.

SEC. 109. (a) An adversely affected worker covered by a certification resulting from a petition made under section 103 of this title shall, upon application, be entitled to a fur-

ther adjustment allowance, in addition to any allowance provided for by sections 106 and 107 of this title, if the following conditions are met—

(1) Such order is entitled to receive an adjustment allowance under section 105 of this title, and

(2) He has received final or tentative notice from his employer that he has ceased to be employed at the firm or subdivision of the firm from which he had been separated.

(b) An adversely affected worker entitled to a further adjustment allowance under this section shall receive financial assistance to defray the cost of participating in a qualified training program and to offset 80 percent of the costs incurred in searching for new employment. The allowance provided under this section shall be made available to a worker for a period not to exceed twelve months after the date he first collected such allowance, and in no event shall any worker collect any allowance under this section if he has been suitably reemployed. The amount of allowance paid to any adversely affected worker under this section shall be reduced by the amount of any similar Federal or State benefits to which such worker may already be entitled.

SEC. 110. For the purposes of this part, the Administrator shall delegate his authority to the Secretary of Labor.

TITLE II—ADJUSTMENT ASSISTANCE FOR FIRMS

PART A—CERTIFICATION OF ELIGIBILITY

SEC. 201. A petition for a certification of eligibility to apply for adjustment assistance under this title may be filed with the Administrator of the Federal Disaster Assistance Administration (hereinafter in this title referred to as the "Administrator") by a firm or its representative.

SEC. 202. The Administrator shall certify a firm as eligible to apply for adjustment assistance under this title if he finds—

(1) A significant number or proportion of the workers in such firm have become totally or partially separated, or are threatened to become totally or partially separated.

(2) that sales or production, or both, of such firm have decreased absolutely, and,

(3) that critical shortages of energy supplies or unusually severe weather conditions contributed importantly to such total or partial separation, or threat thereof, and to such decline in sales or production.

SEC. 203. As soon as possible after the date on which a petition is filed under section 201 of this title, but in any event not later than 15 days after that date, the Administrator shall determine whether the petitioning firm meets the requirements of this title for certification of eligibility and shall issue a certification of eligibility to apply for assistance under this title covering any firm which meets such requirements. Each certification shall specify the date on which critical shortages of energy supplies or unusually severe weather conditions began to contribute importantly to disrupting the operations of an adversely affected firm.

SEC. 204. Whenever the Administrator determines, with respect to any certification he may have issued under section 203 of this title, that a substantial change in circumstances causes such certification to be no longer warranted, he shall terminate such certification and notify the affected firm of such termination.

PART B—ADJUSTMENT ASSISTANCE ALLOWANCES

SEC. 205. An adversely affected firm covered by a certification issued under section 203 of this title shall, upon application to the Administrator, be paid a sum to defray 80 percent of the cost of repairing any damage done to its physical plant if—

(1) Such damage was caused by critical shortages of energy supplies or unusually severe weather conditions,

(2) Such damage occurred after the date, as specified in the certification under which the firm is covered, on which critical shortages of energy supplies or unusually severe weather conditions began to contribute importantly to disrupting the operations of the adversely affected firm, and,

(3) Financial resources for repairing such damage are not readily available from the operating budget of the adversely affected firm. In no case shall payments under this section to any firm exceed $50,000.

SEC. 206. (a) An adversely affected firm covered by a certification issued under section 203 of this title and meeting the definition of a "small business" under the Small Business Act shall, upon application to the Administrator, be granted a loan to be used for operating expenses, including payment of salaries, payments of fuel bills and contributions to unemployment insurance programs, if:

(1) Such firm may be unable to maintain a competitive market position without the aid of such loan, and,

(2) such firm may reasonably be expected to pay back such loan within a period not to exceed 25 years.

(b) The interest on a loan issued under this section shall not exceed four percent per annum.

(c) Any loan made to a firm under this section shall not reduce or otherwise affect any grants or other assistance under this title.

SEC. 207. (a) An adversely affected firm covered by a certification issued under section 203 of this title but not meeting the definition of a "small business" under the Small Business Act, shall, upon application to the Administrator, be granted a guarantee of loans it might negotiate if—

(1) such loans could not be secured without the benefit of a guarantee,

(b) such loans are necessary for the firm to maintain a competitive market position, and,

(3) there is reasonable assurance that such loans will be repaid.

(b) The rate of interest on loans which are guaranteed under this section shall be no higher than the maximum interest per annum that a participating financial institution may establish on guaranteed loans made pursuant to section 636 (a) of Title 15 of the United States Code.

(c) The Administrator shall make no guarantee of a loan having a maturity in excess of 25 years, including renewals and extensions.

(d) Any guarantee of a loan made under this section shall not reduce or otherwise affect any grants or other assistance under this title.

SEC. 208. (a) For the purposes of this part, the Administrator shall delegate his authority to the Administrator of the Small Business Administration in dealing with any firm meeting the definition of a "small business" under the Small Business Act.

(b) For the purposes of this part, the Administrator shall delegate his authority to the Secretary of Commerce in dealing with any firm that does not meet the definition of a "small business" under the Small Business Act.

TITLE III—ADJUSTMENT ASSISTANCE FOR COMMUNITIES

PART A—CERTIFICATION OF ELIGIBILITY

SEC. 301. A petition for certification of eligibility to apply for adjustment assistance under this title may be filed with the Administrator of the Federal Disaster Assistance Administration (hereinafter in this title referred to as the "Administrator") by a local government or its representative.

SEC. 302. The Administrator shall certify a local government as eligible to apply for adjustment assistance under this title if he determines—

(1) the number of unemployed people in the area over which such local government has jurisdiction has increased by 10 percent as a result of critical shortages of energy supplies or unusually severe weather conditions, or,

(2) such local government has made extraordinary expenditures amounting to 5 percent of its operating budget as a result of critical shortages of energy supplies or unusually severe weather conditions.

SEC. 303. As soon as possible after the date on which a petition is filed under section 301 of this title, but in any event not later than 15 days after that date, the Administrator shall determine whether the petitioning local government meets the requirements of this title for certification to apply for assistance under this title covering the local government which meets such requirements. Each certification shall specify the date on which critical shortages of energy supplies or unusually severe weather conditions began to cause the number of unemployed persons to increase in the areas under such local government's jurisdiction or began to cause such local government to make extraordinary expenditures.

SEC. 304. Whenever the Administrator determines, with respect to any certification of eligibility he may have issued under section 303 of this title, that a substantial chance of circumstances cause such certification to be no longer warranted, he shall terminate such certification and notify the affected local government of such termination.

PART B—ADJUSTMENT ASSISTANCE ALLOWANCES

SEC. 305. An adversely affected local government covered by a certification issued under section 303 of this title shall, upon application to the Administrator, be paid a sum to defray 90 percent of the cost of repairing damage to public facilities caused by critical shortages of energy supplies or unusually severe weather conditions, if such damage occurred after the date, as specified in the certification under which the local government is covered, on which critical shortages of energy supplies and unusually severe weather conditions began to cause the number of unemployed persons to increase in the areas under such local government's jurisdiction or began to cause such local government to make extraordinary expenditures. In no event shall a payment to a local government made under this section exceed $150,000.

SEC. 306. An adversely affected local government covered by a certification issued under section 304 of this title shall, upon application to the Administrator, be paid a sum to defray 75 percent of the cost of purchasing or renting equipment or supplies if such purchases or rentals were necessitated by critical shortages of energy supplies or unusually severe weather conditions, and if such purchases or rentals were necessitated by circumstances arising after the date, as specified in the certification under which the local government is covered, on which critical shortages of energy supplies and unusually severe weather conditions began to cause the number of unemployed persons to increase in the areas under such local government's jurisdiction or began to cause such local government to make extraordinary expenditures. In no event shall a payment to a local government made under this section exceed $90,000.

SEC. 307(a). The Administrator is authorized to make loans to any local government which has been certified under section 303 of this title and which may suffer a substantial loss of tax and other revenues as a result of critical shortages of energy supplies or unusually severe weather conditions.

(b) The amount of any loan made under this section shall be based on the local gov-

ernment's need for financial assistance to carry out its governmental activities, and shall not exceed 30 percent of the annual operating budget of the local government.

(c) The interest charged on any loan made under this section shall not exceed 2 per centum per annum. No loan shall be made under this section unless there is a reasonable expectation that a local government will pay back such loan within a period not to exceed 25 years.

(d) Any loans made under this section shall not reduce or otherwise affect any grants of assistance under this title.

SEC. 308. For the purposes of this part, the Administrator may delegate his authority to the Secretary of Commerce.

TITLE IV—GENERAL PROVISIONS

SEC. 401. There are authorized to be appropriated for fiscal year 1977 and fiscal year 1978 such sums as may be necessary to carry out this Act.

SEC. 402. This Act shall date effect 15 days after the date of enactment.

SEC. 403. The authority of the Administrator to certify groups of workers under Part A of Title I of this Act, firms under Part A of Title II of this Act, and local governments under Part B of Title III of this Act shall expire 9 months following the date on which this Act becomes effective.

Mr. STEVENS. Mr. President, I ask unanimous consent that a bill introduced earlier by the Senators from Pennsylvania and Delaware, providing energy and weather adjustment assistance be referred jointly to the Committees on Human Resources; Banking, Housing, and Urban Affairs; Small Business; and Governmental Affairs.

The PRESIDING OFFICER. Without objection, is is so ordered.

By Mr. JAVITS (for himself, Mr. KENNEDY, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. BROOKE, Mr. BELLMON, Mr. PELL, Mr. STAFFORD, Mr. MATSUNAGA, Mr. CRANSTON, Mr. LAXALT, Mr. HUMPHREY, Mr. RANDOLPH, Mr. BAYH, Mr. INOUYE, Mr. HATHAWAY, Mr. RIEGLE, Mr. ANDERSON, Mr. METZENBAUM, and Mr. HART):

S. 705. A bill to amend the Public Health Service Act to revise and strengthen the program under that act for the regulation of clinical laboratories; to the Committee on Human Resources.

CLINICAL LABORATORY IMPROVEMENT ACT OF 1977

Mr. JAVITS. Mr. President, as the author of the Senate-passed Clinical Laboratories Improvement Act of 1976 (S. 1737) in the 94th Congress, I introduce the Clinical Laboratory Improvement Act of 1977 (S. 705).

The bill is cosponsored by 19 Senators: Senators KENNEDY, SCHWEIKER, BROOKE, BELLMON, PELL, STAFFORD, MATSUNAGA, CRANSTON, LAXALT, HUMPHREY, RANDOLPH, BAYH, INOUYE, HATHAWAY, RIEGLE, WILLIAMS, ANDERSON, METZENBAUM, and HART.

The bill, as did the cited Senate-passed bill in 1976, extends and expands the existing program of mandatory licensure to all laboratories—the 14,000 independent and hospital based clinical laboratories, and 50,000 to 80,000 medical labs in physicians' offices—soliciting and accepting specimens for laboratory analysis, to insure that these laboratories meet quality assurance standards and to prevent fraud and abuse.

A companion bill is being introduced in the House by the chairman of the Health and Environment Subcommittee, Congressman PAUL ROGERS of Florida.

The bill responds to the problems which compromise—both in economic and human terms—the quality and efficacy of laboratory testing, a key element in health care for all Americans.

Mr. President, there are problems:

When a patient dies, a child develops severe retardation, or when cancer in a patient goes undiagnosed, all because a laboratory test was incompetently conducted or read;

When key laboratory personnel—medical technologists—testify to the need for employee protection provisions in law so they can come forward freely to tell us in Congress the truth about the quality and accuracy of lab work, and the fraud and corruption in laboratory business.

Mr. President, there is also and in addition larceny in the laboratory and it must be stopped:

When, according it to a U.S. Senate subcommittee, there is rampant fraud in clinical laboratories;

When, because "certain criminal elements are involved in the purchase of laboratories," there is a major fraud investigation in New York City by the U.S. attorney's office.

When the Government Accounting Office—GAO—the investigatory arm of Congress—reports that its examination in four states and the District of Columbia shows physician markups of 151 percent in their billing to medicare and medicaid for patient lab work done at independent lab services.

These are not isolated instances. The litany of shocking truths about clinical labs is documented in testimony on problems of Medicaid fraud and abuse before the House Subcommittee on Oversight and Investigations; the Senate Subcommittee on Long-Term Care—report on fraud and abuse among clinical laboratories; and the hearings before the Health Subcommittee of the Senate Human Resources Committee.

This is a problem which cries out for reform, and I believe the bill I introduce today, which is substantially similar to last year's Senate passed bill, marks an historic milestone in a national commitment to provide quality laboratory testing and honest laboratory business administration.

Mr. President, I have indicated previously the bill I introduce today is almost identical to the Senate passed bill of last year and I would note that the first and principal recommendation of the staff report prepared for the Special Committee on Aging is:

1. The Clinical Laboratories Improvement Act of 1976 should be enacted at the earliest possible opportunity.

The key provisions of the bill:

First. Extend and expand the existing program of mandatory licensure to all laboratories (except those under the jurisdiction of Federal agencies other than the Department of Health, Education, and Welfare) soliciting and accepting specimens for laboratory analysis, with an exemption upon application for biomedical and behavioral research laboratories;

Second. Authorize the Secretary to promulgate standards and regulations to assure the quality, accuracy, and precision of laboratory testing in consultation with appropriate professional organizations concerning the development and implementation of such standards; and authorize the Secretary of Health, Education, and Welfare to license those laboratories meeting quality assurance standards;

Third. Authorize the Secretary to delegate his licensure authority to States implementing laboratory quality assurance programs at least equal to the Federal program;

Fourth. Authorize the Secretary or enforcing State to take necessary actions to revoke or suspend licenses, against laboratories not meeting the quality assurance standards;

Fifth. Authorize the Secretary of Health, Education, and Welfare to establish an Office of Clinical Laboratories, to establish a uniform regulatory program for all laboratories subject to Federal jurisdiction;

Sixth. Authorize the Secretary to exempt physicians' office laboratories where physicians file with the Secretary an attested application, including but not limited to a description of the qualifications of nonphysician laboratory personnel, the quality and type of tests conducted, and the score of proficiency testing examinations taken by such personnel; or as an alternative to an application for exemption from the standards, a physicians' office laboratory shall be exempt if it agrees to participate in approved proficiency testing programs;

Seventh. Authorize the Secretary to waive from the personnel standards laboratories located in rural areas;

Eighth. Authorize the Secretary and an enforcing State to utilize the services of private, nonprofit entities for the provision of inspection and proficiency testing services;

Ninth. Authorize $15,000,000 annually to permit the Secretary to provide technical and financial assistance to States to establish or administer laboratory quality assurance programs;

Tenth. Authorize the Secretary to inspect laboratories;

Eleventh. Authorize the Secretary to seek revocation of a laboratory's license where it is found that the laboratory has engaged in kickbacks, bribes, or false, fictitious, or fraudulent billing practices; with a penalty for such conduct of a maximum $25,000 fine or 5 years' imprisonment; and

Twelve. Prohibit discrimination by any licensed laboratory against any employee who has become involved in any activity concerning allegations that the laboratory is in violation of this section.

The major differences between the bill I introduce today and the Senate passed bill are:

First. In lieu of the individual physician office lab submitting a detailed application for exemption from the national standards, such labs would be exempt from the standards if they participated in a proficiency testing program approved by the Secretary of the Department of Health, Education and Welfare.

Second. Provision is made for an exemption from the national standards for any clinical lab in which the tests or procedures are primarily for biomedical or behavioral research, as contrasted to patient care.

From these laboratories have come many of the recent important advances in the diagnosis of disease, and that process should be encouraged in every way consistent with the public welfare and safety. Since the time of the Senate passed bill, attention has been called to the special requirements of these research laboratories. Frequently staffing patterns and educational background of personnel are different in research laboratories; therefore the Senate passed bill might have inhibited the transfer of their research-proven ideas to clinical diagnosis and care. The bill I introduce requires the Secretary to formulate special procedures for the regulation of those clinical laboratories which engage in biomedical and behavioral research so that they may continue their vital function.

Third. Strengthened antifraud and abuse provisions—by increasing the maximum penalty for such criminal conduct to a maximum fine of $25,000 or 5 years' imprisonment.

Fourth. Requiring satisfactory performance by the lab on periodic proficiency testing and that such testing include "blind" proficiency testing—a system whereby the laboratory is not informed that its proficiency in the examination of specimens is being tested.

Mr. President, laboratory testing occupies an increasingly important place in both diagnostic and preventive medicine. Right now we perform 4.4 billion tests a year at a cost, for the tests alone, of some $12 billion as of 1975. By 1980 we estimate 8.8 billion clinical tests annually, at a cost of about $15 billion. Yet mounting evidence indicates that the quality of much laboratory testing falls far short of adequacy.

We are dealing with the health and lives of millions of Americans—every American is entitled to protection from inaccurate and unreliable lab tests, and many of these in turn result from a failure to regulate the laboratories.

Lack of effective Federal control is in great measure due to the bureaucratic problems attendant on Federal responsibility for assuring the quality of laboratory activities—there are three different agencies responsible for administering the program—and the record demonstrates unequivocally that one agency did not know what the other was doing. There is no uniform and meaningful regulation and control.

Mr. President, when I testified at the hearings before the Subcommittee on Health and the Environment of the House Committee on Interstate and Foreign Commerce respecting clinical lab legislation, I was asked about the interagency laboratory agreement that negated allegedly the need for the legislation. I responded I had little faith in its becoming meaningful.

Mr. President, I ask unanimous consent that the full text of that portion of the hearing be printed in the RECORD at this point.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

[Excerpt]

Mr. FLORIO. The last point is that there are those who are opposed to the whole concept of legislative involvement in this matter on the basis of the fact that the administration is in the process of dealing with this matter through the interagency laboratory agreement. I wonder if you might give us a few of your thoughts on why this administrative approach is not a viable approach, the administrative approach.

Senator JAVITS. The difficulty with the interagency approach is that nothing happens. The whole thing seems to be frozen. That is true also of the administration's supposed report on this subject.

Mr. FLORIO. Are you familiar with the fact that it took two years to put together the Medicare independent laboratory standards?

Senator JAVITS. Exactly right.

Mr. FLORIO. Is this probably what we should not expect with regard to the interagency interplay?

Senator JAVITS. And more.

Mr. FLORIO. Thank you very much.

Senator JAVITS. More of the same.

Mr. JAVITS. Mr. President, the accuracy of my response and the fact that we should not rely on such interagency cooperation—given the long history of bureaucratic backbiting and infighting—was regrettably just recently brought to public attention in a memo dated January 24, 1977, whereby the Center for Disease Control, responsible for interstate licensure under the Clinical Laboratories Improvement Act of 1967—applicable only to 900 large commercial labs—has balked at assignment of its licensure power to the medicare process.

My colleagues may recall that as the Senate prepared for hearings on a revision of CLIA 1967, my Senate-passed bill of the last Congress, HEW announced an interagency agreement among the Center for Disease Control, CDC; Bureau of Health Insurance, medicare; and Bureau of Quality Assurance, adviser to BHI.

Moreover, there had been other attempts at interagency cooperation but they too had broken down. The new effort was in direct response to our bill and was based on the assumption that no agency had any insuperable objection to nailing down an agreement with a redelegation of powers.

I believe the memo, which will be included in the RECORD at the conclusion of my remarks, establishes conclusively the need for the bill's proposed Office of Clinical Laboratories to establish a uniform regulatory policy.

This bill's fundamental goal is laboratory improvement—which State and Federal governments foster, professional associations sponsor, laboratory directors attempt to achieve, and upon which our public health depends.

Expanding licensing procedures, tougher enforcement policies, coordinated efforts by State and Federal offices, as provided in the bill, will help reduce the abuses I have mentioned today as well as those earlier documented by the Senate committees. I believe that we can now begin our attack on these vicious practices perpetrated on the public.

Yet until this bill is enacted into law I am concerned that widespread laboratory improvement remains illusory.

Mr. President, I ask unanimous consent that the CDC memo of January 24, 1977, and the full text of the bill be printed in the RECORD.

There being no objection, the bill and memo were ordered to be printed in the RECORD, as follows:

S. 705

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Clinical Laboratory Improvement Act of 1977".

FINDINGS

SEC. 2. The Congress finds that—

(1) clinical laboratory testing is a vital element of health care throughout the Nation;

(2) health care in this Nation will only be effective and of high quality if procedures utilized for testing by clinical laboratories assure accurate and reliable results;

(3) it is essential to the public interest that the health and welfare of consumers of health care be protected by requiring that all clinical laboratories comply with uniform standards to assure accurate and reliable testing by laboratories;

(4) testing in clinical laboratories which do not comply with such standards can be performed at less expense and thus such laboratories are able to compete unfairly with the clinical laboratories which do comply with such standards;

(5) requiring compliance with standards to assure accurate and reliable testing by clinical laboratories which operate in interstate commerce without provision for requiring compliance with such standards by other clinical laboratories will discriminate against and depress interstate commerce and adversely burden, obstruct, and affect such commerce; and

(6) all clinical laboratory testing is either in interstate commerce or substantially affects such commerce and regulation by the Secretary in cooperation with the States as contemplated by the amendment made by this Act is appropriate to prevent and eliminate burdens upon interstate commerce, to effectively regulate interstate commerce, and to protect the health and welfare of consumers of health care.

AMENDMENT TO THE PUBLIC HEALTH SERVICE ACT

SEC. 3. Section 353 of the Public Health Service Act is amended to read as follows:

"REGULATION AND LICENSING OF CLINICAL LABORATORIES

"SEC. 353. (a) DEFINITIONS.—As used in this section—

"(1) The terms 'laboratory' and 'clinical laboratory' mean (A) a facility for the biological, microbiological, serological, chemical, immuno-hematological, radioimmunological, hematological, biophysical, cytological, pathological, or other examination of materials derived from the human body for the purpose of providing information for the diagnosis, prevention, or treatment of any disease or impairment of, or the assessment of the health of, man, or (B) a facility for the collection, processing, and transmission of such materials for such purposes,

other than a facility exclusively engaged in the collection, processing, or transmission of human whole blood or its components.

"(2) The term 'interstate commerce' means trade, traffic, commerce, transportation, transmission, or communication between any State, territory, or possession of the United States, the Commonwealth of Puerto Rico, or the District of Columbia, and any place outside thereof, or within the District of Columbia.

"(b) NATIONAL STANDARDS.—(1) Within one hundred and eighty days of the date of the enactment of the Clinical Laboratory Improvement Act of 1977, the Secretary shall publish proposed national standards for clinical laboratories. Within one year after such date of enactment, the Secretary shall promulgate such standards with such modifications as the Secretary deems appropriate and such standards shall take effect upon their promulgation. Standards under this subsection may be amended from time to time.

"(2)(A) National standards promulgated under paragraph (1) for clinical laboratories shall be designed to assure consistent performance by clinical laboratories of accurate and reliable laboratory tests and other procedures and services and shall—

"(i) require clinical laboratories subject to the standards to maintain appropriate quality control programs,

"(ii) require such laboratories to maintain such records, equipment, and facilities as may be necessary for the proper and effective operation of such laboratories,

"(iii) require satisfactory performance by such laboratories on periodic proficiency tests developed in accordance with paragraph (3)(C),

"(iv) to the extent necessary to insure the accuracy and reliability of performance of tests by such laboratories, prescribe qualifications for directors and supervisory personnel of such laboratories, laboratory technical personnel, and any other laboratory personnel, which qualifications shall (I) not be limited to education requirements but shall include as alternative requirements appropriate training, experience, and examination requirements, (II) include requirements designed to insure the continued competence of laboratory personnel, and (III) take into account improvements in technology utilized in laboratory testing,

"(v) contain adequate provisions for the enforcement of the standards, including provisions for inspections and monitoring, and

"(vi) include such other requirements as the Secretary determines necessary to assure consistent performance by such laboratories of accurate and reliable tests and other procedures and services.

"(B) Standards prescribed under subparagraph (A) for clinical laboratories may vary on the basis of the type of tests, procedures, or services performed by such laboratories or the purposes for which such tests, procedures, or services are performed.

"(C) The Secretary shall, in accordance with subsection (c), administer and enforce the national standards promulgated under paragraph (1).

"(3) Within one year of the date of the enactment of the Clinical Laboratory Improvement Act of 1977, the Secretary in consultation with appropriate professional organizations shall (A) develop job-related proficiency and practical examinations (including reasonabe standards for determining successful completion of such examinations) for personnel in clinical laboratories which examinations reflect the nature of the work performed by such personnel, (B) develop mechanisms designed to assure the continued competence of such personnel, and (C) develop standards for the proficiency testing of clinical laboratories which standards (i) shall require such tests to be administered at least annually to all laboratories subject to the national standards in effect under paragraph (1), and (ii) shall include a requirement for a system for the testing of a laboratory's proficiency in the examination of specimens under which system the laboratory is not informed that its proficiency is being tested (commonly referred to as 'blind proficiency testing').

"(c) APPLICATION OF NATIONAL STANDARDS.—(1) National standards for clinical laboratories in effect under subsection (b) shall, except as provided in paragraph (2) and subsection (h)—

"(A) apply to each clinical laboratory which is engaged in business in interstate commerce, and

"(B) apply to any other clinical laboratory which is located in a State which (as determined under subsection (d)) does not have primary enforcement responsibility for the regulation of clinical laboratories.

"(2)(A) The Secretary upon request of a State which has primary enforcement responsibility for the regulation of clinical laboratories shall authorize such State to regulate, under the standards of the State described in subsection (d)(1)(A)(i), clinical laboratories located or doing business within the State, as determined by the State, which are described in subparagraph (A) of paragraph (1).

"(B) During the two-year period beginning on the date that national standards first take effect under subsection (b) such standards shall not apply to clinical laboratories which are not engaged in business in interstate commerce.

"(C) During the two-year period beginning on the date that national standards for clinical laboratories first take effect under subsection (b) (or, in the case of a clinical laboratory which is not engaged in business in interstate commerce, during the two-year period beginning on the date such standards are first made applicable to such laboratory), the provisions of such standards prescribing qualifications for supervisory or other personnel shall not apply to a clinical laboratory which—

"(i) the Secretary determines is located in a rural area (as defined by the Secretary) in which individuals with the qualifications prescribed by such provisions are not available,

"(ii) performs services solely for hospitals and licensed physicians, dentists, or podiatrists (or any combination of such practitioners) located within such a rural area, and

"(iii) provides the Secretary satisfactory assurances that it will take such actions as may be necessary to train individuals to meet such qualifications or to employ individuals with such qualifications.

"(D)(i) Upon such conditions as the Secretary may by regulation prescribe, the Secretary may, upon application, exempt from the national standards for clinical laboratories any clinical laboratory—

"(I) which is located in the office of, and operated by, a licensed physician, dentist, or podiatrist, or a group of such practitioners, and

"(II) in which the only tests or procedures which are performed are tests or procedures performed by such a practitioner in connection with the treatment of his patients.

"(ii) Upon such conditions as the Secretary may by regulation prescribe, the Secretary may, upon application, exempt from the national standards for clinical laboratories any clinical laboratory—

"(I) which is located in the office of, and operated by, a licensed physician, dentist, or podiatrist, or a group of not more than five such practitioners and in which the only tests or procedures which are performed are tests or procedures performed in connection with the treatment of the patients of such practitioner (or practitioners), and

"(II) in which the only tests or procedures which are performed are tests or procedures described in clause (i)(II) of this subparagraph and routine tests or procedures, as determined by the Secretary, or only such routine tests or procedures.

An application for the issuance of an exemption under this clause shall be attested to by the applicant and shall include an estimation of the number and a specification of the type of tests and procedures conducted in the laboratory for which the application is submitted, a description of the qualifications (including the educational background, training, and experience) of personnel who are not physicians, dentists, or podiatrists and who participate in the conduct of tests and procedures, the collection of specimens, and the transmission of specimens; a specification of the quantity and type of tests and procedures conducted by such personnel; the type of proficiency testing (if any) participated in by such personnel and the scores received in such testing; and a description of the quality control programs in effect in the laboratory for which the application is submitted. If the Secretary finds, after reasonable notice and opportunity for a hearing, that a laboratory granted an exemption under clause (i) or this clause is not a laboratory which is described by subclauses (I) and (II) of clause (i) or this clause, as the case may be, or that the owner or operator of such laboratory was guilty of misrepresentation in obtaining the exemption, the Secretary shall by order published in the Federal Register withdraw the exemption granted such laboratory.

"(iii) The national standards for clinical laboratories shall not apply to any clinical laboratory described in subclauses (I) and (II) of clause (ii) if the laboratory participates in a proficiency testing program approved by the Secretary and if the laboratory has submitted to the Secretary in accordance with this clause notice of its participation in such a program. The notice required by this clause shall be made in such form and manner as the Secretary shall prescribe and shall be submitted to the Secretary at such times as the Secretary may prescribe. The Secretary may not approve a proficiency testing program for purposes of this clause unless the program has entered into an agreement with the Secretary to provide information to the Secretary respecting the results of the proficiency tests administered under such program.

"(iv) The Secretary shall, upon application, exempt, on such terms and conditions as may be appropriate, from the national standards for clinical laboratories any laboratory in which the tests or procedures which are performed are primarily tests or procedures for biomedical or behavioral research.

"(3) Except as authorized under subsection (d), no State or political subdivision may adopt or continue in effect requirements (other than licensing requirements applicable to directors, supervisory personnel, technologists, or technicians in clinical laboratories and requirements applicable to clinical laboratories under a certificate of need program) which—

"(A) are applicable to clinical laboratories, and

"(B) are different from or in addition to the national standards for clinical laboratories in effect under subsection (b).

"(4) Any clinical laboratory which is engaged in business in interstate commerce shall, during the period beginning on the date of the enactment of the Clinical Laboratory Improvement Act of 1977 and ending on the date such laboratory is required to have in effect a license issued under this section, as amended by such Act, comply with the licensing requirements in effect under this section before such date of enactment.

"(d) PRIMARY ENFORCEMENT RESPONSIBILITY.—(1)(A) For purposes of this sec-

tion, a State has primary enforcement responsibility for the regulation of clinical laboratories described in paragraph (2) during any period for which the Secretary determines (pursuant to regulations prescribed under paragraph (3)) that such State—

"(i) has adopted (I) standards applicable to clinical laboratories which are no less stringent than the national standards in effect under subsection (b), and (II) a system for the licensure of laboratories which meets the requirements of subparagraph (B) of this paragraph and which includes provisions respecting applications and submissions to health systems agencies, which provisions are no less stringent than the provisions of paragraph (1)(B) of subsection (e) and includes provisions respecting the suspension, revocation, and eligibility for licenses which provisions are no less stringent than the provisions of paragraph (2) of subsection (e),

"(ii) has adopted and is able to implement adequate procedures for the enforcement of such State's standards, including such monitoring and such inspections as the Secretary may require by regulation,

"(iii) will keep such records and make such reports with respect to its activities under clauses (i) and (ii) as the Secretary may require by regulation,

"(iv) if it permits exemptions from the requirements of its standards which meet the requirements of clause (i)(I), permits such exemptions under conditions and in a manner which are no less stringent than the conditions and the manner in which exemptions are or may be granted under subsection (c)(2),

"(v) has adopted and can implement adequate procedures for the effective and timely control of health hazards which may result from an activity of a clinical laboratory within the State, and

"(vi) has designated a single agency of the State to enforce its standards and to administer its system for licensure of clinical laboratories.

"(B) For the purpose of primary enforcement responsibility under this subsection, a State system for the licensure of clinical laboratories—

"(i) shall prescribe that licenses issued under such system shall be valid for such period (but not in excess of twenty-four months) as is prescribed under the system, and may require a fee for the issuance or renewal of a license in an amount (not in excess of $500) determined under the system;

"(ii) may provide for variances in such fees based on the volume of tests or procedures performed by the clinical laboratories subject to such fees; and

"(iii) shall provide that licenses issued for a clinical laboratory shall specify the categories of tests and procedures which such laboratory may perform.

"(2) The clinical laboratories subject to regulation by a State which has primary enforcement responsibility are—

"(A) clinical laboratories (other than clinical laboratories described in subsection (h)) which are located within such State and which are not engaged in business in interstate commerce, and

"(B) if authorized under subsection (c)(2)(A), any other clinical laboratory (other than a clinical laboratory described in subsection (h)) engaged in business in interstate commerce and located or doing business within the State, as determined by the State.

"(3)(A)(i) The Secretary shall, by regulation (proposed within one year of the date of the enactment of the Clinical Laboratory Improvement Act of 1977), prescribe the manner in which a State may apply to the Secretary for a determination that the requirements of paragraph (1) are satisfied with respect to the State, the manner in which the determination is made, the period for which the determination will be effective, and the manner in which the Secretary may determine that such requirements are no longer met. The Secretary shall, at least every two years, review the clinical laboratory regulatory activities of a State with primary enforcement responsibility to determine if the State continues to meet the requirements of paragraph (1).

"(ii) Regulations under this subparagraph shall require that before a determination of the Secretary that the requirements of paragraph (1) are not met or are no longer met with respect to a State may become effective, the Secretary shall notify such State of the determination and the reasons therefor, shall provide an opportunity for public hearings on the determination, and, in the case of a determination that such requirements are no longer being met by a State, shall prescribe the period within which such State must comply with such requirements to retain its primary enforcement responsibility. Such regulations shall be promulgated (with such modifications as the Secretary deems appropriate) within ninety days of the publication of the proposed regulations in the Federal Register. The Secretary shall promptly notify in writing the chief executive officer of each State of the promulgation of regulations under this subparagraph. Such notice shall contain a copy of the regulations and shall specify a State's authority under this section when it is determined to have primary enforcement responsibility for clinical laboratories.

"(B) When an application is submitted in accordance with the Secretary's regulations under subparagraph (A), the Secretary shall within ninety days of the date on which such application is submitted (i) make the determination applied for, or (ii) deny the application and notify the applicant in writing of the reasons for the denial.

"(e) LICENSES.—(1)(A) The Secretary shall establish a system for the licensure of clinical laboratories subject, as determined under subsection (c), to national standards in effect under subsection (b). A license issued under such system for a clinical laboratory (i) shall specify the categories of tests and procedures which such laboratory may perform, and (ii) shall be valid for such period (but not in excess of twenty-four months) as the Secretary may prescribe. A fee may be required by the Secretary for the issuance or renewal of a license in an amount not to exceed $500. The Secretary may prescribe variances in such fees based on the volume of tests or procedures performed by the clinical laboratories required to be licensed.

"(B) The system established under paragraph (A) shall require the following as a condition to the issuance or renewal of a license under the system:

"(i) The submission of an application in such form and manner as may be prescribed by the Secretary.

"(ii) A determination by the Secretary that the applicant meets the national standards in effect under subsection (b).

"(iii) The submission by the applicant to the Secretary and to the health systems agency serving the area in which the applicant is located of (I) an accurate itemized schedule of all current rates the applicant charges (including such a schedule of rates for common groupings of tests) for the laboratory services it provides, and (II) such information as may be necessary to disclose any contractual relationships in effect between the applicant and physicians and other health professionals respecting the laboratory's services and the terms of any contracts between the applicant and such persons.

"(C) From the information submitted in accordance with subparagraph (B)(iii) a health systems agency may not disclose—

"(i) the identity of any person for whom an applicant for a license performed services except in response to a request of an officer or employee of the United States or a State made in accordance with regulations of the Secretary and in connection with the functions or duties of the officer or employee in the enforcement of this section or of a Federal or State criminal law; and

"(ii) any contractual relationship described in subclause (II) of such subparagraph, except that, in accordance with regulations promulgated by the Secretary, the health systems agency may disclose (I) a contractual relationship between the applicant and any physician for the performance of services if the applicant receives compensation under title XVIII of the Social Security Act or under a State plan for medical assistance approved under title XIX of such Act for the performance of clinical laboratory services, and (II) any contractual relationship described in such subclause (II) in response to a request of an officer or employee of the United States or a State made in connection with the functions or duties of the officer or employee in the enforcement of this section or a Federal or State criminal law.

"(2)(A) If the Secretary finds, after reasonable notice and opportunity for hearing to the owner or operator of a clinical laboratory licensed under this subsection, that—

"(i) such laboratory is not in compliance with applicable national standards in effect under subsection (b), or

"(ii) such laboratory has (I) failed to comply with reasonable requests of the Secretary for any information or specimens, or work on specimens, the Secretary deems necessary to determine the laboratory's continued eligibility for its license under this subsection or continued compliance with applicable national standards in effect under subsection (b), or (II) refused a request of the Secretary or any Federal officer or employee duly designated by him for permission to inspect, under subsection (l), the laboratory and its operations and relevant records at any reasonable time,

the Secretary may revoke such laboratory's license for the remainder of its term or may limit or suspend such laboratory's license until the owner or operator of such laboratory has demonstrated to the satisfaction of the Secretary that the laboratory is in compliance with such national standards or such requests will be complied with, as the case may be.

"(B) If the Secretary finds, after reasonable notice and opportunity for a hearing to the owner or operator of a clinical laboratory licensed under this subsection, that such owner or operator—

"(i) has been guilty of misrepresentation in obtaining the license;

"(ii) has engaged or attempted to engage in, or represented himself as entitled to perform, any laboratory test or procedure or category of tests or procedures not authorized by the license;

"(iii) has engaged in a billing practice under which charges for laboratory services provided a patient, on whose behalf reimbursement (in whole or in part) for such charges is provided under a program receiving Federal financial assistance, are made at a higher rate than charges for comparable services provided a patient for whom such reimbursement is not made;

"(iv) has offered, paid, solicited, or received any kickback or bribe in the form of money or any other thing of value in connection with the provision of clinical laboratory services; or

"(v) has engaged in any false, fictitious, or fraudulent billing practice for the purposes of obtaining payment under any program the funds for which are provided in whole or in part by the United States,

the Secretary may revoke such license for the remainder of its term or may make such persons ineligible to apply for a license under

this subsection for such period (not to exceed two years) as the Secretary may prescribe, or take both such actions. A billing practice which results in different charges for the same laboratory services solely because of differences in administrative costs related to receiving reimbursement for the provision of such services shall not be considered a billing practice described in clause (iii).

"(C) Any owner or operator of a clinical laboratory who is convicted under paragraph (1) or (2) of subsection (j) of this section or under section 1877(b) or 1909(b) of the Social Security Act after the date of enactment of the Clinical Laboratory Improvement Act of 1977 for a violation occurring after such date shall not be eligible to apply for a license under this subsection for a clinical laboratory during the ten-year period beginning on the date such person's conviction became final and the license of the laboratory involved in such violation shall be revoked.

"(f) JUDICIAL REVIEW.—(1) Any person aggrieved by any final action taken under subsection (e)(2) of this section may at any time within sixty days after the date of such action file a petition with the United States court of appeals for the circuit wherein such person resides or has his principal place of business for judicial review of such action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary or other officer designated by him for that purpose. The Secretary thereupon shall file in the court the record on which the action of the Secretary is based, as provided in section 2112 of title 28, United States Code.

"(2) If the petitioner applies to the court for leave to adduce additional evidence and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the Secretary, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Secretary, and to be adduced upon a hearing in such manner and upon such terms and conditions as the court may deem proper. The Secretary may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken, and he shall file such modified or new findings, and his recommendations, if any, for the modification or setting aside of his original action, with the return of such additional evidence.

"(3) Upon the filing of the petition referred to in paragraph (1) of this subsection, the court shall have jurisdiction to affirm the action, or to set it aside in whole or in part, temporarily or permanently. The findings of the Secretary as to the facts, if supported by substantial evidence, shall be conclusive.

"(4) The judgment of the court affirming or setting aside, in whole or in part, any such action of the Secretary shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification, as provided in section 1254 of title 28, United States Code.

"(g) AGREEMENTS.—(1) The Secretary and any State which has primary enforcement responsibility for the regulation of clinical laboratories may enter into agreements with qualified public or nonprofit private entities which, as determined by the Secretary or such State, as the case may be, have adopted laboratory standards at least as stringent as those in effect under subsection (b) (or in the case of agreements to be entered into by such a State, at least as stringent as those in effect in such State under subsection (d)) under which agreements such entities would—

"(A) make such inspections as the Secretary or such State may require to determine if clinical laboratories are in compliance with applicable standards,

"(B) administer (i) such proficiency tests as the Secretary or such State may require for clinical laboratories, or (ii) such examinations of laboratory personnel as the Secretary or such State may require, or

"(C) do any combination of the activities described in subparagraphs (A) and (B).

"(2) If the Secretary has entered into an agreement under the first sentence of section 1864(a) of the Social Security Act for the enforcement of the requirements of section 1861 of such Act with respect to clinical laboratories by a State which does not have primary enforcement responsibility for the regulation of clinical laboratories, the Secretary may enter into an agreement under this subsection with such a State for the enforcement within such State of the requirements of national standards in effect under subsection (b) with respect to clinical laboratories not subject to the requirements of such section 1861.

"(h) FEDERAL CLINICAL LABORATORIES.—(1) Federal clinical laboratories under the jurisdiction of the Secretary shall be subject to national standards in effect under subsection (b) and any other Federal clinical laboratory in a State shall be subject to such standards unless (A) the laboratory is under the jurisdiction of any of the Armed Forces of the United States or the Administrator of Veterans' Affairs, or (B) the agency which has jurisdiction over such laboratory has in effect standards for such laboratory which are no less stringent than the national standards in effect under subsection (b).

"(2) The Secretary shall bring the national standards in effect under subsection (b) to the attention of the Secretary of each military department and the Administrator of Veterans' Affairs so that such standards may be considered and applied as appropriate by such Secretaries and Administrator to clinical laboratories under their jurisdiction.

"(i) INJUNCTION.—Whenever the Secretary has reason to believe that continuation of any activity by a clinical laboratory required to be licensed under this section by the Secretary would constitute a significant hazard to the public health, he may bring suit in the United States district court for the district in which such laboratory is situated to enjoin continuation of such activity and, upon proper showing, a temporary injunction or restraining order against continuation of such activity pending issuance of a final order by the court shall be granted without bond.

"(j) PROHIBITED ACTS.—(1) Any person who solicits, or any owner or operator who accepts, directly or indirectly, any specimen for a laboratory test or other laboratory procedure by a clinical laboratory which is required to have in effect a license issued by the Secretary under subsection (e) and which does not have such a license in effect or which is not authorized by its license to perform such test or procedure, shall be fined not more than $10,000 or imprisoned for not more than one year, or both.

"(2) Any owner or operator of a clinical laboratory, or any employee thereof, who willfully engages in any false, fictitious, or fraudulent billing practice for the purpose of obtaining payment for laboratory services provided under title XVIII of the Social Security Act, a program established pursuant to title V of such Act, or a State plan for medical assistance approved under title XIX of such Act shall be fined not more than $25,000 or imprisoned for not more than five years, or both.

"(3) No clinical laboratory which is required to have in effect a license issued by the Secretary under subsection (e) or a license issued by a State with primary enforcement responsibility for the regulation of clinical laboratories and which does not have such a license in effect may—

"(A) receive a grant, contract, or other form of financial assistance under this Act, or

"(B) charge or collect for laboratory services for any entity which receives a grant, contract, or other form of financial assistance under this Act.

The charges of such a laboratory may not be included in determining Federal payments under title XVIII or XIX of the Social Security Act.

"(k) EMPLOYEE PROTECTION.—(1) No employer may discharge any employee or otherwise discriminate against any employee with respect to the employee's compensation or the terms, conditions, or privileges of his employment solely because the employee (or any person acting pursuant to a request of the employee) has

"(A) commenced or caused to be commenced a proceeding under this section or a proceeding by a State in carrying out its primary enforcement responsibility;

"(B) testified or is about to testify in any such proceeding; or

"(C) assisted or participated or is about to assist or participate in any manner in such a proceeding or in any other action to carryout the purposes of this section.

"(2)(A) Any employee who believes that the employee has been discharged or otherwise discriminated against by any person in violation of paragraph (1) may, within thirty days after such alleged violation occurs, file (or have any person file on the employee's behalf) a complaint with the Secretary of Labor (hereinafter in this subsection referred to as the 'Secretary') alleging such discharge or discrimination. Upon receipt of such a complaint, the Secretary shall notify the person named in the complaint of the filing of the complaint.

"(B)(i) Upon receipt of a complaint filed under subparagraph (A), the Secretary shall conduct an investigation of the violation alleged in the complaint. Within thirty days of the receipt of such complaint, the Secretary shall complete such investigation and shall notify in writing the complainant (and any person acting on behalf of the complainant) and the person alleged to have committed such violation of the results of the investigation conducted pursuant to this subparagraph. Within ninety days of the receipt of such complaint the Secretary shall, unless the proceeding on the complaint is terminated by the Secretary on the basis of a settlement entered into by the Secretary and the person alleged to have committed such violation, issue an order either providing the relief prescribed by clause (ii) or denying the complaint. An order of the Secretary shall be made on the record after notice and opportunity for agency hearing. The Secretary may not enter into a settlement terminating a proceeding on a complaint without the participation and consent of the complainant.

"(ii) If in response to a complaint filed under subparagraph (A) the Secretary determines that a violation of paragraph (1) has occurred, the Secretary shall order (I) the person who committed such violation to take affirmative action to abate the violation, (II) such person to reinstate the complainant to the complainant's former position together with the compensation (including back pay), terms, conditions, and privileges of the complainant's employment, (III) the award of compensatory damages, and (IV) where appropriate, the award of exemplary damages. If such an order is issued, the Secretary, at the request of the complainant, shall assess against the person against whom the order is issued a sum equal

to the aggregate amount of all costs and expenses (including attorney's fees) reasonably incurred, as determined by the Secretary, by the complainant for, or in connection with, the bringing of the complaint upon which the order was issued.

"(3)(A) Any person adversely affected or aggrieved by an order issued under paragraph (2) may obtain review of the order in the United States court of appeals for the circuit in which the violation, with respect to which the order was issued, allegedly occurred. The petition for review must be filed within sixty days from the issuance of the Secretary's order. Review shall conform to chapter 7 of title 5 of the United States Code.

"(B) An order of the Secretary, with respect to which review could have been obtained under subparagraph (A), shall not be subject to judicial review in any criminal or other civil proceeding.

"(4)(A) Whenever a person has failed to comply with an order issued under paragraph (2)(B), the Secretary shall file a civil action in the United States district court for the district in which the violation was found to occur to enforce such order. In actions brought under this paragraph, the district courts of the United States shall have jurisdiction to grant all appropriate relief, including injunctive relief and compensatory and exemplary damages. Civil actions brought under this paragraph shall be heard and decided expeditiously.

"(B) Any nondiscretionary duty imposed by this subsection is enforceable in mandamus proceeding brought under section 1361 of title 28, United States Code.

"(5) Paragraph (1) shall not apply with respect to any employee who, acting without direction from the employee's employer (or any agent of the employer), deliberately causes a violation of any requirement of this section or of a clinical laboratory regulatory requirement of a State with primary enforcement responsibility.

"(l) INSPECTION AUTHORITY.—(1) For purposes of enforcement of this section, officers, employees, or agents designated by the Secretary, upon presenting appropriate credentials and a written notice to the owner, operator, or agent in charge, are authorized to enter and inspect, at reasonable times and in a reasonable manner, any clinical laboratory in a State which is subject to national standards in effect under subsection (b). A separate notice shall be given for each such inspection, but a separate notice shall not be required for each entry made during the period covered by the inspection. Such an inspection may extend only to relevant equipment, materials, containers, records, files, papers (including financial data, sales data, and pricing data), processes, controls, facilities, and all other things in the clinical laboratory bearing on whether it is being operated in compliance with this section.

"(2) Upon completion of any such inspection and prior to leaving the premises, the officer, employee, or agent making the inspection shall give to the owner, operator, or agent in charge a preliminary report which summarizes any conditions or practices observed by him which, in his judgment, indicate a violation of national standards in effect under subsection (b). He shall also prepare a written final report of his findings and send it to such owner, operator, or agent within thirty days of the completion of the inspection.

"(3) No officer, employee, or agent designated by the Secretary to enter a laboratory and conduct an inspection pursuant to this subsection shall be required to obtain a search warrant from any judicial officer prior to entering any laboratory and conducting any inspection which is authorized by this subsection.

"(m) GRANTS AND TECHNICAL ASSISTANCE.—(1)(A) The Secretary may make one grant to any State to assist it in meeting the costs of meeting the requirements of clauses (ii) through (vi) of subsection (d)(1)(A) if the State meets the requirements of clause (i) of such subsection and provides assurances satisfactory to the Secretary that within one year from the date the State receives such grant it will have primary enforcement responsibility for the regulation of clinical laboratories as determined under subsection (d).

"(B) In addition to the payments made to States under title XVIII of the Social Security Act for the enforcement of standards applicable to clinical laboratories under such title, the Secretary may also make grants to States with primary enforcement responsibility to assist them in meeting the cost of administering and enforcing their programs for the regulation of clinical laboratories.

"(2) The amount of any grant made under this subsection shall be determined by the Secretary.

"(3) No grant may be made under this subsection unless an application therefor has been submitted to and approved by the Secretary. Such application shall be submitted in such form and contain such information as the Secretary may reasonable require.

"(4) For the purposes of making payments under grants under this subsection there are authorized to be appropriated not to exceed $15,000,000 for the fiscal year ending September 30, 1978, and for each of the succeeding fiscal years.

"(5) The Secretary may provide technical assistance to States to assist them in meeting the requirements of subsection (d).

"(n) ADVISORY COUNCIL.—There is established in the Department of Health, Education, and Welfare an advisory council on clinical laboratories which shall advise, consult with, and make recommendations to, the Secretary with respect to—

"(1) national standards promulgated under this section,

"(2) the implementation and administration of this section, and

"(3) coordination between the Federal and State clinical laboratory regulatory programs for the purpose of avoiding duplicate enforcement.

The advisory council shall be composed of individuals who, as a result of their training, experience, or attainments, are well qualified to assist in carrying out the functions of the advisory council. The membership shall include representatives of nationally recognized laboratory accrediting bodies; directors of State laboratory licensing programs; owners, operators, or directors of laboratories; members of professional and other associations concerned with laboratories and laboratory personnel; representatives of laboratories which are engaged in research; representatives of hospitals; and members of the public; and as ex officio members the designated representatives of the Secretary of Health, Education, and Welfare, the Secretary of Defense, and the Administrator of Veterans Affairs. The Secretary shall make appointments to the advisory council in such a manner that the membership is fairly representative of the interests described in the preceding sentence. Members of the advisory council to be appointed from the public shall be individuals who are not employed by, or do not receive (either directly, or through a spouse) any income from, clinical laboratories or any entity which is a supplier of clinical laboratories. Section 222(b) shall apply with respect to members of the advisory council.

"(o) ADMINISTRATION OF SECTION.—The Secretary shall establish, within the Department of Health, Education, and Welfare, an Office of Clinical Laboratories the purpose of which shall be—

"(1) to establish a uniform regulatory policy for the administration of the functions authorized under this section and the laboratory certification and regulatory functions presently administered under this Act, the Federal Food, Drug, and Cosmetic Act, and titles XVIII and XIX of the Social Security Act, and

"(2) to provide guidance with respect to the laboratory component of other health programs administered and enforced by the Secretary.

"(p) ANNUAL REPORT.—Not later than January 1, 1979, and January 1 of each succeeding year the Secretary shall make a report to the Congress (1) respecting the accuracy and reliability of tests and procedures performed by clinical laboratories during the preceding fiscal year, and (2) evaluating the effect of the costs and pricing of clinical laboratory tests and procedures on the overall cost of health care services and the relation of the costs of such tests and procedures to the costs of the health care services for which the tests and procedures are conducted.".

AMENDMENTS TO SOCIAL SECURITY ACT

SEC. 4. (a) Part A of title XI of the Social Security Act is amended by adding after section 1131 the following new section:

"PROCEDURES FOR DETERMINING REASONABLE COST AND REASONABLE CHARGE

"SEC. 1132. In determining the amount of any payment for a clinical laboratory service (other than such a service which is provided by a clinical laboratory which is located in a hospital and which provides services primarily in connection with the furnishing by the hospital of other inpatient or outpatient services) furnished under title XVIII, under a program established pursuant to title V, or under a State plan for medical assistance approved under title XIX, no reimbursement will be available for any element of the cost or charge for such service to the extent that such element is—

"(1) a commission (other than a commission paid to an employee of a clinical laboratory in the course of its usual and customary business) or finder's fee, or

"(2) an amount payable for any facility (or part or activity thereof) under any rental or lease arrangement, where such amount (A) is unrelated or disproportionate to the market value of the facility (or part thereof), or (B) is, directly or indirectly, determined, wholly or in part, as a per centum, fraction, or portion of the charge or cost attributed to the laboratory service.".

(b)(1) Section 1902(a)(23) of the Social Security Act is amended by inserting "(A)" before "has entered into" and by inserting before the semicolon at the end the following: ", or (B) has made arrangements through a competitive bidding process or otherwise for the purchase of laboratory services referred to in section 1905(a)(3), if the Secretary has found that (i) adequate services will be available under such arrangements, (ii) such laboratory services will be provided only through laboratories which during the three-year period beginning on the date of enactment of the Clinical Laboratory Improvement Act of 1977 meet the requirements of section 1861(e)(9) or paragraphs (10) and (11) of section 1861(s) and after the expiration of such period are licensed in accordance with section 353 of the Public Health Service Act, and (iii) charges for services provided under such arrangements are made at the lowest rate charged (determined without regard to administrative costs which are related solely to the method of reimbursement for such services) for comparable services by the provider of such services, or, if charged for on a unit price basis, such charges result in aggregate expenditures not in excess of expenditures that would be made if charges were at the lowest rate charged for comparable services by the provider of such services".

(2) Section 1902(a)(28) of such Act is amended by inserting before the semicolon

the following: ", and provide that any laboratory services paid for under such plan must be provided by a laboratory which during the three-year period beginning on the date of enactment of the Clinical Laboratory Improvement Act of 1977 meets the requirements of section 1861(e)(9) or paragraphs (10) and (11) of section 1861(s) and after the expiration of such period is licensed in accordance with section 353 of the Public Health Service Act".

(3) Section 1902(a)(30) of such Act is amended by inserting before the semicolon the following: "and, in the case of laboratory services referred to in section 1905(a)(3), such payments do not exceed the lowest amount charged (determined without regard to administrative costs which are related solely to the method of reimbursement for such services) to any person or entity for such services by that provider of laboratory services, and in the case of laboratory services billed for by a physician or laboratory but performed by another person or entity which is not in the employ of the physician or laboratory, do not exceed the lowest amount charged to any person or entity for the service plus, at the option of the State and if it is determined to be reasonable under regulations prescribed by the Secretary, a nominal charge for any necessary professional service performed by the physician".

(c)(1)(A) The second sentence of section 1861(s) of the Social Security Act is amended to read as follows: "No diagnostic test performed in any laboratory shall be included in paragraph (3) unless such laboratory meets applicable Federal or State licensing requirements under section 353 of the Public Health Service Act.".

(B)(i) Paragraphs (12) and (13) of section 1861(s) of such Act are redesignated as paragraphs (10) and (11), respectively.

(ii) The first sentence of section 1864(a) of such Act is amended by striking out "the requirements of paragraphs (10) and (11) of section 1861(s)" and inserting in lieu thereof "the requirements of section 1861(e)(9) and the second sentence of section 1861(s)".

(2)(A) Section 1861(e) of such Act is amended—

(i) by striking out "and" after the semicolon at the end of paragraph (8);

(ii) by redesignating paragraph (9) as paragraph (10); and

(iii) by inserting after paragraph (8) the following new paragraph:

"(9) meets applicable Federal or State licensing requirements under section 353 of the Public Health Service Act with respect to any laboratory (as defined in subsection (a)(1) of such section 353) which is a part of the institution; and".

(B) Section 1861(j)(15) of such Act is amended by inserting after "physical facilities thereof" the following: "(including applicable Federal or State licensing requirements under section 353 of the Public Health Service Act with respect to any laboratory which is a part of the institution)".

(C)(i) Subparagraphs (C) and (D) of section 1814 (a)(2) of such Act are each amended by striking out "and (9)" and inserting in lieu thereof "and (10)".

(ii) Section 1861(f)(2) of such Act is amended by striking out "(3) through (9)" and inserting in lieu thereof "(3) through (10)".

(iii) Section 1861(g)(2) of such Act is amended by striking out "(3) through (9)" and inserting in lieu thereof "(3) through (10)".

(iv) Section 1865(a)(4) of such Act (prior to its redesignation by subsection (e)(1)(B) of this section) is amended by striking out "pursuant to paragraph (9)" and inserting in lieu thereof "pursuant to paragraph (10)".

(3) The first sentence of section 1864(a) of such Act is amended by inserting before the period at the end thereof the following: "; except that the Secretary may not make an agreement with a State under this sentence for the purpose of determining whether a laboratory meets the requirements of the second sentence of section 1861(s) or the requirements of section 1861(e)(9) (or include provision for such purpose in any such agreement) unless either such State has primary enforcement responsibility for the regulation of clinical laboratories, as determined under section 353 of the Public Health Service Act, or the State provides assurances satisfactory to the Secretary that it will implement procedures for the enforcement of such requirements".

(4)(A) The amendments made by paragraphs (1) and (2) of this subsection shall become effective on the date on which the national standards for clinical laboratories take effect under section 353(b) of the Public Health Service Act (as amended by section 3 of this Act); except that such amendments shall not apply to laboratories specified in section 353(c)(2)(B) of the Public Health Service Act during the two-year period beginning on such date.

(B) The amendment made by paragraph (3) of this subsection shall become effective four years after the date of the enactment of this Act.

(d)(1) The first sentence of section 1865(a) of the Social Security Act is amended—

(A) by striking out "and" at the end of paragraph (3);

(B) by redesignating paragraph (4) as paragraph (5); and

(C) by inserting the following immediately after paragraph (3):

"(4) paragraph (9) thereof, and".

(2) The second sentence of such section is amended—

(A) by inserting immediately before "or imposes" the following: ", or imposes standards with respect to laboratories which the Secretary (and the applicable State agency designated in accordance with section 353(d)(1)(A)(vi) of the Public Health Service Act, in the case of any laboratory in a State which has primary enforcement responsibility under section 353(d) of such Act) determines are at least equivalent to the national standards for clinical laboratories in effect under section 353(b) of such Act,";

(B) inserting ", section 1861(e)(9), immediately after "section 1861(e)(6)"; and

(C) by striking out "paragraph (4)" each time it appears and inserting in lieu thereof "paragraph (5)".

(3) The third sentence of such section is amended by inserting immediately after "the Secretary" the following: "(and the applicable State agency designated in accordance with section 353(d)(1)(A)(vi) of the Public Health Service Act, to the extent that licensing requirements for laboratories under section 353 of such Act, as specified in section 1861(e)(9) or 1861(j)(15) of this Act, are involved, if the institution or agency is located in a State which has primary enforcement responsibility under section 353(d) of such Act)".

PENALTIES FOR DEFRAUDING MEDICARE AND MEDICAID PROGRAMS

SEC. 5. (a) Section 1877 of the Social Security Act is amended—

(1) in subsection (a) thereof, by striking out "shall be guilty" and all that follows and inserting in lieu thereof the following: "shall (i) in the case of such a statement, representation, concealment, failure, or conversion by any person in connection with the furnishing (by that person) of items or services for which payment is or may be made under this title, be guilty of a felony and upon conviction thereof fined not more than $25,000 or imprisoned for not more than five years or both, or (ii) in the case of such a statement, representation, concealment, failure, or conversion by any other person, by guilty of a misdemeanor and upon conviction thereof fined not more than $10,000 or imprisoned for not more than one year or both.";

(2) in subsection (b) thereof—

(A) by inserting "or arranges for the furnishing of" immediately after "Whoever furnishes";

(B) by inserting "(in cash or in kind)" immediately after "kickback or bribe";

(C) by inserting "or arrangement for the furnishing" immediately after "in connection with the furnishing";

(D) by striking out "rebate of any fee or charge" and inserting in lieu thereof "rebate of any fee, charge, or portion of any payment, in cash or in kind,";

(E) by inserting "or arrangement for the furnishing" immediately after "another person for the furnishing";

(F) by striking out "misdemeanor" and inserting in lieu thereof "felony";

(G) by striking out "$10,000" and inserting in lieu thereof "$25,000"; and

(H) by striking out "one year" and inserting in lieu thereof "five years"; and

(3) in subsection (c) thereof—

(A) by striking out "misdemeanor" and inserting in lieu thereof "felony";

(B) by striking out "$2,000" and inserting in lieu therof "$25,000"; and

(C) by striking out "6 months" and inserting in lieu thereof "five years".

(b) Section 1909 of such Act is amended—

(1) in subsection (a) thereof, by striking out "shall be guilty" and all that follows and inserting in lieu thereof the following: "shall (i) in the case of such a statement, representation, concealment, failure, or conversion by any person in connection with the furnishing (by that person) of items or services for which payment is or may be made under this title, be guilty of a felony and upon conviction thereof fined not more than $25,000 or imprisoned for not more than five years or both, or (ii) in the case of such a statement, representation, concealment, failure, or conversion by any other person, be guilty of a misdemeanor and upon conviction thereof fined not more than $10,000 or imprisoned for not more than one year or both.";

(2) in subsection (b) thereof—

(A) by inserting "or arranges for the furnishing of" immediately after "Whoever furnishes";

(B) by inserting "(in cash or in kind)" immediately after "kickback or bribe";

(C) by inserting "or arrangement for the furnishing" immediately after "in connection with the furnishing";

(D) by striking out "rebate of any fee or charge" and inserting in lieu thereof "rebate of any fee, charge, or portion of any payment, in cash or in kind,";

(E) by inserting "or arrangement for the furnishing" immediately after "another person for the furnishing";

(F) by striking out "misdemeanor" and inserting in lieu thereof "felony";

(G) by striking out "$10,000" and inserting in lieu thereof "$25,000"; and

(H) by striking out "one year" and inserting in lieu thereof "five years"; and

(3) in subsection (c) thereof—

(A) by striking out "misdemeanor" and inserting in lieu there of "felony".

(B) by striking out "$2,000" and inserting in lieu thereof "$25,000", and

(C) by striking out "6 months" and inserting in lieu thereof "five years".

(c) The amendments made by this section shall apply only to offenses committed after the date of the enactment of this Act.

STUDY RESPECTING REQUIREMENTS FOR LABORATORIES AND LABORATORY PERSONNEL

SEC. 6. The Secretary of Health, Education, and Welfare (hereinafter in this section referred to as the "Secretary"), in cooperation with appropriate public and private entities, shall conduct a study of (1) existing voluntary certification standards and

State licensure laws for clinical laboratory supervisors, technologists, and technicians; (2) qualifications of entities that certify such personnel as qualified to perform laboratory procedures in clinical laboratories licensed under section 353 of the Public Health Service Act, (3) existing and proposed public and private mechanisms to determine the continued competence of such personnel, (4) existing laboratory proficiency testing methods used to evaluate the performance of clinical laboratories, and (5) the relationship of requirements for such personnel and of clinical laboratory proficiency testing requirements with clinical laboratory performance.

(b) The study required by subsection (a) shall include—

(1) an assessment of the need for certification of such personnel pursuant to national standards and for assurance of their continued competence;

(2) development of national standards which the Secretary determines should be used as guidelines for entities which certify such laboratory personnel with consideration of the need for increased geographic and career mobility of such personnel;

(3) a determination of the numbers of technical laboratory personnel who would meet standards developed by the Secretary under paragraph (2) and a projection of the numbers of such personnel in the calendar years 1980, 1985, and 1990; and

(4) an analysis of the effect on the costs of laboratory tests and procedures and quality of such tests and procedures of a requirement that a laboratory may not be licensed under section 353 of the Public Health Service Act unless its personnel met standards developed by the Secretary under paragraph (2).

(c) Within two years of the date of the enactment of this Act the Secretary shall submit to the Congress the results of the study conducted pursuant to subsection (a) and recommendations for legislation which the Secretary considers necessary.

REPORT ON EXEMPTIONS

SEC. 7. The Secretary of Health, Education, and Welfare shall report to the Congress a summary of the information received by the Secretary under applications submitted under section 353(c)(2)(D)(ii) of the Public Health Service Act (as amended by this Act) during the three-year period beginning on the date national standards take effect under section 353(b) of such Act (as amended by this Act) and, on the basis of such information, make recommendations (1) as to whether clinical laboratories granted exemptions under clause (ii) of section 353(c)(2)(D) of such Act (as amended by this Act) should be required, as a condition to their exemption, to have laboratory procedure manuals, participate in laboratory proficiency testing programs, and maintain quality control programs prescribed under such standards, and (2) as to whether such section 353(c)(2)(D) should otherwise be revised. Such report shall be submitted within three months of the expiration of such period.

STUDY OF FINANCIAL ARRANGEMENTS MADE BY HOSPITALS FOR CLINICAL LABORATORY SERVICES

SEC. 8. (a) The Secretary shall conduct a study of the financial arrangements entered into by hospitals, reimbursed for the provision of health services under title XVIII of the Social Security Act or a State plan for medical assistance under title XIX of such Act, for the provision of clinical laboratory services by persons who provide such services in such hospitals to determine if such arrangements are in the public interest. Such study shall include an examination of—

(1) arrangements between hospitals and providers of clinical laboratory services under which the fee for the provision of such services is based on a percentage of the gross revenues received by the providers for such services,

(2) leasing arrangements for facilities and equipment entered into by hospitals and providers of such services, and

(3) arrangements by hospitals for salaries and other forms of compensation for the providers of such services.

(b) Within six months of the date of enactment of this Act such study shall be completed and a report made to the Congress setting forth the findings of the study and recommendations of the Secretary for such corrective legislation as the Secretary determines to be necessary.

[Memorandum]

PUBLIC HEALTH SERVICE,
CENTER FOR DISEASE CONTROL,
January 24, 1977.

To: The Deputy Assistant Secretary for Health ES/PHS.

From: Director, Center for Disease Control.

Subject: Redelegation of Responsibility for Regulation of Clinical Laboratories—ACTION.

ISSUE

Documents redelegating responsibility for regulations of clinical laboratories are currently being prepared in PHS. I am recommending that thes documents not be forwarded to the Secretary for signature.

DISCUSSION

The subject redelegation is intended to fomally implement the interagency agreement entered into by the Center for Disease Control (CDC), the Bureau of Quality Assurance (EQA) of the Health Services Administration (HSA), and the Bureau of Health Insurance (BHI) of the Social Security Administration (SSA) on September 30, 1975. For a number of years preceding this latest agreement, CDC has, by every means under its control, sought to implement such agreements in good faith. The clear implication of the September 1975 interagency agreement is that all three agencies [CDC, BHI (SSA), and BQA (HSA)] would agree in the development, intepretation, and application of these standards. Since September 30, 1975, we have attempted with considerable diligence to make this latest arrangement effective.

I have reluctantly come to the conclusion that further attempts to implement this agreement, or to delegate to BHI the responsibility for applying national standards for interstate laboratories through the State agency system, will result in unacceptable degradation in the quality of services now required under the Clinical Laboratories Improvement Act of 1967 (CLIA '67). This is evidenced by the plans and actions taken by BHI in the last few months, which have been in direct conflict with the advice and positions of CDC with respect to both new and old regulations and interpretation.

I, therefore, withdraw my previous approval of the redelegation document package.

It is extremely unfortunate and distressing to me to reach this conclusion. It has become apparent that the programs, goals, and orientation of the Public Health Service with respect to clinical laboratory regulation are so disparate from those adopted for Medicare that they cannot be reconciled. Following are examples of disparity:

1. BHI has agreements with State agencies under which they examine laboratories and then make findings and recommendations to their regional office. The present system of examination assumes a degree of flexibility of local judgment and use of the concept of "substantial compliance" which makes the uniform enforcement of CLIA '67 standards impossible. We had assumed that this concept would not be applied to interstate laboratories under redelegated authority; however, BHI has indicated their intent to apply the same system to all laboratories under their authority.

2. BHI is required by Title XVIII to deem that the accreditation of hospitals by the Joint Commission on the Accreditation of Hospitals (JCAH) is equivalent to a finding that all facilities, including laboratories, meet the certification standards for Medicare. The intent of BHI, as expressed in proposed draft regulations, is essentially identical for those hospital laboratories required to be licensed under CLIA '67 (Interstate). These regulations would evaluate the institution overall and would not evaluate the laboratory alone as is required under CLIA '67. CDC has examined the JCAH standards and made a finding that they are not equivalent to those of CLIA '67.

3. BHI, even in cases in which the State agency has indicated the necessity and a desire to apply standards more effectively, interprets its own regulations in the most lenient way. This has resulted in numerous instances in which the personnel requirements are applied more leniently by BHI than by CDC. Indeed, this is an expressed philosophy of BHI regulation, and it is apparent that they mean to apply it to the interstate laboratories.

4. In many instances in which the State agency or BHI has incorrectly certified certain personnel in meeting requirements, BHI has refused to change the previous decision, resulting in many laboratories staffed with personnel who do not meet CLIA '67 personnel standards.

5. BHI has recently made a decision to allow cytopathology screening to be done away from the laboratory without supervision, contrary to the recommendation of both CDC, State agency, and the Medical Laboratory Services Advisory Committee, and ad hoc consultants advisory to CDC; and, indeed, contrary to the advice of their own General Counsel.

6. Recently, BHI has refused to provide in their proposed examination procedure, a format for specific objective recording of determinations of non-compliance with standards, which is essential for effective enforcement of the regulations under CLIA '67. For example, BHI regards the requirement for inquiry as to records to be a non-essential whereas CDC has found it to be required for effective legal enforcement.

7. In many instances, both State agencies and BQA regional office personnel have been overruled either by regional office BHI or headquarters action, For example, States will find laboratories staffed by directors or technical staff who do not meet requirements, or will find noncompliance with certain quality control provisions, and will recommend decertification. The BHI regional office representative overrules this recommendation, in many instances. In one State, this led to the transfer of this responsibility to the State laboratory.

If my recommendation is accepted, CDC will continue to implement the Interstate Clinical Laboratory Standards to the best of our ability and to cooperate with BHI and BQA by advice and assistance to any extent desired or requested.

If redelegation is carried out, it will be incumbent upon us to immediately and vigorously apply the monitoring function described therein, and to publicly demonstrate the degree to which the State agency system is failing to apply appropriate and applicable standards, not only to interstate laboratories but to Medicare hospital and independent laboratory.

RECOMMENDATION

I recommend that you not forward the redelegation documents to the Secretary for signature.

DAVID J. SENCER, M.D.,
Assistant Surgeon General.

Mr. KENNEDY. Mr. President, I am pleased to cosponsor the Clinical Laboratory Improvement Act of 1977 intro-

duced today by my good friend and colleague Senator JAVITS, the ranking minority member of my committee, who in 1967 authored the original Clinical Laboratory Improvement Act. This bill is substantially similar to the Senate-passed bill of the 94th Congress. A companion bill is being introduced in the House by PAUL G. ROGERS, chairman of the House Subcommittee on Health and the Environment.

The clinical laboratory industry now costs the American people almost $9 billion a year. By 1980, approximately 8.8 billion clinical laboratory tests will be conducted annually at a cost of about $15 billion to the American people. Because the work of clinical laboratories is so integrally connected with the care of patients, without high quality laboratory services America's health care system is in jeopardy. While the Clinical Laboratory Improvement Act of 1967 resulted in improved quality of laboratory performance, the law covered only the large interstate laboratories, less than 10 percent of all laboratories throughout the country. In addition, the American people have had to depend upon a variety of other sources including State governments, individual laboratories, and individual practitioners to assure the quality and reliability of laboratory work. There is even a jurisdictional dispute within the Federal bureaucracy. I am convinced that this patchwork system of regulation does not adequately serve either the doctor or his patient. The time has come for the public and private sectors to develop a system which will better meet the public need. That is what my bill is all about.

During the past several years, my Health Subcommittee has repeatedly committed itself to developing mechanisms to insure quality health care and to stabilize health care costs. This bill helps to achieve both goals with respect to laboratory testing.

Reports of clinical laboratory ineptitude appear much too frequently. We have learned of a distressing litany. Many laboratories, for example, have never been inspected, dirty and broken laboratory equipment is being used by inexperienced technicians, reagents are unlabeled and outdated, and patient specimens are being tested with used unwashed pipettes.

During hearings held in the last Congress before my Health Subcommittee, we learned that although high volume laboratories may be more proficient than smaller laboratories—such as those found in doctors' offices and medicare certified laboratories—the level of quality was still undesirable. For example, 7.6 percent of the interstate laboratory determinations, 16.5 percent of laboratory tests prepared by other large laboratories, and 26 percent of the sample lab work done in medicare reimbursed labs were incorrect. Almost one out of five microbiological determinations, then, are inadequate. This is poor medical care and it is expensive medical care. It should no longer be tolerated.

This bill now commands our attention. The American health care consumer often finds it impossible to evaluate and judge the quality of laboratory testing which he receives. He has no influence on his physician's choice of laboratory; nor has he any indication of relative costs. Tests which cost $10 in one lab cost $45 in another. It is true that lower charges may be attributed to automation, but even among the larger, automated labs there are incredible price variations. In addition, there is growing evidence of fraud and abuse within the clinical laboratory field particularly in connection with the medicaid program.

We are also troubled by the fact that physicians themselves recognize the low quality of laboratory results. They respond to this situation by reordering tests or by dividing specimens into two samples and sending them to different laboratories for concurrent analysis. The problem of cost is further exacerbated because subclinical illnesses remain undetected and, on the other hand, because false positives result in unnecessary medical treatment.

The bill I am submitting will correct many of these excesses. By establishing an Office of Clinical Laboratories in HEW, the bill addresses the issues of inconsistent and irregular regulation and the jurisdictional dispute within the Federal bureaucracy. It further broadens the jurisdictional perimeter to licensure and establishment of quality standards for all laboratories and not just those in interstate commerce. The bill authorizes the Secretary to delegate his licensure and enforcing authority to States implementing quality assurance programs at least equal to the standards established by the Secretary. It authorizes the Secretary to consult with appropriate professional organizations concerning the development and implementation of quality assurance standards. It authorizes $15,000,000 annually to permit the Secretary to provide technical and financial assistance to States to establish or administer quality assurance programs. The bill permits the Secretary to seek revocation of a laboratory's license where it is found that the laboratory has engaged in kickbacks, bribes, or false, fictitious, or fraudulent billing practices; and to impose a $25,000 fine and a maximum of 5 years in prison.

My committee will hold hearings on the bill in March. Those interested in presenting testimony should contact Robert Wenger at 224–7675.

Mr. SCHWEIKER. Mr. President, as ranking minority member of the Senate Health Subcommittee, I am pleased to join with my colleague Senator JAVITS in introducing the Clinical Laboratory Improvement Act of 1977.

The new legislation, substantially similar to the bill I cosponsored with Senator JAVITS and other colleagues on the Health Subcommittee last session which passed the Senate overwhelmingly, extends and expands existing law regarding clinical laboratory licensure. It is aimed at preventing fraud and abuse in the laboratory and insuring high-quality laboratory performance.

Last session, the Health Subcommittee conducted hearings on clinical laboratory regulation. Testimony we received made the following four points clear:

First. The American health care system is becoming increasingly dependent upon the services of clinical laboratories. They perform 4.4 billion tests a year, at a cost to Americans of some $12 billion. By 1980, it is estimated that there will be 8.8 billion clinical lab tests annually, at a cost of approximately $15 billion.

Second. There is mounting evidence that the quality of laboratory testing is inadequate and that better means of insuring laboratory proficiency are needed.

Third. There is a lack of effective Federal control in this area due to bureaucratic difficulties. Three different agencies are responsible for administering the present clinical laboratories program, and the record shows that often one agency does not know what the other is doing.

Fourth. There are serious problems of fraud and corruption within the clinical laboratory business.

Reliable high-quality clinical laboratory work is vital to the provision of high quality health care for Americans. I believe this bill responds well to the problems we have found in the clinical laboratory business and is essential legislation if we are to achieve quality performance by laboratories, establish uniform regulatory policy in this area, and protect the American people from the dire consequences of fraudulent practices and faulty performance by some clinical laboratories.

I want to commend Senator JAVITS for the leadership he has shown in the development of this badly needed legislation, and I am hopeful that the Senate will act promptly on this important bill.

By MR. LAXALT:

S. 706. A bill to amend the Congressional Budget Act of 1974 to limit increases in the levels of total budget outlays and total new budget authority set forth in concurrent resolutions on the budget, except during time of war; to the Committee on Governmental Affairs.

Mr. LAXALT. Mr. President, despite the complaints about high cost and low quality of Government services, the public sector in all developed countries is big and getting bigger, raising potential threats to both private initiative and individual freedom. What is more, because Government's complexity, seeming capriciousness, and sheer impersonal size made it a favorite target for politicians of every philosophical stripe in the last election, it is particularly important that we now begin translating our words into action.

I believe Americans can influence the way in which decisions that control their lives are made. They can overcome their frustrations and begin to exercise a greater degree of control over individuals and institutions on their payroll. But, the they can only do so if they effectively limit the growth of their Government.

For this reason, I am today introducing an amendment which would compel the Congress to face the issue of Govern-

ment growth head-on. But, rather than an attempt to stop Government expansion completely, my proposal would keep the Congress from approving budgets which allow the public sector to grow at the expense of the private sector. To accomplish this, it would prohibit either House of Congress from approving in peacetime a concurrent budget resolution in which the percentage increase in total outlays and new budget authority over the last resolution exceeded the average annual rate of growth in gross national product over the previous 3 years.

In my opinion, the full promise of the Budget and Impoundment Control Act of 1974 has not been realized. In its first year of operation, the new congressional budget process has shown clear signs of giving the Congress an effective mechanism for equating income and outgo. But it has yet to begin curbing the outrageous size of Federal budget deficits, which was one of the principal intentions of its originators. In my judgment, only an overall ceiling will suffice to complete the construction of the congressional budget process as intended by its founders and end the current string of oppressive deficits.

To avoid strait-jacketing the Federal Government, my amendment limits the growth in Federal spending by a 3-year average annual rate of growth in gross national product. To use only the previous year's figures would reduce flexibility required for legitimate countercyclical economic stabilization techniques to be employed. For example, in a recessionary period, somewhat higher spending levels may result automatically from programs such as unemployment compensation and food stamps. But, given the historical duration of business cycles, a three year average should be sufficient to smooth out such fluctuations in economic activity sufficiently to allow this necessary flexibility.

As the following table indicates, one need only look at the last 5 years to see the utility of my proposal for curbing the growth of Government. In actual outlays, the period from fiscal 1972 through fiscal 1976 saw a whopping 61 percent growth in the size of the Federal budget. During this period, the so-called "Great Society" programs truly came on line spearheading an increase in the budget from $231.9 billion in outlays in fiscal 1972 to $373.5 billion in fiscal 1976.

During this period, had my proposal been in effect, the budget would still have grown to accommodate the increased demands on our society and our expanding population. But, my formula would have restricted Government growth to the ability of the private sector to pay for it. Under my proposal, the Federal budget would still have grown more than 50 percent, from $226.2 billion in fiscal 1972 to $353.9 billion in fiscal 1976, but the taxpayers of this Nation would have been saved more than $60 billion over the 5-year period and almost $20 billion in fiscal 1976 alone.

Effect of Laxalt Budget Proposal—Fiscal Year 1972–1976

[In billions of dollars]

	Actual outlays	Permitted outlays	Difference
1972	231.9	226.2	5.7
1973	249.9	246.5	3.4
1974	271.9	246.5	2.7
1975	324.6	295.2	29.4
1976	373.5	353.9	19.6
Total 5 years	1,451.0	1,390.2	60.8

The present piecemeal budgetary process will no longer suffice. Government will continue to grow under the present system as long as those who profit from its growth have a much more intense interest in each program's continuance than taxpayers do in stopping it. Only by taking a broader, overall view and amending fundamental legislation, can we provide hard-pressed taxpayers with relief and restrict the every-increasing encroachment of the public sector on our free enterprise system and perhaps ultimately our personal liberties.

Mr. President, I ask unanimous consent that the text of this legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 706

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 301(a) of the Congressional Budget Act of 1974 is amended by adding at the end of such section the following new sentence: "Except during any war declared by the Congress, the appropriate levels of total budget outlays and total new budget authority for a fiscal year shall not exceed the appropriate levels of total budget outlays and total new budget authority, respectively, for the preceding fiscal year, increased by a percentage equal to the average annual percentage increase in the gross national product during the three calendar years preceding the beginning of such fiscal year.".

SEC. 2. (a) Section 304 of the Congressional Budget Act of 1974 is amended by striking out "which revises" and inserting in lieu thereof "which, subject to the last sentence of section 301 (a), revises".

(b) The first sentence of section 310 (a) of such Act is amended by striking out "or revises" and inserting in lieu thereof "or, subject to the last sentence of section 301 (a), revises".

By Mr. JOHNSTON (for himself, Mr. BARTLETT, and Mr. BELLMON):

S. 707. A bill to amend the Mineral Leasing Act of 1920, and for other purposes; to the Committees on Commerce, Science, and Transportation and Energy and Natural Resources, jointly, by unanimous consent.

COAL PIPELINE ACT OF 1977

Mr. JOHNSTON. Mr. President, today I am introducing S. 707, which amends the Mineral Leasing Act of 1920.

One of the lessons of this winter's natural gas crisis is that our Nation must proceed immediately to the development and use of our great coal resources. This morning, the Committee on Energy and Natural Resources began hearings on S. 7, the Surface Mining and Reclamation Control Act of 1977. This act will provide the ground rules for development of much of the coal in the Western States. Just as the Senate is now considering legislation concerning the production of coal, we must begin immediately to consider legislation concerning the distribution of coal. My region, for instance, can not become less reliant on natural gas and more reliant on coal until the distribution systems needed to deliver large quantities of coal are developed.

A distribution system which deserves serious consideration is the coal slurry pipeline. Such a pipeline would carry crushed coal in a water solution to the point of use. At the point of use the coal would then be separated from the water solution. However, such a pipeline is not feasible until legislation is adopted giving the pipeline the power of eminent domain for the acquisition of rights-of-way.

The bill I am introducing today grants the power of eminent domain to coal slurry pipelines; provides that a certificate of convenience and necessity must be issued by the Secretary of Interior as a prerequisite to the construction of such a pipeline; provides that only a carrier holding a certificate of public convenience and necessity from the Secretary of Interior may exercise the power of eminent domain; and provides that such pipelines will be subject to the same regulation by the Interstate Commerce Commission as are other pipelines. This act specifically does not, in any way, affect existing State, Federal or interstate compact jurisdiction over water resources.

Mr. President, our Nation can no longer avoid hard policy decisions concerning the development and distribution of coal. We must plan now for the orderly production, distributions, and utilization of coal. I urge the Senate to act promptly on this legislation.

Mr. President, I ask unanimous consent that the text of S. 707 be printed in the RECORD.

S. 707

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Coal Pipeline Act of 1977".

DEFINITIONS

SEC. 2. As used in this Act—

(a) "carrier" means any carrier of coal by coal pipeline that is subject to any of the provisions of this Act;

(b) "Department" means the Department of the Interior;

(c) "Secretary" means the Secretary of the Department of the Interior;

(d) "right-of-way" includes necessary land or other property for the location of pipelines, pumping stations, pressure apparatus, tanks, or other stations, equipments, or appurtenances required for the proper operation of a coal pipeline or pipelines; and

(e) "control" means the power to exercise control by whatever means: any person who (1) is a director of a carrier or of any other person, or (2) owns in excess of 5 per centum of the voting stock (or any like evidence of participation) of a carrier or of any other person shall be deemed to have the power to exercise control of such carrier or other person, as the case may be.

RIGHTS-OF-WAY ON FEDERAL LANDS

SEC. 3. Subsection 28(a) of the Mineral Leasing Act of February 25, 1920, as amended by the Act of November 16, 1973 (87 Stat. 567), is further amended by inserting the word "coal" between "natural gas," and synthetic".

EMINENT DOMAIN

SEC. 4. (a) Except as provided in subsection (b), when any carrier cannot acquire by negotiation the right-of-way required to construct, operate, and maintain any proposed coal pipeline or pipelines, such carrier may acquire the same by the exercise of the power of eminent domain in the district court of the United States for the district in which such property is located or in the courts of the State in which such property is located.

(b) The power of eminent domain shall not be exercised to acquire (1) lands owned by the United States or by any State, or (2) lands held in trust by the United States for an Indian or Indian tribe.

(c) Nothing in this section shall be construed to permit acquisition of any right to use or develop water through the exercise of the right of eminent domain.

CERTIFICATION OF PUBLIC CONVENIENCE AND NECESSITY

SEC. 5. (a) The power of eminent domain granted pursuant to this Act may be exercised only by a carrier holding a certificate of public convenience and necessity issued by the Department of the Interior. The Secretary is authorized to issue such a certificate if the Secretary finds, with respect to the particular project of the carrier as to which said power is sought, that the project is in the national interest and provides the capacity necessary to fulfill the requirement of a common carrier of coal, as determined by the Secretary. In addition to other factors customarily considered in determining common carrier status in the case of pipeline common carriers, the Secretary shall consider contracts for the carriage of coal which are in existence or proposed as of the date of the application for certification and may also consider such contracts for such carriage as may reasonably be anticipated, at the time of issuance of the certificate, to be entered into after such date. In determining the size of the pipeline to be certificated, the Secretary shall take into account the resultant cost to ultimate consumers of services or products affected by such transportation.

(b) In making the findings required in (a) of this section the Secretary shall consider and make independent findings on the extent to which the project—

(1) would help meet national needs for coal utilitization, considering, among other matters, alternate routes or means of transportation of coal and the relative costs of such alternative routes or means;

(2) may be impeded or delayed unless granted the power of eminent domain;

(3) involves disruption to the environment, as compared with disruption from other routes or modes of transportation or other methods of utilization of the coal resources involved; and

(4) considers the balance between the energy needs of the area to be benefited by the project and the water requirements and other impacts on the area from which the coal is to be transported.

The Secretary's findings as to whether a project is in the national interest shall be based on the record as a whole taking into consideration each of the criteria set forth in this subsection.

(c) The Secretary shall require as a condition of issuance of a certificate of convenience and necessity under this Act that any pipeline for which such certificate is issued be constructed, operated, and maintained as a common carrier as provided in the Interstate Commerce Act. Any violation of such condition shall be enforced as provided in such Act, and nothing in this paragraph shall be construed to limit, impair, or otherwise affect any provision of such Act.

(d)(1) No carrier granted the power of eminent domain under this Act shall transport any coal mined by it or under its authority or which it may own in whole or in part, or over which it may have any control, direct or indirect.

(2) The prohibition contained in subsection (d)(1) shall not apply to the construction, ownership, and operation of a feeder line for the purpose of gaining access to a coal pipeline by any person who would otherwise be ineligible if—

(A) the carrier has declined a formal request to construct, own, and operate the feeder line;

(B) the owner of the feeder line will operate the line as a common carrier for any excess capacity in the feeder line; and

(C) the Secretary has determined that an exemption from subsection (d)(1) is in the public interest.

(3)(A) No certificate of public convenience and necessity may be issued to any carrier which controls, is controlled by, or is under common control with any person which uses or will use coal transported by the carrier or which supplies coal to the pipeline and (B) no carrier granted the power of eminent domain under this Act may control, be controlled by, or be under common control with any such person.

(4) The penalties and enforcement provisions of section 8 shall not apply to this subsection, but whenever, on the basis of any information available to it, the Interstate Commerce Commission finds that any carrier or other person is in violation of paragraph (1) or (3)(B), it shall notify such carrier or other person. If such violation extends beyond the thirtieth day after the date of such notice, the Commission shall, after notice and opportunity for hearing, issue an order requiring such carrier or other person to comply. Failure to obey any such order shall be subject to the same penalty as provided for in section 16(8) of the Interstate Commerce Act (49 U.S.C. 16(8)).

(e) No certificate of public convenience and necessity may be issued to any person engaged as a common carrier in interstate transportation of coal by any mode unless such person enters into a compact with the Secretary within two years from the date of enactment of this Act providing means whereby rights-of-way across the lines of such person may be acquired by a carrier on terms customarily employed with reference to other types of pipeline. Any Federal court of competent jurisdiction may entertain a suit by an interested party to enforce the provisions of such compact.

(f) If the Secretary determines, in the course of the consultations and findings required by subsection (b) or the hearings required by section 6 that the project right-of-way may be utilized for additional uses compatible with operations of the project line, the Secretary may, in his discretion, require as a condition to the grant of a certificate of public convenience and necessity that the particular project right-of-way be subject to such compatible uses.

(g) The Secretary shall require the additional use described in subsection (e) only if he by rule (1) finds—

(A) the additional use is a compatible use, and

(B) conditioning the issuance of the certificate upon the availability of the right-of-way for the additional use is in the public interest, and

(2) establishes reasonable provisions for the payment of compensation for the additional use to the person otherwise entitled to the exclusive use.

PROCEDURE

SEC. 6. (a) Applications for a certificate of public convenience and necessity under this Act shall be filed with the Department pursuant to such regulations as it may prescribe. Each carrier applying for a certificate shall reimburse the Department for administrative and other costs incurred in processing the application as the Secretary shall prescribe.

(b) A certificate authorized by section 5 may be issued only after public notice and public hearings in accordance with this section.

(c) The carrier shall publish, in accordance with regulations promulgated by the Secretary, notice that it has filed an application for a certificate of public convenience and necessity under this Act in a newspaper of general circulation in each county in which the project will be located. The notice shall, among other things, specify to the greatest extent practicable the land which would be subject to the power of eminent domain.

(d) The Secretary shall publish in the Federal Register a notice of the receipt of each application under this Act.

(e) The Secretary shall hold at least one public hearing in each State in which the project involved will be located. Any interested person may present relevant material at any hearing. After all hearings in each State are concluded, the Secretary shall hold at least one public, formal adjudicatory hearing in accordance with the provisions of section 554 of title 5, United States Code, in the District of Columbia at which the Federal Energy Administration and the Environmental Protection Agency shall, and other Federal, State and local agencies may, participate.

ANTITRUST REVIEW

SEC. 7. (a) The Department shall not issue any certificate pursuant to section 5 of this Act unless it has received the advice of the Attorney General of the United States and the Federal Trade Commission that such action would not restrain trade, further monopolization, substantially adversely affect competition, or otherwise create or maintain a situation in contravension of the antitrust laws. The issuance of a license under this Act shall not be admissible in any way as a defense to any civil or criminal action for violation of the antitrust laws of the United States, nor shall it in any way modify or abridge any private right of action under such laws.

(b)(1) Nothing in this section shall be construed to bar the Attorney General or the Federal Trade Commission from challenging any anticompetitive situation involved in the operation of a coal slurry pipeline.

(2) Nothing contained in this section shall impair, amend, broaden, or modify any of the antitrust laws.

(3) As used in this section, the term "antitrust laws" includes, but is not limited to, the Act of July 2, 1890, as amended; the Act of October 15, 1914, as amended; the Federal Trade Commission Act (15 U.S.C. 41 et seq.); and sections 73 and 74 of the Act of August 27, 1894, as amended.

ENFORCEMENT AND PENALTIES AND JUDICIAL REVIEW

SEC. 8. (a) At the request of the Secretary the Attorney General may institute a civil action in the district court of the United States for the district in which the affected operation is located for a restraining order or injunction or other appropriate remedy to enforce any provision of this Act or any regulation or order issued under the authority of this Act.

(b) If any carrier shall fail to comply with any provision of this Act, or any regulation or order issued under the authority of this Act, after notice of such failure and expiration of any period allowed for corrective action, such person shall be liable for a civil penalty of not more than $5,000 for each and every day of the continuance of such failure. The Secretary may assess and collect any such penalty.

(c) Any person who knowingly and willfully violates any provision of this Act, or any regulation or order issued under the authority of this Act, or makes any false statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under this Act shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or both.

(d) Whenever a carrier violates any provision of this Act, or any regulation or order issued under the authority of this Act, any director, officer, or agent of such corporation or entity who authorized, ordered, or carried out such violation shall be subject to the same fines or imprisonment as provided for under subsection (c) of this section.

(e) Petitions for judicial review shall be filed in the court of appeals of the United States for the circuit in which the pipeline's originating point of coal transportation is located.

CONSTRUCTION OF LAW

SEC. 9. Nothing in this Act shall be construed—

(1) as affecting in any way any existing law governing appropriation use, or diversion of water, or any Federal, State, or private right to water;

(2) as expanding or diminishing Federal or State jurisdiction, responsibility, or interests in water resources development or control;

(3) as displacing, superseding, limiting, or modifying any interstate compact or the jurisdiction or responsibility of any legally established joint or common agency of two or more States or of two or more States and the Federal Government; or

(4) as superseding, modifying, or repealing, except as specifically set forth in this Act, existing laws applicable to the various Federal agencies which are authorized to develop or participate in the development of water resources or to exercise licensing or regulatory functions in relation thereto.

REGULATIONS

SEC. 10. The Secretary is authorized to promulgate such rules and regulations as he deems necessary to carry out the purposes of this Act.

UNDERGROUND CONSTRUCTION

SEC. 11. All coal pipelines subject to this Act shall, to the maximum extent practicable, consistent with environmental protection, safety, and good engineering and technological practices, be buried underground.

RELATIONSHIP TO INTERSTATE COMMERCE ACT

SEC. 12. Except where otherwise provided by this Act, the provisions of part I of the Interstate Commerce Act (24 Stat. 379) as amended (49 U.S.C. 1–40) shall be applicable to coal pipelines subject to this Act.

SEC. 13. Subsequent to the passage of this Act, no person shall engage in the transportation of coal by slurry pipeline without first obtaining a certificate of public convenience and necessity under sections 5 and 6 of this Act unless such person enters into a compact with the Secretary within two years from the date of enactment of this Act providing means whereby rights-of-way across the lines of such person may be acquired by a carrier on terms customarily employed with reference to other types of pipeline. Any Federal court of competent jurisdiction may entertain a suit by an interested party to enforce the provisions of such compact.

Mr. STEVENS. Mr. President, I ask unanimous consent that a bill introduced earlier by the Senator from Louisiana (Mr. JOHNSTON), for himself and Mr. BARTLETT and Mr. BELLMON, on coal slurry pipelines be referred jointly to the Committees on Commerce, Science, and Transportation and Energy and Natural Resources.

The PRESIDING OFFICER. Without objection, it is so ordered.

By Mr. CLARK (for himself, Mr. LEAHY, Mr. ABOUREZK, Mr. BAYH, Mr. BUMPERS, Mr. BURDICK, Mr. CHURCH, Mr. DECONCINI, Mr. GRAVEL, Mr. HART, Mr. HASKELL, Mr. HATHAWAY, Mr. HEINZ, Mr. HUDDLESTON, Mr. HUMPHREY, Mr. INOUYE, Mr. KENNEDY, Mr. MATSUNAGA, Mr. MCGOVERN, Mr. MCINTYRE, Mr. METCALF, Mr. RANDOLPH, Mr. RIEGLE, Mr. STAFFORD, Mr. ZORINSKY, Mr. PEARSON, and Mr. MATHIAS):

S. 708. A bill to amend title XVIII of the Social Security Act to provide payment for rural health clinic services; to the Committee on Finance.

Mr. CLARK. Mr. President, today Senator LEAHY, and I are joined by 24 cosponsors in introducing legislation giving rural Americans greater access to primary health services.

The bill would change an existing medicare regulation that prohibits reimbursement to clinics that lack full-time physicians. It would allow the use of medicare funds for small, rural health clinics that use physician extenders to provide primary care and treatment to citizens who generally lack other sources of basic health care.

During field hearings by the Senate Rural Development Subcommittee over the last year—in Vermont and Iowa—we learned that this medicare policy represents the single most serious obstacle to health services for rural Americans.

As we all know, rural America is losing its primary care physicians. The country doctor has disappeared with the horse and buggy. Many of the doctors who still practice are approaching retirement, leaving thousands of small communities and millions of Americans with no alternative but to travel many miles to larger cities to receive health services.

Furthermore, despite a recent trend among medical school graduates to practice in family medicine, the overwhelming majority of young physicians are not attracted to remote rural areas. They correctly recognize that solo practice in a small rural community often means overwork, fewer opportunities for professional consultation and continuing education, and lack of access to well-equipped hospitals.

Thousands of communities throughout the country are relying upon the services provided by physician extenders in rural health clinics. The populations of these areas are insufficient to financially support a full-time physician, but they are able to support a small primary care clinic staffed by a primary care provider with back-up supervision by a physician.

Most of these practitioners, or physician extenders, are nurse practitioners or physician's assistants. Reports and studies have come to near-unanimous agreement that they not only provide high quality health care, but they are also likely to locate in smaller communities.

The clinics where the extenders work have several benefits. First, the extenders tend to emphasize preventive health care. They educate patients about proper nutrition and other self-help techniques, in order to prevent the necessity for care by a physician or hospital personnel. In these remote areas, where one extender is responsible for the health of hundreds or even thousands of people and where physician and hospital care is not readily accessible and costly to use, maintaining good health is a necessity.

Second, rural health clinics become the first step of a health system. Most extenders are, and should be, linked to a physician and to a hospital to which they can refer patients with critical health problems. Other patients with routine problems are not required to go to a physician, and they are thereby saved the extra cost of transportation and physician care. As a result, extender-staffed clinics are cost-efficient and make sense in terms of the organization of a health system.

However, rural Americans receiving care in these primary care clinics are penalized because medicare will not reimburse for extender services unless a physician is physically present during the provision of health services. The effect of this policy is to completely exclude from reimbursement the satellite clinics which are increasingly prevalent in rural areas. While physicians do provide general supervision of the extender services, they naturally are unable to physically oversee those services on an hour-to-hour basis.

I ask unanimous consent that a chart illustrating how the medicare program discriminates against rural America be reprinted in the RECORD.

There being no objection, the table

was ordered to be printed in the RECORD, as follows:

Amount of part B medicare benefits paid per beneficiary by state: Fiscal 1976

	Benefits	Percent of population rural, 1970
State:		
D.C.	$439.02	0
Hawaii	334.53	16.9
California	325.45	9.1
New York	293.83	14.4
Nevada	284.35	19.1
Arizona	251.24	20.4
Florida	250.94	19.5
Mass.	241.67	15.4
R.I.	236.98	12.9
Michigan	220.28	26.2
Colorado	215.78	21.5
Connecticut	214.92	22.6
Oregon	211.34	32.9
Maryland	210.66	23.4
Ohio	210.40	24.7
Montana	160.49	46.6
Alaska	156.26	51.6
N.C.	154.47	55.0
Maine	154.22	49.2
N.H.	147.98	43.6
Indiana	146.82	35.1
Arkansas	146.21	50.0
S.C.	143.16	52.4
Nebraska	142.59	38.5
Illinois	137.28	17.0
Idaho	136.91	45.9
Iowa	131.91	42.8
Kentucky	130.91	47.7
S.D.	124.74	55.4
Wyoming	113.05	39.5

SOURCES.—Bureau of the Census and Office of Research and Statistics, Social Security Administration.

Mr. CLARK. This chart ranks States by the average amount of medicare medical insurance benefits paid to each beneficiary in fiscal 1976. While none of the 15 highest ranking States have populations that exceed one-third rural, all but one of the 15 lowest ranking States have significant rural populations.

The range of benefits between States is extraordinary. Average benefits in the District of Columbia, which is 100 percent urban, are 3.5 times as large as those in South Dakota, which is 45 percent urban.

There are several possible explanations for the evident urban bias of the medicare program. But surely one important reason is the fact that rural health clinics using extenders are not remibursable.

This medicare policy conflicts with several Federal health programs that support the training of nurse practitioners and physician's assistants. The Federal Government also provides start-up grants to health clinics that utilize extenders through the Appalachian Regional Commission, rural health initiative, and migrant health centers programs.

Secretary of Health, Education, and Welfare Joseph Califano identified this problem in a report to President Carter entitled "American Families: Trends, Pressures, and Recommendations". Among several examples of policies that Secretary Califano considered to have an adverse impact on American families was the "narrow range of medical benefits and health personnel which are reimbursable under medicaid and medicare."

Califano stated:

The Appalachian Regional Commission sponsors "physician extender clinics" in isolated rural areas but Medicare reimbursement is not permitted.

He also cited the examples of the HEW's rural health initiative and Robert Wood Johnson Foundation clinics, which face financial problems because of the medicare extender policy.

The policy not only discriminates against rural citizens in communities that have such clinics, it also discourages the establishment of additional clinics in medically underserved areas. I recently received a letter from a resident of the town of Albert City, Iowa—population 183—typical of communities across the Nation that are searching for some solution to their lack of health services. The letter, which I ask unanimous consent be printed, summarizes the problems as follows:

It now seems financially impractical for these doctors to hire a physicians assistant, thereby leaving the Albert City community without any medical services whatsoever. It seems most confusing to a rural community trying to secure medical services when a department of the government, mainly HEW encourages rural health care through a physicians assistant type of service and on the other hand disallows payment of Medicare funds.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ALBERT CITY ELEVATOR,
Albert City, Iowa.

Hon. DICK CLARK,
Russell Building,
Washington, D.C.

DEAR SIR: The small rural community of Albert City, Iowa, is located in Northwest Iowa, approximately 35 miles from Storm Lake, Iowa, which is the county seat and also where the hospital serving our community is located. For several years, efforts have been made by our community organizations to secure the services of medical service for our community. During the last six months we have made an arrangement with a group of doctors from Storm Lake to establish a Satellite Clinic in our town, providing us with part time medical services. As of February 1st, these doctors, as a result of losing some doctors in their practice will be unable to serve our community any longer. Therefore, again leaving us without medical service for our community.

However, we have been successful in recruiting a physicians assistant to move to the Albert City community as of February 1, 1977, working in conjunction with and for the Storm Lake doctors. The physicians assistant is to live in Albert City and to provide full time coverage with back up and supervisory service from the Storm Lake doctors on a part time basis.

Now for the problem. The problem has come up, due to HEW regulations forbidding payments to a physicians assistant of Medicare or Medicaid funds. It now seems financially impractical for these doctors to hire a physicians assistant, thereby leaving the Albert City community without any medical services whatsoever. It seems most confusing to a rural community trying to secure medical services when a department of the government, mainly HEW encourages rural health care through a physicians assistant type of service and on the other hand disallows payment of Medicare funds.

It is therefore imperative and most urgent for this law to be changed in order that our community is able to recruit and secure the services of this type of medical service for our community. Your early and urgent assistance in this matter will be much appreciated by the Albert City community.

If there is any way that we can provide other supportive assistance in securing proper legislation, feel free to call on us. I remain

Sincerely Yours,
BRUCE G. ANDERSON,
Member of The Albert City Clinic Committee.

Mr. CLARK. Mr. President, the bill we are introducing today would amend title XVIII of the Social Security Act to allow medicare, part B, reimbursement for the primary health services provided by rural clinics. Payment would be based on the costs associated with the provision of these services. This would avoid the fee-for-service reimbursement mechanism that encourages expensive crisis care, and at the same time permit reimbursement for health-related costs of operation.

The reimburseable services would consist of all primary care services and supplies that would be covered if they were furnished by a physician, in addition to others that are provided by a physician extender.

Clinics would be required to meet several criteria beyond providing primary health services in order to qualify for medicare reimbursement. Among the requirements are:

First, an arrangement for the regular review by physicians of all medical services;

Second, the preparation by the supervising physician and physician extender of medical orders for care and treatment;

Third, the availability of physicians for referral and consultation purposes and for advice and assistance in emergencies;

Fourth, clinical records for all patients;

Fifth, arrangements for referral or admission of patients into hospitals;

Sixth, written management policies;

Seventh, procedures for storing, administering, and dispensing of drugs; and

Eighth, procedures for utilization review.

All of the above requirements are intended to insure that medicare dollars are used to provide high-quality health services to beneficiaries. They also promote the existence of a health system involving clinics, physicians, and hospitals.

The bill addresses the problem where it is most acute—in rural areas. While there are undoubtedly medically needy Americans living in large cities, these people are more likely to have access to such alternatives as extender-staffed clinics with full-time supervising physicians, hospital outpatient clinics, and federally sponsored health maintenance organizations and neighborhood health centers.

Our definition of "rural" is broad enough to include all areas in the United States that would be generally accepted as rural in size and by nature. Only communities of 50,000 or more inhabitants, and their closely settled "fringes," would be excluded because they would be considered urban.

The other prerequisite would be that the area's supply of medical services is insufficient to meet the needs of its residents. At the minimum, this definition would include all rural areas that have been designated by HEW as "medically underserved." Using our definition of rural, at least 35 million Americans live in areas that would qualify for reimbursement.

This bill uses the term "physician extender" to signify the types of primary health providers that work in rural health clinics. While this currently is the most generally used term, we ought to explore other possible ways to clearly denote the concept of a primary health practitioner. The bill would define "physician extender" as one who is certified as an adult-family nurse practitioner by the American Nursing Association or as a physician's assistant by the National Commission on Certification of Physician's Assistants. Nothing in the bill would supercede any State law or policy regarding either the use of extenders or the provision of health services.

We are hopeful that the Senate Finance Committee will soon give its close attention to this matter, perhaps as a part of its consideration of changes in the mode of reimbursement under medicare. Rural Americans are looking to Congress for assistance, and the principle of equity demands that we respond promptly to their pleas.

I ask unanimous consent that this bill be printed in the RECORD, in addition to a transcript of a recent segment of the CBS Evening News, that brilliantly illustrates the basic problems of rural health care.

There being no objection, the bill and transcript were ordered to be printed in the RECORD, as follows:

S. 708

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1833 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"(i) With respect to rural health clinic services, payment shall be made, on behalf of an individual, on the basis of costs reasonably related to providing such services or on the basis of such other tests of reasonableness as the Secretary may find appropriate. The provisions of subsection (b) shall not apply to this section.".

(b) Section 1861 of such Act is amended by adding at the end thereof the following new subsection:

"(aa)(1) The term 'rural health clinic services' means such services and supplies as would otherwise be covered (under subsection (s)(2)(A)) if furnished as an incident to a physician's professional service, and such additional services provided by a physician extender, furnished by a rural health clinic to an individual as a primary care patient.

"(2) The term 'rural health clinic' means a facility which—

"(A) is primarily engaged in providing rural health clinic services;

"(B) has an arrangement with one or more physicians under which provision is made for the regular review by such physicians of all medical services furnished by physician extenders;

"(C) provides for the preparation by the supervising physicians and physician extenders of medical orders for care and treatment of clinic patients, and the availability of such physicians for such referral and consultation for patients as is necessary, and for advice and assistance in the management of medical emergencies;

"(D) maintains clinical records on all patients;

"(E) has arrangements with one or more hospitals for the referral or admission of patients requiring inpatient services or such diagnostic or other specialized services as are not available at the clinic;

"(F) has written policies to govern the management of the clinic and all the services it provides;

"(G) has appropriate procedures or arrangements, in compliance with applicable State and Federal law, for storing, administering, and dispensing drugs and biologicals; and

"(H) has appropriate procedures for utilization review.

For purposes of this title, such term includes only a facility which is not located in an urbanized area (as defined by the Bureau of the Census) where the supply of medical services is not sufficient to meet the needs of individuals residing therein (including such rural areas as are designated by the Secretary as areas having medically underserved populations under section 1302(7) of the Public Health Service Act, and clinics that receive a majority of their patients from rural medically underserved areas).

"(3) The term 'physician extender' means a physician assistant, nurse practitioner, nurse clinician, or other trained practitioner who is certified as a physician's assistant by the National Commission on Certification of Physician's Assistants or its successor, or who is certified as an Adult-Family Nurse Practitioner by the American Nursing Association or its successor, and who is legally authorized to provide any physician services, as defined in section 1861(q), in the jurisdiction in which such services are provided.".

(c) Section 1862(a)(3) of such Act is amended by striking out "in such cases" and inserting in lieu thereof "in the case of rural health clinics, as defined in section 1861(aa)(2), and in other cases".

(d)(1) Section 1861(s) of such Act is amended—

(A) by striking out "and" after the semicolon at the end of paragraph (8);

(B) by striking out the period at the end of paragraph (9) and inserting in lieu thereof "; and";

(C) by inserting after paragraph (9) the following new paragraph:

"(10) rural health clinic services."; and

(D) by redesignating paragraphs (10), (11), (12), and (13) as paragraphs (11), (12), (13), and (14), respectively.

(2) Section 1864(a) of such Act is amended by striking out "paragraphs (10) and (11)" and inserting in lieu thereof "paragraphs (11) and (12)".

(e) Section 1122(b)(1) of the Social Security Act is amended by inserting after the term "health care facility" the following: "(including a rural health clinic as defined in section 1861(aa)(2) of this Act)".

(f) The amendments made by this Act shall apply to services rendered on or after the first day of the third calendar month which begins after the date of enactment of this Act.

(g) Nothing in the amendments made by this Act shall be construed as superceding any State law regarding the use of physician extenders and the provision of health services.

CBS EVENING NEWS WITH MORTON DEAN

DEAN. Some of the good life in rural America is not so good anymore. The reason—the country doctor is an endangered species. Joan Snyder, CBS News, Clairfield, Tenn., reports.

JOAN SNYDER. He drives many miles a day over winding mountain roads to reach the people who need him. Jesse Walker, a country doctor practicing in Appalachia, a rare breed. The problem is: his kind of doctor is much too rare.

JESSE WALKER, M.D. Here in this section, I think it's about the same as it is all over the country. We have a problem getting not only doctors but other professionals also to come to the rural areas.

SNYDER. Government figures show that 35-million Americans living in rural areas are medically under-served, with too few doctors or none at all.

The little town of Walnut, Mississippi, has a fully equipped clinic, but it's silent and empty. The town can't find a doctor to work here. Since the last doctor left, after only a brief stay, this part of northeastern Mississippi has been among 700 areas defined as having a critical shortage of health care, many of them unable to attract doctors because of their isolation, lack of cutlural and educational facilities, and the long working hours of a country practitioner.

GATHA JUMPER [Chmn, N.E. Mississippi Devel. Corp.]. Some people get here sick and they don't have anywhere to turn to. And we need doctors here to treat our sick just like they do anywhere else in the United States.

SNYDER. But this year, in one of the neediest areas, Appalachia, the situation may get even worse. Thirty-nine health care clinics are coming to the end of a five-year funding period, provided by the government's Appalachian Regional Commission, and may be forced to shut down if they can't find money elsewhere. That would leave some of the most isolated and impoverished Americans without medical attention, like the more than 4,000 people served by two clinics in eastern Tennessee and Kentucky—coal mining country—where many mines have played out, deepening the poverty of the residents whose shacks often have no running water or indoor plumbing.

Many Appalachians have chronic diseases like heart trouble, diabetes and respiratory infections. Before the clinics opened people had to drive long distances over the mountains to find medical care—a difficult or impossible trip in bad weather. Clinic patients are afraid those days will return.

QUESTION. And how would you feel if the clinic had to close down?

Mr. JANICE HUDDLESTONE. Well, I'd feel bad about it because people up in here just wouldn't have no way of being doctored and, you know, getting medicines.

SNYDER. That's what worries the people who work at the Clear Fork Clinic in Tennessee and the Laurel Fork Clinic in Kentucky, both of which will run out of funds this April. The original idea was to make all 200 Appalachian regional clinics self-sufficient at the end of five years. But for many, it hasn't worked out that way, partly because the patients can afford to pay only low fees— as little as six dollars a visit. Another major financial problem has been the government's controversial policy of not paying the clinics for visits by Medicare patients unless a physician is on the premises—like Dr. Walker who works part-time at both the Tennessee and Kentucky clinics. But since there aren't enough doctors to go around, many patients are treated by what are called physician-extenders, who have medical training but no M.D.—like physician's assistant Chuck Ward, a former medical corpsman in Vietnam, who works at the Clear Fork Clinic.

One clinic service is home visits.

CHUCK WARD. Have you been having any dizziness at all?

ROY KING. Um-hmm.

SNYDER. Sally King, who has been treated for severe asthma attacks, worries about the future.

SALLY KING. Well I feel wonderful to know that we have medical care close if we—you know, in emergency. It's—It's a—an awful dreadful thing to think that you might die just for the need of medical help.

Dr. WALKER. I frequently tell doctors that if they're interested in providing service to people that really need it, that this is the

place to come and that they can get a lot more satisfaction out of that than they can dollars, sometimes.

SNYDER. To help solve the medical crisis in rural areas, the Appalachian Regional Commission is hoping for legislation this year that would provide Medicare compensation to physician-extenders. It's also been proposed that Medicare and Medicaid payments to physicians—now a good deal lower in rural than in urban areas—be raised to attract more doctors to needy areas and that more young people from rural areas be recruited for medical schools, so that they can return as country doctors.

But as they search for more government or foundation money, time is running out for the struggling clinics of Appalachia.

Mr. LEAHY. Mr. President, it is with great pleasure that I join the distinguished senior Senator from Iowa in introducing legislation to allow medicare reimbursements to cover the reasonable costs incurred by rural primary health care clinics. I think it is important to emphasize that in formulating this measure we took great care to assure that these health services are of high quality, including requirements that relate to the nature of the clinics and the training and supervision of the health practitioners involved.

The Health Manpower Act of 1976 contained a number of provisions to help alleviate the shortage of physicians and other health professionals in many parts of rural America. In addition, the Department of Health, Education, and Welfare has initiated a number of innovative projects for improving health care delivery in those areas. Notable in that regard is the increased use of nurse practitioners who treat patients under the supervision of physicians in nearby communities.

However, I have serious doubts whether we here in Washington can design and impose any system of health care on any community in Vermont or Appalachia or Wyoming, if that commitment and support does not exist at the local level.

It is a lesson all of us in Washington should have in mind as we try to solve the broad national crisis of maldistribution of primary care facilities.

One direction we should move in is to break down some of the barriers erected by the Federal Government which tend to discourage local efforts to provide rural care.

One perfect example of a barrier is the current policy of medicare prohibiting reimbursement to nurse practitioners and other physician extenders unless a doctor is physically on site.

This policy obstructs the access of many elderly and impoverished rural Americans to the health care they need. In some cases, it has forced badly needed clinics to close down. In others, they do not open in the first place, because of the threat of having to close down 1, 2, or 3 years after developmental funding runs out.

Let me cite one example of how this policy adversely affects an otherwise successful clinic.

Grand Isle County, which is an island community of 3,750 people between northern New York State and Vermont, connected at the north and south by roads to Vermont, had no primary care facility for years.

In 1974 the Champlain Islands Health Center was established primarily through the efforts of a local consumer health council and the visiting nurses association.

The key elements of the health center are: First, consumer involvement and governing responsibilities; second, utilization of nurse practitioners as primary care givers with physician backup and audit; third, an active volunteer organization, providing 24-hour telephone coverage; fourth, nurse practitioners who have been able to handle well over 90 percent of the cases, the remainder being trained elsewhere in the health system; and fifth, a cost effective system because nurses and physicians alike are used to their full potential.

The main problem at the center is long-range financing. To date, they have been able to put together a mix of funding primarily through foundation and Government developmental grants. When those sources dry up in a year or two, the center may be forced to close unless there is a change in the Federal reimbursement policy.

In that particular case I am glad to report that representatives of the center and the New Hampshire/Vermont Blue Cross/Blue Shield working cooperatively with my office were able to fashion a pilot reimbursement project for residents in the islands who carry Blue Cross. Periodically they calculate the percentage of patient population their members make up, and reimburse that percentage of the clinic's operating costs.

While this was a dramatic step in the right direction, it does not answer the larger health problems for rural America. The bill we have introduced today will go far toward that end by making medicare reimbursement available to rural health clinics.

Without reform of medicare to compensate these clinics adequately for the services they provide, hundreds of them, in rural communities throughout the Nation may be forced to close thereby denying millions of Americans the quality, accessible health care they require and desire.

REIMBURSEMENT AND THE RURAL HEALTH CLINIC

Mr. CHURCH. Mr. President, I am joining Senators CLARK and LEAHY in introducing legislation which will result in a more equitable reimbursement policy for physician extenders in serving in rural health clinics in order to help provide adequate health care treatment in the rural sections of our country which are medically underserved.

The Congress has intermittently discussed national health insurance proposals in the past decade. Throughout those discussions, I have repeatedly warned that financial access to the health care system in itself will not solve the health problems of Americans. Financial access without physical access means little.

We are beginning to come to grips with this problem of physical access. The first graduates of the National Health Service Corps program are now making their way to medically-underserved areas. But the question as to how many of these young physicians will remain in these communities after their obligation is fulfilled goes unanswered. Clearly, this program alone cannot begin to handle the immediate need for health care delivery in rural areas.

Therefore, the addition of the physician extender to the health care delivery system holds special promise for rural areas. These health care practitioners—physicians assistants, nurse practitioners, MEDEX, and similarly trained individuals—have provided the necessary link to health care access in rural communities throughout the Nation. Unfortunately, medicare reimbursement procedures do not recognize the enormous potential value of such personnel.

Under current provisions, the medicare program will not reimburse services provided by physician extenders in a clinic setting unless a doctor is present. Some communities can support a rural health clinic, but they have not been able to attract a full-time physician. Rural elderly persons receiving care from these clinics find that even though they are dutifully paying their monthly part B medicare premium—physicians services—they are denied reimbursement for their treatment at the clinic. Under the legislation offered today, medicare reimbursement would be given for care provided by a certified physician extender in a clinic setting with periodic review by a licensed physician.

To my way of thinking, this would correct an injustice in the medicare program without jeopardizing the quality of care for persons in rural areas. It is widely accepted that certain health care procedures generally associated with physician visits can be competently performed by persons with less professional training. The certified health care practitioner undergoes a degree of education and testing commensurate with the responsibilities undertaken. Further, this individual has direct access to a physician as well as to a hosptal nearby.

In Idaho, medicare reimbursement policy has been a major obstacle to the provision of care for elderly persons in rural areas. If medicare is to serve all persons in all geographic areas with some degree of equity, it is high time for corrective action.

Mr. President, I hope that the Senate Finance Committee will give prompt and favorable consideration to this proposed change in the medicare reimbursement system.

By Mr. MAGNUSON (for himself and Mr. PEARSON) (by request):

S. 709. A bill to amend the Consumer Product Safety Act and to aid in the enforcement of acts implemented by the Consumer Product Safety Commission; to the Committee on Commerce, Science, and Transportation.

CONSUMER PRODUCT SAFETY

Mr. MAGNUSON. Mr. President, I introduce for myself and Mr. PEARSON, by request, a bill to amend the Consumer Product Safety Act and to aid in the en-

forcement of acts implemented by the Consumer Product Safety Commission.

I ask unanimous consent that the letter of transmittal, the text of the bill, and the separate views and legislative recommendations of Commissioner R. David Pittle be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 709

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 7(b) of the Consumer Product Safety Act (15 U.S.C. 2056(b)) is amended by—

(a) inserting "(1)" immediately after "(b)",

(b) redesignating subparagraphs (1), (2), (3), and (4) as subparagraphs (A), (B), (C) and (D) respectively, redesignating "(A)" and "(B)" in newly redesignated subparagraph (D) as "(i)" and "(ii)" respectively and striking out the words "paragraph (4)(B)" in the last sentence and inserting in lieu thereof "subparagraph (D)(ii)."

(c) striking out the words "under this Act" in the first sentence and inserting in lieu thereof "as described in paragraph (1)(A) of subsection (a)", and

(d) adding at the end thereof the following new paragraph (2):

"(2) A proceeding for the development of a consumer product safety standard as described in paragraph (1)(B) of subsection (a) shall not be subject to the requirements of this section unless the Commission determines that the public interest requires otherwise."

SEC. 2. (a) Section 7(c) of the Consumer Product Safety Act (15 U.S.C. 2056(c)) is amended to read as follows:

"(c) Notwithstanding subsection (b), if the Commission determines that (1) there exists a standard which has been issued, adopted or proposed by any other Federal agency or by any other qualified agency, organization or institution, and (2) such standard, with such non-material modifications as the Commission determines are necessary, if promulgated under this Act, would eliminate or reduce the unreasonable risk of injury associated with the product, then it may, in lieu of proceeding under subsections (b) through (g) of this section, publish such standard as a proposed consumer product safety rule."

(b) Section 7 of such Act (15 U.S.C. 2056) is amended by

(1) redesignating subsections (d), (e) and (f) as (e), (f) and (g), respectively; and

(2) adding a new subsection (d) as follows:

"(d) If the Commission determines that an existing standard, other than a standard which meets the requirements of subsection (c)(2), with appropriate modification, if promulgated under this Act, would eliminate or reduce the unreasonable risk of injury associated with the product, then the Commission shall proceed under subsections (b) through (g) of this section; except that the invitation under subparagraph (D)(ii) of subsection (b)(1) may be limited to such appropriate modification of the existing standard."

(c) Section 9(a) of such Act (15 U.S.C. 2058(a)) is amended by striking out "(e)(1)" and "(F)" in the first sentence of paragraphs (1) and (2) and inserting in lieu thereof "(f)(1)" and "(g)" respectively.

SEC. 3. Section 5 of the Federal Hazardous Substances Act (15 U.S.C. 1264) is amended by adding the following new subsections:

"(c) Any person who is found by the Commission, after written notice and an opportunity for a hearing in accordance with section 554 through 557 of title 5, United States Code, to have violated any of the provisions of section 4 of this Act or sections 403(n), 502(p) and 602(f) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 343(n), 352(p), and 362(f)) shall be liable to the United States for a civil penalty not to exceed $2,000 for each such violation. Each distinct unit of product in violation of such provisions constitutes a separate offense for such purpose except that the maximum civil penalty shall not exceed $500,000 for any related series of violations. The Commission shall maintain a transcript of such hearing conducted pursuant to this subsection. The amount of such civil penalty shall be determined and assessed by the Commission, by written notice. Any civil penalty under this subsection may be compromised by the Commission, and may be deducted from any sums owing to the United States to the person charged.

"(d) Any person against whom a violation is found under subsection (c) may obtain review in the court of appeals of the United States for the circuit in which such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing notice of appeal in such court within thirty days from the date of such assessment and by simultaneously sending a copy of such notice by certified mail to the Commission. The Commission shall promptly file in such court a certified copy of the record upon which such violation was found and such penalty assessed as provided in section 2112 of title 28, United States Code. The finding of the Commission shall be set aside if found to be unsupported by substantial evidence, as provided by section 706(2)(E) of title 5, United States Code.

"(e) In determining the amount of such penalty, the Commission shall take into account the nature, circumstances, extent, and gravity of the violation committed and, with respect to the person found to have committed such violation, the degree of culpability, and history or prior offenses, ability to pay, effect on ability to continue to do business, and such other matters as justice may require.

"(f) If any person fails to pay an assessment of a civil penalty after it has become final and unappealable, or after the appropriate court of appeals has entered final judgment in favor of the United States, the Commission shall recover the amount assessed in the district court for the district in which such person resides or has his principal place of business. In such action, the validity and appropriateness of the final order imposing the civil penalty shall not be subject to review."

SEC. 4. The Act to require certain safety devices on household refrigerators shipped in interstate commerce (15 U.S.C. 1211) is amended by—

(1) redesignating sections "3", "4", and "5"; as sections "4", "5", and "6" respectively;

(2) striking the words "Secretary of Commerce" in newly redesignated section 4 thereof; and

(3) inserting the following new section 3 after section 2 thereof:

"SEC. 3. (a) Any person who is found by the Commission, after written notice and an opportunity for a hearing in accordance with section 554 through 557 of title 5, United States Code to have violated any of the provisions of the first section shall be liable to the United States for a civil penalty not to exceed $2,000 for each such violation. Each distinct unit of product in violation of the first section constitutes a separate offense for such purpose except that the maximum civil penalty shall not exceed $500,000 for any related series of violations. The Consumer Product Safety Commission shall maintain a transcript of such hearing conduct pursuant to this subsection. The amount of such civil penalty shall be determined and assessed by such Commission, by written notice. Any civil penalty under this subsection may be compromised by such Commission, and may be deducted from any sums owing by the United States to the person charged.

"(b) Any person against whom a violation is found under subsection (a) may obtain review in the court of appeals of the United States for the circuit in which such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing a notice of appeal in such court within thirty days from the date of such assessment and by simultaneously sending a copy of such notice by certified mail to the Consumer Product Safety Commission. Such Commission shall promptly file in such court a certified copy of the record upon which such violation was found and such penalty assessed as provided in section 2112 of title 28, United States Code. The finding of such Commission shall be set aside if found to be unsupported by substantial evidence, as provided by section 706(2)(E) of title 5, United States Code.

"(c) In determining the amount of such penalty, the Consumer Product Safety Commission shall take into account the nature, circumstances, extent, and gravity of the violation committed and, with respect to the person found to have committed such violation, the degree of culpability, any history of prior offenses, ability to pay, effect on ability to continue to do business, and such other matters as justice may require.

"(d) If any person fails to pay an assessment of a civil penalty after it has become final and unappealable, or after the appropriate court of appeals has entered final judgment in favor of the United States, the Consumer Product Safety Commission shall recover the amount assessed in the district court for the district in which such person resides or has his principal place of business. In such action, the validity and appropriateness of the final order imposing the civil penalty shall not be subject to review."

SEC. 5. Section 30(b) of the Consumer Product Safety Act (15 U.S.C. 2079(b)) is amended by adding the words "as amended," after the words "Federal Trade Commission Act,".

SEC. 6. Section 27 of the Consumer Product Safety Act (15 U.S.C. 2076) is amended by adding the following new subsection:

"(m) Payments to participants in Commission proceedings related to rulemaking and in Commission adjudicatory proceedings may be made without regard to section 3648 of the Revised Statutes of the United States (31 U.S.C. 529)."

SEC. 7. Section 4(g)(1) of the Consumer Product Safety Act (15 U.S.C. 2053(g)(1)) is amended by adding after "a Director of Epidemiology", the words "a Director of Compliance".

WASHINGTON, D.C., *January 18, 1977.*

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, Washington, D.C.

DEAR MR. CHAIRMAN: In accordance with the provisions of Section 27(k)(2) of the Consumer Product Safety Act (15 U.S.C. 2076(k)(2); P.L. 92–573), I am pleased to enclose herewith the legislative recommendations of the Consumer Product Safety Commission to the Congress.

Section 1 of the bill would amend section 7(b) of the Consumer Product Safety Act (CPSA) to provide that consumer product safety standards consisting of requirements for labeling, warnings or instructions not be subject to the requirements of section 7 unless the Commission determines that the public interest so requires. This amendment would grant the Commission needed flexibility in its regulatory development program

by giving the Commission the option of omitting the detailed procedures of the offeror process or section 7 where the standard involving only labeling requirements and where the Commission concludes that use of the offeror process is unnecessary. Such a conclusion would be warranted, the Commission believes, where it is already aware of the specifications of an appropriate proposed labeling standard or believes that its staff can readily and more efficiently develop the proposed labeling standard. Regardless of whether the offeror process is utilized, promulgation of the standard would be subject to the public notice and comment procedures of section 9 of the Consumer Product Safety Act and 5 U.S.C. 553.

Under section 7(c) of the CPSA, the Commission may propose, without modification, an existing standard in lieu of accepting an offer under section 7 to develop a standard. Section 2(a) of the bill would amend section 7(c) to provide that existing standards which the Commission determines are appropriate for promulgation under the CPSA with certain non-material modifications, may be proposed directly by the Commission without having to go through the formality of inviting the public to recommend an existing standard or offer to develop one. This amendment would simplify the Commission's procedures where an appropriate standard exists. It would also enable the Commission to make non-material modifications of the existing standard so that it conforms with the format for a federal mandatory standard established by the Commission. In determining, under section 2(a) of the bill, whether an existing standard is, with non-material modification, appropriate for promulgation, the Commission will take into account, among other things, the degree to which the public participated in the development of the existing standard. Where the Commission concludes that the degree of public participation was inadequate, it will, in promulgating the standard under section 9, take several steps to insure meaningful public participation.

Section 2(b) of the bill would provide that when in the Commission's judgment an existing standard, with some material changes, would adequately protect the public from unreasonable risk of injury, CPSC would use the offeror process but the invitation to prospective offerors could be limited to such modifications as the Commission determines are necessary. The provision would permit the Commission to properly focus the effort undertaken by the offeror where a standard already exists so as to avoid unnecessary expenditure of Commission and offeror resources.

Sections 3 and 4 of the bill would, respectively, establish civil penalty authority under the Federal Hazardous Substances Act (FHSA) and the Refrigerator Safety Act. Under the present FHSA (and by extension, the Poison Prevention Packaging Act (PPPA)) the Commission is limited in enforcement matters to recommending that the Department of Justice seek criminal penalties or close the case. The amendments to the FHSA would give the Commission an additional option in tailoring a sanction to fit an offense and would provide the deterrent and flexibility needed to address the many gradations of violation with which the Commission must deal on a daily basis.

Section 5 of the bill addresses the problem of the limited options available to the Commission in enforcement of the Flammable Fabrics Act (FFA). Those options are to seek criminal penalties if a willful violation can be established or initiate a lengthy administrative proceeding leading to the issuance of a cease and desist order. We construe the Consumer Product Safety Act as granting to us all the authority that the Federal Trade Commission had in administering the FFA. Further, we believe that the amendments to the Federal Trade Commission Act, which would have been applicable to the FFA if it were still administered by the FTC, should be available to this Commission. The provisions of section 5 would constitute a clear statement that the Commission possesses the more efficient and stringent civil penalty authority the Congress has recently given the Federal Trade Commission, and which this Commission believes is necessary in enforcing the FFA.

Proposed text of the bill is attached. It is the hope of the Commission that the Congress will give favorable consideration to this recommended legislation.

Sincerely,

S. JOHN BYINGTON,
Chairman.

WASHINGTON, D.C., *January 26, 1977.*

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: On January 18, 1977, I forwarded to you, pursuant to section 27(k)(2) of the Consumer Product Safety Act (15 U.S.C. 2076(k)(2)), a draft bill containing certain legislative recommendations of the Consumer Product Safety Commission.

Enclosed herewith is a revised version of that bill, containing two additional proposed amendments to the Consumer Product Safety Act.

Section 6 of the revised bill would amend section 27 of the Consumer Product Safety Act (15 U.S.C. 2076) to authorize advance payments for participants in Commission proceedings. The Comptroller General of the United States has ruled that the Commission has authority to provide financial assistance to those participants in its proceedings (1) who represent an interest that can reasonably be expected to contribute substantially to a full and fair determination of the issues in a proceeding and (2) who are indigent or otherwise unable to finance their participation in a proceeding. The Comptroller General has also stated that 31 U.S.C. 529 prohibits the making of advance payments of public money absent specific statutory authorization to do so, and that payments for participation in agency proceedings must thus be made on a reimbursement basis.

The Commission agrees with the Comptroller General's expressed view that ". . . the inability to make advance payments might in some cases impede or prevent the Commission (in this decision, the Federal Communications Commission) from obtaining desired participation . . ." Participants for whom the Commission authorizes financial assistance in a particular proceeding might well have to forfeit such assistance and not participate in the proceeding whenever they are unable to meet their ongoing costs, pending reimbursement by the Commission. Since participants are authorized to receive financial assistance in part because of their lack of financial resources, such occurrences could be common. Accordingly, the Commission is recommending an amendment authorizing advance payments to participants in Commission proceedings.

Section 7 of the revised bill would amend section 4(g)(1) of the Consumer Product Safety Act (15 U.S.C. 2053(g)(1)) to provide that appointment by the Chairman of the Director of Compliance would be subject to Commission approval.

Sincerely,

S. JOHN BYINGTON,
Chairman.

WASHINGTON, D.C.,
January 25, 1977.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: On January 18, 1977 the Consumer Product Safety Commission forwarded to you in accordance with the provisions of Section 27(k)(2) of the Consumer Product Safety Act (15 U.S.C. 2076(k)(2)) the CPSC legislative recommendations to the Congress. Because I disagree with a portion of these recommendations, I have decided to submit an alternative provision for consideration by the Congress. My provision is included as an attachment to this letter.

The Commission's proposed legislation contains three separate changes: (i) a modification of the "offeror" process set forth in Section 7 of the CPSA (15 U.S.C. 2076 *et seq.*), (ii) the establishment of civil penalty authority under the Federal Hazardous Substances Act (FHSA) (15 U.S.C. § 1261 *et seq.* and the Refrigerator Safety Act (RSA) (15 U.S.C. §1211 et seq.) and (iii) a clarification of the civil penalty authority under the Flammable Fabrics Act (FFA) (15 U.S.C. § 1191 *et seq.*) I stand in complete accord with the Commission's proposed actions with respect to civil penalty authority under the FHSA, RSA, and FFA. However, I have major reservations with respect to the Commission's proposed language amending Section 7.

As I understand the proposals for modifying Section 7, the majority would do several things: (a) Section 1 of the bill would amend Section 7(b) of the CPSA to provide that consumer product safety standards consisting solely of requirements for warnings or instructions would not be drafted under the offeror process unless the Commission were to determine that the public interest so required, (b) Section 2(a) of the bill would amend Section 7(c) to provide that existing standards which the Commission determines are appropriate for promulgation under the CPSA, with certain *non*-material modifications, may be proposed directly by the Commission without having to go through the formality under the offeror process, of inviting the public either to recommend an existing standard or to offer to develop one and (c) Section 2(b) of the bill would provide that when in the Commission's judgment an existing standard, with some modification, would adequately protect the public from unreasonable risk of injury, the CPSC would be required to use the offeror process only to make those modifications of the existing standard which would be "material."

Before discussing my alternative proposals for amending Section 7, I would briefly describe the offeror process, its origins, and some of my criticisms of it.

When Congress established the Consumer Product Safety Commission, it required the Commission to follow the basic rulemaking provisions of the Administrative Procedure Act (APA) for setting safety standards. These provisions, set forth in Section 553 of the APA, are utilized by most Federal regulatory agencies and have been repeatedly found by the courts to comport with the strictest notions of constitutional due process. Section 9 of the CPSA is essentially the same as Section 553 of the APA, with one additional requirement. However, in addition to the basic APA provisions, Congress added an additional set of requirements for standards setting in the Consumer Product Safety Act. These additional requirements—the offeror process—are set forth in Section 7 of the Act.

Under the offeror process, the CPSC is generally prohibited from drafting standards by itself. Instead, the CPSC must publicly invite persons outside of the Commission to offer to develop a standard for the agency. These persons, called offerors, may be any interested member of the public including industry or consumer groups. Only after an offeror has completely drafted a standard and submitted it to the CPSC may we, if we believe it to be inadequate, alter it.

Once the offeror has completed its draft and the CPSC has reviewed and possibly made revisions to the standard, the CPSC then must either propose and promulgate the standard in accordance with Section 9 of the CPSA or withdraw the proceeding.

Thus, the offeror process, is in effect, "pre-rulemaking rulemaking."

One exception to the requirement that the CPSC utilize the offeror process arises with respect to existing standards. A person responding to an invitation for offerors, in lieu of applying to be an offeror, may submit for CPSC consideration an existing standard (e.g., an industry voluntary standard) which covers the consumer product for which the agency proposes to develop a consumer product safety standard. Should the Commission decide that the existing standard, if promulgated under the CPSA, would eliminate or reduce the unreasonable risk of injury associated with the product, then it may, instead of utilizing an offeror, propose the standard as a proposed consumer product safety standard in accordance with Section 9 of the CPSA.

The history of the offeror process is somewhat murky. Based on several conversations with persons involved in its development, I have concluded that it is a compromise approach to government rulemaking that resulted from disagreements betwen two divergent interest groups. One group of interests felt that government should generally defer to industry in standards setting. They preferred that government take industry voluntary standards and adopt them as mandatory standards. In contrast, the other group felt that industry could not stringently regulate itself and tried to minimize industry dominance of standards setting.

The present offeror process contains elements traceable to each group. Under Section 7, the offeror may be any interested person or group thus providing both industry and consumers opportunities to direct the development of standards. Furthermore, the offeror must provide the opportunity for public participation (including representatives of consumers and consumer organizations) during the development of such standard.

While I admire the inventiveness of the drafters of the offeror process, I should reemphasize that they crafted the process as a compromise solution to a conflict over basic rulemaking approaches. They had virtually no experience to indicate that the process would work. In short, it was an experiment and should not be considered sacrosanct.

What are the possible advantages of the offeror process? Many people initially felt that it would be a less costly way for the government to develop standards than reliance on "in-house" capabilities. Regretfully, this proposition would be accurate only if the CPSC relied solely on industry offerors. I would personally find such a situation unacceptable. On the other hand, to obtain consumer offerors, the CPSC must, in my judgment, spend substantial amounts of money. For example, Consumers Union, the only consumer offeror utilized thus far was paid $260,000 to manage the development of a draft standard on lawnmowers. Similar management costs are, to my mind, going to be required each time a standard is developed under the direction of a consumer offeror. Moreover, regardless of who the offeror is, these costs do not reflect the considerable research, redrafting, and rationale development undertaken by Commission staff after the offeror's submission. This has been the case for each of the proposed standards thus far developed under Section 7. Therefore, I do not believe that any major cost advantages exist through the use of this process.

The other major rationale behind the offeror process is that of increased "public participation." This notion arises because of the fact that under Section 7 procedures the Commission must rely on offerors who are members of the public rather than the agency itself to develop consumer product safety standards. Many people, including myself, believe that involvement of the "public" in the early, basic development of standards could produce significantly better standards than reliance solely on the traditional APA procedures. However, I hold this belief with major qualifications.

First, I do not believe that simply any "public" is adequate for standards development. Under the offeror system an industry group is a member of the public and, if accepted by the CPSC, may draft a standard for its own products. To some observers, this situation is similar to a fox setting visitation hours to a chicken coop. It is my view that while substantial industry involvement is essential in standards development, it is unwise for the CPSC to permit industry dominance of the process. The offeror procedures are susceptible to this type of dominance simply because industry has an extreme advantage in resources. That the Act requires that consumer participants be invited to participate on an offeror development team means little if these participants cannot obtain adequate technical expertise. Unless consumer involvement in the offeror process is equal in quality to industry involvement, I do not believe the phrase "public participation" is very meaningful.

Second, I do not believe that the offeror process contains the only feasible method of providing for public participation. In fact, it may be one of the most cumbersome, least effective ways of doing so. Yet the law requires that the CPSC utilize this process and only this process. I believe the Commission should be free to experiment with alternative forms of public participation.

I have additional concerns about the offeror process. I am skeptical about the ability of the process to produce standards on an expeditious basis. At the time of passage of the Consumer Product Safety Act, it was the judgment of Congress that 210 days after the Commission invites offers to develop a consumer product safety standard (including 90 days for the chosen offeror to prepare a draft standard) the Commission should receive the draft standard from the offeror, analyze it, and be in a position either to withdraw the standard's development or to propose the standard in the *Federal Register* substantially in accordance with Section 553 of the APA. The Congress recently extended the time period for offeror development by 60 days to permit the offeror 150 rather than 90 days to develop a draft standard. Frankly, based on our experience to date, I suspect that even this extension of time will be insufficient for most offerors.

In addition, I cannot avoid the view that the offeror process is as much a source as a solution to the problem of delay in standards development. There are several inherent periods of delay in the offeror process which seem unavoidable and which are relatively unproductive: (a) there is the period between the time the Commission decides that an unreasonable risk exists and the time the notice inviting offers is actually published in the *Federal Register*. This "pre-notice" period is subject to no time constraints; (b) there is the period after the notice is published in which the Commission receives and evluates offers to develop proposed safety standards. This period has averaged over 60 days; (c) there is the "start-up" period in which the offeror fully organizes the participants and becomes familiar with the current thinking of the Commission regarding work to be done. This period obviously is at the expense of productive time; (d) finally, there is the period after the submission of the draft standard in which the Commission must analyze and, if necessary, rewrite portions of the draft standard that are inadequate. Based on our experience to date, this period will be quite long. These delays trouble me because it is of primary importance that standards development proceed quickly.

Many observors are quick to point out that the Commission's evaluation period after an offeror has submitted a draft standard usually has taken as long as or longer than the offeror's development period. This is seen as evidence that the offeror system functions no more slowly than when the government drafts standards. I question this view. It is my judgment that much of the CPSC delay after the offeror's work is complete is directly attributable to the fact that the offeror has proposed either inadequate requirements or requirements that lack any legally sustainable technical rationale.

This point leads directly to my final concern about the offeror process. While it may be premature to assess the whole process on the basis of the several proposed standards submitted so far, I am deeply concerned about the ability of the offeror process to produce high quality standards. It is my judgment that several of the proposed standards submitted by past offerors were nothing more than "warmed-over" versions of voluntary standards initially determined to be inadequate by the Commission. Another proposed standard, while apparently innovative, obviously suffered from extreme haste resulting from the offeror's effort to meet statutory deadlines. And in almost every offeror proceeding, the Commission has found; it necessary to request CPSC staff to do additional background work and make substantial changes in the draft standard.

With this background established, I now turn to my misgivings about the majority's proposals.

First, I fail to see the value of amending Section 7 to provide for bypassing the offeror process simply to develop a standard consisting solely of requirements for warnings or instructions. Aside from the fact that the CPSC has never had occasion to develop such a standard, there already is a mechanism outside of the offeror process for requiring warnings or instructions. Under Section 27 (e) of the CPSA, the Commission may, by rule, require any manufacturer of consumer products to provide to prospective purchasers such performance and technical data related to safety as the Commission determines necessary to carry out the purposes of the Act. The CPSC General Counsel has concluded that Section 27(e) generally gives sufficient authority to the CPSC to require cautionary warnings or instructions. Given this interpretation, I am unable to see the benefit of Section 1 of the majority's proposed bill.

Second, and most important, I do not believe that the Commission should seek greater flexibility in Sections 2(a) and 2(b) of the bill to adopt existing standards without seeking similar flexibility to modify the offeror process when circumstances might dictate. Adding flexibility only in the one area is illogical and invites an undue temptation for the Commission to rely on existing standards rather than incur the expense and delay of the more innovative rulemaking required when starting with a clean slate.

In my view, the Commission should not rely primarily on adopting existing standards. Most existing standards relevant to CPSC activities are industry voluntary standards. While there has been significant upgrading of these standards in recent years, I still find many of them to be lacking in the stringency, clarity and comprehensiveness that should be the hallmark of good mandatory safety standards. Moreover, I remain to be convinced that these standards reflect a proper balancing of industry and consumer views.

This last point is extremely important to me. The fact that a nongovernmental group drafted an existing standard should not lead one to conclude that the standard incor-

porates an adequate degree of "public participation." The majority's letter of transmittal implicitly concedes this point when it states that "in determining, under Section 2(a) of the bill, whether an existing standard is, with non-material modification, appropriate for promulgation, the Commission will take into account, among other things, the degree to which the public participated in the development of the existing standard." While I agree with the spirit of the majority's intentions as expressed in their *letter*, I am struck by the extreme flexibility of the majority's approach as set forth in its proposed *bill*. The bill is silent regarding whether or not there must be "public participation." The bill does not require the CPSC to reject existing standards where public participation was inadequate or nonexistent nor does it set minimum standards for the type or degree of public participation necessary for an existing standard to be acceptable. It does not even require the Commission to make findings regarding whether or not the public participated during the drafting of an existing standard.

Even if one assumes that the Commission's letter of transmittal forms a strongly binding part of the bill's legislative history, the Commission retains very broad flexibility. The only course of action to which the letter commits the Commission where it concludes that the degree of public participation was inadequate in the development of an existing standard is that the CPSC will, "in promulgating the standard under Section 9, take several steps to insure meaningful public participation." No details are provided regarding what the "several steps" will be. This obviously permits great flexibility.

My point in highlighting the flexibility of the majority's bill with respect to adopting existing standards is not so much to criticize it as to contrast it with the extreme rigidity of the offeror process.

As I read the majority's bill, the CPSC could decide that an existing standard drafted by an industry group was an acceptable standard. It could do so even though the industry group excluded consumers from its drafting work. If the CPSC wanted to provide greater consumer participation before adopting the standard, it could convene a public meeting or meetings to discuss the standard. The CPSC could provide funding to consumers to assist them in evaluating the standard. Assuming that no major objections were raised to the standard, the CPSC could then proceed to adopt the standard in accordance with Section 9 of the CPSA.

By contrast, if the CPSC staff—rather than an industry group—were to develop the exact same standard even after extensive public meetings and consultation with industry and consumer groups, the Commission would be barred from taking any action to implement that standard until it had gone through the entire set of offeror procedures.

Extreme flexibility for adopting industry standards coupled with extreme rigidity in developing governmental standards (regardless of the degree of public participation) does not, in my opinion, serve the public interest well. I urge the Congress to provide the same degree of flexibility to the CPSC to modify the offeror process as it does to permit the CPSC to adopt existing standards.

One cannot help but note that the CPSC has been in existence for over three and one-half years. I know of very few people who believe that the offeror process has functioned smoothly or effectively during that time. My colleagues believe that the offeror process can be improved to the point where it will be expeditious and useful. I have sufficient reservations on this point that I am reluctant to endorse legislation that continues to tie us to the process.

The legislation I have proposed is fairly simple. It permits the CPSC to modify the offeror process if it believes circumstances require it to do so and retains the important base element of public participation. This gives the CPSC flexibility to experiment with other methods of providing public participation presently barred by the majority's proposal.

I hope that you will give favorable consideration to my proposal.

Sincerely,

R. DAVID PITTLE, Ph. D.,
Commissioner.

---

(1) Section 7(b) of the Consumer Product Safety Act (15 U.S.C. 2056(b)) is amended by (1) amending "(1)" between "(b)" and the word "A" in the first sentence of this paragraph and (2) by adding the following section.

(b)(2) Upon a finding that the procedures set forth in paragraph (b)(1) should be modified for the development of a particular consumer product safety standard, the Commission may, in lieu of those procedures, adopt alternative procedures (including proposal by the Commission and promulgation in accordance with Section 9). Such finding shall be published in the *Federal Register* and shall state:

(1) the manner in which the procedures set forth in paragraph (b)(1) will be modified;

(2) the reasons (e.g., the degree of technical complexity involved in the problem to be addressed, the Commission staff's experience and expertise regarding the problem, the period of time determined by the Commission to be appropriate for the development of the standard, or other factors) for modifying the procedures set forth in paragraph (b)(1); and

(3) the steps the Commission will take to include interested persons (including representatives of consumers and consumer groups) to participate in the development of the consumer product safety standard.

(2) Section 7(d)(1) of the Consumer Product Safety Act (15 U.S.C. 2058(a)) is amended by inserting "(b)(2) or" between the word "subsection" and "(c)" in the first sentence of the paragraph.

(3) Section 9(a) of the Consumer Product Safety Act (15 U.S.C. 2058(a)) is amended by inserting "(b)(1), (b)(2)," between "7" and "(c)" in the first sentences in paragraphs (1) and (2).

By. Mr. STEVENSON:

S. 710. A bill to amend the Export Administration Act of 1969; to the Committee on Banking, Housing and Urban Affairs.

U.S. EXPORT CONTROL AUTHORITY

Mr. STEVENSON. Mr. President, I am today introducing a bill to insure that U.S. export controls are based on a firm legal foundation and that they are implemented in accordance with the intent of the Congress. It would repeal the ability of the executive branch to rely on the Trading With the Enemy Act to deal with matters governed by the Export Administration Act. It provides that upon enactment, orders, rules, and regulations issued under the Export Administration Act may not be implemented under the authority of section 5(b) of the Trading With the Enemy Act. And it further provides that upon reenactment of the Export Administration Act, orders issued under the Trading With the Enemy Act to extend regulations previously issued under the Export Administration Act shall be null and void.

Mr. President, this legislation is needed in order to end uncertainty over the authority to regulate exports and to preserve the right of the Congress to determine U.S. export policy. At present, the legal foundation for the exercise of export controls is murky. The basic U.S. export control statute—the Export Administration Act—expired last September. However, regulations issued under that statute were reissued under the alleged authority of the Trading With the Enemy Act. But there is a serious question whether the Trading With the Enemy Act provides an adequate basis for such action.

The Trading With the Enemy Act is a broad, generalized, blanket grant of authority to the President to regulate transactions involving property in which any foreign government or national has an interest. It is to be used only in times of national emergencies. Its use when no real national emergency exists to carry out the policies of the Export Administration Act is of doubtful legality, is questionable as a matter of policy, and is a source of uncertainty in the exporting community. Its use raises serious question about the ability of the Congress to control executive branch discretion. And its invocation undermines the right of the Congress to prescribe U.S. export policy and to insist on conformity with the law.

The Export Administration Act is the basic U.S. export control statute. It sets forth U.S. export control policy in great detail. Among other things, it prescribes policy and procedures for regulating exports to protect the domestic economy from shortages, to further U.S. foreign policy objectives, to protect the national security, and to counter foreign boycotts against countries friendly to the United States. It is the statute which is intended to govern U.S. export control policy and practice on a regular and continuing basis.

The Trading With the Enemy Act, by contrast, is emergency legislation. It is intended to be used in times of war or national emergency. Since it is intended to give the President broad discretion to deal with true national emergencies, it contains little elaboration of specific goals and standards of procedure.

Mr. President, the bill I am introducing today would end the practice of relying on the Trading With the Enemy Act to carry out the policies of the Export Administration Act. It would make it clear that the Congress insists on use of the Export Administration Act, with all its specific standards, guidelines, and procedures to regulate U.S. exports. It would restore the power of the Congress to determine what U.S. export policy is to be. And it would end the temptation to veto or block Export Administration Act amendments, because of the availability of the Trading With the Enemy Act fallback.

This bill is not intended to deprive the President of the ability to protect the national security in times of national emergency. On the contrary, it is intended to remove uncertainty about the legality of Presidential action and to insure that such action is in conformity

with the requirements and intent of the law.

One of the difficulties with the present situation is exemplified by present antiboycott efforts. The Export Administration Act explicitly provides that it is U.S. policy to oppose restrictive foreign trade practices or boycotts imposed on countries friendly to the United States and to encourage and request U.S. exporters to refuse to take any action in support of such boycotts. The act further provides that exports may be controlled or restricted in order to effect these policies and establishes penalties for violations, as well as procedures for enforcement of rules and regulations promulgated to achieve these goals.

When the Export Administration Act expired last September, regulations implementing the antiboycott provisions of the Export Administration Act were reissued under the Trading With the Enemy Act. But the Trading With the Enemy Act, enacted in 1917, makes no mention of any antiboycott policy. U.S. exporters who are required to comply with these antiboycott regulations raise legitimate questions about the authority to compel such action. Similar questions could arise with respect to export restraints imposed, or monitoring operations begun, for domestic economic purposes. Clearly it would be preferable to insist on the use of the Export Administration Act, the statute that Congress intended for such purposes, rather than the vague and imprecise authority of the Trading With the Enemy Act.

Mr. President, an important issue is at stake: Once a statute has been enacted to deal with a specific matter, with guidelines, standards, criteria, and goals to govern Executive action, should the executive branch be permitted to rely on a different statute to accomplish similar objectives? The answer is no. Otherwise, why should Congress go through the exercise of review and revision of laws intended to govern Executive action if the Executive is free to deal with the same matter without the benefit of those laws? Executive action pursuant to generalized authority on matters Congress intends to govern by specific statute makes a mockery of the legislative process. It undermines the authority of the Congress to insist on compliance with the law. And because the Trading With the Enemy Act is used to justify all actions authorized by the Export Administration Act, bills to amend that act may be vetoed, or the act may be allowed to expire, with impunity. Congress, thereby, effectively delegates its responsibility to legislate to the executive branch.

Mr. President, this bill leaves intact the President's authority under the Trading With the Enemy Act to control foreign assets in times of war or national emergencies. The wisdom of retaining that statute for those purposes is a matter for future consideration. This bill merely insures that the Export Administration Act—the statute which is intended to govern export regulations—is in fact the statute which governs the exercise of that authority.

I ask unanimous consent that the bill be printed in the RECORD:

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 710

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 14 of the Export Administration Act of 1969 is amended—

(1) by inserting "(a)" after "Sec. 14."; and

(2) by adding at the end thereof the following:

"(b) After the date of enactment of this subsection, orders, rules, or regulations implementing the policies set forth in section 3 may not be implemented under the authority of section 5(b) of the Trading with the Enemy Act. Any order, rule, or regulation which was promulgated under the authority of section 5(b) of the Trading with the Enemy Act, on or after the date referred to in subsection (a) but prior to the date of enactment of this subsection, and which continued or reinstated any order, rule, or regulation which, prior to the date referred to in subsection (a), implemented the policies set forth in section 3 shall be null and void.".

By Mr. STEVENSON:

S. 711. A bill to establish a Federal Bank Examination Council; to the Committee on Banking, Housing and Urban Affairs.

FEDERAL BANK EXAMINATION COUNCIL ACT

Mr. STEVENSON. Mr. President, I am reintroducing today a bill to create a Federal Bank Examination Council. I introduced this bill last year after hearings in the Banking Committee disclosed that the lack of coordination among the bank regulatory agencies was impairing the regulatory process.

The General Accounting Office has just completed an extensive study of Federal bank regulation which confirms those concerns. The study documents numerous deficiencies in existing regulatory practices. Many of the defects are traceable to the absence of uniform standards and procedures among the three bank regulatory agencies. Many are traceable, too, to the failure of the regulatory agencies to coordinate their activities. "Competition in laxity" aptly summarizes the situation.

Mr. President. The Federal Bank Examination Council established by this bill would help rectify the deficiencies in the present system. The Council would be composed of the Comptroller of the Currency, a member of the Board of Directors of the Federal Deposit Insurance Corporation and a member of the Federal Reserve Board. The bill would authorize the Council to establish uniform Federal bank examination standards and procedures and recommend further improvements in bank supervision.

At present the three bank supervisory agencies—the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Federal Reserve System—each determine their own bank examination standards, use their own bank examination forms, independently train their own bank examiners, and follow different procedures for supervising banks. The lack of uniformity in Federal bank examination forms and procedures complicates the collection of data on the banking system. It adds to the reporting burden on banks, especially banks which are subsidiaries of multibank holding companies. Inconsistency of Federal bank examination standards produces discrepancies in the identification and supervision of problem banks. And the absence of coordinated bank supervisory procedures hampers the agencies in coping with bank failures.

Recently failed large national banks were supervised by the Comptroller's Office; were subsidiaries of bank holding companies supervised by the Federal Reserve System; and had deposits insured by the FDIC. All three agencies necessarily become involved in almost all cases of large bank failures. The Federal banking agencies have no coordinated system for early identification of banks and bank holding companies that encounter difficulty and for close supervision where there is a risk of failure. There is no standing mechanism for joint supervisory followup when banks are identified as problem banks by one or more of the three agencies. The rapidity with which the condition of a bank can change requires improved capability for the Federal agencies to act jointly and expeditiously. The Federal Bank Examination Council established by this bill would be responsible for working out cooperative arrangements among the three Federal agencies for identifying and supervising problem banks and for dealing with bank failures.

Experts on bank supervision have recommended that the three Federal agencies set up a computerized bank information network. The Federal Bank Examination Council could examine that recommendation as well as others that have been made to insure timely, accurate information on the condition of banks. It is especially important that the three Federal agencies not adopt information systems which are mutually incompatible or incomprehensible. The Comptroller of the Currency is presently implementing recommendations made by the consulting firm of Haskins & Sells for improvements in his office. The Council would review the actions underway and contemplated in the Comptroller's Office to determine whether the new procedures will be compatible, or can be rendered compatible with those of the FDIC and Federal Reserve System, and whether these changes should be adopted by all three agencies.

The Federal Bank Examination Council could also work toward a better relationship between State and Federal bank supervisory agencies. Most banks in this country are State chartered, subject to examination and supervision by State banking offices. Most State-chartered banks are insured by the FDIC and many are members of the Federal Reserve System, and thereby subject to examination and supervision by one of those two Federal agencies. The duplication of effort by State and Federal bank examiners could be reduced, perhaps even eliminated in many States, if Federal procedures could be established for the certification of State bank supervisory agencies. The Conference of State Bank Supervisors testified before the Banking Committee on March 19, 1976, that—

Capabilities of State banking departments have reached the point where the Conference believes that a State banking department upon filing a request with the . . . (FDIC) for authority to conduct its own examination of all State-chartered banks within its borders, should be granted this responsibility by the . . . (FDIC) in the absence of a clear showing by the . . . (FDIC) that the State banking department does not possess the capability necessary to warrant being certified.

Certification on a statewide scale is next to impossible given the absence of uniform examination standards and procedures at the Federal level. State banking agencies are forced to choose one of the three Federal agencies as a model for bank examination procedures or to establish an idiosyncratic State system.

The bill provides for formation of a liaison committee of State bank supervisory agency representatives which would work with the Federal Bank Examination Council to promote uniformity in State and Federal bank examination standards and procedures. The liaison committee and the Council could consider the possibility of certification and other measures to encourage the growth of efficient State bank supervisory agencies.

Creation of the Federal Bank Examination Council would leave unchanged the present Federal bank regulatory structure, but would not preclude changes in that structure in the future. Indeed, experience with the Federal Bank Examination Council should help to indicate whether structural changes are necessary, and if so, what those changes should be. The Council would move ahead in an area where change is clearly needed. Former Governor Holland of the Federal Reserve Board testified before the Banking Committee on December 8 last year that there is strong support at the Board for creation of a Council to focus on: "efficient and uniform modernization of bank examination and vigorous and consistent follow-up procedures when bank weaknesses are revealed."

The expenses of the Federal Bank Examination Council would be shared equally by the three Federal banking agencies, each of which is supported by assessments on the banks it examines, not by appropriated funds. Assessments on the banks need not increase. On the contrary, the costs of the Council should be more than offset by savings realized through standardization of examination forms and procedures, joint training of bank examiners, certification of State bank supervisory agencies, and other measures to reduce the duplication of effort and increase efficiency in the Federal bank supervisory process.

By creating a Federal Bank Examination Council with authority to establish uniform Federal bank examination standards and procedures, this bill would take a much needed practical approach toward resolving the problems which have arisen in bank supervision. Equally important, it would do so without altering the existing Federal regulatory structure and without eroding the dual banking system. If a Federal Bank Examination Council had been in existence, I believe we would have had fewer problem banks and fewer bank failures in recent years, and those failures which were unavoidable could have been dealt with more smoothly. We should adopt this bill now so that the Council will be in place to coordinate the Federal response to whatever difficulties may arise in the banking system in the future, as well as to improve the deficiencies already identified.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 711

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Bank Examination Council Act".

PURPOSE

SEC. 2. It is the purpose of this Act to establish a Federal Bank Examination Council which shall prescribe uniform standards and procedures for the Federal examination of banks by the Comptroller of the Currency, Federal Deposit Insurance Corporation, and the Federal Reserve System, and which may make recommendations to promote uniformity in bank supervision. The Council's actions shall be designed to promote consistency in such examinations and to insure progressive and vigilant bank supervision.

DEFINITIONS

SEC. 3. As used in this Act—

(1) the term "Federal banking agencies" means the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation; and

(2) the term "Council" means the Federal Bank Examination Council.

ESTABLISHMENT OF THE COUNCIL

SEC. 4. There is established the Federal Bank Examination Council which shall consist of the Comptroller of the Currency, the Chairman of the Board of Directors of the Federal Deposit Insurance Corporation, and the Chairman of the Board of Governors of the Federal Reserve System, who shall be the Chairman of the Council. The Chairmen of the Board of Directors of the Federal Deposit Insurance Corporation and of the Board of Governors of the Federal Reserve System shall serve until their successors are appointed to the Council and may, from time to time, designate other officers or employees of their respective agencies to carry out their functions as members of the Council. Each member of the Council shall serve as a member without additional compensation, but shall be entitled to expenses incurred in carrying out his official duties as such a member.

EXPENSES OF THE COUNCIL

SEC. 5. One-third of the costs and expenses of the Council, including the salaries of its employees, shall be paid by each of the Federal banking agencies. Annual assessments for such shares shall be levied by the Council based upon its projected budget for the year, and additional assessments may be made during the year if necessary.

FUNCTIONS OF THE COUNCIL

SEC. 6. (a) The Council shall establish uniform standards and procedures for the examination of banks to be applied by the Federal banking agencies (including a uniform examination report form), and may make recommendations for uniformity in other supervisory matters.

(b) The Council shall conduct schools for examiners and assistant examiners employed by the Federal banking agencies. Such schools shall be open to enrollment by employees of State bank supervisory agencies under conditions specified by the Council.

(c) The Council shall develop uniform reporting systems for banks, bank holding companies, and nonbank subsidiaries.

(d) Not later than April 1 of each year, the Council shall prepare an annual report for the preceding year on its activities.

STATE LIAISON

SEC. 7. To encourage the application of uniform examination standards and procedures by State and Federal bank supervisory agencies, the Council shall establish a liaison committee composed of five representatives of State bank supervisory agencies which shall meet at least twice a year with the Council. Members of the liaison committee shall receive a reasonable allowance for necessary expenses in attending meetings.

ADMINISTRATION

SEC. 8. (a) The Chairman of the Council is authorized to carry out and to delegate the authority to carry out the internal administration of the Council, including the appointment and supervision of employees and the distribution of business among members, employees, and administrative units.

(b) In addition to any other authority conferred upon it by this Act, in carrying out its functions under this Act, the Council may utilize, with their consent and to the extent practical, the personnel, services, and facilities of the Federal banking agencies and Federal Reserve banks, with or without reimbursement therefor.

(c) In addition, the Council may—

(1) subject to the provisions of title 5, United States Code, relating to the competitive service, classification, and General Schedule pay rates, appoint and fix the compensation of such officers and employees as are necessary to carry out the provisions of this Act, and to prescribe the authority and duties of such officers and employees; and

(2) obtain the services of such experts and consultants as are necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 9. This Act shall become effective ninety days after the date of its enactment.

By Mr. STEVENSON (for himself, Mr. PERCY, Mr. EAGLETON, Mr. DANFORTH, Mr. HUMPHREY, Mr. ANDERSON, Mr. STENNIS, Mr. LONG, Mr. EASTLAND, and Mr. JOHNSTON):

S. 712. A bill to authorize the construction of a replacement lock and dam the locks and dam 26, Mississippi River, near Alton, Ill., and Mo., and for other purposes; to the Committee on Environment and Public Works.

LOCKS AND DAM 26

Mr. STEVENSON. Mr. President, today I introduce legislation to authorize the construction of a new dam and single 1,200-foot lock to replace the existing locks and dam 26 at Alton, Ill., on the Mississippi River. The bill in most respects is the legislation approved by the Senate Public Works Committee last year. The authorization was reported to the Senate as part of the Omnibus Water Resources Development Act of 1976, but was deleted by the Senate because time did not permit it to fully consider the issue. To avoid jeopardizing the entire act, the Senate agreed to drop the authorization for locks and dam 26 with assurances that it would be taken up again at the earliest possible time in this Congress.

The need for a new lock and dam has been under discussion for many years. We have been inundated with studies dating back to 1964. It would not be hard

for anyone to build a cast for either side; all you have to do is pick your study and choose your statistics. The studies provide no clear-cut answers—and certainly they have not produced a common ground on which to agree. The positions are too entrenched by economics to permit consensus. And no more studies will produce—as if by magic—a compromise between competing economic interests. But there is one thing on which we should agree: The issue has been studied to death and neither side is going to convince the other. It is time to make a decision.

The debate is bogged down. But when all the rhetoric is stripped away, the facts remain. They are so simple and obvious that they are sometimes overlooked in self-serving scrambles to quote statistics and engineering theories. The facts are that the existing dam is in disrepair and the locks are inadequate to meet the traffic.

Locks and dam 26 was built in 1938 with an expected life span of 50 years and a maximum tonnage capacity of 73 million tons annually.

The dam was constructed on a site that has proved unstable. It has pilings sunk into a sand foundation. Consequently, there is a constant shifting and periodic cracking in the dam. Since the structure is just south of the confluence of the Mississippi and the Illinois Rivers, the heavy waterload has pushed the dam downstream by as much as 1 inch. The lock walls have shifted vertically toward the river—up to 1 foot in some places.

Theoretically, the existing locks can handle 73 million tons per year. Actually the tonnage is somewhat lower. Last year little more than 60 million tons of cargo transited the facility, and it is rapidly approaching full utilization.

Traffic is projected at 85 million tons in 10 years. Even if the existing facility was in good repair and could be counted on to operate efficiently and safely, it could not handle demand 10 years from now.

There is no escaping the reality that a larger lock is needed. A single 1,200-foot lock will have a capacity of only 86 million tons—an increase that will barely handle 1985 traffic.

With these facts in mind—and given the inevitability of traffic increases and the limitations of the existing facility—something must be done and soon. Each year's delay in the construction of a new lock and dam could raise the cost by $25 million.

Some claim that with extensive investments and repair, locks and dam 26 can be rehabilitated to meet traffic needs for the next 50 years. That possibility leaves me with little enthusiasm. It is too dangerous. An independent engineering review conducted by the General Accounting Office confirmed that the safest rehabilitation proposal would cost $341 million—almost as much as a new lock and dam. And this does not take into account operation and maintenance costs which could well make the final price tag higher. Other, less costly rehabilitation proposals were rated as uncertain, or theoretically feasible but based on assumptions that were not proven, and involving an unknown degree of risk. In some instances the cost estimates and proposed work were described as insufficient or too optimistic. The commerce of the Midwest—the economy of the world's most highly developed industrial and agricultural region—is too important to have its future hang on an uncertain or risky rehabilitation scheme.

Locks and dam 26 is a major commercial intersection of the central United States, serving essential traffic on the Mississippi, the Gulf Intracoastal Waterway, the Illinois, Missouri and Ohio Rivers. I for one would want to err, if err it is, on the side of prudence in dealing with the future of L. & D. 26. Cheaper is not better if that means subjecting $5 billion worth of midwest productivity, the value of the commerce through L. & D. 26 last year, to an "unknown degree of risk." How much more will it cost if the system fails? How would the Midwest deliver its goods to market in this Nation and the world? The recurring boxcar shortages during peak harvest periods already demonstrate that other modes cannot pick up the slack.

This year's extended subzero freeze is a good example of what we can expect if the system at L. & D. 26 fails. Barges are frozen in the rivers, causing a disruption of transportation services. Vital fuel supplies—fuel oil for homes and factories and coal for power plants—are not being delivered upstream.

In the final analysis this argument is not about the condition of locks and dam 26. It is an argument between competing modes of transportation for economic advantage. A modest 13-million-ton increase in capacity at Alton will not force the railroads to the brink of bankruptcy. Nor do I believe that we should aid the Nation's railroads by forcing an unnecessary and artificial constraint on their competitors by water. A new lock and dam at Alton will take 8 to 10 years to construct. That is more than enough time for the railroads to adjust to any transition, and more than enough time for the Congress to adopt a user fee system, if necessary, to offset any competitive disadvantages and pay costs of construction and operation. In the long run the financial condition of the railroads is dependent on factors other than 13 million tons of water cargo.

I am sympathetic to the railroads. I sit on the Senate subcommittee that has jurisdiction over railroad legislation. I want to do all I can to assure their well-being. But I draw the line when it is argued that we should perpetuate inefficiences in water transportation in order to aid railroads. It is bad economics and bad public policy.

The bill I am introducing is a limited proposal aimed at addressing all major concerns and criticisms about a new lock and dam.

We will hear the same arguments as last year: That this is the first step toward sneaking in a 12-foot channel on the Upper Mississippi River; that this is a back-door approach for a multibillion dollar replacement of all locks and dams on the Upper Mississippi and Illinois Waterway; and that a new lock and dam will not eliminate the bottleneck but only move it upstream. These objections received widespread circulation and are the product of misinformation and distortion. And so it is important to set the record straight and understand exactly what a new lock and dam at Alton will mean.

A new lock and dam will not mean a 12-foot channel on the Upper Mississippi River. The legislation I am introducing expressly prohibits it, and forbids any Federal official from even studying the possibility of deepening the channel. Every Member who supports a new lock and dam 26 opposes a 12-foot channel. The costs are prohibitive and the environmental damage too great.

I am not indifferent to the condition of the Mississippi River. My home is on the shores of the Mississippi. I know that river and love it. It is possible for the region to prosper and for the river to be preserved. This bill includes an idea advanced last year by our former colleague, Vice President MONDALE, to create an Upper Mississippi River Council for the express purpose of making certain that the environment and economics are given equal consideration in determining the uses of the river. The Council is charged with drawing up a master plan for the Upper Mississippi to make certain there is a proper balance between environment and economics.

This bill is not a back-door route to a multibillion dollar investment. The costs involved are simply those of replacing L. & D. 26. The multibillion dollar figure has been advanced time and again and makes no sense. Under the provisions of this bill, there will be a moratorium on all construction activities on the Upper Mississippi until the Congress adopts a master plan for the river. Even then, no construction to expand the capacity of the river can be undertaken unless specifically authorized by the Congress. A single 1,200-foot lock at Alton will not push the bottleneck upstream. Existing capacity at Alton is 73 million tons. A 1,200-foot lock will raise it to 86 million tons. The combined capacity of the two rivers upstream from Alton is 108 million tons—more than enough to handle any increase in traffic credited to a new lock at Alton. The one lock and dam downstream can handle about 140 million tons. The new lock at Alton will set the upper limit of tonnage for the entire system at 86 million tons out of a possible 108 million tons upstream.

These are the facts about locks and dam 26. It is in a state of disrepair and inadequate to meet the needs of the Middle West, and therefore, the Nation. The legislation is clear cut. There will be no 12-foot channel and no costs other than those involved at Alton. And if commodity projections hold true, there will be more than enough cargo for the rails and the barges. I am convinced that two locks will in time be needed at Alton. But I

have reluctantly come to the conclusion that the climate is such that we cannot authorize both now. I am willing to postpone consideration of a second lock in order to obtain authorization for the one lock and dam that is essential now. And if competing modes of transportation are unfairly affected, I would support a system of user fees. Indeed, this may be necessary in any event to finance the construction and operation of such projects as Locks and Dam 26.

Mr. ANDERSON. Mr. President, it is an honor for me to join Senator STEVENSON, along with Minnesota's Senior Senator, HUBERT H. HUMPHREY and our other colleagues from the Upper Mississippi River basin, in introducing S. 712, to authorize the construction of a replacement structure for locks and dam 26 on the Mississippi River near Alton, Ill.

As the Senate is aware, the issue of locks and dam 26 was a major one in the 94th Congress and prompted several legislative proposals, including one by Vice President MONDALE that contained many of the provisions in S. 712.

Mr. President, the issue of the upgrading of locks and dam 26 is not a new one to me. As Governor of Minnesota, I followed this project closely for several years.

This bill meets three very critical needs. It provides for the upgrading of an old facility. All parties to this issue agree that locks and dam 26 must be improved soon. Second, the project will ultimately relieve a chronic river commerce bottleneck that costs Minnesota shippers millions of dollars each year and delays delivery of important energy supplies. Third, it will impose a moratorium on any further expansion of the Upper Mississippi barge corridor, except for the new lock and dam at Alton.

Senator STEVENSON's bill prohibits any Federal activity aimed at building or even planning a 12-foot navigation channel. I am opposed to a 12-foot channel. It would have a disastrous effect on the ecology of the Upper Mississippi River. S. 712 directs that wildlife habitat lost through the construction at Alton be replaced on an acre-for-acre basis. It imposes a moratorium on all construction activities on the Upper Mississippi River until the Congress adopts a master plan for the river. It prohibits any expansion of the Upper Mississippi's traffic capacity unless specifically authorized by Congress.

I do not believe that the construction of a single 1,200-foot lock will adversely affect the ecology of the Upper Mississippi system, nor will it work a competitive hardship on the railroads and trucking industry which carry freight along the river corridor. These ill effects will occur only if we permit expansion beyond the current 9-foot channel or if we authorize further expansion above Alton. The bill I am cosponsoring explicitly forbids these projects.

The benefits to Minnesota commerce, which depends heavily on the Mississippi River, from this bill will be quite substantial. But S. 712 is more than a public works authorization bill. It is also designed to protect the environment of the Upper Mississippi River, in what I consider a foolproof manner.

Most arguments advanced against a new locks and dam 26 assume that this project is a thinly disguised wedge that will ultimately lead to the construction of a 12-foot navigation channel on the Upper Mississippi River all the way to Minnesota's Twin Cities.

After an extensive review of this project, I have concluded that this assumption is not correct. Neither are the predictions that a new locks and dam 26, constructed pursuant to this legislation, is simply stage one of a multibillion-dollar program that will irrevocably modify other Upper Mississippi locks to accomodate deep draft barges that require a 12-foot channel for navigation.

S. 712 does not authorize an environmentally disastrous 12-foot channel; S. 712 explicitly forbids it. Under our proposal not one Federal dollar can be spent even to plan or design a 12-foot channel unless Congress specifically authorizes it.

I recognize the long-standing and legitimate concerns of many conservation organizations regarding the protection of the Upper Mississippi River. I share the conclusion of my colleague, Senator STEVENSON, that this session the Congress must address the issue of Locks and Dam 26 expeditiously and with sensitivity to the environment. S. 712 is the vehicle and I request the conservation groups to carefully analyze the protections in this bill.

In my judgment, short of amending the U.S. Constitution, there is no more effective way of preventing the 12-foot channel. S. 712 also forbids any new construction on the Upper Mississippi River until the Congress itself adopts a master plan for the use of the river and its environs, and, even then no construction can commence in the absence of a specific act of Congress.

I believe these are effective restrictions which give the environment a clear parity with the economic needs of those who depend upon the barge traffic that flows up and down the river.

The railroad and trucking industries have expressed fears that a new lock at Alton will work a severe competitive hardship on them since they depend on trade within the Upper Mississippi corridor. I believe this one project will not have a measurable effect on the railroad and trucking industries whose economic health is as essential to Minnesota's economy as a healthy barge industry.

Mr. President, Senator STEVESON's bill represents a successful effort to recognize our region's economic and environmental needs. That is why I have added my name to it.

By Mr. STEVENSON:

S. 713. A bill to amend the Internal Revenue Code; to the Committee on Finance.

INVESTMENT TAX CREDIT

Mr. STEVENSON. Mr. President, today I am reintroducing a bill to insure that the investment tax credit is made available in all the circumstances intended by Congress. The measure is identical to one I introduced last year during debate on the Tax Reform Act.

I have no great brief for the investment tax credit but believe that as long as it is law, its benefits should be made available equitably and to all the beneficiaries intended by Congress.

A transaction has been called to my attention in Illinois where the credit is not available despite the fact that the transaction meets all the substantive tests for investment tax credit treatment.

This case involves the Chicago South Suburban Mass Transit District and the Illinois Central Railroad. In 1969, Illinois Central and Chicago South Suburban entered into an agreement calling for South Suburban to purchase 130 commuter rail cars and deliver them to Illinois Central in return for an approximate $13 million cash payment. The $13 million was to be used by the South Suburban Transit District to pay its one-third share of the total purchase price, with the remaining two-thirds to be paid for with a grant from the Federal Government under the Urban Mass Transit Act.

The transaction was completed during the period 1971 to 1973. When Chicago South Suburban took delivery of the cars from the manufacturer, Illinois Central made its $13 million payment to South Suburban, and South Suburban turned the cars over to Illinois Central. Since the Urban Mass Transit Act barred Illinois Central from taking title to the cars, they were transferred to Illinois Central under a lease, despite the fact that Illinois Central funds, not South Suburban funds, were used to pay the one-third local share of the total purchase price. Because Illinois Central is technically a lessee rather than a purchaser, it is not eligible for an investment tax credit for its $13 million investment, and because Chicago South Suburban is a nontaxable governmental entity, there is no investment tax credit for it to take or pass through to Illinois Central.

The result is, I believe, unintended and inconsistent with the purposes of the law. Illinois Central stands in the same shoes as a purchaser of new equipment and clearly should be treated as such for purposes of the investment tax credit. Its outlay of millions of dollars for new equipment is exactly the kind of behavior which the investment tax credit seeks to encourage in order to stimulate economic activity. In addition, the purchase of modernized railroad commuter equipment directly advances the Urban Mass Transit Act's goal of improving mass transit systems.

Mr. President, this amendment to the Internal Revenue Code would be retroactive to August 1, 1971, in order to insure that it covers this particular transaction. I do not know of other circumstances in which it would apply, though there may be some. The estimated revenue loss is $900,000.

Mr. President, after bringing up this measure last year as an amendment to the Tax Reform Act, I withdrew it at the

request of Senator LONG, who indicated that the Finance Committee would like to study it further. I hope that the Finance Committee will take swift action on it in this Congress in order to rectify an inequitable result at the earliest opportunity.

By Mr. RIEGLE (for himself and Mr. GRIFFIN):

S. 714. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Environment and Public Works.

CLEAN AIR ACT AMENDMENTS

Mr. RIEGLE. Mr. President, yesterday the Environmental Pollution Subcommitte chaired by the distinguished Senator from Maine, Senator MUSKIE, began to reconsider the Clean Air Act amendments debated at length last year by both the House and Senate. As many Members will recall, the amendments were denied final passage in the last days of the 94th Congress due to the Senate's failure to act on this legislation before Congress adjourned in October.

Last year's controversy centered on the schedule of auto emission control standards recommended by the bill's conference report for model year 1978 and for the years following. The controversy continues, and I am concerned that the Clean Air Act amendments will again be jeopardized by prolonged argument on this particular issue.

The debate over auto emissions standards is a complex one. In the last session of Congress, the House approved, on September 15, the schedule of auto emission standards introduced by Representatives JOHN D. DINGELL of Michigan and JAMES T. BROYHILL of North Carolina—and supported by EPA Administrator Russell Train—by a vote of 224 to 169. However, far stricter—as well as technologically and financially impractical—sets of standards were imposed on the automobile manufacturers by the Senate and by the final conference report on the Clean Air Act amendments. To the great concern of everyone in our economy who depends on the auto industry—particularly the auto companies who operate on a tight timetable in their yearly production cycles—no acceptable solution was agreed upon before Congress adjourned on October 1.

The death of the Clean Air Act Amendments Conference Report of 1976 in a Senate filibuster the final day of the 94th Congress left in place the statutory 1970 Clean Air Act auto emissions standards for 1978. These stringent standards for the model year 1978 cannot be met. The EPA, auto makers, both the House and Senate 1976 bills, and the conference report all endorse carrying the 1977 statutory levels into 1978. Foreign and domestic auto companies are equally convinced that the technology is simply not yet available to meet the standards in the original legislation.

The extension of the 1977 standards, however, died with the rest of the Clean Air Act amendments, and we now have a situation in which the auto companies are being asked to meet 1970 standards impossible to meet in time for production of their model year 1978 cars. Production of the 1978 cars must begin this summer, and test runs on these vehicles are being conducted now. But the manufacturers are running test vehicles at the emission levels recommended in the conference report, without any assurance that Congress will enact these standards in place of the original 1970 levels.

If Congress does not act, the manufacturers will be unable to start production of the 1978 models. This means a virtual shutdown of the auto industry, and with unemployment running at 7.9 percent nationally and at 9 percent in Michigan, such a shutdown would cause unnecessary damage to the industry.

An early legislative solution must be worked out to permit the production of the 1978 cars and also of cars in upcoming years. To alleviate this situation, I am today introducing the Mobile Source Emission Control Amendments of 1977. I am pleased to be joined in this effort by my good friend and colleague from the State of Michigan, Senator GRIFFIN, and I am pleased to report also that an identical bill (H.R. 2380) has been introduced in the other body by Representatives DINGELL and BROYHILL.

The mobile source emission control amendments contains the emissions standards recommended by Representatives DINGELL and BROYHILL last year. It is supported by Environmental Protection Agency—EPA—Administrator Russell Train and its scientific value is documented in the attached report entitled, "Analysis of Some Effects of Several Specified Alternative Automobile Emission Control Schedules," dated April 8, 1976. This report was prepared jointly by the Environmental Protection Agency, the Department of Transportation, and the Federal Energy Administration. It clearly shows the advantageous fuel and consumer savings of the mobile source emissions schedule. In addition, it shows that there are no appreciable air quality or health losses under our bill when compared to the auto exhaust standards in the 1976 Clean Air Act Amendments. Also attached is a summary of this report.

Briefly, the mobile sources bill phases in stricter air pollution control standards at a rate that will permit manufacture of fuel efficient automobiles, provide better job security for auto and related industry workers, and reduce air pollution; 1977 standards are maintained through 1979, tightened in 1980, and reduced to their lowest levels in 1982. This extension and phase-in of standards is critical to the U.S. economy, to the auto industry, and most notably to the millions of Americans employed in auto-related businesses. Part of my goal is to halt job dislocation in the auto industry and still improve the ambient air quality in the country. I believe that this emissions schedule will have a far more acceptable impact than that recommended by last year's conference report.

In addition, this bill is proven to be the most balanced in terms of continued clean air improvements, auto fuel efficiency, lower consumer costs, job production and protection, auto model availability, and would not lock out other potential engine emission control technology in research for today's cars or future models. Excellent progress has been made in reducing auto pollution standards at present levels—1977 levels—and we continue to make progress as older, high-polluting vehicles are replaced.

Present standards, for example, represent approximately an 83-percent reduction in hydrocarbon and carbon monoxide emissions and a 38-percent reduction in nitrous oxides emissions relative to uncontrolled autos. Continued replacement of obsolete high-polluting cars with low-emission new cars will reduce mobile source related air pollution well into the 1980's regardless of whether more stringent standards are adopted. The added air quality benefits obtained from moving to tougher standards are minute in comparison to the fuel and dollar cost that would be required. One recent study, dated March 22, 1976, performed by Prof. S. Fred Singer, department of environmental sciences, University of Virginia, for the National Science Foundation, concludes that the benefits and cost of achieving 1975 standards are about equal and the cost will exceed benefits—by as much as $13 billion—as tighter standards are adopted.

With respect to cost—in 1979, the conference committee standards would cost $255 more per car and would result in a 6-percent fuel economy penalty compared to the 1977 standards; this is equal to 27 million barrels of oil in the first year. In 1981, the recommended standards would cost $350 million more than the Dingell standards, and would result in an 8-percent fuel economy penalty over the Dingell standards, equal to 36 million barrels of oil in the first year. As well as ruling out the most promising engine alternatives now being developed—including the stratified charge, the diesel and the turbine—the increased prices, reduced model offerings, reduced fuel economy, and poorer driveability of cars meeting the conference report's standards would result in a loss of 1 million car sales per year, which is equivalent to a loss of 90,000 jobs in the auto industry and 140,000 more jobs in supporting industries. That is a total of 230,000 jobs lost.

It is apparent, Mr. President, that the standards for the years beyond 1980 are of equally vital concern to auto manufacturers. The car builders must meet exhaust emission test, but also must comply with the new mandatory fuel economy mileage standards of the Energy Policy and Conservation Act for the model years 1978 through 1985. It takes more time than the conference report

permits to be able to develop these systems adequately.

In addition to the auto emissions standards in the attached summary of the mobile source emission control amendments of 1977, the bill includes other emissions control sections affected by the Clean Air Act. These sections, as outlined, are essentially identical to the House-passed bill and the conference report of 1976. Errors in the conference report have been corrected and language refined. This bill meets the intent of the law and resolves other emissions issues as Congress intended in the amendments last year before the conference report died in the Senate filibuster.

Only the automobile high altitude emission control section has undergone any major revision from the conference report by the additional requirement that EPA hold new hearings and initiate new rulemaking proceedings regarding standards to be met by auto in operating in high altitude areas.

None of the controversial stationary source emission control provisions of the conference report of 1976 are included. Those issues can be handled in separate legislation so that urgent congressional response to auto-related mobile source controls will not be delayed. The mobile source emission control amendments we have introduced properly and expeditiously respond to the need for changes in the law.

Let me conclude, Mr. President, by emphasizing the severe economic consequences we will have to bear if the emission standards advocated in the 1976 conference report are adopted over those advocated by Representatives DINGELL, BROYHILL, EPA Administrator Russell Train, Senator GRIFFIN, and myself. To date we have not been totally successful in dealing with the turmoil of the country—7.9 percent of the Nation's work force is unemployed, 9 percent of Michigan's work force is unemployed, and fully 20 percent of Detroit's work force is unemployed.

Further, almost 10 percent of Michigan's work force is employed by the auto companies and this is equally true of other auto manufacturing States. These are the people for whom the conference report will cause continued economic problems.

The conference committee report works against the consumer and against energy conservation. In comparison to the mobile sources bill, it has serious implications for the U.S. economy which needs all the economic stimulus it can get. It would create higher prices, significantly waste gasoline, offer no real added health or air quality benefits, and result in higher maintenance costs to consumers.

In addition—and this is especially pertinent this winter—it would waste such large amounts of fuel under its tighter standards that to meet our national energy needs we would have to experience more damage to the environment through added oil drilling, construction of pipeline, and even added strip mining. It would result in wastefulness that would lead to greater demands for imported crude oil at the OPEC cartel's higher prices.

Michigan and the country as a whole cannot afford this unnecessary waste of energy. This winter's weather has rendered a state of emergency in Michigan and has caused untold economic damage and financial loss throughout the State. Other States are suffering equally disastrous problems. This bill will help avoid further discomfort and expense.

I urge my colleagues to support the Mobile Source Emission Control Amendments of 1977 as a best way to balance concerns of consumer needs, fuel efficiency, employment, and a healthy environment.

Mr. President, I ask unanimous consent that the materials I referred to above be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION SUMMARY OF MOBILE SOURCE EMISSION CONTROL AMENDMENTS OF 1977

SECTION 1—SHORT TITLE

SECTION 2—LIGHT-DUTY MOTOR VEHICLE EMISSIONS

This is the same Dingell-Broyhill provision which was overwhelmingly adopted by the House on September 15, 1976, by a vote of 224–169. It provides that automobiles manufactured during model years 1978 and 1979 meet the same emissions standards applicable for model year 1977, that is—1.5 gpm hydrocarbons, 15.0 gpm carbon monoxide, and 2.0 gpm oxides of nitrogen. For model years 1980 and 1981 the standards are .9 gpm HC, 9 gpm CO, and 2.0 gpm NO_x. For 1982, and subsequent model years the standards require a full 90 percent reduction in emissions of carbon monoxide and hydrocarbons from the levels emitted in model year 1970. However, in regard to oxides of nitrogen, the EPA Administrator is required to set a standard for the 1982 and 1983 model years (and, at his discretion, later model years) at a level which he determines to be technologically practicable taking into account the cost of compliance, the need for such standards to protect public health and the impact of such standards on fuel consumption.

Thus, applicable Federal standards under this provision would be as follows:

	HC(gpm)	CO(gpm)	NO_x(gpm)
1978–79	1.5	15	2.0
1980–81	.9	9	2.0
1982 and thereafter	.41	3.4	(1)

[1] Adm. set by EPA.

SECTION 3—TAMPERING

This section broadens the existing prohibition of the Clean Air Act against knowing removal or tampering with emission controls to cover any person engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles or engines or who operates a fleet of motor vehicles, and specifies the penalties for violations. This section also provides that the prohibition does not require use of manufacturer parts for maintenance or repair.

SECTION 4—TESTING BY SMALL MANUFACTURERS

This section which originated in the House and was accepted by the House and Senate Clean Air Conference during the 94th Congress, limits certification testing for vehicle manufacturers with projected annual sales of 300 or less to 5,000 miles or 160 hours.

SECTION 5—HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

This section, which includes the same provision approved by the House and adopted by the Conference, exempts the adjustments of emission control systems of high altitude vehicles from the anti-tampering provision of existing law, if the adjustment does not adversely affect emission performance. The manufacturer is required to submit to the Administrator adjustment instructions.

In addition, this section adds a new provision which authorizes EPA to conduct a new rulemaking proceeding to determine the most appropriate method of implementing the Act's mobile source emission requirements for model year 1978 and thereafter with respect to light duty vehicles intended for principal use in high altitude areas. EPA is directed to consider the economic impact of any such regulation upon consumers, franchised dealers and the manufacturers, the state of the art of emission control technology, and the probable impact of such regulation on air quality in the affected areas.

SECTION 6—WARRANTIES AND MOTER VEHICLE PARTS CERTIFICATION

This section provides that the performance warranty under the existing Clean Air Act shall not be invalidated on the basis of the use of parts that have been certified in accordance with regulations which EPA shall promulgate within two years.

This section further provides that the performance warranty mandated by law shall be for a period of 18 months or 18,000 miles, which ever first occurs. It also requires notification in the manufacturer's maintenance instructions that maintenance or repair may be performed using certified parts.

SECTION 7—PARTS STANDARDS: PREEMPTION OF STATE LAW

When the parts certification program provided for in Section 6 is finally implemented, the States, except California, are preempted from adopting or enforcing any requirement applicable to the same aspect of the part.

SECTION 8—SULPHUR EMISSIONS STUDY

This section originated in Senate and was adopted by the Conference. The Administrator is required to conduct a study of emissions of sulfur compounds from motor vehicles and aircraft. Health and welfare effects of such emissions are to be reviewed and alternative control strategies are to be analyzed. This study will be reported to Congress by January 1, 1978.

SECTION 9—DEFINITION OF EMISSION CONTROL DEVICE OR SYSTEM

This section defines, for the purposes of Section 207, the term "emission control device or system" to mean catalytic converters, thermal reactors, or other components installed on or in a vehicle for the purpose of reducing auto emissions.

SECTION 10—RAILROAD LOCOMOTIVE EMISSION STANDARDS

Both the Senate and House passed a similar locomotive emission provision during the 94th Congress. This section is essentially the same as proposed by the Senate and agreed to by the Clean Air conferees. It amends existing law by adding a new provision which provides that the Administrator must promptly begin study and investigation of the air quality impacts of emissions from railroad locomotives, and of the technological feasibility of controlling such emissions. The Administrator must publish this study and propose emission standards reflecting the

degree of emission reduction achievable through the application of the best available technology taking into account the cost of compliance.

Within 90 days of proposal and after public hearings, the regulations must be promulgated, to become effective when the Administrator determines in consultation with the Secretary of the Department of Transportation that the requisite technology is available for application, taking into account the cost of compliance within such period.

After such regulations become effective, the Federal emission standards are preemptive.

SSECTION 11—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

This section establishes comprehensive procedures for informal rulemaking under the Clean Air Act, which would apply in lieu of the Administrative Procedure Act. The section (a) specifies the rules and actions to which such procedures will apply; (b) provides for establishment of a rulemaking docket for each of these rules or actions; (c) describes the material and data that are required for inclusion in the record and mandates that the Administrator must base any rule or other action solely on the information and data contained in the record; (d) establishes the procedures for participation in the rulemaking process, including cross-examination on material issues of disputed fact; (e) provides the standards of judicial review, including the "substantial evidence" test; (f) modifies certain deadlines for promulgation of rules; and (g) extends to 60 days the period of petitioning for judicial review of any such rule.

SECTION 12—AUTHORIZATIONS

This bill authorizes annual appropriations of $200,000,000 for fiscal year 1978, 1979, and 1980.

ANALYSIS OF SOME EFFECTS OF SEVERAL SPECIFIED ALTERNATIVE AUTOMOBILE EMISSION CONTROL SCHEDULES

This analysis is the product of a coordinated effort among the U.S. Department of Transportation, the Environmental Protection Agency, and the Federal Energy Administration to compare certain specific effects of several schedules for implementing more stringent automobile emission control standards. This analysis was prepared in response to a request to the Economic Policy Board, Executive Office of the President, by letter of March 19, 1976, from Congressman John D. Dingell.

The specific emission control schedules are set forth in detail in Appendix A. For convenient reference, the schedules are identified in this analysis as follows:

Schedule and brief description of schedule

DT: Amendment offered by Rep. John D. Dingell, and earlier suggested by EPA Administrator Train.

A-C: A combination of two similar schedules considered by House Interstate and Foreign Commerce Committee.

B: Schedule contained in the current Senate Public Works Committee Bill, S. 3219.

D: Schedule adopted by House Interstate and Foreign Commerce Committee (Brodhead Amendment) H.R. 10498.

E: Extension of present Federal standards indefinitely for analytical purposes.

ANALYTICAL ASSUMPTIONS

Any analysis of this type must make a number of assumptions. Two assumptions were necessary to permit the comparison of the effects on fuel economy of the various emission control schedules. These assumptions deal with anticipated changes in average vehicle weight and with the mix of vehicle size-classes sold, each of which factors has a significant effect on fuel economy.*

1. It has been assumed that major vehicle weight reduction programs will occur regardless of which emission control schedule is imposed. The projection of vehicle weight trends through model year 1985 used in this analysis is set forth in Appendix B. It is based on the announced plans of manufacturers to introduce lighter weight cars through the end of the 1970's and an assessment of engineering design practicality for the later years. It is not a judgment or prediction that manufacturers will in fact produce cars in accordance with the projection of average weight.

2. Average fuel economy of the new fleet depends not only on the weight of individual cars offered for sale, but also on the mix in which such models are sold. For the purpose of this analysis it has been assumed that the model mix listed below (which approximates the anticipated 1976 model year sales), will continue through 1985, i.e.: 40 percent full-size cars (6 passenger capacity); 30 percent medium-size cars (5 passenger capacity); 30 percent small-size cars (4 passenger capacity).

Cars in each size class in 1985 would be lighter in weight than cars in the same class in 1976 and would accommodate its designated number of passengers in reasonable comfort. The actual sales mix in future years will be determined by consumer desires, manufacturer's decisions, and actions by the Federal government. Nevertheless, this assumption about the sales mix of cars is reasonable for the purposes of this analysis.

In addition, one must recognize that there is considerable uncertainty in making predictions of the impact of technology that is not currently in use. Thus, with the exception of Schedule E, estimates for all emission control schedules are given in terms of a lower and an upper range, by reference to the fuel economy effects.

For schedule E, which would extend indefinitely the currently applicable emission standards, the assumptions used are spelled out in Appendix C. The low range estimates assume use of technology that is already in production, is being certified for use in 1977 cars, or has otherwise been extensively tested and demonstrated to be feasible by the auto industry. It tends to undervalue the technological improvements that may be made and used in the later years. The high range estimates assume that each manufacturer will be able to make full use of all promising technology that is potentially available even though such technology requires further development, comprehensive testing, and reduction to commercial production practice before it can be fully judged to be available, and thus it presents benefits that may not actually be achieved in the years under consideration. Appendix D gives a detailed discussion of emission control technologies assumed to be used for each range of estimates.

Finally, in each case in which a schedule provides for administrative discretion in establishing the NO_x standard that must be met, this analysis has assumed that the least stringent permissible NO_x standard would be established.

SECTION 1. FUEL ECONOMY IMPACTS OF THE SEVERAL SCHEDULES FOR EMISSION CONTROL

Estimated fuel economy impacts are presented in terms of miles per gallon for the new car fleet for each model year (Table 1a) and of percentage differences of fuel economy for each schedule relative to Schedule DT (Table 1b), rounded to the nearest full percent. New car fleet average fuel economy was 14 mpg in 1974 and 15.8 mpg in 1975.

Table 1c presents the lifetime fuel consumption of the new car fleet by model year for the DT schedule. It also presents the differences in lifetime fuel consumption in each model year for each schedule with the DT schedule as reference. Plus numbers represent consumption greater than Schedule DT and minus numbers represent savings in fuel. The analysis has assumed that the average car is driven 100,000 miles and that the annual new car fleet is 10 million cars. By comparison, the nation's automobile fleet today consumes approximately 75 billion gallons of gasoline annually, or about 5 million barrels of oil per day. As a perspective on the magnitude of these amounts, note that about 2 million barrels per day are expected to flow through the Alaskan pipeline when in full operation.

These tables reflect only the use of gasoline engine powered vehicles. The use of diesel engines in place of a small fraction (10 percent to 20 percent by 1985) of gasoline engines would result in a small but significant improvement in fuel economy and a resulting reduction in fuel consumption of 4 percent to 7 percent by 1985 over the improvements predicted for gasoline engines alone. The corresponding reduction in lifetime new car fleet fuel consumption for the 1985 model year cars ranges between 1.5 and 2.4 billion gallons. Table D-3 of Appendix D shows the impact of diesel vehicle on new car fleet average fuel economy.

* "Fuel economy" throughout this analysis refers to fuel economy based on the EPA composite city-highway driving schedule.

TABLE 1a.—ESTIMATED FUEL ECONOMY OF NEW CAR FLEET IN MILES PER GALLON BY MODEL YEAR, FOR EACH SCHEDULE OF EMISSION CONTROL

Model year	Emission control schedule								
	Low range				High range				Reference E
	DT	A-C	B	D	DT	A-C	B	D	
1976	17.6	→			17.6	→			17.6
1977	18.4	→			19.0	→			19.0
1978	20.7	19.7	20.7	20.7	21.1	20.9	21.1	21.1	21.1
1979	21.8	20.8	19.8	21.8	22.2	22.2	21.8	21.2	22.2
1980	21.7	20.6	20.2	20.6	23.1	22.9	22.4	22.9	23.1
1981	23.0	22.0	21.6	22.0	24.5	24.5	24.0	24.5	24.5

1985	37.04	1.87	.55	1.87	−3.37	33.67	3.78	0	3.78	0

SECTION 2. HEALTH BENEFITS

Tables 2a and 2b present the air quality effects of the emission control schedules while Tables 2c, 2d, and 2e present selected health effect indicators associated with HC, CO, and NOx, respectively, for the schedules. This analysis draws upon the recent comprehensive report on air quality and health consequences of changing automobile emission standards prepared by EPA for the Air Quality, Noise, and Health Panel of the Task Force on Motor Vehicle Goals Beyond 1980.

A high degree of stringency of stationary source control for automotive related pollutants was assumed in the analysis as was the imposition of programs such as inspection and maintenance to ensure minium deterioration of emission control over the lifetime of the car. Less optimistic assumptions would have produced less air quality improvement and a higher level of health effects. However, since the same set of assumptions has been applied to all schedules, the relative ranking of the emission control schedules in terms of air quality and health effects would probably not be affected.

There are two points that should be kept clearly in mind in considering the results presented here. First, it should be noted that the health effects indicators represent only a partial listing of the effects from high air pollution levels and are not intended to represent a statement of gross benefits from pollution control. Their primary significance is in the context of relative differences between emission control schedules.

Second, there is a high degree of uncertainty in making both air quality and health impact projections. The data base is limited and in some cases still subject to scientific debate, and the methodologies are subject to additional development. As a result the estimates below may well be too high or too low, and they may vary relative to each other.

Table 2a presents projections of the percentage reduction in ambient concentration of mobile source related air pollutants in 1990 in comparison with base years in the early 1970's for the DT emission control schedule. It also presents the percentage point differences for the other schedules relative to the DT schedule. Plus numbers indicate improvements in air quality while negative numbers indicate relatively poorer air quality. For all schedules, there is improvement in the oxidant and carbon monoxide air quality relative to the base years.

Table 2b summarizes the number of air quality control regions that are projected to exceed the national primary ambient air quality standard for each pollutant in 1990 for each emission control schedule.

Table 2c gives the projected numbers of aggravation of heart and lung disease in elderly patients, incidents of eye irritation, and excess headaches in 1980, in 1990, and for the total period from 1980 through 1990 due to oxidants which is controlled through reductions in hydrocarbon emissions. The effects in 1980 are predominantly due to the cars in use in 1980 which, for the most part, reflect less stringent hydrocarbon emission standards than the standards in the schedules considered in this analysis. The 1990 numbers are associated with the cars that are produced to meet the specific emission control schedule. There are other health effects of oxidants than those listed.

Table 2d presents some health effects indicators of ambient carbon monoxide; specifically, excess cardiac deaths and excess person hours of disability. As with oxidants, the health effects in 1980 are due to the older cars still on the road in that year. The 1990 health indicators reflect the cars that meet the standards in the emission control schedules.

Table 2e gives health effect indicators of oxides of nitrogen emissions in 1980, 1990, and cumulated for the period from 1980 through 1990. The health effect indicators are lower respiratory disease (chest colds, bronchitis, croup, pneumonia) in children and days of restricted activity due to lower respiratory disease in children. Even though the oxides of nitrogen emissions from automobiles decline relative to the peak year, oxides of nitrogen from other sources are projected to increase even more rapidly so that the health effect indicators are projected to increase from 1980 to 1990 for all emission control schedules considered in this analysis.

TABLE 2a.—PERCENTAGE REDUCTION IN POLLUTANT CONCENTRATIONS IN 1990 FROM BASE YEAR FOR SCHEDULE E AND PERCENTAGE POINT DIFFERENCES FOR OTHER SCHEDULES RELATIVE TO SCHEDULE DT

Pollutant	Percentage reduction schedule DT	Differences relative to schedule DT: schedules (percent) —			
		A-C	B	D	E
HC (Oxidant)	41	0	1	1	−5
CO	81	0	2	0	−5
NO_x	−17	13	9	11	−12

TABLE 2B.—NUMBER OF AIR QUALITY CONTROL REGIONS EXCEEDING AMBIENT AIR QUALITY STANDARD IN 1990 FOR EACH EMISSION CONTROL SCHEDULE

Pollutant	Emission control schedule				
	DT	A-C	B	D	E
HC (Oxidant)	31	31	30	31	32
CO	0	0	0	0	3
NO_x	8	8	8	8	9

TABLE 2c.—SELECTED HEALTH EFFECT INDICATORS FOR HYDROCARBON EMISSION (OXIDANT EFFECTS) IN 1980, IN 1990, AND CUMULATIVE FROM 1980 THROUGH 1990 FOR EACH EMISSION CONTROL SCHEDULE

Time period and emission control schedule	Projected health consequences		
	Aggravation of heart and lung disease in elderly patients (thousands)	Eye irritation (thousands)	Headache (thousands)
Base year	43	2,160	3,200
1980:			
DT	35	1,750	2,650
AC	34	1,725	2,630
B	33	1,700	2,600
D	36	1,775	2,680
E	36	1,800	2,700
1990:			
DT	9	525	1,000
AC	9	510	1,000
B	9	500	1,000
D	9	510	1,000
E	13	690	1,200
Cumulative 1980-90:			
DT	177	9,700	15,000
AC	176	9,700	15,100
B	175	9,400	14,800
D	177	9,700	15,000
E	210	10,900	17,100

TABLE 2d.—SELECTED HEALTH EFFECT INDICATORS FOR CARBON MONOXIDE EMISSIONS IN 1980, 1990, AND CUMULATIVE FROM 1980 THROUGH 1990 FOR EACH EMISSION CONTROL SCHEDULE

Time period and emission control schedule	Projected health consequences	
	Excess cardiac deaths (units)	Excess person hours of disability
Base year	20.0	330,000
1980:		
DT	1.4	32,000
A-C	1.4	31,000
B	1.4	20,000
D	1.4	23,000
E	2.0	33,000

TABLE 2d.—SELECTED HEALTH EFFECT INDICATORS FOR CARBON MONOXIDE EMISSIONS IN 1980, 1990, AND CUMULATIVE FROM 1980 THROUGH 1990 FOR EACH EMISSION CONTROL SCHEDULE—Continued

Time period and emission control schedule	Projected health consequences: Excess cardiac deaths (units)	Projected health consequences: Excess person hours of disability
1990:		
DT, A-C, B, D, E	0	0
Cumulative impact between 1980 and 1990:		
DT	5	83,000
A-C	5	80,000
B	5	67,000
D	5	83,000
E	5	110,000

TABLE 2e.—SELECTED HEALTH EFFECT INDICATORS FOR OXIDE OF NITROGEN EMISSIONS IN 1980, IN 1990, AND CUMULATIVE FROM 1980 THROUGH 1990 FOR EACH EMISSION CONTROL SCHEDULE

Time period and schedule	Projected health consequences: Excess attacks of lower respiratory disease in children (thousands)	Projected health consequences: Excess days of restricted activity from lower respiratory disease in children (thousands)
Base year	700	1,900
1980:		
DT	740	2,000
A-C	740	2,000
B	740	2,000
D	740	2,000
E	760	2,100
1990:		
DT	880	2,300
A-C	730	2,000
B	770	2,100
D	750	2,000
E	1,450	3,900
Total impact between 1980 and 1990:		
DT	8,100	21,000
A-C	7,350	19,800
B	7,550	20,400
D	7,450	20,100
E	11,100	30,000

SECTION 3. CONSUMER COST IMPACTS

The estimate for impact in terms of consumer costs is presented in terms of differences (in 1975 dollars) between each emission control schedule and schedule DT, for the low range and high range estimates. The cost differences are presented as undiscounted lifetime cost per vehicle, which consists for the sum of additional new car cost (sticker price), lifetime maintenance cost, and lifetime fuel costs at 60 cents per gallon for gasoline, assuming the average car is driven 100,000 miles during its life. Table 3a presents these estimates for the low range; Table 3b presents these estimates for the high range. Negative numbers represent cost savings. Appendix E is a discussion of the assumptions and methodology used in obtaining these results. For perspective, these costs should be compared to the lifetime cost of an average 1976 passenger car of approximately $16,700.

Table 3c presents the undiscounted lifetime costs for the entire new car fleet in each model year, parallel to Tables 3a and 3b, assuming 10 million cars in each model year. Note that the numbers in Table 3c are exactly 10,000,000 times greater than the numbers in Tables 3a and 3b. It is useful to note that the aggregate lifetime cost of the 1976 model year fleet, at 10 million cars, would be about 167 billion dollars. Undiscounted costs tend to over value costs incurred in later years relative to first costs. Discounting at a 10 percent rate and using the typical schedule of miles driven as a function of age of car would change the numbers in all three tables to some extent but probably would not change the relative rankings between emission control schedules.

APPENDIX A

EMISSION CONTROL SCHEDULES

The table below presents the emission standards assumed to be applicable to new cars in each model year for the analysis provided in this report

Schedule and brief description of schedule[1]

DT: Amendment offered by Rep. John D. Dingell, and earlier suggested by EPA Administrator train

A-C: A combination of two similar schedules considered by House Interstate and Foreign Commerce Committee

B: Schedule contained in current Senate Public Works Committee Bill, S. 3219.

D: Schedule adopted by House Interstate and Foreign Commerce Committee (Brodhead Amendment) H.R. 10498

E: Extension of present Federal standards indefinitely for analytical purposes.

Model year	Emission control schedule—HC/CO/NO_x, grams per mile: D(T)	A-C	B	D	E
1976	1.5/15/3.1	1.5/15/3.1	1.5/15/3.1	1.5/15/3.1	1.5/15/3.1
1977	1.5/15/2	1.5/15/2	1.5/15/2	1.5/15/2	1.5/15/3.1
1978	1.5/15/2	.9/9/2	1.5/15/2	1.5/15/2	1.5/15/3.1
1979	1.5/15/2	.9/9/2	.4/3.4/2	1.5/15/2	1.5/15/3.1
1980	.9/9/2	.4/3.4/2	.4/3.4/1	.4/3.4/2	1.5/15/3.1
1981	.9/9/2	.4/3.4/2	.4/3.4/1	.4/3.4/2	1.5/15/3.1
1982	.4/3.4/2	.4/3.4/2	.4/3.4/1	.4/3.4/2	1.5/15/3.1
1983	.4/3.4/2	.4/3.4/1.5	.4/3.4/1	.4/3.4/1.5	1.5/15/3.1
1984	.4/3.4/2	.4/3.4/1.5	.4/3.4/1	.4/3.4/1.5	1.5/15/3.1
1985	.4/3.4/2	.4/3.4/.4	.4/3.4/1	.4/3.4/4	1.5/15/3.1

[1] As applicable, for purposes this analysis, it has been assumed that in all cases the least stringent NO_x standard would be granted by waiver.

APPENDIX B

ASSUMPTIONS FOR AVERAGE WEIGHT OF CARS, BY MODEL YEAR

In this report estimates for fuel economy impacts of different emission standards have been normalized to reflect consistent treatment of the vehicle weight in each emission control schedule. It has been assumed that vehicle weight would successfully be reduced by the auto companies as a part of their ongoing weight reduction programs, and that the model mix of cars sold would remain steady at 40 percent large-size (6 passenger), 30 percent mid-size (5 passenger), and 30 percent small-size (4 passenger).

The average new car test weight in each model year which results from these assumptions is:

N.B.—Test weight is curb weight plus 300 pounds.

Average test weight

Model year:	
1976	3,820
1977	3,700
1978	3,600
1979	3,500
1980	3,410
1981	3,310
1982	3,220
1983	3,130
1984	3,040
1985	2,950

APPENDIX C

BASIS FOR ESTIMATE OF NEW CAR FUEL ECONOMY FOR EMISSION CONTROL SCHEDULE E

Emission control Schedule E, which assumes an indefinite extention of the present Federal standards of 1.5 g/mi HC, 15 g/mi CO, and e.1 g/mi NO_x, provides the most reliable basis for projecting fuel economy improvements because of the large amount of available test data. Even with Schedule E, there is still a range of estimates for fuel economy in the future because of the uncertainty about the actual choices manufacturers will make as to the technology to be used in their production cars.

The technical staff developed upper range and lower range fuel economy projections for Schedule E. The average, or mid-range, projection was then used as a reference case to estimate the effects of the other emission control schedules. Table C gives the three fuel economy projections. Each projection includes the assumptions about weight changes and model mix described above. The lower range estimate assumes that engines will be improved by 1985 to the point where all are as good as the best engines produced in model year 1975 and that upgraded transmissions featuring a lock-up clutch on the torque converter will be introduced in the early 1980s and used throughout the new car fleet by 1985. It also assumes some reduction in engine size to increase average efficiency with a corresponding increase in the time required to accelerate from 0 to 60 mph; (that is, 15 seconds as a representative figure for the whole new car fleet) and the phased-in use of oxidation catalysts with 70 percent conversion efficiency at 50,000 miles.

The upper range estimate assumes that the engines are improved to the "best 1975" level by 1978, that there is an increase in the average efficiency of engines, a greater increase in the 0 to 60 mph acceleration time by 1985 than that used in the low range projections, and the use of electronic engine controls.

TABLE C.—PROJECTIONS OF NEW CAR FLEET FUEL ECONOMY BY MODEL YEAR FOR SCHEDULE E WITH DIFFERENT TECHNOLOGY ASSUMPTIONS

[Miles per gallon]

Projection	Model year—									
	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985
Lower range	17.6	18.5	19.4	20.3	21.0	22.1	23.1	24.4	25.7	27.0
Upper range	17.6	19.4	22.8	24.1	25.2	26.9	29.7	30	32	32.5
Mid-range (used in analysis)	17.6	19.0	21.1	22.2	23.1	24.5	25.9	27.2	28.8	29.7

APPENDIX D

ASSUMPTIONS ON UTILIZATION OF TECHNOLOGY TO MEET MORE STRINGENT EMISSION STANDARDS FOR LOW-RANGE AND HIGH-RANGE PROJECTIONS

It was noted in the body of the report that different assumptions had been made for the *low range* and the *high range* fuel economy projections for each of the increasingly more stringent emission schedules, in each model year, and that these assumptions differed in terms of the degree to which advanced technology that currently may require further development would be utilized and the impacts of that technology on fuel economy.

Substantial additional successful development will be needed before all the technology discussed for the high range will be suitable and available for production. Therefore, the degree of uncertainty associated with the fuel economy projections for the high range is large. There is also a degree of uncertainty associated with the low range since it assumes the use of reasonably well developed and demonstrated technology and makes no allowance for improvements in fuel economy due to emission control technology which is now only in the early stages of development.

This appendix discusses the assumptions about the emission control technology and displays in Figures D–1 and D–2 the differences in application of these technologies for each of the two ranges. Finally, there is a discussion of the impact of diesel powered vehicles.

TECHNOLOGY FOR THE LOW RANGE PROJECTIONS

The low range fuel economy projections for the various emission control schedules use the concept of Emission Control Impact (ECI), which is defined here as the percentage difference between the fuel economy at one emission standard and the fuel emisison standard and the fuel economy at 1.5 HC, 15 CO, 3.1NO_x (emission control schedule E).* Negative values for ECI indicate a relative loss in fuel economy. Table D–1 displays the ECI values for each emission standard under consideration as a function of model year for cars in the 4000 lb. inertia weight class. (An x in Table D–1 for an emission standard and a model year indicates that no such ECI value was needed for any of the emission control schedules in this analysis.) The procedure used to develop the entries for Table D–1 is discussed.

The next step in the generation of the low range projections is to generalize the ECI values in Table D–1 for the 4000 inertia weight car to the total new car fleet. This generalization is done by multiplying the ECI value for any model year by the ratio of average test weight for that model year (from Appendix B) to 4000 lb. This process reflects the effect of weight upon ECI. The table of ECI values that results is then matched against the emission control schedules (Appendix A) to produce Table D–2, which presents the Emission Control Impact value for the entire new car fleet in any model year for each emission control schedule other than schedule E, which is the reference schedule. Table D–2 is used with the mid-range fuel economy projection for emission control schedule E from Appendix C to calculate for each model year the low range fuel economy projections presented in Section 1, Table 1a.

The starting point for the Emission Control Impact estimates of Table D–1 was the estimates of the effect of emission standards upon fuel economy reported by GM[1] for their 3500–4500 pound cars. These values were considered to be representative of present practice.

Next, these Emission Control Impacts are adjusted to account for the impact of the recent change in specifications of the durability test fuel. The fuel specification change results in improved oxidation catalyst durability, representing an improvement from 55 percent to about 70 percent oxidation catalyst efficiency at 50,000 miles. A two percent improvement in average fuel economy is assumed to result from the retuning of all engines in the new car fleet at the current emission levels, and a four percent improvement for the lower emission standards. It is assumed that a two-year phase-in period is sufficient for such engine retuning. Additional effects upon fuel economy of further developments in emission control technology beyond those indicated in Figure D–1 are not included in these low range projections. Also, the initial drop in fuel economy and improvement in later years that commonly occurs when emission standard levels are changed has not been included.

The emission control technology assumed representative in this low-range case for each emission standard is shown in figure D–1 (not reproduced). For the .4/3.4/2 case, an option exists to add the switched-out start catalyst to the emission control system. If this is done, it would improve the estimated ECI by two percentage points and increase the incremental automobile retail price by $50. No additional maintenance within 50,000 miles is assumed.

*Note that in the body of the report all comparisons are made with respect to schedule DT.

1985	-9.0	-13.5	-10.5	-13.5

TECHNOLOGY FOR THE HIGH RANGE PROJECTIONS

The underlying assumption for the high range projection of fuel economy for the different emission control schedules is that by 1978 all engine types would be improved in efficiency to the level of the best engine types produced in 1975 and that these engines will be designed and engineered to give their best fuel economy at emission standards of 1.5/15/3.1 and above while using 91 RON unleaded gasoline and the basic emission control system.

The basic emission control system utilized to meet emission standards in the range between 1.5 HC, 15 CO, 3.1 NO_x and 0.41 HC, 3.4 CO, and 1.0 NO_x consists of monolith oxidation catalyst, air injection, high energy ignition and proportional exhaust gas circulation (EGR). This basic emission control system offers a degree of emission control that is significantly greater than the minimum required to meet the standards at 1.5 HC, 15.0 CO, and 3.1 NO_x, and thereby permits the adjustment of engine parameters for improved fuel economy at the less stringent emission levels within the stated range of standards.

At 1.5 HC, 15 CO, 3.1 NO_x optimal fuel economy may be achieved through the use of the basic technology identified if a good EGR system that is truly proportional to engine load is used, such as back pressure modulated EGR which controls the EGR rate in proportion to the exhaust system pressure. In 1975 and 1976 few vehicles utilized this system (manifold vacuum modulated units were used) and optimum fuel economy was not achieved. The use of the better EGR systems in 1977 and subsequent years is expected to provide for continued fuel economy improvements of up to 10 percent relative to 1976. Additional improvements are possible at this emission control level, and at more stringent levels, with use of electronic engine controls.

To maintain optimal fuel economy calibration in the lower part of the range of standards, additional emission control hardware must be added to the basic system. GM and other investigators have shown that good fuel economy and stringent NO_x control down to 1.0 gm/mile NO_x can be maintained through a delicate balance of EGR rate, air/fuel ratio (A/F) and spark ignition timing, in some specific engines, although HC emissions increase as NO_x decreases. The key to maintaining good fuel economy and NO_x control involves the use of HC control measures that are complementary to the basic catalyst technology. The emission control components useful at various emission standards levels are discussed below. Figure D-2, which displays the emission control technologies used at the different emission standards, may be helpful in understanding the schedules and relationships.

At 1.5 HC, 15 CO, 2.0 NO_x the basic emission control is used, except EGR modulation, is accomplished electronically to obtain the optimum fuel economy level. In some cases modulation of the air injection rate electronically may also be required. The development of these techniques is required before they can be used, but it is assumed that development and application is completed within the next few years.

At 0.9 HC, 9.0 CO, 2.0 NO_x the basic emission control system is also used. The recalibrated A/F, EGR rate, and timing needed for NO_x control and optimum fuel economy result in HC emissions that are greater than can be handled by the primary oxidation catalyst, so exhaust port liners and a start catalyst need to be added to the basic technology at this emission control level to treat the excess HC and maintain optimum fuel economy. The port liners conserve heat in the exhaust gas and thus permit continued combustion of HC (and CO) in the exhaust system. The start catalyst is is a small exidation catalyst located very close to the exhaust mainfold. The size and location of this catalyst permits rapid warmup during cold-start of the engine (much faster than the larger main catalyst located much farther from the engine) which results in more complete oxidation of HC during cold start. (The cold start contributes a significant fraction of the HC emissions.)

At 0.41 HC, 3.4 CO, 2.0 NO_x, more stringent HC control is required. Either improved catalysts with higher conversion efficiencies, or improved fuel metering such as electronically modulated carburetors would provide the more stringent HC control. These carburetors would reduce HC by cutting off fuel during decelerations and more precise fuel metering during accelerations. Since the conventional carburetor goes extremely rich under both these conditions. Such carburetors require development.

At 0.41 HC, 3.4 CO, 1.5 NO_x and 0.41 HC, 3.4 CO, and 1.0 NO_x the same systems as used for 0.41 HC, 3.4 CO, and 2.0 NO_x is employed except that reoptimization of EGR rate, A/F ratio, and ignition timing to keep good fuel economy results in even more excess HC. To simultaneously achieve good fuel economy and emissions control requires the use of improved catalysts (conversion efficiency of 75 percent at 50,000 miles) and improved fuel metering. A catalyst change at 25,000 miles may be required to achieve good fuel economy for some engines that have difficult emission control problems.

At the 0.41 HC, 3.4 CO, 0.4 NO_x level a three-way catalyst system or a dual catalyst would be required. While good fuel economy has been demonstrated for both systems in some prototype test cars, 50,000 mile durability of the catalyst remains to be demonstrated.

Fuel economy penalties of up to 10 percent may be expected in the first year of application and catalyst change could be required. However, with maturity (3-5 years) these systems are expected to achieve optimum fuel economy.

Thus, the successful development of the above technologies could significantly minimize, if not eliminate, the emission control impact, at least down to the emission control level of .41/3.4/1.0. The emission control impact of further NO_x reductions to 0.4 gm/mi is more uncertain, but successful development at the 3-way and/or dual catalyst systems could also minimize the fuel economy impact.

IMPACT OF DIESEL POWERED VEHICLES

The technologies described above for both the high and low range and the resultant fleet average fuel economy and fuel consumption do not include consideration of using diesel engine vehicles. Diesel powered vehicles are now being marketed in the U.S. in small numbers. In view of the impetus for greater average fuel economy due to the new fuel economy standards, it is reasonable to assume that diesel vehicles will be used in greater numbers in the future unless their development nad use is impeded by low NO_x standards or non-competitive costs.

Assuming 10 percent market penetration by diesel engine powered cars by 1985 and applying this estimate to the low range fuel economy estimates given in Table 1a, average fuel economy would be about ⅓ MPG higher in model year 1980 and about 1 MPG higher in model year 1985. Assuming a 20 percent value for diesel engine market penetration by 1985, and applying it to the high range fuel economy projections given in Table 1a, the average fuel economy in model year 1980 would be ½ MPG higher and in model year 1985 about 1.5 to 2 MPG higher. Table D-3 gives the projected new car fleet average fuel economy for each emission control schedule based on these assumptions about diesel engine market penetration.

The lifetime new car fleet fuel consumption figures corresponding to Table 1c would be lower, i.e., about 2% lower in 1980 and 4% to 7% lower in 1985. Fuel savings in the 1985 new car fleet due to the use of diesel engine would range from 1.5 to 2.4 billion gallons. This analysis assumes that diesel vehicle fuel economy will be 25% greater than the improved gasoline engine vehicle fuel economy in 1985 based on the fact that most diesel engine vehicles are presently about 25% better than the best 1976 gas engines. There are other potential problems (such as odor, particulate levels, and noise) which diesel engines may need to overcome before full market penetration can be achieved. In addition, it must be noted that NO_x standards of 1.0 g/mi and below may affect the fuel economy of the heavier cars with diesel engines and may well preclude the development and application of the diesel engine for the heavier cars.

TABLE D-3.—NEW CAR FLEET FUEL ECONOMY PROJECTIONS WITH DIESEL ENGINE CARS INCLUDED, FOR EMISSION CONTROL SCHEDULES AND MODEL YEARS 1976 THROUGH 1985

[In miles per gallon]

Model year	Low range projection (10 percent diesel in 1985)					High range projection (20 percent diesel in 1985)

APPENDIX E

ASSUMPTIONS OF THE INCREMENTAL CONSUMER COST IMPACTS OF ALTERNATIVE EMISSIONS REDUCTION SCHEDULES

Section 3 of this report summarized the impact of total lifetime consumer costs per car and for the total new car fleet for the alternative emissions reduction schedules relative to Schedule DT. As with any estimate of future costs, the estimates are subject to uncertainty, especially concerning periods further in the future.

Table E–1 summarizes the technology assumptions (from Section 3) and estimated equipment and maintenance costs at the different emission levels for the low and high ranges. The major source for the cost estimates was the 1975 Emissions Control Status Report, submitted on April 5, 1976.[1]

Equipment costs were estimated under the assumption that all technologies (and therefore costs) for the 1.5/15/3.1 base case are included in *all* schedules and thus are not incremental. For the high range case, this means that some advanced technologies (such as electronic spark control) are included in the base case and appear in each of the alternative schedules, including the DT schedule.

TABLE E-1.—TECHNOLOGIES AND COSTS ASSUMED FOR ANALYSIS

Emission levels (HC/CO/NO_x)	Low range: Technologies assumed	Low range: Incremental cost estimates [1] Sticker price	Low range: Maintenance [2]	High range: Technologies assumed	High range: Incremental cost estimates [1] Sticker price	High range: Maintenance [2]
1.5/15/3.1	Oxidation catalyst, high-energy ignition, proportional EGR.	Base		Monolith catalyst, high-energy ignition, proportional EGR, electronic spark control.	Base	
1.5/15/2.0	Same as Base	0	0	Base plus electronic EGR, electronic air	$20	0
0.9/9/2.0	Base plus air injection	$25	$25	Base plus:		
				Port liners	(5)	0
				Start catalyst	(50)	0
					55	0

[4] 3 oxygen sensor changes.
[5] 3-way catalyst change on ⅓ of the cars.
( ) Indicates unit cost estimates.

SUMMARY OF THE DOT/EPA/FEA EMISSION CONTROL ANALYSIS

The interagency auto emission control analysis updates our understanding of the energy costs and air quality benefits of implementing more stringent federal emission standards. The report focuses on alternative emission reduction schedules for the period 1977–1985. Three schedules in the report are of special relevance to upcoming floor debate in the House on the Clean Air Act Amendments, H.R. 10498. Those schedules are: 1) standards offered by Congressman William Brodhead and adopted by the Interstate and Foreign Commerce Committee in the bill as reported, 2) a set of less stringent standards proposed by EPA Administrator Russell Train, and which will be offered by Congressman John Dingell, and 3) standards proposed by Congressman Henry Waxman which are more stringent than those of Mr. Brodhead.

	Brodhead: As adopted in H.R. 10498	Brodhead: NO_x waiver	Train, as proposed by Dingell	Waxman: As proposed in 3/18 press conference	Waxman: NO_x waiver
1977	1.5/15/2		1.5/15/2	1.5/15/2	
1978	1.5/15/2		1.5/15/2	.9/9/2	
1979	1.5/15/2		1.5/15/2	.9/9/2	
1980	.4/3.4/2		.9/9/2	.4/3.4/.4	1.5
1981	.4/3.4/.4	2.0	.9/9/2	.4/3.4/.4	1.5
1982	.4/3.4/.4	2.0	[1] .4/3.4/2	.4/3.4/.4	1.0
1983	.4/3.4/.4	1.5	[1] .4/3.4/2	.4/3.4/.4	1.0
1984	.4/3.4/.4	1.5	[1] .4/3.4/2	.4/3.4/.4	1.0
1985	.4/3.4/.4	[2]	[1] .4/3.4/2	.4/3.4/.4	[2]

[1] 1982 NO_x on Dingell/Train will be set administratively. The 2.0 NO_x is assumed for purposes of analysis.)
[2] No waiver.

The interagency study assumes that the average car is driven 100,000 miles and that new car sales will average 10 million units per year through 1985. Fuel economy per car is projected to improve with successive model years.

A final assumption is that "in each case in which a schedule provides for administrative discretion in establishing the NOx standard that must be met, this analysis has assumed that the least stringent permissable NOx standard would be established." This last assumption is potentially troublesome, in that it minimizes the potential fuel and economic penalty associated with discretionary standards.

For example, the Brodhead standard provides for a 1981–1984 NOx emission of .4 gm/mi, with administrative authority to raise the standard to as high as 2.0 gm/mi, if the more stringent standard is determined to be impractical or unachievable.

Question: Should an analysis of the Brodhead standards assume a NOx standard of .4 gm/mi, 2.0 gm/mi, or something in between? The interagency study uses 2.0 gm/mi. This results in a lower fuel and economic cost calculation than if .4 had been assumed.

Working with staff from the interagency

study to evaluate the case in which auto manufacturers are required to achieve a 1.0 gm/mi NOx emission under Brodhead from 1981–1984, and under Waxman from 1980–1984, our review of the interagency analysis leads to the following conclusions:

FUEL ECONOMY IMPACTS

The 1977–1985 Brodhead standards (as incorporated in H.R. 10498) would create additional engine demands and cause consumption of as much as 9.27 billion gallons of gasoline more than under Dingell/Train standards. Over a nine year period, this amounts to 67,000 barrels of oil per day. The Waxman standards would result in 14.89 billion gallons greater gasoline consumption than under Dingell/Train.

CONSUMER COST IMPACTS

In addition to increased operating fuel costs, more stringent standards require more expensive emission control equipment and maintenance. These costs are ultimately paid by the car purchaser/owner. The interagency study concludes that new car costs, lifetime maintenance costs, and lifetime fuel at 60 cents per gallon for gasoline, would total as much as 22.3 billion more under the Brodhead standards than under Dingell/Train. Waxman standards could cost consumers $29.67 billion more than Dingell/Train. Accounting for inflation would increase these added costs to roughly $30 bilion for Brodhead and $41 billion for Waxman.

AIR QUALITY BENEFITS

Estimates of air quality and health consequences of changing automobile emission standards in the interagency study were derived from a recent comprehensive report prepared by EPA for the Air Quality, Noise, and Health Panel of the Task Force on Motor Vehicle Goals Beyond 1980. Relative to mobile source related air pollutants in the 1970's, the Dingell/Train auto emission standards are projected to reduce hydrocarbons (HC) in 1990 by 41 percent and carbon monoxide (CO) by 81 percent. Nitrogen oxides (NOx) are expected to increase by 17 percent. Ambient levels of hydrocarbons and carbon monoxide are predicted to be no lower under either the Brodhead or Waxman standards than under Dingell/Train. The Brodhead standards would dampen the increase in nitrogen oxides to 6 percent, while the Waxman standards would lead to only a 4 percent increase.

Exactly 31 air quality control regions are expected to exceed ambient air quality standards in 1990 under all three auto emission standards.

By Mr. INOUYE (for himself and Mr. MATSUNAGA):

S. 716. A bill to amend title 5 of the United States Code to prohibit the consideration of certain matters in the determination of cost-of-living allowances for employees stationed outside the continental United States; to the Committee on Governmental Affairs.

Mr. INOUYE. Mr. President, I rise today to protest an inequity being imposed upon some of our American military men and their dependents and to propose a bill for their relief.

Thirty years ago the Congress enacted a law to provide the payment of a cost-of-living allowance, COLA, to certain Federal employees in Alaska, Guam, the Virgin Islands, Hawaii, and U.S. possessions. The purpose of this bill was not to penalize Federal employees who were stationed in U.S. posts where the cost of living was far higher than on the mainland. Basically, the system uses Washington, D.C. as a reference point and then attempts to compensate Federal employees for their higher cost of living, if any, up to a maximum of 25 percent of their basic pay.

To carry out this program the Civil Service Commission annually conducts surveys in metropolitan Washington, D.C. and in the areas entitled to the allowance. It then evaluates and adjusts the respective COLA's accordingly.

This year the Civil Service Commission adopted some changes in computing the cost-of-living allowances in Hawaii. Without going into the details of these survey changes, the net result is that the Civil Service Commission reduced and later eliminated the COLA for those employees who had Federal housing and access to commissary and exchange facilities. To those employees that had neither of these benefits the Civil Service Commission raised their COLA to 17.5 percent.

The principal victims, and the Civil Service estimates there are some 15 percent of all Federal employees directly affected, of this new and arbitrary ruling are veterans and their dependents. I would have no argument that the provision of housing or commissary and exchange privileges, given as a direct result of Federal employment, are grounds for some reduction in a cost-of-living allowance. However, benefits earned as a result of military service should be entirely separate from salary received as a civilian employee. For their service to their country, whether it be as disabled war veterans, retired military personnel, active-duty personnel or their dependents, our counrty has seen fit to compensate these individuals with access to commissary and post exchanges. These privileges were earned. They were awarded by Congress irrespective of the financial conditions of the individual recipients. It was not, and is not, the intent of Congress that our military personnel and their dependents be penalized by the administrative decision of a Government agency for benefits they accrue because of other Government service.

Under the Civil Service ruling any general schedule employee who has access to the commissaries or exchanges in Hawaii must forfeit the 17½-percent COLA. You now have a situation where two people, working side by side, doing the same job will receive vastly different salaries. For example a $10,000-a-year worker with a 25-percent State and Federal tax burden will be taking home without COLA $7,500. The same worker with COLA will have a take-home pay of $9,250. What added service has the second worker performed to qualify for this added income?

I would, in addition to disputing the justification for this reduction, also dispute the accuracy of the Civil Service's calculations. While some savings are, indeed, made by purchasing in commissaries and exchanges I cannot see how, with any reasonable stretch of the imagination, the Civil Service can determine that a person with an aftertax income of $7,500 is going to save $1,750 by such purchases. Many with commissary privileges find it inconvenient to shop there by reason of location alone.

At a higher level of income, the Department of Labor estimates that a family with a gross income of $22,500 would spend $6,851 for food, clothing, and personal care items; that is, those items available in commissaries and PX's. One might contend that commissary and PX shopping will save the purchaser between $650 and $1,000 a year on these items. But, the new penalty on workers at their level is not $650, not $1,000, not even $2,000 but rather almost $4,000.

Further, the Civil Service Commission has restricted its punitive action only to those with access to commissaries and PX's. This means that those Federal employees who are the children of those with these privileges or living with the recipients of these benefits will continue to receive them indirectly and also receive their COLA bonus.

I believe the Civil Service Commission has gone too far. In its zeal to create a more equitable system it has, indeed, created a less equitable one. It has, without proper authority, penalized those whom Congress has seen fit to reward for service to their country. It has penalized them to a degree far beyond the potential benefits that accrue to them as a result of these purchasing privileges. And lastly, the Civil Service Commission has not closed any of the loopholes so that those who receive their benefits indirectly are treated in the same manner.

There are two major issues to deal with. The first relates to whether persons having commissary and PX privileges as a result of benefits given to them by Congress should be singled out and penalized by a Government agency without congressional authorization. The second issue relates to the Commission's methodology in determining the monetary value of these benefits.

The bill that I am introducing will restore to these people the benefits to which they are entitled. I would expect that the hearings on this bill would also demonstrate that the Civil Service Commission has mistakenly overvalued the monetary benefits of commissary and PX privileges.

I urge that the appropriate committee begin hearings as soon as possible so that the Congress can undo the wrong that has been done to those whom we most especially wanted to reward.

Mr. President I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 716

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (a) of section 5941 of title 5, United States Code, is amended by adding at the end thereof the following new sentence: "No determination of any rate of any allowance or of any area, group, or class to which such rate applies which is made under regulations prescribed pursuant to this subsection shall include any consideration of whether or not an employee has access to any commissary or exchange facilities unless that access is derived from the individual's employment as a civilian Federal employee.

SEC. 2. (a) Subject to subsection (b), the amendment made by the first section of this

Act shall apply with respect to pay periods beginning after October 31, 1976.

(b) In the case of any pay period beginning after October 31, 1976, and before the date of the enactment of this Act, any amount payable by reason of the amendment made by the first section of this Act shall, if application therefor is made not later than the end of the 180-day period beginning on the date of the enactment of this Act, be paid in a lump sum.

ADDITIONAL COSPONSORS

S. 2

At the request of Mr. MUSKIE, the Senator from Kentucky (Mr. FORD), the Senator from Indiana (Mr. LUGAR), and the Senator from Nebraska (Mr. ZORINSKY) were added as cosponsors of S. 2, a bill to require authorizations of new budget authority for Government programs at least every 5 years, to provide for review of Government programs every 5 years, and for other purposes.

S. 38

At the request of Mr. STEVENS (for Mr. MCCLURE), the Senator from Oklahoma (Mr. BARTLETT) was added as a cosponsor of S. 38, to repeal the Gun Control Act of 1968.

S. 57

At the request of Mr. MUSKIE, the Senator from Minnesota (Mr. ANDERSON), was added as a cosponsor of S. 57, a bill to amend the Federal Water Pollution Control Act Amendments of 1972.

S. 146

At the request of Mr. STEVENS (for Mr. GOLDWATER), the Senator from North Carolina (Mr. HELMS) was added as a cosponsor of S. 146, to amend the Social Security Act.

S. 170

At the request of Mr. HUMPHREY, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 170, the Comprehensive Youth Employment Act of 1977.

S. 172

At the request of Mr. STEVENS (for Mr. BARTLETT), the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 172, to amend the Social Security Act.

S. 182

At the request of Mr. KENNEDY, the Senator from Delaware (Mr. BIDEN), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Vermont (Mr. LEAHY), the Senator from Maryland (Mr. MATHIAS), and the Senator from Connecticut (Mr. RIBICOFF) were added as cosponsors of S. 182, the Federal Tanker Safety and Marine Antipollution Act of 1977.

S. 185

At the request of Mr. CHURCH, the Senator from New Jersey (Mr. WILLIAMS), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Missouri (Mr. EAGLETON), the Senator from Rhode Island (Mr. PELL), and the Senator from Arkansas (Mr. BUMPERS) were added as cosponsors of S. 185, to amend the Social Security Act.

S. 201

At the request of Mr. BURDICK, the Senator from Iowa (Mr. CLARK) was added as a cosponsor of S. 201, to amend title 39 of the United States Code.

S. 225

At the request of Mr. PROXMIRE, the Senator from Massachusetts (Mr. BROOKE) was added as a cosponsor of S. 225, the Credit Union Modernization Act of 1977.

S. 256

At the request of Mr. PEARSON, the Senator from Maryland (Mr. MATHIAS) was added as a cosponsor of S. 256, relating to increased supplies of natural gas.

S. 265

At the request of Mr. MCINTYRE, the Senator from Iowa (Mr. CLARK), and the Senator from California (Mr. CRANSTON) were added as cosponsors of S. 265, the Elderly and Handicapped Persons Transportation Act of 1977.

S. 290

At the request of Mr. CHILES, the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of S. 290, to establish a Federal Commission on Ethics.

S. 303

At the request of Mr. STEVENS (for Mr. MCCLURE), the Senator from Delaware (Mr. BIDEN), the Senator from Georgia (Mr. NUNN), and the Senator from Utah (Mr. GARN) were added as cosponsors of S. 303, relating to pay increases for Members of Congress.

S. 308

At the request of Mr. LEAHY, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of S. 308, to rescind certain budget authority.

S. 396

At the request of Mr. DOMENICI, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 396, a bill to provide full medicare coverage of beneficiaries temporarily out of the United States.

S. 481

At the request of Mr. DOMENICI, the Senator Montana (Mr. MELCHER), the Senator from Michigan (Mr. RIEGLE) and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 481, a bill to amend the Age Discrimination in Employment Act.

S. 504

At the request of Mr. STEVENS (for Mr. MCCLURE), the Senator from North Carolina (Mr. HELMS) and the Senator from Indiana (Mr. LUGAR) were added as cosponsors of S. 504, the Jobs Creation Act of 1977.

S. 530

At the request of Mr. HANSEN, the Senators from Mississippi (Mr. EASTLAND and Mr. STENNIS) were added as cosponsors of S. 530, to reaffirm the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce.

S. 551

At the request of Mr. HUMPHREY, the Senator from Michigan (Mr. RIEGLE) and the Senator from South Carolina (Mr. HOLLINGS) were added as cosponsors of S. 551 a bill to provide for grants to States for the payment of compensation to persons injured by certain criminal acts and omissions, and for other purposes.

S. 604

At the request of Mr. JAVITS, the Senator from Pennsylvania (Mr. HEINZ) and the Senator from Connecticut (Mr. RIBICOFF) were added as cosponsors of S. 604, to amend the Emergency Unemployment Compensation Act.

S. 610

At the request of Mr. HOLLINGS, the Senator from New Hampshire (Mr. DURKIN) was added as a cosponsor of S. 610, relating to operating costs of mobile offices in the home States of Senators.

S. 615

At the request of Mr. HANSEN, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 615, to amend title II of the Social Security Act to increase the increment in old-age benefits payable to individuals who delay their retirement beyond age 65.

SENATE JOINT RESOLUTION 16

At the request of Mr. HATFIELD, the Senator from Utah (Mr. HATCH) and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of Senate Joint Resolution 16, to restore citizenship rights of Mr. Jefferson Davis.

SENATE CONCURRENT RESOLUTION 5

At the request of Mr. GRIFFIN, the Senator from Oklahoma (Mr. BARTLETT), the Senator from Oklahoma (Mr. BELLMON), the Senator from Nebraska (Mr. CURTIS), the Senator from Kansas (Mr. DOLE), the Senator from New Mexico (Mr. DOMENICI), the Senator from Utah (Mr. GARN), the Senator from Wyoming (Mr. HANSEN), the Senator from California (Mr. HAYAKAWA), the Senator from Alaska (Mr. STEVENS), and the Senator from North Dakota (Mr. YOUNG) were added as cosponsors of Senate Concurrent Resolution 5, a concurrent resolution pertaining to persons missing in action in Vietnam.

SENATE RESOLUTION 78—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

(Placed on the Calendar.)

Mr. CANNON, from the Committee on Rules and Administration, reported the following original resolution:

S. RES. 78

Resolved, That, (a) in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with their jurisdiction under rule XXV of the Standing Rules of the Senate, the following standing committees are authorized from March 1, 1977, through June 30, 1977, in their discretion (1) to employ personnel, (2) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency, and (3) to make expenditures from the contingent fund of the Senate, as follows:

(A) Committee on Agriculture, Nutrition,

and Forestry, not to exceed $120,000, of which amount not to exceed $4,000 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(B) Committee on Armed Services, not to exceed $220,000, of which amount not to exceed $7,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(C) Committee on Banking, Housing, and Urban Affairs, not to exceed $314,000.

(D) Committee on the Budget, not to exceed $706,000, of which amount not to exceed $22,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(E) Committee on Energy and Natural Resources, not to exceed $240,000, of which amount not to exceed $14,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(F) Committee on Environment and Public Works, not to exceed $339,000, of which amount not to exceed $1,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(G) Committee on Finance, not to exceed $131,000, of which amount not to exceed $5,250 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(H) Committee on Foreign Relations, not to exceed $420,000, of which amount not to exceed $21,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(I) Committee on Human Resources, not to exceed $712,000, of which amount not to exceed $22,750 may be expended for the procurement of the services of individual consultants or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(J) Committee on the Judiciary, not to exceed $1,533,000, of which amount not to exceed $25,700 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(K) Committee on Rules and Administration, not to exceed $207,000, of which amount not to exceed $35,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(L) Committee on Veterans' Affairs, not to exceed $115,000, of which amount not to exceed $21,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(b) In holding hearings, reporting such hearings, and making investigations as authorized by section 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with their jurisdiction under rule XXV of the Standing Rules of the Senate, the following standing committees are authorized from February 11, 1977, through June 30, 1977, in their discretion (1) to employ personnel, (2) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency, and (3) to make expenditures from the contingent fund of the Senate as follows:

(A) Committee on Commerce, Science, and Transportation, not to exceed $880,000, of which amount not to exceed $134,500 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(B) Committee on Governmental Affairs, not to exceed $1,072,000, of which amount not to exceed $76,500 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 2. (a) In carrying out its duties and functions under Senate Resolution 58, Eighty-first Congress, agreed to February 20, 1950, the Select Committee on Small Business is authorized from March 1, 1977, through June 30, 1977, in its discretion (1) to make expenditures from the contingent fund of the Senate not to exceed $85,000, of which amount not to exceed $875 may be expended for the procurement of services of individual consultants, or organizations thereof, (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended); (2) to employ personnel; (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency; (4) to procure the temporary services (not in excess of one year) or intermittent services of individual consultants, or organizations thereof, in the same manner and under the same condtions as a standing committee of the Senate may procure such services under section 202(i) of the Legislative Reorganization Act of 1946; and (5) to provide assistance for the members of its professional staff in obtaining specialized training, in the same manner and under the same conditions as any such standing committee may provide that assistance under section 202(j) of such Act.

(b) In carrying out its duties and functions under Senate Resolution 400, Ninety-fourth Congress, agreed to May 19, 1976, the Select Committee on Intelligence is authorized from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $491,000, of which amount not to exceed $12,000 may be expended for the procurement of the services of individual consultants. or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(c) (1) In carrying out its duties and functions under section 104 of Senate Resolution 4, Ninety-fifth Congress, agreed to February 4, 1977, the Special Committee on Aging is authorized, from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $191,000, of which amount not to exceed $7,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(2) Section 104(a)(2) of Senate Resolution 4, Ninety-fifth Congress, is amended by striking out "and for purposes of sections 133(g), 134, and 202 of the Legislative Reorganization Act of 1946,".

(d) In carrying out its duties and functions under Senate Resolution 281, Ninetieth Congress, agreed to July 30, 1968, the temporary Select Committee on Nutrition and Human Needs (as extended by section 106 of Senate Resolution 4, Ninety-fifth Congress) is authorized, from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $160,000, of which amount not to exceed $8,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(e) In carrying out its duties and functions under Senate Resolution 109, Ninety-fourth Congress, agreed to March 31, 1977, the temporary Select Committee to Study the Senate Committee System is authorized, from March 1, 1977, until its expiration, to expend from the contingent fund of the Senate not to exceed $50,000, of which amount not to exceed $9,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. (a) The amount made available for each committee under the first section and section 2 of this resolution shall be added to the amount which was made available for such committee by resolution for the year ending February 28, 1977, and which is unexpended at the close of February 28, 1977, and such total amount shall remain available for such committee through June 30, 1977 (or, in the case of the temporary Select Committee to Study the Senate Committee System, until its expiration).

(b) Amounts authorized to be expended from the contingent fund of the Senate under this resolution by each committee shall be paid upon vouchers approved by the chairman of such committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

(c) Of the total amount made available under this resolution for the Committee on Armed Services, the Committee on Banking, Housing, and Urban Affairs, the Committee on Commerce, Science, and Transportation, the Committee on Governmental Affairs, the Committee on the Judiciary, and the Committee on Rules and Administration, the chairman of each such committee is authorized to allocate such amounts as he deems appropriate for subcommittees of such committee. Upon making any such allocation, such chairman shall notify the Committee on Rules and Administration and the Secretary of the Senate.

SEC. 4. It is the sense of the Senate that—

(1) each committee, in selecting members of its staff to be retained on the staff of such committee and its subcommittees after June 30, 1977, should, to the greatest extent practicable, retain those members of its staff to whom section 703(d) of Senate Resolution 4, Ninety-fifth Congress, applies rather than retaining or employing individuals who were not members of its staff on February 11, 1977; and

(2) in the event a member of the staff of a committee to whom such section 703(d) applies voluntarily leaves the staff of such committee before June 30, 1977, the vacancy caused thereby shall not be filled unless such committee expects to fund the vacant position from funds made available to it pursuant to section 133(g) of the Legislative Reorganization Act of 1946 for the period beginning on July 1, 1977.

SEC. 5. Subject to the provisions of section 705 of Senate Resolution 4, Ninety-fifth Congress, the amount of any accrued surplus available to any Senator under section 108 of the Legislative Branch Appropriation Act, 1976, at the close of February 28, 1977, shall be available to that Senator during the period beginning on March 1, 1977, and ending on September 30, 1977, for the purpose specified in section 705(a) of such resolution.

SENATE RESOLUTION 79—ORIGINAL RESOLUTION REPORTED AUTHORIZING REVISION AND PRINTING OF THE SENATE MANUAL

(Placed on the Calendar.)

Mr. CANNON, from the Committee on Rules and Administration, reported the following original resolution:

Resolved, That the Committee on Rules and Administration be, and it is hereby, directed to prepare a revised edition of the Senate Rules and Manual for the use of the Ninety-fifth Congress, that said Rules and Manual shall be printed as a Senate document, and that two thousand additional copies shall be printed and bound, of which one thousand copies shall be for the use of the Senate, five hundred and fifty copies shall be for the use of the Committee on Rules and Administration, and the remaining four hundred and fifty copies shall be bound in full morocco and tagged as to contents and delivered as may be directed by the Committee.

SENATE RESOLUTION 80—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY

(Placed on the calendar.)

Mr. CANNON, from the Committee on Rules and Administration, reported the following original resolution:

S. RES. 80

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Sidney Rosenthal, father of Harold W. Rosenthal, and Tillie Rosenthal, mother of Harold W. Rosenthal, an employee of the Senate at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 81—SUBMISSION OF A RESOLUTION RELATING TO THE EXPULSION OF GEORGE KRIMSKY BY THE SOVIET GOVERNMENT

(Referred to the Committee on Foreign Relations.)

Mr. BAYH (for himself, Mr. CASE, Mr. HAYAKAWA, Mr. LUGAR, Mr. METCALF, Mr. PERCY, Mr. RIEGLE, Mr. STONE, and Mr. SCHWEIKER) submitted the following resolution:

S. RES. 81

Whereas the Helsinki Declaration pledges both the United States and the Soviet Union to the principle that:

The legitimate pursuit of their professional activity will neither render journalist liable to expulsion nor otherwise penalize them. If an accredited journalist is expelled, he will be informed of the reasons for this act and may submit an application for re-examination of his case.

Whereas harassment of accerdited correspondents does not facilitate progress in areas of vital interest to both the United States and the Soviet Union and does not contribute to an atmosphere which will encourage greater regulation of political and military competition;

Whereas such action requires appropriate steps to be taken by the United States government in order to protect the internationally recognized rights of American correspondents;

Resolved, That it is the sense of the Senate that—

1) the expulsion of Mr. George A. Krimsky is contrary to the spirit of the Helsinki Deeclaration respecting the rights of journalists;

2) such a decision serves only to obstruct the implementation of the free flow of information provisions contained in the Helsinki Declaration;

3) such action only invites and justifies steps of a reciprocal nature by the United States government;

4) the United States government and the U.S.S.R. should seek in a cooperative spirit greater communication in this area in order to prevent similar events of a counterproductive nature from occuring in the future and

5) the Secretary of the Senate transmit a copy of this resolution to the President of the United States in order that the Department of State may convey this view directly to General Secretary Leonid Brezhnev of the Central Committee of the Communist Party of the Soviet Union.

Mr. BAYH. Mr. President, I rise today to submit a resolution protesting the recent action by the Soviet Government in the explusion of Mr. George Krimsky of the Associated Press. In response, our Department of State has ordered TASS correspondent Mr. V. I. Alekseyev to leave this country.

Mr. President, I believe deeply that we must improve our relations with the Soviet Union. To use their phraseology we should seek ways of "deepening détente." But as I have said many times in this Chamber and to my constituents in Indiana, détente must be a two-way street. In order for a policy of relaxation of tensions to have a lasting success and provide benefit to the people of both our countries the U.S.S.R. must be made aware of how genuinely we are committed to fundamental human rights principles. It is therefore in a spirit of cooperation—in the true "spirit of Helsinki"—that we must put the Senate on record regarding this matter. This can be done in a way which will not damage our efforts to broaden as well as deepen détente. Such an effort will make us no less steadfast in adherence to basic principles expressed in a constructive way.

I ask unanimous consent for the New York Times article of February 5 and Washington Post editorial of February 8 to be printed at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 5, 1977]

SOVIET EXPELS AP REPORTER; HARASSES OTHER NEWSMEN

(By David K. Shipler)

Moscow, February 4.—The Soviet Foreign Ministry today ordered a correspondent of The Associated Press to leave the country within a week. It was the first expulsion of an American journalist in seven years, and it underscored the rising Government pressure directed against the Western press here in recent months.

The correspondent, George A. Krimsky, has been known as one of the most tenacious reporters in the Moscow press corps. With a good command of the Russian language and many Russian friends, he has been particularly active in reporting activities by dissidents in a period when Soviet authorities are strengthening efforts to curb the dissident movement.

Mr. Krimsky was one of three reporters accused last spring by the weekly Literaturnaya Gazeta of working for the Central Intelligence Agency. He and the two others—Alfred Friendly Jr., then with Newsweek, and Christopher S. Wren of The New York Times—denied the charge and asserted that the Government was attempting to cut them off from Soviet sources.

Mr. Friendly, whose assignment was scheduled to end, left Moscow last summer. Mr. Krimsky and Mr. Wren remained.

AP REFUSED TO WITHDRAW KRIMSKY

On Jan. 24, the press department of the Foreign Ministry summoned David Mason, bureau chief of The Associated Press, asked him why Mr. Krimsky was still here and suggested that he should be withdrawn. The Associated Press refused.

Two days ago, Literaturnaya Gazeta renewed the C.I.A. charges against the three correspondents in an article that focused on Mr. Krimsky and mentioned the others only in passing. Mr. Krimsky was accused of having given a Russian informant special coupons available only to foreigners for use in special stores where goods are better and prices lower than in regular Soviet shops. Mr. Krimsky denied the charge.

Meantime, other forms of harassment were used. While he was covering a dissident demonstration in December, the tires on his car were slashed. Last week, his Russian maid was blocked by a policeman as she came to his apartment and was told she could no longer work for him.

Some other correspondents have also felt pressure. Soviet acquaintances have been interrogated by the K.G.B., the security police, and told to stay away from the Americans. Official interviews and permission to travel within the country have been denied from time to time.

Yesterday, the tires on a car belonging to David Satter, an American who works for The Financial Times of London, were slashed in front of the police-guarded foreigners' compound where he lives; he had met with two dissidents in his apartment.

RAIL OFFICIAL CANCELED WREN INTERVIEW

Last week, a Ministry of Railroads official canceled a scheduled interview with Mr. Wren because he said he had been told by the Foreign Ministry about the espionage charges in Literaturnaya Gazeta.

Emil Svelis of United Press International the only American correspondent based in Leningrad, has had particular difficulties since he arrived several weeks ago to open an office as part of a reciprocal arrangement in which Tass, the Soviet press agency, has opened an office in San Francisco.

According to colleagues of Mr. Svelis, he has been followed almost constantly, his wallet was stolen and his car was tampered with in a manner potentially dangerous. As he was meeting with dissidents at a hotel, a good tire was replaced with a bald one and the wheel was put back on with only two nuts replaced and those not properly tightened.

Mr. Svelis noticed the change before he drove off and reported it to nearby policemen, who then interrogated him for several hours.

The colleagues said that his wife, Charlotte, a secretary at the United States Consulate, had called a taxi one evening to take her home. It took her instead to a dark and deserted warehouse district, where the driver turned into a side street, switched off the engine and smiled at her silently. Then out of the shadows, two men appeared, entered the taxi and smiled at her for a long time. Finally the driver took her home.

Such harassment of the foreign press had been suspended for several years, during the bloom of detente and the approach and aftermath of the European security conference in Helsinki in August 1975. The last American

newsman to be expelled was John Dornberg of Newsweek, in 1970.

The Helsinki document, signed by the Soviet Union and 34 other states, declares; "The legitimate pursuit of their professional activity will neither render journalists liable to expulsion nor otherwise penalize them. If an accredited journalist is expelled, he will be informed of the reasons for this act and may submit an application for re-examination of his case."

Valentin A. Khazov, deputy chief of the Foreign Ministry's press department, told Mr. Mason and William Brown, political counsellor at the United States Embassy, that Mr. Krimsky was being expelled for espionage and currency violations.

American officials were understood to have told the Russians that the move against the correspondent "might possibly lead to unpleasant consequences."

"Normally, the State Department likes to reciprocate and expel a Soviet reporter in retaliation, one diplomat explained. But in the past, he said, American news organizations have opposed such tactics. Speaking of the Russians, he declared "the only language these people understand is the language of reciprocity, and I think we ought to apply it across the board."

PROTEST BY PRESIDENT OF AP

Keith Fuller, president and general manager of the Associated Press, said in a statement:

"The expulsion of George Krimsky, in our view, is a flagrant violation of the Helsinki agreement as it pertains to news reporters carrying out their mission.

"We would submit George Krimsky's news dispatches to any fair-minded third party for comparison with any other Western journalist's work within the Soviet Union.

"He did make friends with many Soviet citizens because of his language facility and his Russian heritage. He is an American, of course, but of Russian descent.

"From the facts before me, I can discern only that his sin was to be an aggressive reporter in the Soviet Union today where the rising voices of Soviet dissidents seem to be unnerving those responsible for his expulsion."

[From the Washington Post, Feb. 8, 1977]

A SOVIET STEP BACKWARD

The Soviet Union took a step backward by expelling Associated Press correspondent George Krimsky, the first American journalist it has ousted since 1970. He was accused of currency violations and espionage; actually he was kicked out for his effective coverage of the Soviet dissident movement. The Soviet expulsion can only deepen American wariness toward a regime that, for all its pretensions of self-esteem, obviously still does not feel enough confidence in itself to permit either independent speaking by a handful of its own citizens or independent reporting by Westerners not under its thumb. Chalk up yet another victory for the prevalence of the KGB mentality in the Kremlin.

The State Department, giving notice, retaliated by expelling a TASS correspondent from Washington. The reprisal apparently puts the United States in the embarrassing position of ignoring as the Russians ignored, the Helsinki provision by which both states pledged to respect journalists engaged in "legitimate pursuit of their professional activities." But the Department had no alternative if the working conditions and tenures of the remaining American journals in Moscow were to be at least minimally protected. American news organizations are, properly, embarrassed at receiving this sort of official patronage. To reject it, however, is to let the Kremlin restrict and intimidate the American press corps intolerably. It is some consolation that, unlike Moscow, Washington did not act against a journalist because of what he wrote.

The ouster of Mr. Krimsky is serious enough. What is more troubling is the suggestion it carries of a Soviet determination to challenge the new administration to a test of wills. It is not hard to imagine voices in Moscow demanding a prompt demonstration that the Kremlin will not tolerate American interest, beyond a certain point, in Soviet dissidents—such as the "concern" the State Department expressed yesterday for detained activist Alexander Ginsburg. In Washington, there are voices demanding that the United States take each Soviet human-rights offense as a political challenge to be met with a firm response. Unless treated with great care on both sides, the situation could get quickly and badly out of hand.

SENATE CONCURRENT RESOLUTION 10—ORIGINAL CONCURRENT RESOLUTION REPORTED REVISING THE CONGRESSIONAL BUDGET FOR FISCAL YEAR 1977

(Placed on the Calendar.)

Mr. MUSKIE, from the Committee on the Budget, reported the following concurrent resolution:

S. CON. RES. 10

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 304 of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1976—

(1) the recommended level of Federal revenues is $346,800,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $9,700,000,000;

(2) the appropriate level of total new budget authority is $467,000,000,000;

(3) the appropriate level of total budget outlays is $415,000,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $68,200,000,000; and

(5) the appropriate level of the public debt is $718,300,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares, pursuant to section 304 of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1976, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $109,200,000,000.
(B) Outlays, $100,100,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,900,000,000.
(B) Outlays, $6,800,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,500,000,000.
(B) Outlays, $4,400,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $18,800,000,000.
(B) Outlays, $17,200,000,000.
(5) Agriculture (350):
(A) New Budget authority $1,600,000,000.
(B) Outlays, $3,000,000,000.
(6) Commerce and Transportation (400):
(A) New Budget authority, $17,300,000,000.
(B) Outlays, $16,000,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $14,300,000,000.
(B) Outlays, $10,000,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $30,400,000,000.
(B) Outlays, $23,200,000,000.
(9) Health (550):
(A) New budget authority $40,600,000,000.
(B) Outlays, $39,500,000,000.
(10) Income Security (600):
(A) New budget authority, $166,300,000,000.
(B) Outlays, $139,300,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority $18,900,000,000.
(B) Outlays, $18,100,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,500,000,000.
(B) Outlays, $3,600,000,000.
(13) General Government (800):
(A) New budget authority $3,500,000,000.
(B) Outlays, $3,500,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,600,000,000.
(B) Outlays, $7,700,000,000.
(15) Interest (900):
(A) New budget authority $37,900,000,000.
(B) Outlays, $37,900,000,000.
(16) Allowances:
(A) New budget authority, $800,000,000.
(B) Outlays, $800,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, $16,100,000,000.
(B) Outlays, $16,100,000,000.

AMENDMENTS SUBMITTED FOR PRINTING

EXECUTIVE REORGANIZATION ACT—S. 626

AMENDMENT NO. 38

(Ordered to be printed and referred to the Committee on Governmental Affairs.)

Mr. METCALF. Mr. President, I submit an amendment in the nature of a substitute to S. 626, the executive reorganization bill, which was introduced last Friday by the chairman of the Government Operations Committee, Mr. RIBICOFF, on behalf of the administration.

This amendment would restore to the President the specific authority to submit reorganization plans which was incorporated in the old reorganization act that Congress allowed to lapse in 1973. In no way would the President's flexibility for proposing his governmental reorganization be inhibited. However, the amendment would change the legislative procedure for permitting the reorganization plans to go into effect, by assuring the House and Senate of the opportunity to act jointly, up or down, within a time certain—90 days. Under the old act's procedure, the President's plan would become the law of the land, unless either House rejected it within 60 days.

Mr. President, as I testified before the Senate Government Operations Committee recently, I believe the old act's aproach of allowing the President to abolish, transfer, or consolidate statutory agencies and functions by a plan which will become law if Congress does nothing is an unreasonable shift of powwer to the President. It is a gun to the head of Congress. It puts committees and Members in an impossible situation

for appraising the substantive impact of the statutory changes. But worse, it is legislation by inaction, or inattention, and this is my opinion, runs counter to article I of the Constitution.

My amendment, Mr. President, would preserve the opportunity for expeditious plans. It would extend the period for legislative action to 90 days, with a requirement for discharge of a resolution of approval from committee after 60 days. When the committee has reported the resolution or has been discharged, it would be in order for any Member to move to proceed with the consideration of the resolution, and such motion would be highly privileged. There would be no amendments. A joint resolution of approval must come to a vote up or down within the 90-day period. I have included a provision which was enacted into law under the Trade Act of 1974, which would control the time in the Senate so the deadline could be met. If the joint resolution is approved it goes to the President for signature as is the usual constitutional practice. If either House declines to take up and act on the resolution, or having done so, rejects the resolution of approval, then of course, the plan fails.

Mr. President, I ask unanimous consent that my remarks before the Senate Government Operations Committee on February 8, 1977, be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

EXECUTIVE REORGANIZATION: WHAT ROLE FOR CONGRESS?

Mr. Chairman and Members of the Committee, last Friday, President Carter asked the Congress to reinstate the executive reorganization authority which we allowed to be terminated in 1973. This is very broad authority permitting the President by plan to transfer, abolish or consolidate any Federal agency or function unless either House disapproved his plan within sixty days.

The President has made executive branch reorganization one of his first priorities, and that should be supported. But is this approach, covering such a broad scope of the government, the proper way to go about the task?

This is not a partisan matter. The future role and responsibility of the Congress is involved.

Therefore, before we rush to redelegate these powers, some basic questions must be raised. I would appeal to my colleagues that they reserve judgment on this legislation until these questions are resolved.

Is not this procedure, in effect, an unreasonable delegation of legislative power? The plan is sent up, and each House has only sixty days to study it and move it through the legislative process, or the President's plan becomes the law of the land. Members are not permitted to amend his plan either in committee or on the floor, if indeed it ever gets there. It is all or nothing. If there is any part of the plan a Member does not like, he must live with it, or carry the larger burden of obtaining a vote of rejection on the entire plan.

Is this what the framers of the Constitution had in mind when they provided that all legislative powers be vested in the Congress? Article I, Section 8 sets forth specific powers for the formulation of government policies by the Congress, and in the last paragraph, it is the legislature that is empowered to make all laws for "carrying into execution" those policies and any other powers vested by the Constitution in the government.

Under Article II of the Constitution, the President advises the Congress as to what measures he feels are necessary. The burden is on him to get the Congress to consider his proposals. Congress then asserts its legislative prerogative to perfect or improve the legislation. After legislation is passed, it goes to the President who may either sign it or veto it.

With the President's executive reorganization act approach, this Constitutional process would seem to be reversed. The President makes the changes to be accepted or disapproved by the Congress under a strict time restraint. The burden of proof is shifted from the President to Senate and House legislators who may oppose his plan. There is no opportunity to perfect the plan by amendment, indeed not even a requirement that there be a majority vote on the plan by either House. As a result, major functions and agencies, which were created by the deliberative process of legislation, may be wiped out or redirected virtually overnight without appropriate legislative consideration and enactment.

I raise these issues because I feel they go to the heart of the doctrine of separation of powers. The Congress appropriates the money for executive administration; it establishes the substantive laws of our government; it provides the means by which the President executes those laws, and it provides a check and balance against the arrogation of undue power by the Executive. My concern is that the breadth of authority delegated to the President under his proposed reorganization act—with its time constraints and restriction on amendments—will seriously upset the balance of power which we in Congress have so vigorously sought to achieve in recent years. The memories of the recent past—of Vietnam, Watergate, impoundments, the use and abuse of the veto power—are still very much with us. We have just begun to recover our balance of power with such measures as the War Powers Act and the Congressional Budget and Impoundment Control Act. Would the delegation, once again, of executive reorganization authority to the President be a step in the direction of losing the balance we have worked so hard to achieve?

This matter was of serious concern to our present majority leader (Mr. Byrd) when he introduced his own version of an executive reorganization act in the 93rd Congress (S. 936, 93rd Cong., 21 February 1973, Cong. Record p. 4791). Among other things, that bill required that no reorganization plan submitted by the President could become effective unless there was a concurrent resolution approving the plan, adopted by majority vote of the two Houses. "I feel," said Senator Byrd, "that it is important that the Congress approve reorganization plans on the basis of their merit and after full debate, not just allow them to go into effect if either House does not take formal action to disapprove them."

The Senator went on to argue his position in persuasive terms:

"My bill is a major step toward recovering some of the initiative the legislative branch has lost to the executive. It will aid in restoring to Congress its responsibility for discharging the duty of overseeing the conduct of the executive departments. It will strengthen the authority of the Congress over the administrative bureaucracy in the face of increasing executive encroachment on Congress' constitutional authority. And it will, through its provision for affirmative approval of plans, safeguard against ill-considered and hasty action by the executive and default approval by a busy or an apathetic Congress.

"Congressional control and oversight of the executive departments and agencies constitute one of our most important functions. It is the means by which the Congress is assured that its policies are being faithfully carried out, by which it may hold executive officers to an accounting for their stewardship, and by which it learns the effects of legislative policies and is thus able to make necessary statutory revisions. I believe that the bill which I introduced today will go a long way toward accomplishment of these objectives."

A similar response has come over the years from the Chairman of the House Government Operations Committee (Mr. Brooks) who just last Friday announced his opposition to any reinstitution of the old reorganization act authority and suggested as an alternative his own bill. Congressman Brooks stated:

"We have lived through a time when we saw what can happen when Congress makes broad delegations of its powers to a President. I do not want any President to have the opportunity to abuse our governmental process . . . Only now are we beginning to restore the balance that should exist between the legislative and executive branches."

Chairman Brooks' bill would permit the President to submit reorganization plans to Congress, but it would require the approval of both the House and Senate before the plan could become law. The bill contains provisions to assure a vote on the plan within a specified time, and it also provides authority for the President to change his plan after he has submitted it to the Congress.

Other Members of Congress have outright opposed the delegation of executive reorganization authority to the President, and perhaps this option deserves more serious consideration then those modified versions of the approach which I have mentioned.

Certainly major reorganization plans should come before the Congress as regular legislation. Even the President's bill prohibits the abolition, creation or consolidation of executive departments. But what is a major reorganization; and what is a minor one? These distinctions are not made in the Administration's proposal.

Whether the subject be energy or health or environment or housing, under this legislation, the President could transfer the whole or a part of any agency (including any independent regulatory agency), and the whole or any part of its statutory functions, to the jurisdiction of another agency.

Indeed, under his bill, he could transfer out, or abolish, any agency within a department, and any function within a department, except that he could not convey or abolish the entire department, or all of its functions.

The President would also be permitted to consolidate statutory agencies and functions, including some but not all the functions of a department.

He could authorize a governmental official to delegate his legislatively created powers to another official or agency.

He could change the name of any agency or the title of its head, as well as such name and title with respect to any newly created agency.

I urge my colleagues to reflect on these extraordinary powers. You don't have to create or abolish or consolidate departments—as the Persident's bill rightly prohibits—in order to effect a major reorganization under this proposed authority. You need only merge or consolidate statutory agencies and functions into a superagency, including functions that are now in the departments and in the independent regulatory agencies.

Whether major or minor in scope or subject matter, any such sweeping reorganization as contemplated in this legislation could

cause confusion and frustration among relevant Senate and House committees, and the sheer weight of it may be too much to get a resolution of disapproval out to the floor of either House in sixty days. In any event, the entire membership of either House would not be assured of responding to the plan, up or down.

But this wide-ranging reorganization authority over statutory agencies and functions is not the only thing questionable about the President's proposal.

In the message and bill that he sent to the Congress on Friday, he included some additional items to strengthen his power over the reorganization plans and his pressure on the Congress.

First, he has provided that the President can amend his plan within thirty days after sending it to the Congress, but there are not similar provisons for either House to amend it, if in fact it even reaches the floor. He provides for a negotiation mechanism between the relevant substantive committees and the President, which may not be satisfactory to members who are not privy to the negotiations.

Second, he would repeal the requirement of the old reorganization act, that the President could send up only one plan during a thirty-day period, and provide for the submission of any number of plans. This, he says would "speed up the reorganization process," that the President could send on only one plan during a thirty-day period, and provide for the submission of any number of plans. This, he says would "speed up the reorganization process" by forcing Congress to deal with more than one plan at a time. No doubt it would have that effect, but it would also increase the pressure on the Congress to do its work within the sixty day periods attached to each plan. It could put us in a virtual straight-jacket. As statutory agencies and functions will almost always be involved in these plans, this could in effect, be disruptive and, indeed, destructive of our legislative prerogatives.

Third, the President would remove the existing limitation that each reorganization plan must be limited to one "logically consistent" subject. He proposes that his plans be allowed to cover more than one subject—how many is not clear—and when you combine this authority with the submission of additional plans within the thirty day period, you have utter chaos.

Finally, he would extend all of this reorganization authority for four years. This would bind the next Congress, and provide us with very little opportunity to halt the measure if it turned out unsatisfactory in the meantime.

As a member of the Senate Government Operations Committee, I intend to take a very hard look at this legislation proposed by the Administration. I urge my colleagues to do likewise. We should consider warnings issued by the Majority Leader and study his legislative suggestions. We should review the legislative history, and see what Congress may be giving up by the adoption of this reorganization procedure. And we should think above party and personal ideology, and consider in the final analysis, the Constitution which we have all taken the oath to defend and protect.

Mr. METCALF. Mr. President, we were told at the hearings by the Director of the Office of Management and Budget that the one-House veto feature of the President's bill is a "time-tested procedure" under which reorganization plans have been submitted since 1949. I do not find that argument persuasive or indeed, relevant, to the legislative situation today. I thought the point had been brought home to us in the Congress in the early 1970's, that the erosion of our prerogatives which we permitted to occur during the 1950's and 1960's was wrong—wrong in the field of foreign affairs, wrong in the field of fiscal affairs, and wrong in the vitally important field of organization of the Government. We have sought to repair the damage in some degree, and we have been moving in the right direction. There have been those who have suggested that this reassertion of congressional authority would be a temporary phenomenon, that we would lapse back into the role of a passive body, reacting to an active Presidency, as soon as both branches were once again under the control of the same party. I believed, and I know my colleagues believed, it would not be so.

Yet we have before us in this reorganization plan proposal the first test of our resolve and we are about to fail it. The vote on this issue is not, or should not be, a vote of confidence or no confidence in our new President. I have the highest trust in his goals and his abilities. But this partisan support cannot justify ceding to him the leading role in the legislative process in this area of our national life.

I have studied the Attorney General's opinion to the President concerning the constitutional aspects of this reorganizational proposal. That opinion may be persuasive with respect to the principal issue to which virtually all its points are addressed; namely, whether the one-House veto provision deprives the President of any of his constitutional authority. While I am prepared to accept the Attorney General's view on that issue, I cannot accept it on the issue of whether Congress is deprived of any of its influence and responsibilities.

I, therefore, urge this body, Mr. President, not to return to the ways of the 1950's and 1960's, but to continue our reassertion of the proper role of the Congress in the governmental process. We have, and we must exercise, not merely the right to disapprove any change in the law, but the responsibility to consider and fully enact such change. We must have procedures which can be adopted to give priority to the President's reorganization proposals, and to expedite our deliberations concerning them. The bill I am introducing would achieve these ends. It would differ from the President's proposal in that it would require, rather than merely permit, action by both Houses of Congress before the law can be changed.

Mr. President, I ask unanimous consent that the full text of my amendment be printed in the RECORD at this point.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 38

Strike out all after the enacting clause and insert the following:

That (a) section 905(b) of title 5, United States Code, is amended by striking out "April 1, 1973" and inserting in lieu thereof "April 1, 1979".

(b)(1) Section 906(a) of such title is amended to read as follows:

"(a) Except as otherwise provided under subsection (c) of this section, a reorganization plan is effective at the end of the first period of 90 calendar days of continuous session of Congress after the date on which the plan is transmitted to it if, between the date of transmittal and the end of the 90-day period, the Congress passes a joint resolution stating in substance that it favors the reorganization plan.".

(2) Section 906(b) of such title is amended by striking out "60" and inserting in lieu thereof "90".

(c) Section 909 of title 5, United States Code, is amended to read as follows:

"§ 909. Terms of resolution

"For the purpose of sections 908–914 of this title, 'resolution' means only a joint resolution of the Congress, the matter after the resolving clause of which is as follows: 'That the Congress favors the reorganization plan numbered —— transmitted to Congress by the President on ——, 19—.', the blank spaces therein being appropriately filled, but does not include a joint resolution which specifies more than one reorganization plan.".

(d)(1) Section 911 of such title is amended to read as follows:

"§ 911. Discharge of committee considering resolution

"If the committee to which a resolution with respect to a reorganization plan has been referred has not reported it at the end of 60 calendar days of continuous session of Congress after its introduction such committee shall be automatically discharged from further consideration of such resolution and such resolution shall be placed on the appropriate calendar of the House involved.".

(2) Section 912(a) of such title is amended by inserting "automatically" before "discharged".

(e)(1) Chapter 9 of such title is further amended by adding at the end thereof the following new section:

"§ 914. Requirement of vote in each House; procedure after one House receives a resolution from the other House

"(a) A vote on final passage of a resolution shall be taken in each House on or before the 90th calendar day of continuous session of the Congress after date of transmittal of the reorganization plan to which it relates.

"(b) If, prior to the passage by one House of a resolution of that House, that House receives a resolution with respect to the same reorganization plan from the other House, then—

"(1) the procedure in that House shall be the same as if no resolution had been received from the other House; but

"(2) the vote on final passage shall be on the resolution of the other House.".

(2) The analysis of chapter 9 of such title is amended by adding at the end thereof the following new item:

"914. Requirements of vote in each House; procedure after one House receives a resolution from the other House.".

YOUTH EMPLOYMENT ACT—S. 503

AMENDMENT NO. 39

(Ordered to be printed and referred to the Committee on Human Resources.)

Mr. HAYAKAWA. Mr. President, I am submitting today an amendment to S. 503, the Youth Employment Act which has been referred to the Labor and Public Welfare Committee. Nearly one out of five teenagers in the labor market is presently out of work. In my judgment this is an intolerable situation. The difficulties young people experience in

finding and holding jobs are not only important because of the immediate losses associated with joblessness; there is the additional risk that the experience of unemployment may impair the personal, economic, and social development of young people and cause frustrations whose deleterious effects can never be erased. There are many labor experts who will agree that increases in the minimum wages have substantially contributed to the deterioration in the teenage labor market.

By contrast, many foreign countries have legal provisions, collective bargaining agreements, or traditions which permit them to pay youth less than adults, often in a fixed percentage. These provisions have been reflected in their low youth unemployment rates. My amendment today follows this example.

On the basis of personal observations, I have reached the conclusion that there are many jobs which remain vacant, because the employers regard the costs generated by minimum wages as too high. I consequently expect that my amendment, once enacted, will contribute to the improvement of the present youth job market.

I ask unanimous consent that my amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 39

On page 4, line 11, insert "70 percent of" after the word "than".

On page 12, between lines 6 and 7, insert the following new subsection:

"'(b) Notwithstanding any other provision of this Act a youth employed in a job for which assistance is given under this title shall be paid wages which shall not be less than 70 percent of the minimum wage which would be applicable to employment under the Fair Labor Standards Act of 1938 if section 6 of that Act applied to the youth and he were not exempt under section 13 of that Act.".

On page 12, line 7, strike out "(b)" and insert in lieu thereof "(c)".

ADDITIONAL DISTRICT COURT JUDGES—S. 11

AMENDMENT NO. 40

(Ordered to be printed and referred to the Committee on the Judiciary.)

JUDICIAL CONFERENCE DISTRICT COURT JUDGESHIP RECOMMENDATIONS

Mr. McCLELLAN. Mr. President, on January 10, 1977, I reintroduced as S. 11 the omnibus district court judgeship bill which was passed by the Senate in the 94th Congress (S. 287) and which would authorize the appointment of 45 additional district judges in various judicial districts. In my introductory statement on S. 11, I made reference to the fact that the Judicial Conference of the United States was completing action on the 1976 quadrennial survey of judgeship needs by the various Federal courts. The Judicial Conference, on February 9, 1977, transmitted to the Congress its recommendations for the creation of 107 additional district judges in various judicial districts. The total number recommended by the Judicial Conference includes the 45 district judgeships approved by the Senate in the last Congress and also represents the Judicial Conference's recommendations that an additional 62 district judges be authorized by the Congress.

Mr. President, in order that these recommendations of the Judicial Conference may be studied and considered by the Senate, I am today submitting an amendment to S. 11, which amendment contains the entire 107 additional judges requested by the Judicial Conference. As I stated in my introductory statement to S. 11, the judicial statistics for fiscal year 1976 may justify far more than the 45 new positions contained in S. 287 which was considered in the last Congress. The Conference's recommendations will be studied by the Committee on the Judiciary and evaluated in the light of the three-part statistical standard which was used by the committee during the last Congress to measure the workload of the judges in each court. Because the Congress has not authorized any new judgeships since 1970, notwithstanding a sizable increase in judicial business, final action on judgeship bills should be a high priority in the 95th Congress. To this end, I have also inserted into today's RECORD a notice that the Committee on the Judiciary will commence hearings on S. 11, the printed amendment to that bill and upon any other district court judgeship bills, commencing on February 21, 1977. By this early consideration of this legislation, the Committee on the Judiciary hopes to report an omnibus district court judgeship bill for early consideration by the full Senate.

Mr. President, because these hearings will commence on the first day following a nonlegislative day, I ask unanimous consent that my amendment to S. 11 be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 40

Strike out all after the enacting clause and insert in lieu thereof the following: That:

(a) The President shall appoint, by and with the advice and consent of the Senate, two additional district judges for the northern district of Alabama, one additional district judge for the middle district of Alabama, three additional district judges for the district of Arizona, two additional district judges for the eastern district of Arkansas, one additional district judge for the northern district of California, three additional district judges for the eastern district of California, one additional district judge for the central district of California, two additional district judges for the southern district of California, two additional district judges for the district of Colorado, one additional district judge for the district of Connecticut, one additional district judge for the northern district of Florida, three additional district judges for the middle district of Florida, five additional district judges for the southern district of Florida, five additional district judges for the northern district of Georgia, one additional district judge for the southern district of Georgia, two additional district judges for the northern district of Illinois, one additional district judge for the eastern district of Illinois, one additional district judge for the northern district of Indiana, one additional district judge for the southern district of Indiana, one additional district judge for the southern district of Iowa, one additional district judge for the district of Kansas, two additional district judges for the eastern district of Kentucky, four additional district judges for the eastern district of Louisiana, one additional district judge for the middle district of Louisiana, one additional district judge for the western district of Louisiana, two additional district judges for the district of Maryland, four additional district judges for the district of Massachusetts, three additional district judges for the eastern district of Michigan, two additional district judges for the western district of Michigan, one additional district judge for the district of Minnesota, one additional district judge for the eastern district of Missouri, two additional district judges for the western district of Missouri, one additional district judge for the district of Nevada, one additional district judge for the district of New Hampshire, one additional district judge for the district of New Jersey, one additional district judge for the district of New Mexico, one additional district judge for the northern district of New York, one additional district judge for the eastern district of New York, one additional district judge for the eastern district of North Carolina, one additional district judge for the middle district of North Carolina, one additional district judge for the northern district of Ohio, one additional district judge for the southern district of Ohio, one additional district judge for the western district of Oklahoma, one additional district judge for the eastern and western districts of Oklahoma, two additional district judges for the district of Oregon, two additional district judges for the middle district of Pennsylvania, four additional district judges for the district of Puerto Rico, three additional district judges for the district of South Carolina, one additional district judge for the district of South Dakota, one additional district judge for the middle district of Tennessee, three additional district judges for the northern district of Texas, one additional district judge for the eastern district of Texas, five additional district judges for the southern district of Texas, one additional district judge for the western district of Texas, two additional district judges for the eastern district of Virginia, two additional district judges for the western district of Virginia, one additional district judge for the eastern district of Washington, one additional district judge for the western district of Washington, one additional district judge for the southern district of West Virginia, and one additional district judge for the western district of Wisconsin.

(b) The existing district judgeship for the eastern and western districts of Kentucky, heretofore provided for by section 133 of Title 28 of the United States Code, shall hereafter be a district judgeship for the eastern district of Kentucky only, and the present incumbent of such judgeship shall henceforth hold his office under section 133, as amended by this Act.

(c) One of the two existing district judgeships for the northern, eastern, and western districts of Oklahoma, heretofore provided for by section 133 of Title 28 of the United States Code, shall hereafter be a judgeship for the northern district of Oklahoma only, and the other such judgeship shall hereafter be a judgeship for the western district of Oklahoma only. The more senior of the present incumbents in those two present judgeships shall henceforth serve only in the western district, and the more junior of the two shall henceforth serve only in the northern district. Both such present incumbents shall henceforth hold their offices under section 133, as amended by this Act.

(d) The existing district judgeship for the

eastern and western districts of Washington, heretofore provided for by section 133 of Title 28 of the United States Code, shall hereafter be a district judgeship for the western district of Washington only, and the present incumbent of such judgeship shall henceforth hold his office under section 133, as amended by this Act.

(e) In order that the table contained in section 133 of Title 28 of the United States Code will, with respect to each district therein, reflect the changes in the number of judgeships made by section 1 of this Act, such table is amended to read as follows:

Districts	Judges
Alabama:	
Northern	6
Middle	3
Southern	2
Alaska	2
Arizona	8
Arkansas:

(f) In addition to the five additional district judges for the southern district of Florida provided in subsection (a) of this section, the President shall also appoint, by and with the advice and consent of the Senate, one other additional district judge for that district. Any vacancy occurring in the office created by this subsection five years or more after it is created shall not, however, be filled.

SEC. 2. The Director of the Administrative Office of the United States Courts is authorized to place a total of 15 positions in grades 16, 17, and 18 of the General Schedule, in lieu of the 4 supergrade positions authorized by existing law and 3 positions allotted by the Civil Service Commission.

SEC. 3. Such sums as may be necessary to carry out the purposes of this Act are hereby authorized to be appropriated.

NOTICES OF HEARINGS

EMERGENCY EDUCATIONAL ASSISTANCE ACT

Mr. PELL. Mr. President, I wish to announce that the Subcommittee on Education of the Committee on Human Resources will hold a hearing on the Emergency Educational Assistance Act on February 14, 1977, at the Goff Junior High School in Pawtuckett, R.I.

Any persons wishing to submit written statements for the hearing record should contact Mrs. Jean S. Frohlicher, counsel, Subcommittee on Education, room 4230 Dirksen Senate Office Building, Washington, D.C. 20510—telephone 202–224–7666.

OMNIBUS DISTRICT COURT JUDGESHIP BILL

Mr. McCLELLAN. Mr. President, I wish to announce that open public hearings have been scheduled by the Committee on the Judiciary on S. 11 and printed amendment No. 40 to that bill, providing for additional district court judgeships.

The hearings will be held on February 21 and 22, in room 2228 Dirksen Senate Office Building, commencing at 10 a.m. each day. Additional days of hearings as may be necessary will be announced by the committee.

All persons who wish to testify or submit a statement for inclusion in the RECORD should communicate, as soon as possible, with Paul Summit, 2204 Dirksen Senate Office Building—telephone 4–3281—or Bill Westphal, 6306 Dirksen Senate Office Building—telephone 4–3618.

SUBCOMMITTEE ON PRIVILEGES AND ELECTIONS

Mr. PELL. Mr. President, as chairman of the Subcommittee on Privileges and Elections, I wish to announce that the subcommittee has scheduled a hearing on the authorization of the Federal Election Commission for fiscal year beginning October 1, 1977, for Thursday, March 3, 1977.

This hearing will be held in room 301 Russell Senate Office Building on March 3, 1977, beginning at 10 a.m.

Further information can be obtained from the office of the subcommittee, room 310 Russell Senate Office Building, 224–5647.

SELECT COMMITTEE ON INTELLIGENCE

Mr. INOUYE. Mr. President, I wish to announce that the Select Committee on Intelligence will hold hearings on Tuesday, February 22, 1977, on the nomination of Adm. Stansfield Turner to be Director, Central Intelligence. The hearing will begin at 10 a.m. The location will be announced later.

Any party interested in appearing or filing a statement regarding this nomination should advise the committee. The committee's office number is 224–1700.

SUBCOMMITTEE ON PRIVILEGES AND ELECTIONS

Mr. PELL. Mr. President, as chairman of the Subcommittee on Privileges and Elections, I wish to announce that the subcommittee has scheduled a hearing on the operation of the Overseas Citizens Voting Rights Act of 1975—Public Law 94–203—and S. 703, a bill to improve the operation and administration of the act, for Tuesday, March 8, 1977.

The hearing will be held in room 301, Russell Senate Office Building, on March 8, 1977, beginning at 10 a.m.

Any persons wishing to submit written statements for the hearing record should send them to the Subcommittee on Privileges and Elections, room 310, Russell Senate Office Building, Washington, D.C. 20510—AC 202—224–5647.

ON S. 7—SURFACE MINING LEGISLATION

Mr. METCALF. Mr. President, the Subcommittee on Minerals, Materials and Fuels held a hearing on February 7, 1977, to learn the position of the Carter administration on S. 7, the Surface Mining Control and Reclamation Act of 1977.

This bill is a modified version of H.R. 25, the bill vetoed by President Ford in May, 1975. Interior Secretary Cecil Andrus and FEA Administrator John O'Leary both testified in strong support of S. 7 and offered modifications.

"I assure you," Secretary Andrus said, "that the administration is committed to helping you pass such legislation and to careful administration of the program the legislation provides."

Mr. O'Leary echoed these sentiments when he stated:

We strongly favor tough surface mining legislation.

This show of support for S. 7 from two key Federal officials is most encouraging. I intend to give their suggestions close scrutiny and I ask unanimous consent that the testimony of Messrs. Andrus and O'Leary be printed in the RECORD at the close of my remarks.

Mr. PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METCALF. At this time, I also wish to announce that three additional hearing dates have been set for the Subcommittee on Minerals, Materials and Fuels to receive comments on S. 7.

On March 1, 1977, selected coal operators or their spokesmen have been invited to present their views on the steep slope provisions of the bill, as applying to the Appalachian coal fields.

On March 2, 1977, certain citizen groups and individuals representing environmental concerns in the same region will have an opportunity to appear and testify.

On March 3, 1977, various surface mine operators, coal consumers, and environmental groups will be heard on the probable effects of S. 7 on Western coal surface mining operations and environment.

All three hearings will begin at 10 a.m. in room 3110, Dirksen Senate Office Building. All other parties interested in submitting written testimony on S. 7 should submit their views by March 3, 1977.

For further information those interested can call Norman Williams at 224–5249.

STATEMENT OF CECIL D. ANDRUS, SECRETARY OF THE INTERIOR

Mr. Chairman and members of the committee: I strongly endorse the enactment of comprehensive surface mining control legislation. Your committee has worked on, and the Congress has passed, such legislation during the past two Congresses. A Presidential signature on it is long overdue and I am glad to see it placed at the top of your agenda. Drawing on your past efforts and expertise, this Administration looks forward to a new law under which an effective surface mining control program can be carried out.

Increasing this Nation's ability to produce and use coal in order to decrease our reliance on imported oil and scarce natural gas is essential. With sound environmental safeguards, surface mining will be an acceptable way to produce much of this coal.

Fortunately, coal is abundant in this country. We can afford to be particular about where and how we mine it, consistent with conservation of the resource. We can afford to declare certain areas off limits to strip mining because of other important resource values, and we can insist on ending the abuses which historically have been associated with coal strip mining.

Prompt establishment of new ground rules for surface coal mining is essential both for a sound environmental policy and a sound energy and economic policy. Despite recent improvements in state and Federal programs, a uniform approach, approved by the Congress, needs to be adopted:

To assure a high level of environmental protection;

To provide for sound management of our land resources;

To eliminate competitive economic pressures on states to lower their reclamation standards; and

To provide the coal industry with firm guides for its future development.

In reaffirming my support of this legislation, I would like particularly to mention some of its fundamental components, which have been developed in the last few years of debate and compromise on this legislation:

First, that reclamation is required to fully restore strip mined land to at least its original productivity.

Second, that the burden is on the operator, not the government or citizen, to demonstrate affirmatively that reclamation according to the law will be achieved.

Third, that certain areas will be off limits to strip mining because of other important resource values, preserving the option for society later to determine whether the coal is worth the sacrifices associated with mining by surface methods.

Fourth, that citizens will have meaningful opportunities to participate in the implementation of the law—through availability of information, hearings and opportunities for citizen suits.

Last, that abandoned, unreclaimed mines will be reclaimed using money from production fees.

In approaching this legislation, I want to see a bill which will make for an effective and efficient program without an undue burden on the economy. More specifically, the following principles should govern:

No arbitrarily imposed losses of coal production should result from the program.

It should not result in significant unemployment.

No substantial consumer impacts should result.

It should assign responsibilities to State and Federal governments appropriately.

It should not adversely affect competition.

No unreasonable administrative burdens and governmental costs should be imposed.

In general, I believe the legislation before you meets these tests.

I hope you will agree with me, however, that if we can improve the bill, we should not be deterred from this by past history and, in any event, several issues remain to be resolved.

How to protect the owners of surface interests in lands where the Federal government owns and might lease coal for surface mining is an issue of central concern. Some recognition is certainly appropriate to protect the interests of individuals who have, in many instances, created by their own labor a working ranch or farm and who may be faced with serious losses if Federal leases are issued. I am not prepared to support a blanket prohibition of surface mining in the split ownership situation, however. Many hours of your time were spent in the last Congress trying to resolve this difficult issue. The bill which finally passed conferred a right to consent on a specified class of surface owners. To avoid large windfalls, it also specified compensation which could be paid for consent. The concept of this provision in the vetoed bill would appear preferable to an outright prohibition. At this point, I can only suggest that we remain open to reaching the most reasonable possible solution of the problem and I will be ready to work with you to this end.

A second question is the protection of alluvial valley floors. I fully support such protection. My staff advises me, however, that it would be desirable to clarify the alluvial valley floor prohibition somewhat and to make specific allowance for the continued operation of approved mines already producing coal.

As I mentioned, a basic feature of S. 7 which I support is its provisions for remedying the historical environmental neglect of lands already mined and now abandoned. Some estimates are that a million and a half acres of land have been disturbed by all coal mining.

As you consider the bill's provisions for abandoned land reclamation, however, let me urge you to focus on highest priority needs. A tremendous amount of reclamation work must be done to repair the scars and correct the continuing environmental harm from mines where responsibility for reclamation has ended and we must assure that our limited resources will be used to produce the greatest good possible.

Another issue of some concern is the assignment of responsibility for the surface mining reclamation program on Federal lands between the States and the Federal government. S. 7 is directed toward the accommodation of arrangements worked out in the last year. I would urge that you make those arrangements, like other portions of State programs, subject to review and approval by the Secretary, rather than election by the States. Other issues will also need resolution. The Department's legislative report, which you have, addresses most of these specifically and I will be happy to answer any questions about them you may have. My staff will also work with you in making whatever changes will improve the bill. As we plan and undertake preparation for implementation of the program, we will keep you fully advised and remain open to your advice.

Coal constitutes over 85 percent of our hydrocarbon energy reserves and there can be no question that coal will provide a significant proportion of our energy needs for years to come. But as coal production increases, the environmental and land use problems it entails will also increase. We just cannot afford to permit historical mining practices to continue, particularly since environmentally sound mining can meet the Nation's energy and economic needs. The pollution of some 11,000 miles of streams by acid mine drainage, extensive siltation, the loss of forest and agricultural lands from productive capacity, the destruction of wildlife habitat, burning mine waste dumps, and health and safety hazards must all be controlled. Major impacts on land use and water resources are associated with many surface mines and these must be dealt with carefully.

The framework provided by S. 7 to deal with surface coal mining reclamation is sound. I want to work with you to make needed improvements expeditiously and produce a bill for President Carter to sign. I assure you that the Administration is committed to helping you pass such legislation and to careful administration of the program the legislation provides.

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., February 4, 1977.

Hon. HENRY M. JACKSON,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This responds to your request for the views of this Department concerning S. 7, the "Surface Mining Control and Reclamation Act of 1977."

We strongly support enactment of such legislation. A new law to control surface mining of coal and provide for reclamation of mined lands is badly needed and the legislation your Committee has before it is well conceived to meet that need. Its expeditious passage is a high priority of President Carter.

S. 7 would provide for a cooperative surface coal mining regulatory program with responsibility for implementation being shared between the States and the Secretary of the Interior. Strong reclamation performance standards and permit requirements would assure that both State and Federal mined land would be fully reclaimed and that the environment would be protected. On the other hand, under mechanisms provided by the bill, the production of needed coal could continue under national standards in a reasonable manner. Public participation in decisions about surface coal mining would be provided for. Full development of needed information would be required or encouraged to serve as a basis for effective and reasonable regulation of surface mining operations. Through S. 7's bonding and enforcement provisions, actual compliance with the standards and requirements would be assured.

In addition to the reclamation regulatory program, the bill provides for reclamation of lands already damaged by past mining. Financed in S. 7 through a fee levied against Federal coal, the bill provides both for reclamation of rural lands through the Department of Agriculture and for acquisition and reclamation of abandoned and unreclaimed mined lands and for alleviation of problems related to mining.

The effects of inadequately controlled surface coal mining are well known. Among them are destruction or diminiution of the utility of land, erosion and land slide, flooding, water pollution, destruction of fish and wildlife habitat, loss of natural beauty, property damage, health and safety hazards, and adverse social impacts.

Increasingly in the future, the Nation's energy needs will depend on coal mining. Current trends indicate that more and more of this mining will be by surface methods. Federal and other western lands will be called on to supply surface-mined coal, in many instances for the first time. Against this background, the need for legislation such as S. 7 is urgent.

In developing and carrying out an effective and efficient surface coal mining control and reclamation law, the Department will work closely with the Congress. President Carter has indicated that he would have signed the surface mining legislation passed by the last Congress, but vetoed. The President is prepared to approve similar legislation and has directed us to work with Congress in resolving remaining major issues and developing whatever changes in introduced bills may appear advisable to improve them.

Protection of surface owners of land where the Federal Government owns and proposes to lease coal was a particularly difficult issue for the last Congress. Section 423(e) of S. 7 changes the surface owner consent provision finally developed and included in the vetoed bill. That provision afforded a right to consent to specified individuals and limited the amount that could be obtained by such an individual if he does consent. The amount specified had three components to be determined by appointed appraisers: (1) the fair market value of "the surface estate," (2) certain specified losses and damages, and (3) and additional reasonable amount limited to the lesser of the item (2) losses or $100 per acre. If this provision were adopted, the language of item (1) should be clarified so that it would apply to the fair market value of the "surface estate based on its use for agricultural purposes and exclusive of the value of minerals or the right to consent under this section." Clarified in this way, that type of provision is preferable to Section 423(e) of S. 7 which prohibits surface mining of Federal coal where the surface is owned by a non-Federal party.

The bill will place on small mine operators a heavy administrative and operating burden. Several changes may be desirable to limit this burden, including:

Directing the regulatory authority to undertake the development of some of the information required to obtain a mining permit;

Financing this work in part from the reclamation fee collected pursuant to section 301(b)(3);

Permitting reduced application fees;

Omission of certain permit application data as determined by the regulatory authority and in some instances requiring less data; and

Modifying the bond release administrative provisions by limiting the scope of the notice to be given and providing an informal procedure for release.

Departmental staff can work with your Committee in providing specific amendments to accomplish these changes.

A related matter concerns the schedule provided by the bill for implementation of the program. We recommend application of performance standards to new mines beginning six months after enactment and to existing mines beginning after one year. In addition, it appears desirable to have applications for permanent permits made only after a State or Federal program is approved. The regulatory authority's determination whether to issue a permit could not be delayed longer than six months after application is made (or a specified time after enactment of the bill). Tying the permanent permit application procedure to approval of a State or Federal program in this fashion is administratively preferable to provisions of S. 7 which require permit applications twenty months after enactment, whether or not a program has been approved.

A related matter concerns the requirement of Federal inspections of non-Federal mines beginning 135 days after enactment. While we recognize the desirability of Federal "back-up" enforcement of reclamation requirements principally intended to be a State responsibility, we are concerned that State incentives to carry out that responsibility not be weakened. A full program of regular Federal inspections might weaken those incentives and encourage States to withdraw from the regulatory program. To reduce this possibility, we suggest that Federal "back-up" inspections be provided only where there is an indication of specific need—that is, when the Secretary receives information giving reason to believe that there are violations of the Act's requirements.

With respect to the abandoned land reclamation program set forth in Title III, we recommend that the fees assessed against currently mined coal be made applicable to all coal—not merely coal derived from Federal land and should be in addition to royalties now received from Federal land. In addition, the Administration would like to work further with the Congress to determine whether the provisions of section 305 relating to secondary impacts of mining are best suited to meeting problems posed by abandoned mine lands. It is important that resources of the abandoned land reclamation program be directed to matters of highest priority and that past environmental damage be remedied effectively and expeditiously. To this end, consideration of the requirement that fifty percent of the fees collected for the fund be initially allocated to the State from which they are derived may warrant modification to allow more flexibility in directing resources to areas of greatest need.

An important purpose of this legislation is to protect fish, wildlife and other ecological values. In developing and implementing this program we intend to assure that these values are appropriately recognized.

Section 410(b)(5) recognizes the need for special protection of alluvial valley floors. These areas are essential to the agricultural base of the Nation and the economic life of many parts of the West. We support this protection. Some modification appears desirable, however, to clarify the provision and to provide for the continued operation of mines currently producing coal. To accomplish this we recommend amending section 410(b)(5) to read:

(5) the proposed surface coal mining operations, if located west of the one hundredth Meridian west longitude would—

(A) not interrupt, discontinue, or prevent farming on alluvial valley floors that are irrigated or naturally subirrigated but, excluding undeveloped rangelands which are not significant to farming on said alluvial valley floors and those lands that the regulatory authority finds that if the farming that will be interrupted, discontinued, or prevented is of such small acreage as to be of negligible impact on the farm's agricultural production, or,

(B) not adversely affect the quantity or quality of water in surface or underground water systems that supply these valley floors in (A) of subsection (b)(5):

Provided, this paragraph (5) shall not affect those surface coal mining operations which in the year preceeding the enactment of this Act (1) produced coal in commercial quantities, and (2) were located within or adjacent to alluvial valley floors or had obtained specific permit approval by the State regulatory authority to conduct surface coal mining operations within said alluvial valley floors.

We believe that administration of provisions of S. 7 relating to judicial matters may also be improved. With respect to citizen suits seeking to compel the Secretary or a regulatory authority to perform an act or duty under the Act which is not discretionary, it may be appropriate to specify that the citizen suit provision shall constitute the exclusive remedy to assure that the Secretary or regulatory authority will receive sixty days notice except for situations involving an imminent threat to the health or safety of the plaintiff or would immediately affect a legal interest of the plaintiff. This will allow the Secretary opportunity to remedy any failure that may in fact exist without the necessity for suit.

In addition, a provision of the Clean Air Act similar to section 426(a)(1) of S. 7 has been the subject of much needless litigation concerning the specification of "the appropriate" United States Court of Appeals. We recommend that this be clarified by providing that review of actions relating to State programs for a State shall be by the Court of Appeals for the Circuit in which the State is located. Review of orders or decisions of national scope under section 426(a)(2) should be in the U.S. Court of Appeals for the District of Columbia.

Finally, we endorse the provision of section 423(d) which contemplates the application of State programs to Federal lands. This should, however, be carried out by agreement between the States and the Secretary of the Interior rather than at the sole election of a state. To this end, several changes appear desirable. It should be clarified that States with cooperative agreements will be permitted to retain their regulatory function, with appropriate modification, prior to the approval of a State program, that the Department retain its statutory duty to receive and approve mining plans, and that the designation of lands unsuitable for mining will continue to be an Interior responsibility. It should also be specified that the election

of the State will be subject to the Department's review and approval as are other aspects of the State program.

This Administration is firmly committed to the prompt enactment of good surface mining and reclamation legislation. To accomplish this we are prepared to work closely with the Congress, both with respect to the modifications outlined above and to other improvements that may appear advisable as the Congress acts on the measure. More importantly we will continue that close relationship in implementing an effective program. The harm left in the wake of past surface mining must be ended promptly. Enactment of legislation such as S. 7 in the near future is a high priority both of President Carter's energy policy and his environmental policy.

The Office of Management and Budget has advised that enactment of legislation conforming to the views set forth above would be in accord with the program of the President and it has no objection to the presentation of this report.

Sincerely,

CECIL D. ANDRUS,
Secretary.

STATEMENT OF JOHN F. O'LEARY, ADMINISTRATOR, FEDERAL ENERGY ADMINISTRATION

Mr. Chairman and Members of the Subcommittee: I appreciate the opportunity to appear today to discuss the pending Federal surface mining legislation. The need for tough surface mining regulations is long overdue. The lengthy debate on this issue has obscured the important environmental goals which can and must be achieved. The President has repeatedly stated his position that Federal surface mining legislation is essential and that the time for its adoption is now. I am personally in complete agreement with this view.

Coal is one of our oldest and most plentiful sources of energy. Unfortunately, in many parts of our country its production and use has occurred without proper regard for its impact on our environment. Scenic areas have been lost. Our air and water have been fouled by failure to act in an environmentally responsible manner. We must put these days behind. The cost of reclamation is not high and we should not be misled to believe that concern for our enviromnent and the production of energy are incompatible.

The Winter of 1976–1977 has dramatically pointed out the Nation's need for sound, well reasoned, energy programs. Senate Bill-7 along with the similar legislation which has been introduced in the House of Representatives (H.R. 2) is in my judgment, an important step in the right direction of balancing environmental and energy objectives.

The urgency of our energy situation dictates that the American people establish priorities and move rapidly towards adopting new goals and standards. The "Surface Mining Control and Reclamation Act of 1977" reflects this national commitment. The task now is to enact legislation which will guarantee that our growing energy needs are not pursued at the expense of our natural environment.

The need for minimum national performance standards is further illustrated by recent State actions. Some coal producing States have adopted new surface mining legislation. Others have recently improved their laws. Those States which have enforced stringent reclamation standards have been able to maintain a viable coal industry. But competitive pressures among States have sometimes resulted in the failure to enact more stringent laws and have often led to less vigorous enforcement.

Time has come to establish national performance standards and to establish an enforcement program to make sure these standards are met.

Traditional reliance on oil and gas for most of our energy requirements must change to reflect the realties of our current energy situation. We need to establish a firm basis for coal to play an expanded role in meeting our Nation's energy needs. Coal producers must be able to proceed with a clear understanding of their responsibilities.

Coal represents the most important domestic source of energy for the United States in the near term. U.S. coal production in 1976 was 665 million tons and is expected to increase to over 1 billion tons in 1985. Our coal reserves, used wisely and in conjunction with environmentally sound standards, will provide us with a reliable domestic energy source for many years to come.

The Federal Energy Administration is committed to the timely passage of this needed legislation. We have carefully reviewed the proposed legislation, and there are just a few areas of concern, which merit attention.

First, S. 7 would prohibit surface mining of Federal coal where private surface ownership exists.

The purpose of this feature is to protect legitimate surface owner interests. I believe that the protection of such interests is essential, but I would urge you to consider an approach which would adequately safeguard surface owners' rights without enacting an overall ban.

A second provision of the Senate version which warrants further review is the alluvial valley floor section. We recognize the importance of alluvial valley floors to the economic viability of farming and ranching operations in the West and, therefore, to traditional Western lifestyles. Those areas which are conducive to agricultural activities should be protected and, therefore, sources of water to such areas need to be maintained.

It is our view that mining operations located adjacent to or in proximity of alluvial valley floors which will not have a significant adverse impact on water sources supplying alluvial valley floors, and meet other requirements of the legislation, should be permitted. We believe that the provison dealing with this matter could be subject to unintended interpretation. We would, therefore, prefer an alluvial valley floor provision which is unambiguous and would not lead to needless and lengthy litigation.

We strongly favor enactment of tough surface mining legislation. We do recognize that there are procedural and administrative changes that may be necessary in order to improve the workability of the regulatory structure to be implemented under such legislation. These matters, of course, should be discussed between the agencies charged with administering such legislation and the appropriate committees of Congress.

I would be pleased to answer any questions.

ADDITIONAL STATEMENTS

DO NOT GO GENTLY . . .

Mr. RIBICOFF. Mr. President, every year Americans who would like to keep working and who are able to work are forced to retire at age 65. The assumption that 65 is the appropriate retirement age for all flows from our social security system. This system encourages forced retirement by denying benefits to those men and women over 65 who continue to work. Senator GOLDWATER has introduced, and I have cosponsored legislation to repeal this inequitable retirement test.

In yesterday's New York Times magazine Harvey Shapiro had an excellent article about the evils of forced retirement. I should like to share that article with my colleagues. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO NOT GO GENTLY . . .

(By Harvey D. Shapiro)

"It just doesn't make any sense to me," Mike Shapiro says bitterly over his afternoon cup of coffee at Chef's Cafe. "The Social Security Administration says it's running out of money and has to keep raising payroll taxes to support all the old folks. Meanwhile there's plenty of us old-timers hanging around who'd like to earn our own living, and they won't let us keep on working. . . . It just doesn't make any sense," he says again, pausing to let his coffee cool.

For years Mike Shapiro was the kind of employee who came to work early and went home late without putting in for overtime. When he turned 65, he was forced to retire. "It's an awful thing to do to a person," he says. Still vigorous and active at 76, Shapiro lives modestly on his Social Security and a small pension in Superior, Wis. Although he once took peculiar pride in being the first one up on his block weekday mornings, in recent years he has learned to sleep late. "Otherwise," he says wistfully, "the days seem too long."

Like hundreds of thousands of other older Americans, Mike Shapiro considers himself more a victim than a beneficiary of compulsory retirement, the practice of making employees retire when they reach some predetermined age, regardless of whether they are willing and able to continue working. The retirement age varies—it's 55 for New York City firefighters, 56 for air traffic controllers, 70 for Harvard professors, and 65 for most people. According to a 1975 survey by Louis Harris & Associates, for 61 percent of those working, age rather than ability will dictate when they must retire. And for many older people, their later years are like their earliest ones: they find society unwilling to entrust them with any meaningful tasks.

Several forces have come together to make compulsory retirement a common employer policy. Because older workers often receive higher wages and more benefits than younger workers doing the same job, companies are eager to oust them when times are tough. Then, too, many employers are convinced they couldn't keep talented employees without the prospect of promotions guaranteed by scheduled retirements.

This generational conflict is especially intense these days because members of the post-war baby boom are now in the labor force, dramatically swelling the ranks of younger workers eager to move up. Moreover, the women's movement has brought more and more women into the job market. While the female population of the United States has climbed 52 percent since 1947, the number of working women has risen 123 percent. Finally, minorities and women who were once restricted to dead-end jobs now have court-supported access to promotions. But as Illinois State Representative Alan Greiman notes, "They all see their paths blocked by 63-year-old white males who, they think, will keep on working forever if they're not forced to retire."

Because the issue of mandatory retirement cuts across the generations, the labor movement has had enormous trouble in dealing with it. In September 1975, the AFL–CIO Executive Council declared that "organized labor has opposed and will continue to oppose unilateral imposition of compulsory retirement by employers." But "unilateral" is a crucial word. Many union leaders have signed contracts permitting employers to retire high-salaried older workers in order to provide more jobs for younger workers.

Until this century, older people often kept on working as long as they could, and many never completely retired. But by the 1920's

the growth of corporate employers first permitted and then required everyone to quit working at the same time. Adapting the rules to fit individual situations became too troublesome for the bookkeepers. Creation of the Social Security system in 1935 enshrined mandatory retirement at 65—a figure the United States Social Security Administration is reported to have borrowed from Germany, where Otto von Bismarck arbitrarily chose 65 as the age of eligibility for that country's first social welfare system in 1889. As a result, the proportion of men and women over 65 still working has dropped from 68 percent in 1890 to 22 percent in 1974.

Not only has compulsory retirement become widespread, says Carin Clauss, associate solicitor of the United States Department of Labor, "there is a growing trend toward compelling retirement prior to 65." Currently, more than 11 million Americans are locked into pension plans allowing them to be retired as early as age 55 at the employer's discretion.

Those who have thought about forced retirement recognize that it flies in the face of overwhelming scientific evidence about the increasing vigor and longevity of older Americans. There is no evidence that an average person's skills decline abruptly, nor is there proof that everyone ages at the same rate. There is no way of telling how long a person can do good work—or even when he or she will do it. When Prof. Ben Duggar retired from the University of Wisconsin at age 70, for example, he had a mildly distinguished academic career. After retirement, however, he became a consultant to Lederle Laboratories, where, at the age of 73, he isolated an antibiotic he called Aureomycin and then another called tetracycline, which has become the world's most widely prescribed antibiotic.

Most government and university research shows that employees from 65 to 70 and even up to 75 generally perform as well as younger workers in jobs not requiring heavy physical labor. While younger workers usually have more education and learn more rapidly, older employees are more likely to display better judgment and have stable work habits. "Most of the handicaps of oldness in our society are social, conventional and imaginary," says Dr. Alex Comfort, a gerontologist. "The physical changes are trifling by comparison."

The idea that retirement is necessary so that older people can "take it easy" in their twilight years is increasingly irrelevant in this era of desk jobs. Furthermore, says the American Medical Association, which has opposed mandatory retirement at 65 on health grounds, "There is ample clinical evidence that physical and emotional problems can be precipitated or exacerbated by denial of employment opportunities." According to the National Center for Career Life Planning, forced early retirement ranks ninth—after the deaths of various family members and divorce—among 40 major stress-producing events in life.

Supporters of compulsory retirement point out that that rule allows elderly employees whose work has not been satisfactory to leave in dignity. "It means nobody has to face saying, 'You can't cut it anymore,' " says Donald J. Povejsil, vice president of personnel and administration at Westinghouse Electric Company. He adds, "Any other method of retiring people would be extremely difficult to manage."

Dr. Arthur S. Flemming, United States Commissioner on Aging and chairman of the Commission on Civil Rights, contends that mandatory retirement is simply a "lazy person's device for dealing with difficult personnel decisions." He goes on: "Certainly a manager would have to make some difficult decisions without compulsory retirement, but a good manager should always be making those kinds of decisions as he tries to raise the quality of his work force."

As for employers' fears that they would face endless legal wrangling if they had to establish standards to determine when each older worker should retire, Commissioner Flemming says that this will not happen. "It's much easier to apply tests at that end of a career," he says, "since the employer knows the person and his or her work. While hiring always involves some guesswork, termination can be based on actual performance on the job."

Flemming's convictions have been borne out by a number of firms without mandatory retirement rules. At Paddock Publications in Arlington Heights, Ill., which employs 300 people, "it is working out very well," says executive vice president Robert Y. Paddock Sr. "Most of the time an employee feels ready to retire just about when we begin to think they're ready." He cites the case of an advertising salesman in his early 60's whose track record seemed to be worsening. Before the advertising manager could say anything, Paddock notes, "The man kind of lost interest in his work and retired." Paddock, which publishes nine daily and six weekly newspapers for Chicago suburbs, has several employees in their 70's, including some who were hired at 65 after retiring from jobs elsewhere. Robert Paddock, who is in his late 50's, says, "When I retire at about 80, maybe things will change, but I like the way we do it right now."

Most of the jobs not subject to mandatory retirement rules are at small organizations like Paddock, where the boss knows everybody and can respond humanely to individual situations. But big companies can also get along without mandatory retirement. At United States Steel, for example, compulsory retirement rules affect only 19,000 office workers out of a total work force of 172,000. The bulk of the firm's employees can keep on working as long as they can pass annual medical examinations geared to the nature of their jobs, says C. T. Spivey, vice president of personnel.

Even if an employee's medical examination raises questions, Spivey says, "We get the union in and find another job for him if he want to keep working." At one of the company's plants near Pittsburgh, for example, an older worker recently moved from "second helper" in the open hearth department to the more sedentary job of "weigher" because of medical problems. Similarly, a worker who operated a bulldozer outdoors found his arthritis was bothering him more as he got older, but he didn't want to retire, so he transferred to an indoor job as a repairman.

Spivey says the bulk of United States Steel's employees retire as soon as they put in 30 years and are eligible for a pension, but the firm has no problems in finding work for those who want to stay on. The record-holder is Henry Baude, who retired as a price clerk on August 31, 1973, at the age of 77, after completing 61 years with the company. But United States Steel has had several other 60-year veterans.

An absence of mandatory retirement rules not only works successfully throughout the steel industry, but also at such varied large companies as Walt Disney Productions, the Bankers Life and Casualty Insurance Company, as well as the state governments of Illinois and Pennsylvania. Says John B. Martin legislative counsel to the American Association of Retired Persons and its affiliate, the National Association of Retired Teachers, "We're not arguing against early retirement. We say an employee ought to have some options. If he wants to retire early—fine. If he wants to continue working—fine. What we're dealing with essentially is the concept of freedom of choice."

The current lack of flexibility in work schedules is hardly a necessity. When they have to, employers can adapt on a massive scale. In retailing, for example, as stores have begun to remain open 12 hours a day or seven days a week in an era of 40-hour workweeks, store managements have been receptive to varied schedules permitting some people to work full time, some part time and some overtime. There's no reason why other employers couldn't adapt in a similar fashion. The automakers, for example, who are plagued with absenteeism on Mondays and Fridays, could bring in retirees to work on those days. Allowing older workers who remain fit and productive to make adjustments in their workdays, workweeks or workyears could lengthen their working career.

There is increasing organization and militancy among the elderly opposed to mandatory retirement. "Because of inflation, more and more older people are realizing that without employment they're just not going to make it economically," says John B. Martin. "Retirement will mean a descent into near poverty." But the complaint goes beyond economics. "This is really a moral issue," says Dr. Flemming, "because personnel policies requiring retirement at a given age without regard to an individual's abilities are in direct conflict with our Judeo-Christian concept of the dignity and worth of each human being."

Persons over 65 make up 14.8 percent of the registered voters and politicians are becoming attuned to "senior power." Major battles over retirement policies are beginning to be played out in courthouses and legislative bodies as well as offices across the country. Since the courts have been the cutting edge in overturning employment practices that discriminated against minorities and women, some senior citizens have hoped legal action would aid them as well. But last spring, the United States Supreme Court dismissed an age discrimination suit filed by Lt. Col. Robert Murgia, who was forced to resign from the Massachusetts State Police when he reached the mandatory retirement age of 50, even though a rigorous medical examination had shown him to be in excellent health. The Murgia case was the latest of several unsuccessful attempts to challenge the constitutionality of compulsory retirement in the courts. Thus, Carin Clauss says, "The only way to get rid of compulsory retirement rules altogether would seem to be through legislation."

Several bills to end compulsory retirement were introduced in the United States Congress in the last few years. Representative Paul Findley, Republican of Illinois, first introduced a bill to end mandatory retirement in 1974; it disappeared rather quickly after it was introduced, but when he offered a similar bill in 1976, it gained 99 co-sponsors, ranging from liberal Democrats like Bella Abzug to conservative Republicans like John Rousselot of California. Moreover, Findley's bill was endorsed by Dr. Arthur S. Flemming and former Secretary of Labor Willard Wirtz. Although the bill didn't get out of committee, Representative Findley says he was encouraged by the increasing support and introduced the bill on the first day of the 95th Congress in January.

There are similar stories at the state level. In Illinois, a bill to abolish compulsory retirement passed the House of Representatives by a vote of 117 to 21 before it was killed in the upper house. Illinois Representative Alan Greiman introduced his bill again this year, and he reports increasing interest in such legislation in California, Pennsylvania and other states.

In New York, a bipartisan group of 52 Assemblymen and 21 State Senators introduced a similar bill last spring. That bill disappeared in committee, but was introduced last month. In a statement explaining the bill, Assemblyman Thomas R. Fortune, the chairman of the State Assembly committee on the aging, described mandatory retirement as unjust and economically unsound. He noted that such

restrictions contradicted the principle behind prohibitions against sex and race discrimination in employment. "A person should only be forced to leave a job if that person cannot perform the assigned tasks," he said. "Under no circumstances should a person be removed because of physical characteristics that are irrelevant to job performance."

A Department of Labor official is not optimistic about legislative changes on compulsory retirement, however. Business and labor leaders can be expected to support the status quo, he says, and "there is strong unreasoned opposition on Capitol Hill to any tinkering with retirement right now because of ERISA." ERISA—the Employee Retirement Income Security Act of 1974—reformed the rules governing pension plans to help retirees, but it also increased the costs and complexity of maintaining pensions and was followed by a record number of plan liquidations. Thus, the Department of Labor official says older Americans don't have enough supporters at the present time to pass legislation banning compulsory retirement, although there's a good chance of passing a law to increase the mandatory retirement age from 65 to 68 or 70.

Ironically, the growing conviction that change is not far off is based on the plight of the young rather than the old. Though younger workers have generally assumed their interest lay in getting older workers to retire, the economics of the situation are working in the other direction now. As the retired elderly population grows in size, the balance between workers and retirees in tilting precariously. While there were seven workers paying Social Security taxes for every person collecting benefits in 1955, there were only four in 1960 and less than three in 1975. Within 50 years, there will be less than two Americans working for each Social Security beneficiary.

Since those working support those who are retired under Social Security, to raise enough money to pay all those retirees, Social Security taxes will have to rise to 25 percent of average incomes in a few years unless some changes are made. By the same token, private pensions are devouring huge sums that might have been available for wages. United States Steel spent over $200 million on its pension fund last year, and like many employers it is now supporting more people through its pension plans than its payrolls.

In November, former Treasury Secretary William Simon recommended raising the age at which people can retire and claim benefits in order to ward off bankruptcy of the Social Security system. If enough people think about the whopping deductions Social Security and pension costs are already taking out of their paychecks, they will conclude it is costing too much to discriminate against older workers. That may turn out to be a very persuasive argument for letting older people keep on working as long as they can. There's an even more persuasive reason for improving the treatment of the elderly. The elderly are the only outcast group all of us can expect to join.

ALL-AMERICAN GAS PIPELINE PROPOSAL

Mr. HANSEN. Mr. President, you may have noticed an editorial in the February 5 edition of the Washington Post in criticism of the all-American gas pipeline proposal. In all fairness, the attached rebuttal should also be brought to the public's attention so that both sides of the issue are properly aired.

The final decision on a pipeline route to transport natural gas from Alaska's North Slope to the lower 48 is a complex one which will require a great deal of thought and study. The Post editorial oversimplified many of the factors upon which the final decision will be based. The rebuttal which I place in the RECORD today points out some of the inconsistencies raised by the editorial. I ask unanimous consent that this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EL PASO CO.,
February 7, 1977.

EDITOR,
The Washington Post,
Washington, D.C.

DEAR EDITOR: Your lead editorial of February 5th supporting a trans-Canadian route for Alaskan natural gas includes a criticism of El Paso's "All-American" proposal which is not only factually incorrect but also misleading to your readers on a very important issue.

You assert that one of El Paso's "serious defects" is that our plan "would deliver the gas to the wrong part of the country. The North Central states need the gas, not the Southwest."

The EL Paso proposal is specifically designed to deliver Alaskan gas to the West, Midwest, and the Northeast—and other areas of the country—by utilizing the existing excess capacity of the pipelines already delivering gas to those markets—in fact the same markets proposed by Arctic Gas.

Judge Litt's decision—which you support—clearly affirms El Paso's nation-wide delivery capability. Although numerous quotes demonstrate this important capability, one will suffice (from his overall conclusion):

"El Paso, too, has a viable plan which technically can be built in an environmentally sound manner and which can deliver natural gas to all U.S. markets." (emphasis added).

Indeed, as a result of the critical shortage in the East and Southeast, gas from California, on only a few days notice is reaching those areas today by use of the El Paso system, clearly demonstrating the work-ability of our proposal to utilize existing pipelines to serve all parts of the country.

You go on to observe that "A lot of the politics of the final decision will revolve around this regional interest." It is unfortunate that the basic factual error in your editorial will serve to inflame those regional political interests.

The gravity of the high level of unemployment in our economy requires a response to the assertion that the El Paso project finds support for the "bad reason—jobs." The record indicates that the El Paso project will provide 750,000 man-years of employment for U.S. workers versus 250,000 man-years for U.S. workers by the proposed project to be constructed principally through Canada. Your editorial is the first suggestion that this constitutes "make-work."

It is regrettable that your editorial may lead some Americans to misunderstand their choices on such an important issue.

Very truly yours,
HOWARD BOYD, *Chairman.*

U.N. CONFERENCE ON WATER

Mr. KENNEDY. Mr. President, in recent years there has been a commendable effort to target our foreign assistance on programs that help the poorest segment of a developing nation's population. The Congress mandated this in the Foreign Assistance Act, and it has guided our foreign assistance policy since.

But in our effort to give first priority to programs that help the rural and urban poor, there has been a tendency to think primarily in terms of agricultural and health programs. These are obviously essential elements in any developmental effort. Increasing food production has naturally assumed a high priority in the wake of the world food crisis in 1974.

However, it is sometimes forgotten that a crucial element that links both agricultural and health development is water. The effective use of water is essential not only to increased food production, it is also estimated that sickness around the world would fall by 80 percent if people in the less developed nations could be given pure drinking water.

Next month the United Nations has scheduled a conference on water, due to open in Mar del Plata, Argentina, on March 14. There are some indications that this conference is not being considered by many governments as important as the world food or population conferences. Yet, as the distinguished economist Barbara Ward points out in a recent essay, nothing so directly affects the health and well-being of the poorest of the poor than water.

For too long, programs of water development have been targeted for industrial development—dams for electricity that may increase the gross national product but fail to raise the standard of living among the poorest segments of the Third World. As Barbara Ward points out, the question of water is of crucial importance to the international community, and it is essential to development in the Third World.

Mr. President, I am confident that the new administration will give this issue the priority it deserves, and to actively support the purposes of the forthcoming United Nations Conference on Water. I hope our delegation to the Conference will reflect this priority, and represent the highest levels of our Government.

It should give us pause to note Barbara Ward's finding that if the world spent just one-tenth of what it spends on military armaments each year, the human race might have clean water and enough to eat by the beginning of the next century. This is surely worth the $30 billion that may be required—especially when the world spends over $300 billion for arms.

Mr. President, I commend to the attention of Senators the essay by Barbara Ward on water, published in this week's Economist, and two related newspaper articles. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Economist (London), Feb. 5, 1977]

WATER: ARIADNE'S LIQUID THREAD

(By Barbara Ward)

The United Nations conference on water, due to open at Mar del Plata, Argentina, in March, has rather the look of a stepchild among UN ventures. The sum set aside for it—$400,000—is 20 times less than the sum proposed for the science and technology conference in 1979. It had no executive head until Mr. Mageed of Sudan bravely stepped in as secretary-general only nine months before the opening day. Now there is doubt

whether governments will bother to send ministers.

It is, of course, true that world water supplies cannot run out. The trouble is that their distribution is uneven and that the rich, hardly by coincidence, are well watered and thus perhaps uninterested. Must we then conclude that a useful but rather aimless exchange of information is all that will come out of Mar del Plata? That is certainly possible, even likely. But there is one reason for believing that something more urgent and with more purpose could result. It is that, after 25 years of a widely practised conventional wisdom towards development, its strategies are now increasingly seen to be deficient. Breakneck industrialisation with highly capital-intensive technology and without constraints on pollution or on the saving of resources has had top priority. It has been largely financed by squeezing the rural sector: investment policies tend to put only a 20% share of capital into the countryside, although it usually provides half the nation's wealth and contains at least three quarters of the population. And it has gone hand in hand with neglect of such critical social services as sanitation, on the grounds that they are of undefinable value to gnp.

Even when investment has taken place in rural areas and has been directly concerned with water, it has too often retained what might be called the "industrialising bias". A number of dams were built simply for hydroelectric power for industry. Many more had irrigation as part of their aim, but the dam could be fully built before a single farmer's channel had been dug and could have been in existence 10 years without agreement on water costs, distribution, types of cultivation and the institutional arrangements for financing, storing, moving and selling the food produced. Only rarely have serious efforts been made to calculate how larger expanses of water would affect more people directly or indirectly through schistosomiasis, filariasis, river blindness, all the worm infestations and malarial infections. No one contrived to work out a satisfactory economic equation to balance the disablement of a peasant—a "surplus" peasant at that—against so many kilowatt hours of assured power.

Even when technical change has come to the rural areas not "wholesale" with the big dams but "retail" in all the varieties of improved seed, fertilisers, tubewells and tractors of the "green revolution", large farmers alone have tended to command the capital or the influence needed to secure the new opportunities. Thus have the rural poor become more "surplus" than ever. When one recalls that in many countries virtually all the gains of growth have been absorbed by the top 10% of the people—the new successful urban groups—that the poorest 10% are poorer than ever, that they are none the less likely to double in number by, say, 2010, it is not hard to see elements of explosion, violence and collapse in so unbalanced a strategy.

So the UN water conference has to devise proposals for action which recognise that a greatly increased emphasis on water can be one of the main strands in a new, more equitable and hence less politically and socially disruptive pattern of development. Whichever aspect of inadequacy one picks out—the lack of emphasis on safe water, sanitation and health, the enormous neglect of agriculture, the unplanned, pellmell urbanisation and the careless wastes and pollutions of new technologies—water can be Ariadne's thread through the labyrinth.

MAKE A CLEAN START

If we begin with clean reliable water, the most widely accepted estimate is that about 30% of third-world city dwellers lack it. So do at least three quarters of the poor lands' country people (excluding China). Moreover, sewage treatment is often allowed to lag even when the point of density of human settlement has been reached at which the removal of excrement and wastes generally is a precondition of the water remaining safe. Sewage disposal must go with supply once scattered dwellings and small hamlets are left behind.

There is not simply one universal and infallible way of providing urban water systems and sanitation schemes. Each country, each region, each city has to evolve its own strategy. But, after 20 years of diligent though scattered work on water systems and sanitation in developing countries, a number of principles of action have emerged which do appear to have some general validity.

The first principle, in equity, is to give priority to the needs of those with no safe water at all—a third of them third-world city dwellers. Improvements can include giving individual households or groups of households access to a protected well. But this does not cut out water-carrying for the family. That leaves wide open the risk of contamination and the transfer of the faecal diseases—typhoid, dysentry, infantile gastroenteritis.

The safest way of securing safe water for all is to provide communities as soon as possible with piped water and a treatment plant. Provided latrines are dug and night-soil disposed of, full-scale sewage treatment can wait rather longer—in fact, some of central Tokyo is still served by cesspits and the so-called "honey carts" which clear them. In choosing when to install modern sewerage, developing countries must balance immediate security against the probable emergence of new and better technologies later.

Once the piping system is installed, the authorities are able to choose between a variety of installations and a variety of charges. This flexibility makes it possible to give priority to those who have no safe water at a price that is not too far out of line with what they can afford. Standpipes distributed through the settlement are the cheapest alternative; then a tap in each house; and lastly the western ideal and normal practice—multiple taps and (admittedly very wasteful) flush-toilets in the house.

According to estimates made in the late 1960s and based upon experience of cities in east Africa, the differences in annual costs between providing 30% of the people with some form of piped water (while improving wells for another 30%) and bringing piped water to 90% of the people were just under $300,000. Water charges that increase sharply with the number of taps in the house and the amount of water used in both house and garden can be used as subsidies to the general water rate. Water would then become not simply the greatest single insurance against disease. It would represent a genuine redistribution of income in societies where wealth is grossly skewed. However, it is also true that a well trained inspectorate and self-regulating taps—the Fordilla valve, for instance—will be needed to prevent a possible abuse of the new, safe water.

In such matters as where standpipes should be sited, it will be necessary to consult the local people. This brings us to a second principle. Unless the provision of safe water and sanitation is accompanied by some critical community changes, its benefits will be sharply diminished. Sometimes they will cease to exist at all. First among institutional changes is thus to bring in the local people and to get their help in constructing the new water system and to train responsible people for the normal tasks of maintenance.

Good health, small families

This should include simple instruction in hygiene—of the type carried on in Chinese settlements by the local health committee and women health workers. In this way parents can be taught the importance of hand-washing after using the latrine and of face-washing to avoid trachoma. It can encourage citizens not to leave water slopping about the standpipes, to become happy assembly points for mosquitoes or worm-breeders. It can help—perhaps its most important function—to persuade parents whose first three children have not died of gastro-enteritis that they are now unlikely to do so and that a family of limited size is in their profound self-interest.

Yet unless there are policies which give—as in Peru—security of tenure to squatter settlements, which encourage self-help in building homes and providing services and which also give a new degree of support to small businesses—workshops, cafes, mini-industries—the water may flow but the settlers are likely to do little to maintain it. Sick, disillusioned, indifferent or, on the contrary, ambitiously on the move, a great body of squatters hardly see their settlements as more than dumping-grounds or staging-posts. So why care? It can become mere waste to give assured water supplies to highly provisional communities.

In fact, in accepting the goal of clean water for all by 1990—the resolution formally accepted at the Habitat conference at Vancouver last June—governments have committed themselves to a policy which ceases to accept the squatter tide as a self-settling phenomenon. On the contrary, it takes decisions—about the location and tenure of communities, the migrants' use of land, sites and services, access to work and so on.

Yet there is a paradox. Suppose that the major drive in providing clean water—and the social conditions which alone are likely to make the service effective—follow the urban bias of the past two decades and are concentrated on the present shanty towns. The result could be a sharp increase in the attractions of existing megalopitan areas, an even more rapid movement out of the rural districts and an even greater pressure of urban unemployment. For all its difficulties, to get water to everybody in third-world cities is in a sense easy. The difficult task at Mar del Plata will be to see that the agricultural sector begins to get its needed share of attention, skills and investment.

BUT FOOD DOES NOT GROW IN TOWNS

In redressing this imbalance, the role of water—whether of safe water for people or enough water for fields or for protection against waterborne diseases—is central. And it will quickly be discovered that, just as an effective water policy for cities demands social changes, the need is no less urgent in the country side. If the developing world is to achieve the annual food growth target put forward at the Rome food conference in 1974—4% a year for the next 15 years—a large part will have to come from introducing or improving irrigation. Land with reliable rainfall is largely used up. Even where, as in parts of Latin America and tropical Africa, there is still land to develop, the uncertainty of rainfall makes assured storage and distribution of water a precondition for lasting success.

But the prospects are far from unhopeful. One root of reassurance is, strangely enough, the inefficiency of so many contemporary irrigation schemes. Restoring them to full use was picked out as a high priority for investment at Rome. It should be repeated at Mar del Plata. Relining worn channels to prevent seepage, pumping out excessive ground water and increasing the channels' flow to reverse the trend to salinity, replanting eroded catchment areas—every one of these policies has been adopted in the Indus valley scheme, fostered by the World Bank in the 1960s, and in field after field the grain grows again and the white scrofulous saline soil gives way.

Such measures, together with new irrigation schemes, are not technically difficult.

Most of them are highly labour-intensive. So are many of the best methods of eradicating waterborne disease. For instance, cleaning the banks of rivers, lakes and channels of their snail population and relining them not only helps to break the snail-parasite-man-water-snail cycle, it is the best possible education the workforce can receive in the value of preventive measures. One of the chief lessons of China's decentralised, small-scale, labour-intensive, conservative-minded irrigation techniques is that, in all such schemes, a key element is "learning by doing". Only working on the project, argue the Chinese, gives a lasting understanding of the reasons for bank linings, tree brakes, control of water flow and so forth.

Moreover, many new irrigation techniques are waiting to be tried out in thousands of suitable but still traditionally watered acres. The differences in output tell the story: 4,585 lbs. per acre of rice in Japan, 1,225 in Brazil; 3,510 in Taiwan, 945 in India. The Japanese, by long tradition, have devised their irrigation systems so that each field can be served separately. This gives the farmer (who is a "big man" if he has five acres) more flexibility in the choice of crop. It also ensures that all the acres are served. Too often, in gravity irrigation, the farmers on the lower slopes find their supplies blocked by the men above.

In the desert areas of Israel, underground irrigation has been introduced. A porous pulsating pipe carries water and fertiliser directly to the roots of the plants. The method cuts evaporation, saves at least half the water and fertiliser and, above all, keeps humans from constant bodily contact with water—by far the most effective defense against most waterborne disease. The technique is now being tried out in California.

The Chinese, the Japanese and the Israeli experiments illustrate a further point. Whether they are based on traditional techniques or on innovations, all are backed by strong cooperative or communal organization that gives the individual farmworker the advantages of scale and access to all the services—credit, fertiliser, marketing—which he could not reach on his own. In short, they are an alternative version of the green revolution but based, particularly in China and Taiwan, on labour and co-operation rather than on large tractors and workless villages.

Since in parts of Asia and Africa, if all land were redistributed, the farmer's average holding would not be much above one hectare (2½ acres), the co-operative or communal framework is a precondition of success. It can be argued that it is virtually the only way to create enough wealth and work on the land to slow down the drive to the cities and at the same time to meet a nation's rising needs for food.

Take the towns to the country

This framework also suggests the possibility of a reinforcing policy. If one adds up all the services—credit, fertiliser, packaging, storage, transport, garages, repair shops, education, technical advice, health centers—which are entailed by greater and more labour-intensive use of water in farming, one is all but driven to the conclusion that scattered farmers and small villages, unrelated to larger centers, will simply be unable to carry the programme through. Again the pattern is significant. In Denmark, Taiwan and Israel the number of market and service centres, increasingly tailored to suit farmers' needs, is of the order of one centre to 10 or 15 villages. A report published in 1970 showed Indonesia to have one centre to 355 villages and India to have one centre to 185 villages.

This suggests that the urban-agricultural confrontation is in many ways spurious. What is required is the kind of urbanisation that enhances and stabilises rural life, offers decentralised towns which can provide not only services for farmers but also health, education, work and opportunity to all the rural people's children. In the third world, a decentralised urban system geared to the development of productive farming, to a growing labour-intensive industrial sector serving basic needs, and especially geared perhaps to the farmers' children's rising aspirations, could provide a sort of map to indicate the places where safe water, sanitation and the amenities of proper conservation should be introduced. It would be perhaps the most effective and productive way of reversing the anti-rural bias of the past two decades.

But there would be other benefits. Take, for instance, pollution. The chief danger to water is its infection with organic wastes and—once industrialisation sets in—with various forms of chemical poisoning. That could be minimised in the new system. Or take erosion. One of the chief dangers offered by water is that, in areas of seasonal flooding, it erodes the land. Topsoil is still one of the chief (and most valuable) forms of detritus dumped in estuaries or carried off to the sea. That too could be reduced.

Some of the answers to these problems have been described—reforestation of catchment areas, planting trees to check wind erosion, protecting and cleaning banks and canals. One should add the use of all human and animal excrement for manure; this at least reduces the chances of it passing raw into the waters. But the solution has not so far been entirely satisfactory. Now, however, technology is beginning to provide inexpensive machines that can meet both the main water problems simultaneously. Small digestors, like India's gobar gas plants, treat organic wastes (including human excrement), so that methane gas is provided for cooking, heating and pumping, while the residue provides fertiliser.

But the gobar gas plant and comparable small machines are still protection, as it were, at the "retail" level. If the industrial sector is to grow—as it must—and if the cities, large and small, are not to remain sinks of waterborne disease, the communities have to move on to "wholesale" activities. The more effective safeguards of water made possible by western standards of sanitation should be the goal. But when one says goal, it is necessary to remember that here, too, standards are changing and improving and the third world is beginning to have a range of choice unknown even 10 years ago.

The hopeful thing is that with rising energy costs and the large savings in energy that can be achieved in recycling scrap metals, the markets for metallic wastes are improving. At the same time, nations like Holland and cities like Leningrad have long been using organic wastes as compost. The most recent development is to separate protein from the organic wastes, mix it with chopped straw and sell it directly as animal feed—another possibility enormously encouraged by rising pressures on food supplies and prices.

The latest treatment systems under experiment in North America and Europe are based upon this perception of wastes turned back into materials. And since, once sold, they earn steady income for the municipal plants—Dusseldorf has made a regular profit for some years—one of the nagging doubts, "all this is too expensive for the poor lands," could, with suitable economic help at the investment stage, turn out to be groundless.

CAN WE AFFORD IT?

Here, of course, we encounter the $64 billion question for Mar del Plata: can the targets of clean water for all people, of adequate water for farming, of pollution control and conservation—the three areas of priority—realistically be afforded by the world community? Actually, it is nearer to a $30 billion-a-year question, since present UN estimates suggest that clean water and sanitation for all by 1990 will cost $9 billion a year, two thirds of it for water, while the needed investment in agriculture—which of course, includes not only water but such other basic needs as fertiliser, mechanisation, credit—was estimated at the Rome food conference to be of the order of $25 billion a year. Subtract the double-counting for water and the total is about $30 billion.

These look formidable figures until one remembers two things. First, modern sanitation systems not only produce social goods—like health and well-being and a new parental approach to family size. They also give increasing promise of providing fertiliser, cheapening the use of power in industry and even technically making a profit for municipal authorities. Similarly, there is no more basic human need to be satisfied than food, and at times no more disinflationary force than not having to depend upon world grain markets driven to crazy peaks by Russian harvest failures or North American droughts. On both counts, the investment is counter-inflationary.

Then one can compare this $30 billion in largely productive investment with the $300 billion spent each year on arms. For just one tenth of the world's most inflationary and unproductive expenditure, the human race might have clean water and enough to eat by the beginning of the twenty-first century.

The fortunate cannot even be sure that a doubling of the poorest hungriest, most disease-ridden peoples of this planet in not much more than a couple of decades may not be a threat at least as worth considering as the threats on which $300 billion a year for arms are now being spent. Suppose both threats were considered together and steady, supervised 10% cuts in arms-spending were progressively transferred to investment in water and food. After all, in 1973 the Russians did propose a very modest version of this programme, but there was no western response. Yet if the proposals were taken up again and expanded to a full 10%, mankind might sharply improve its chances of survival. It would even deserve to do so.

[From the Christian Science Monitor, Dec. 14, 1976]

SAFE WATER FOR THE WORLD?

(By Louise Sweeney)

WASHINGTON.—Safe drinking water could be provided to all of the world's people by 1990 if governments made pure water a global priority.

This is the conclusion of the International Institute for Environment and Development, which just concluded a three-day conference here.

Half of the world's population has only contaminated water to drink, according to a report released Monday following this symposium.

"Here in the U.S., there is water for all—you simply open the faucet every day and have pure clean water—but half the population of the world doesn't have clean water to drink," said institute spokesman Enrique Penalosa of Colombia.

"High mortality rates are due to lack of pure drinking water; low life expectancy is a consequence of lack of pure water. Governments are investing huge amounts for the education and training of people who die young because of contaminated water," said Mr. Penalosa, who was secretary general of the recent UN habitat conference.

Still Mr. Penalosa suggested, "It is possible to provide pure water for all mankind by 1990 if the right political decisions are taken."

The bill for such "water for all" would be $6 billion per year for water supplies and $3 billion per year for related sanitary treatment every year for 14 years.

The institute, a nonprofit organization funded by private foundations, UN agencies, and some governments, suggests that safe drinking water could be provided in the third world, where the greatest need is, for $3 annually for every person there. Ninety percent of such money would be allocated domestically, only 10 percent internationally, according to the institute.

The cost to "the rich" countries contributing that 10 percent would be only 30 cents a person, the institute suggests. Appropriating that money would be a question of reordering priorities, according to the institute, which says that currently $100 per person in the "developing world" is spent on military arms.

India, Zaire, and Iraq are typical of those countries where people suffer most from contaminated drinking water, according to another institute spokesman, Robert Stein. The group's figure indicates that one third of those people living in rural communities—or roughly one billion people—do not have clean, safe water, and that 150 million of those in cities do not either. They also note that there is a water scarcity in 25 percent of the globe and that people in Asia and Africa suffer most from the lack of good water.

The institute's findings, in addition to being announced publicly, are being sent to the UN Secretary-General for consideration in the UN water conference in Mar Del Plata, Argentina, March 14–25. The institute is trying to arouse more governmental interest in the water problem on the part of industrial nations who have not as yet become sufficiently involved in the issue or the Mar Del Plata Conference, according to institute spokesmen. The just-concluded three-day symposium which resulted in the findings included experts from 15 countries.

[From the Baltimore Sun, Oct. 20, 1976]

CLEANER WATER IN POOR NATIONS HELD HEALTH KEY

GENEVA.—Sickness around the world would fall by 80 per cent if people in poor countries could be given pure drinking water, according to estimates by World Health Organization (WHO) experts here.

The experts say that more than 1.2 billion persons, one-third of the world's population, in developing countries lack safe drinking water supplies and more than 1.4 billion have no sanitary waste disposal facilities.

The results include diseases that have crippled entire populations in some regions, such as a killer disease borne by a water snail which infests the Nile.

Cholera, typhoid, diarrhea, dysentery, malaria and intestinal worm infections are among the illnesses transmitted through water.

More insidious is a general weakening of the population causing high infant death rates and making people prone to disease.

THE STORY OF A DISILLUSIONED VETERAN

Mr. GRIFFIN. Mr. President, as we all know, President Carter's first official act was to grant a blanket pardon for all Vietnam-era draft evaders.

I felt then—and feel just as strongly today—that this was an unwise and ill-considered decision.

From the mail that is coming into my office, it is clear that countless Americans feel the same way.

President Carter's action has not brought the country together; nor has it healed the wounds of Vietnam. On the contrary, his pardon has reopened old wounds and rekindled understandable bitterness shared by many veterans and their families.

Of those who have written to me on this issue, close to 98 percent have expressed opposition to the Carter blanket pardon.

Detroit television station WJBK conducted a poll on the pardon issue the week before President Carter was sworn into office. Of the 995 viewers who responded 82 percent registered opposition to President Carter's position.

Judging from my mail alone, it seems clear that public sentiment is still overwhelmingly against the kind of blanket pardon President Carter has granted.

Among the letters I received last week was one from retired Air Force M. Sgt. Thomas J. McPhee of Detroit, who served this country with honor in World War II, Korea, and Vietnam.

His letter was unforgettable, because it was accompanied by a large box. Inside I found 17 medals that had been awarded to Sergeant McPhee during his 25 years of military service.

The array included a Distinguished Flying Cross, a Purple Heart, an Air Force Commendation Medal, several Air Medals, and nearly a dozen other decorations from three wars that the sergeant had once worn with pride.

But no longer. Today, Sergeant McPhee is a bitter and disillusioned man; he cannot bear to wear them any longer.

Although his letter is stronger than some, the anger it expresses is not unique.

I ask that Sergeant McPhee's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SENATOR GRIFFIN: When I joined the service in 1945 it was mostly through a sense of duty. My father served in World War I and my only brother died in a Japanese prison camp. In those days and for many years to come the profession of arms was an honorable profession. I now find that honor is just a word between "hollow" and "horse****" in the dictionary.

I spent almost all my 25 years in the service as a combat aircrew member in The Strategic Air Command. I flew as a gunner on B–45s over Korea (and Red China) during the Korean War and on B-52s over North and South Vietnam during the Vietnamese War. I could have avoided both wars by making it known that I was a "sole surviving son". I chose not to do so because I was led to believe that courage was a virtue. I now know that it is also simply a word in the dictionary. You can find it between "Cop-out" and "cowardice".

Along the way I collected many awards and decorations. In my ignorance I was proud of them. I naively believed that they were awarded for valor and honorable service. President Carter's amnesty declaration made me realize that they were really sucker badges. I was suckered into two wars by the foolish idea that as an American, it was expected of me. I now find that all the heroes are in Canada and will no doubt be welcomed with a ticker tape parade upon their triumphant return to this country. I am enclosing these so-called "awards and decorations" with the request that you pass them on to the president so that he may use them on the Canadian border. At one apiece, they should decorate fifteen or twenty valiant war resisters.

I used to be proud of the fact that I was a retired soldier. I signed my name: Thomas J. McPhee, MSgt (Ret),—but no more. If anyone should ask me the source of my income I shall conceal the fact that I draw military retirement pay by claiming to be a smuggler. There is less of a stigma attached to that.

If there is a Vahalla I pray that those whom have earned a place there will forgive me for having voted so stupidly.

THOMAS J. MCPHEE,
Smuggler.

IMPACT OF POPULATION TRENDS ON THE UNITED STATES

Mr. HUMPHREY. Mr. President, I would like to share with my colleagues an article in the New York Times of February 6, 1977, by Robert Reinhold, which investigates the impact of population trends on our society.

Mr. Reinhold states that while the average age of an American citizen is now 28.9 years, it is likely to increase to 37.9 years old—that is an 8.4 year increase by the year 2030. Although it is difficult to forecast all of the consequences of this trend, it seems unlikely that any aspect of American life—the economy, housing styles, education, musical taste, land use, recreation, manufacturing, medical care, retirement practices, even politics—will be unchanged in an "older" American society.

For several years, the average number of children born to each family has decreased below the replacement level of 2.1 to 1.8 in recent years. The level in 1957 was 3.7 children for each family.

At the same time, improved medical care has increased the numbers surviving into old age. The declining death rate means a steady expansion of the numbers of the aged. If recent trends continue, the Census Bureau has predicted that 17 percent of all Americans, or one in every six, will be over 65 by the year 2030, compared with one in 10 today.

With these trends in mind, we should begin to be aware of what this will mean for the future in terms of our society. The implications for our social security system is one important question.

Mr. President, I ask unanimous consent that this informative article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WIDE CHANGES IN ECONOMY AND WAYS OF LIFE EXPECTED AS MEDIAN AGE OF AMERICANS RISES

(By Robert Reinhold)

WASHINGTON, Feb. 5.—Slowly, almost imperceptibly, but with inexorable force, America's population is undergoing a profound transformation that could alter nearly every facet of its way of life.

Low fertility and mortality rates have combined to produce a population that, while increasing for many decades, will probably have a larger proportion of elderly people and a smaller proportion of the young.

After decades of the rising influence of the "youth culture," the pendulum is swinging back. By the year 2030, the median age of Americans will be 37.3, or 8.4 years older than it is today, if American women continue to bear so few children and the death rate continues to drop. Federal Government figures to be released in a few weeks will show that fertility rates dropped in 1976 to a new low for the fifth year in a row.

Although it is hazardous to forecast the consequences of this trend, it seems unlikely that any aspect of American life—the economy, housing styles, education, musical taste, land use, recreation, manufacturing, medical care, retirement practices, even politics—will be untouched.

While the full brunt of the trend will not be felt for years, harbingers abound:

Levi Strauss, the jeans maker whose ads with psychedelic and sexual overtones were the commercial embodiment of the youthful culture of the 1960's, has made subtle changes in its pitch. The company now promotes sportswear with a fuller cut, for that 1965 college boy who can no longer squeeze into his size 30 Levis.

Dropping school enrollments have forced educators to close schools and colleges and to search for new "markets." Montgomery County in Maryland, which lost 4,500 students this year and expects to see another drop of 4,500 in the fall, recently closed seven public schools. Columbia University in New York recently announced a major move into adult education.

Faced with declining sales of baby food, the Gerber Products Company has diversified and now makes such products as vaporizers and shampoo. It is also testing adult foods such as ketchup and peanut spreads, as well as single-serving foods for the elderly. As it is, company officials privately estimate that as much as 10 percent of its baby food is actually consumed by the elderly.

The FM rock radio stations that emerged in the 60's are still thriving, but the sponsors are selling condominium apartments and suburban homes as well as phonograph records and acne remedies.

Social Security officials are calling for a thorough revamping of the retirement pay system, because they fear that soon there will not be enough young people working to support the swollen ranks of retired elderly. There are now 31 Social Security beneficiaries for every 100 workers. By the middle of the next century, it is estimated, the figure will rise to 50. If, so, Social Security taxes may have to rise to 35 percent of the taxable payroll.

THE UNDERLYING STATISTICS

Underlying the predictions of an aging population are some statistical facts of life.

The fertility rate of American women continues to slide dramatically. For the first 11 months of 1976 the rate was 65.7 births for each 1,000 women in the childbearing ages (15 to 44), down from 66.7 in 1975. At the crest of the postwar "baby boom" in 1957, the figure was 122.7; the previous low was 75.8, set in 1936 during the Depression.

Even the absolute number of babies born remains extremely low, in comparative terms. About 3,159,000 babies were born during the 12 months that ended last November, the same as during the comparable period of 1975. During the baby boom years, with a far smaller population, over four million babies a year were born.

For several years now the crucial "total fertility rate," of the average number of children born to each family, has sagged below the "replacement level" of 2.1. This is the figure at which the population would, after some decades, cease to grow. From 3.7 children for each family in 1957, the total fertility rate went to 1.8 in 1975.

At the same time, improved medical care has swelled the numbers surviving to old age, pushing the death rate to new lows almost every year. It stood at 8.9 deaths for each 1,000 people in 1975, and advance indications are that it will be at least that low in 1976.

The declining death rate means a steady expansion of the ranks of the aged. If recent trends persist, the Census Bureau has projected, 17 percent of Americans, or one in every six, will be over 65 by the year 2030, compared with one in 10 today.

STABILITY BY 2030

Under these projections, excluding the imponderable of immigration, population would stabilize by about 2030 with 46 million people over age 65, twice as many as today. This means, for example, that the number of women over 65 would be about equal to the number of girls under 15. Or, to put it another way, the median age of Americans will have climbed from 28.9 this year to 37.3 in 2030. The median age was 16 in 1800.

These projections—they are not predictions—assume that fertility will remain low. Human fertility is notoriously unpredictable, and a handful of experts foresee a modest rise a few years from now. But most American demographers feel the low fertility rates will continue because of the availability of effective contraception, liberalized abortion and divorce laws, postponement of marriage and the changing role of women. One key barometer of future fertility, the average number of children young women expect to have, slid from 3.1 births for each woman in 1967 to 2.4 in 1976.

All of this has rekindled some old fears of "demographic stagnation" and economic distress. Alfred Sauvy, the French demographer, portrays an aging society as one that would "slide towards inevitable decadence, like a tree with too much foliage for there to be any young growth." He has conjured up a dreary image of a "population of old people ruminating over old ideas in old houses."

Few American population experts, most of whom have labored hard for population stability, or "zero population growth," share the pessimism of Mr. Sauvy. Like Thomas J. Espenshade, an economist at Florida State University who works on population trends, most concede that the transition to an older society will cause some painful social and economic dislocations but believe the ultimate effect will not be damaging.

DEFERRED IMPACT

The full impact of the transition to an older society will be deferred because the ranks of baby boom children, born between 1947 and 1961, are now moving through young adulthood. But as they reach middle age and retirement years, if the low birth rate continues, the composition of society will change dramatically. It will become more like the stable older population of Sweden and less like the young, rapidly growing population of Mexico.

Will an older society reflect Alfred Sauvy's sad image of decadence, stagnation and rivalry between the generations? Or will it result in more stability, as forecast by advocates of zero population growth?

The consequences of population shifts are difficult to predict because styles of life are affected also by taste, innovation and other unpredictable factors.

But it seems safe to assume that a country dominated by the old will need less baby food, toys, teachers and maternity wards. Conversely, demand should rise for retirement homes, medical care, recreational facilities and entertainment suiting the tastes of the elderly. Political styles too may be altered, with the elderly controlling close to a third of the vote.

A LIFE SPAN GAP

The problem of widowed women may well be exacerbated. Unless medicine drastically cuts the death rate of men, the gap in life span between men and women is likely to widen, even though both will live longer. Some have suggested, only half jokingly, that bigamy be legalized for elderly men.

American business does not seem especially worried about the aging trend. Some product and service lines will suffer, but on the whole industrial leaders are optimistic. Vernon Johnson, director of corporate planning at General Mills, which markets not only cereals but also toys, games, sportswear and other products, says that the trend to smaller families will free more "discretionary" income for such goods as games and clothing.

But if individual industries adapt, what about the economy as a whole? Will an older population be as productive? What will happen to income, consumption, demand for goods? Will there be less mobility? Will a population that has ceased to grow create enough economic growth to encourage investment in capital goods and maintain full employment? Will companies and institutions become more dominated by old people who may be unwilling or unable to change? In short, will the economy stagnate?

Economists differ on these questions, but in general American experts are sanguine. The arguments are extremely complex, but the consensus seems to be that any possible decline in average worker productivity in an older society would not be as damaging as continued population growth.

ADVANTAGES PREDICTED

Indeed, many see clear advantages. Joseph J. Spengler of the University of North Carolina finds little reason to fear unemployment and says productivity should rise because the capital previously used to train new workers could be used to build more factories and machines.

Other economists believe both per-capita income and consumption would rise in a stable population. Professor Espenshade of Florida State, for example, has tried to foresee the economic impact of a changing age composition by examining consumption patterns in stable and growing populations. He found the net difference negligible, with the reduced spending for food and necessities offset by greater consumption of discretionary products and services, such as leisure pursuits.

A major concern is that an older society will have less mobility, occupational and geographic. With nearly all workers expected to live at least to the end of their working years, ambitious talented young people may find their way blocked by an older leadership. At the same time, there may be a shortage of labor able to move from one place to another because older people are usually less adaptable.

Such concerns have spawned much talk of altering the "entry" and "exit" ages for workers. Some have suggested earlier retirement to make way for the young, but others talk about postponing it because men and women will live longer with health intact.

WORRY ABOUT DULLNESS

A less tangible concern is that an older society might be less creative, less innovative, more conservative. Without the pressure of large waves of young people, it is argued, a society would become gray and dreary. Critics of this theory say that countries with older populations, like Sweden, are not particularly conservative.

Of greater immediate concern is the matter of dependency. A stable population would have the same proportion of people in the working ages (18 to 65), compared to the dependent young and old, as it does today—about three workers to every two dependents. However, the preponderance of dependents would shift to the elderly group, who are far more costly to care for than the young.

Today, the United States provides poorly for retired people. What will happen when their number doubles? In a 1972 report to the Commission on Population Growth and the American Future, Lincoln Day of the United Nations' statistical office put it this way:

"To worry about the supposed behavioral consequence of an aging, or more aged, population, is to divert attention from the real issue: how to incorporate a higher proportion of old people into society in a socially and emotionally meaningful way."

The "graying of America" has given Dr. Robert N. Butler, head of the National Institute on Aging, reason to hope that "this may be the time when humankind uses a little forethought."

REPORT ON U.S. PARTICIPATION IN INTERNATIONAL ORGANIZATIONS

Mr. PERCY. Mr. President, earlier this week the Committee on Government Operations released a report on U.S. Participation in International Organizations. This report was based upon a year long study by the staff of the Committee.

The report points up a number of important aspects of international organizations and U.S. participation in them. Some of the major areas covered include:

The size and scope of international organizations.

The proliferation of international organizations and duplication of effort among them.

Inefficiencies and lack of evaluation of activities undertaken by many of these organizations.

The problems of formulating and coordinating U.S. policy toward international organizations because of the many U.S. agencies with interests in and involvement with them.

The problems of recruitment of U.S. nationals for work in international organizations.

The size of staffs and personnel compensation of employees of various international organizations.

Mr. President, I think this background information will serve as a good basis for hearings later this year by the Government Operations Committee. Other committees of Congress may well be interested in reading the report also for information on international organizations which are participated in by U.S. agencies under their jurisdiction.

Many international organizations serve useful purposes in many worthwhile fields and U.S. participation in them is in our national interest. Our intention in pointing out various weaknesses in them is not to say that we feel the United States should withdraw from them, but rather to build them into more effective institutions to better meet the many growing problems the world faces today.

I look forward to further studies on this most important area and to the hearings that will be held later this year.

IMMIGRATION

Mr. KENNEDY. Mr. President, the growing problems and future course of our national immigration policy and practice is continuing to generate a good deal of congressional and public interest. Some modest progress was made last year with the enactment of the Immigration and Nationality Act Amendments of 1976, and hopefully this Congress will continue the effort.

In this connection, I would like to share with Senators and readers of the RECORD the foreword I prepared for the current issue of the San Diego Law Review, which also contains a number of useful articles and commentaries on new immigration regulations and recent legislation, the labor certification requirement for intending immigrants, and current issues relating to deportation, including the right to counsel in deportation proceedings.

Mr. President, I commend the Law Review to Senators, and ask unanimous consent that the text of my foreword on current legislative issues be printed in the RECORD.

There being no objection, the foreword was ordered to be printed in the RECORD, as follows:

FOREWORD

(By Hon. EDWARD M. KENNEDY*)

Immigration policy should be generous; it should be fair; it should be flexible. With such a policy we can turn to the world, and to our own past, with clean hands and a clear conscience. Such a policy would be but a reaffirmation of old principles. It would be an expression of our agreement with George Washington that "the bosom of America is open to receive not only the opulent and respectable stranger, but the oppressed and persecuted of all nations and religions; whom we shall welcome to a participation of all our rights and privileges, if by decency and propriety of conduct they appear to merit the enjoyment." [1]

When John F. Kennedy became President in January 1961, he pledged to the American people that he would earnestly work for immigration reform, and his leadership in this area contributed significantly to the passage of the 1965 Immigration Act.[2]

This Act abolished the discriminatory national-origins quota system from the statute books and substituted a new system for distributing visas on a first-come, first-served basis. Exclusive of immediate relative and other "special immigrant visas," 120,000 visas were made available annually for applicants in the Western Hemisphere and 170,000 visas for applicants in the Eastern Hemisphere.

The Act of 1965, clearly a benchmark in the history of American immigration policy, was a victory for the forces of common sense and decency. The Act broadened equality of opportunity, a central theme in American history. And it stands with other legislation of the 1960's in the field of civil rights, poverty, education, and health as a reaffirmation of our nation's continuing pursuit of justice and fair play.

More than a decade has passed since the Act of 1965 became effective, and, in the main, it has served our country and its traditions well. However, the Act was only the beginning of an important task. It failed to resolve issues relating to immigration from Western Hemisphere countries. It did not include a comprehensive policy for admitting refugees. It did not deal with needed reform in areas such as deportation, naturalization, and citizenship. And in many respects the Act fell short of the desired flexibility in immigration policy and practice recommended by the executive branch and supported by many members of Congress.

In 1965 there was a general recognition that new legislation would soon be needed. But the continuing reform effort was quickly stalled, and it has remained so until this day, despite a good deal of legislative activity in Congress and growing pressures from the private sector. The only important exception is the Immigration and Nationality Act Amendments of 1976,[3] which passed the Senate and House of Representatives during the waning hours of the 94th Congress, and was only recently signed into law. The principal provisions of this new law involve Western Hemisphere immigration. Among other things, the law extends to the Western Hemisphere the seven preference categories and the annual 20,000 per country visa limit, currently applicable to the Eastern Hemisphere. It also extends to natives of Western Hemisphere countries the opportunity to adjust their status in the United States on the same basis as natives of Eastern Hemisphere countries. Finally, the new law provides that Cuban refugees in the United States who adjust their status to permanent resident aliens under the Adjustment Act of 1966[4] will not be charged to any numerical ceiling. The provision on Cuban refugees merely confirms legislatively a long overdue administrative action taken by the Attorney General in September of this year.

Although the Act of 1976 was rushed through Congress with little debate or consultation and with no opportunity for amendments, its principle provisions are clearly an effort to help fulfill the intent of the 1965 Immigration Act. No expert observer objects to bringing visa applicants in both the Eastern and Western Hemispheres under the same system and set of rules. Nevertheless, the Act of 1976 is not as noncontroversial as its authors and supporters suggest. For example, contrary to the House report on the legislation, there is no "general consensus" that the annual limit of 20,000 visas per country should be imposed on Mexico, or even on Canada. Legitimate concern has been expressed by some members of Congress and many private immigration experts over the possible ramifications of this provision.

Some concern also exists over other provisions of the new law. The modifications in the labor certification procedure in section 212(a)(14)[5] of the present law is one such provision. And another is what some observers are calling the "punitive" language in the adjustment of status provisions. This language bars from adjustment of status those aliens in nonimmigrant status, other than immediate relatives, who accept "unauthorized employment." And widespread congressional and public concern has been demonstrated over the new law's failure to make any changes in the refugee provisions of the current statute.

Reforming the immigration and naturalization laws has always been a slow and difficult process. Hopefully the Immigration and Nationality Act Amendments of 1976 will contribute to this reforming process in terms of both the Act's limited and controversial contents and what it portends for the tremendous task that remains.

This task involves several matters of public concern: first, refining the new policy and system established in 1965, including the treatment of refugees; second, reviewing and reforming all other provisions of the basic immigration statute, including those dealing with nationality and naturalization; third, finding more feasible alternatives for dealing with the problem of undocumented and out-of-status aliens; fourth, humanizing the administrative practices and procedures of the immigration and naturalization law; and fifth, bringing more order into the structure and decision-making process of the scattered bureaucracy which interprets and implements the law.

In refining the new policy and system established in 1965 and further developed through the Immigration and Nationality Act Amendments of 1976, Congress should consider at least these items: allocating up to 35,000 or 40,000 visas annually to both Mexico and Canada on a temporary, if not permanent basis; modifying the definition of various preference categories, including, for example, granting preference status to the parents of permanent resident aliens; restructuring the preference system by changing the percentage allocation of visas to each preference category, by better utilizing the unused visas in any one category to meet excessive demands in other categories, by rearranging the order of the various preferences, and, perhaps, by combining some existing preference

Footnotes at end of article.

categories; and removing the distinction between the Eastern and the Western Hemisphere by establishing a worldwide immigration ceiling and preference system after a transition period of perhaps three years.

In this connection, one of the most glaring deficiencies of the existing preference system and law—a deficiency which is contrary to our international commitments and to our national traditions and interests—concerns the admission of refugees. Of fundamental importance is a new definition of a refugee. Present law and practice emphasize the plight of people who "have fled (I) from any Communist or Communist-dominated country or area, or (II) from any country within the general areas of the Middle East."[6] A new definition is suggested in legislation I introduced in the last Congress:

"The term "alien refugee" means (i) any alien (I) who is outside the country of his nationality or who, not having a nationality, is outside the country of his habitual residence, and who is unable or unwilling to return to such country because of persecution or well-founded fear of persecution on account of race, religion, nationality, membership of a particular social group or political opinion, or (II) who has been uprooted by catastrophic natural calamity or military operations and who is unable to return to his usual place of abode, and (ii) the spouse and children of any such alien, if accompanying or following to join him."

A definition along these lines not only conforms with the traditional humanitarian concerns of the American people but also gives meaning to our country's 1968 accession, with two reservations, to the United Nations Protocol Relating to the Status of Refugees. If such a definition was the law, admitting refugees from Chile, for example, would become a simple matter of humanitarian practice, instead of an issue for heated debate.

A legislative change in the definition of a refugee should also include the granting of immigrant visas to eligible applicants, instead of according them "conditional entry" status. There should also be a substantial increase in the number of visas allocated for refugee admissions within the preference system. In accordance with a new policy stressing flexibility in dealing with the homeless, the Attorney General should be specfically authorized, following consultations with Congress, to exercise his parole power in section 212(d)(5) of the basic immigration statute to bring into the United States additional refugees "for emergent reasons or for reasons deemed strictly in the public interest." He should also be authorized to adjust the status of such refugees to that of permanent resident aliens. This change would avoid the need for special legislation such as that which was previously enacted for Hungarian and Cuban parolees and which is currently required for the more than 140,000 new arrivals from the Indochina Peninsula.

Legislation to refine the new immigration policy and system established in 1965 must be a matter of early priority after the 95th Congress convenes on January 4, 1977. And serious legislative considerations must also begin over *all* other aspects of the basic immigration statute.

The basic statute's provisions on nationality and naturalization, for example, have been largely ignored by the executive branch and Congress since the 1952 codification and amendment of the immigration laws. Many of these provisions, as well as others in the basic statute are products of a harsher period in our country's history and have no place in the public policy of a free society. Moreover, for various reasons, including judicial decisions which have significantly altered the basic statute over the years, many provisions are either inoperable or no longer invoked. Certain provisions dealing with deportation are a good example. It is not surprising, therefore, that in 1976 an overwhelming number of experts view the basic immigration and nationality statute—the Act of June 27, 1952[7]—as an anachronism in the public policy of the United States. They strongly believe that legislative clarifications of the basic statute, and serious efforts to update and overhaul it, are long past due.

A serious and comprehensive review of the basic immigration statute, with the goal of legislative reform, is not an easy task. Given the history of legislation in this area and the complexity of the issues involved, revision will require much time and deliberation. Nevertheless some modest but important amendments are undoubtedly possible in the months ahead. An amendment to liberalize the English language requirements for citizenship, a generally recognized need, is a good example. Also possible is some truly meaningful and compassionate legislation to deal with the problem of undocumented aliens. And perhaps progress can be made even in meeting some less recognized needs, such as enacting a meaningful statute of limitation on deportation and establishing a board of appeals, especially for denial cases involving the family members of United States citizens and permanent resident aliens. These two objectives, among others, are important elements in an equitable policy. They were once a part of the law, and they should be restored.

However, despite the potential for piecemeal review and reform, the fact remains that a truly serious and comprehensive review is needed. Nothing really has approached such an effort since the congressional hearings and public debate which accompanied the passage of the Immigration and Nationality Act of 1952 and the subsequent work of President Truman's Commission on Immigration and Naturalization.[8]

Expert views expressed in the *San Diego Law Review* and elsewhere have justifiably sought to encourage a new effort, and the process should begin in the next Congress with the full cooperation of the executive branch. In this regard, the Judiciary Committees of Congress and the appropriate offies in the executive branch probably can do a great deal. But serious consideration should also be given the creation of a special commission to make a complete study of all matters pertaining to American immigration and naturalization policy and practice and to make findings and recommendations for accomplishing the long sought goal of general reform. The composition and structure of the Select Commission on Western Hemisphere Immigration, which was established by the Immigration Act of 1965, suggest a pattern for creating a new commission on general policy and reform.

Immediate and longer-term legislative reform is of fundamental importance in updating our national immigration and naturalization policy. We must not lose sight of this goal. But early remedies are also needed to meet the growing deficiencies in current administrative practices and procedures. In addition greater order in the structure and decisionmaking process of the scattered bureaucracy which interprets and implements the law is called for. Many problems which have been addressed in this *Law Review*, and the kinds of problems recently associated with establishing and implementing special measures for victims of the conflict in Lebanon, underscore the urgent needs in this area of public concern. And the need for some immediate action is generally recognized by a broad segment of people involved in immigration and naturalization matters.

To humanize the administration of the law, to bring a greater sense of understanding and compassion for those affected by the law, and to bring a better balance between the police and service functions of the Immigration and Naturalization Service are some immediate goals.

Immigration is deeply ingrained in the American tradition; it is one of the oldest themes of our history. Today, as in the past, the pressures for immigration to the United States are greater than those for any other country. To many thousands of families and individuals in all parts of the world the United States remains a beacon of hope, opportunity, and freedom.

Americans recognize the importance of our immigrant heritage, and its contributions to the building of our country and the sustaining of our free society. There is little doubt that in 1976 the overwhelming number of our citizens accept immigration as a continuing part of our Nation's historical process—for humanitarian, cultural, economic, and personal reasons.

Although we must have laws and limitations, we must also maximize equal opportunity for everyone. And we must remain "generous," "fair," and "flexible" in the implementation of our laws and in the treatment accorded new arrivals in our land.

Through its symposia on immigration law, the *San Diego Law Review* is providing a valuable forum for discussing important matters of public policy and concern. The editors deserve our appreciation, our thanks, and our encouragement for continuing their service to the American people.

PROJECT SEAFARER

Mr. GRIFFIN. Mr. President, earlier this week, Congressman PHIL RUPPE of Michigan and I released the text of a letter we sent to President Carter.

The letter calls attention to a commitment made by Mr. Carter to the people of Michigan's Upper Peninsula during the closing days of his campaign for the Presidency.

Whether right or wrong, it is obvious that Mr. Carter has already made a decision that Project Seafarer, the low-frequency submarine communications network proposed by the Navy, will not be located in the Upper Peninsula. He made a flat commitment that, if the people in the area are against it, Seafarer will not be built there—regardless of national defense or other considerations.

Since local public opinion is overwhelmingly opposed, frankly, I see no reason to prolong the agony or to spend

additional millions of dollars on environmental studies that relate to a northern Michigan site. Under the circumstances, it would be better for all concerned if the Defense Department now shifted its attention to other possible sites in the country where Seafarer could be built, if it is needed.

I ask unanimous consent that the text of our letter and the campaign statement made by Mr. Carter be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., February 1, 1977.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: You will recall that on October 25, 1976, in response to inquiries regarding your position on Project Seafarer (an extremely low-frequency submarine communications network proposed by the Navy), you said:

"If I am elected, Project Seafarer will not be built in the Upper Peninsula (of Michigan) against the wishes of the citizens."

As you may know, citizens in five of the eight counties that would be affected, did have an opportunity on May 18 to register their wishes in a referendum on the issue; and they voted by a margin of 3 to 1 against locating Project Seafarer in the Upper Peninsula. More recently, on November 2, in a referendum held along with the Presidential election, citizens in the other three affected counties expressed their wishes, and they voted by a margin of more than 4 to 1 against locating Project Seafarer in the Upper Peninsula.

In your October 25 statement you appropriately pointed out that:

". . . even if this particular system is shown to be needed, there are other places where it can be built, including land owned by the federal government which is already dedicated to military use."

In view of the fact that it clearly would be "against the wishes of the citizens" to build Project Seafarer in the Upper Peninsula of Michigan; and since, as you have indicated, "there are other places where it can be built" if the Defense Department determines that it's necessary, we now strongly urge that Northern Michigan be eliminated and removed from consideration as a site for this project.

Your prompt attention to this matter would be deeply appreciated.

With best wishes,

ROBERT P. GRIFFIN,
U.S. Senator.
PHILIP E. RUPPE,
Member of Congress.

[Text of a statement, dated Oct. 25, 1976, by Jimmy Carter, as reported in the Oct. 26 issue of the Bessemer (Mich.) Pick and Axe]

The Navy's proposed ELF submarine communication system should not be built in Michigan's Upper Peninsula against the wishes of the people who live there. The people of the Upper Peninsula have made their opposition to Project Seafarer known through referenda, and I have discussed the project with Fran Brouillette, the Democratic candidate for Congress from the 11th Congressional District.

I share the concern of Fran Brouillette and those who voted on Project Seafarer that the effects of this system on the environment and our people have not been adequately studied or evaluated. I share the concerns of property owners in the Upper Peninsula that this project will jeopardize their investment in their homes, farms, and land. I do not feel the Navy or Department of Defense have been open or forthright about the effects of Project Seafarer, and I intend to change that if elected.

The Navy has yet to satisfactorily demonstrate the military necessity of Project Seafarer. But even if this particular system is shown to be needed, there are other places where it can be built including land owned by the federal government which is already dedicated to military use.

If I am elected, Project Seafarer will not be built in the Upper Peninsula against the wishes of the citizens. And I want to be able to count on Fran Brouillette's support in Congress on this decision.

CHARTING THE PREVIOUSLY UNCHARTABLE—THE AMAZON AND MODERN TECHNOLOGY

Mr. HUMPHREY. Mr. President, earlier this week there appeared an exceptionally intriguing article in the Washington Post concerning efforts of the Brazilian Government to chart the vast expanses of the Amazon jungle.

To date, 936,000 square miles of the Amazon have been mapped, utilizing modern aerial radar technology followed up by on-the-ground spot checks by technicians. The region thus far charted is:

. . . comparable to an aerial survey stretching from the tip of Maine to the tip of Florida and extending westward a bit past the Mississippi River.

And what has been found thus far?

Radar maps produced by the survey indicate that the Brazilian region is dotted with potentially valuable deposits of minerals such as bauxite, iron ore, tin ore, manganese, limestone and even gold, diamonds and radioactive substances—which no one knew were there before. The radar maps show that some of the Amazon's tributaries and mountains—which have been routinely marked in on globes and atlases all over the world for years—actually are miles away from where mapmakers thought they were.

The survey maps also tell which parts of the Amazon jungle may be best suited for farm settlements and highways, which parts should be used for large-scale timber and cattle raising, and which parts for ecological or economic reasons—would best be left alone. Detailed reports accompanying the maps note that much of the development in the region so far has been the wrong kind in the wrong place.

Mr. President, the important aspect of this undertaking is not only discovery of new mineral wealth, potential farmland and cattle raising country, but discovery of how the Brazilian Government had made serious mistakes in their development planning in the past. What is being achieved with modern technology will allow the Government to not only minimize those mistakes but also avoid them in the future.

There are many vast uncharted regions on the face of this planet which should lend themselves to the use of the same technology. I believe we should follow very closely what is happening in Brazil for it could be a precursor to similar uses of technology elsewhere.

Mr. President, I ask unanimous consent that the article, entitled "Radar Discloses Untapped Riches in Amazon Jungle," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 7, 1977]

RADAR DISCLOSES UNTAPPED RICHES IN AMAZON JUNGLE

(By Bruce Handler)

RIO DE JANEIRO.—For the first time in its history, Brazil is finding out what really exists in its myth-shrouded Amazon jungle. An accurate profile of this region—which is vast, remote and largely uninhabited, yet potentially rich in natural resources—is beginning to emerge from an ambitious aerial radar survey organized by the Brazilian government.

This undertaking could help Brazil develop the Amazon jungle in a rational and intelligent manner and move the huge country closer to its goal of becoming a major developed nation.

The aerial survey, which has cost some $25 million in the past six years, has produced an incredible amount of new data about the region. It also has revealed how Brazil wasted large amounts of time and money, both foolishly and destructively, on poorly thought-out Amazon development schemes in the past.

Radar maps produced by the survey indicate that the Brazilian region is dotted with potentially valuable deposits of minerals such as bauxite, iron ore, tin ore, manganese, limestone and even gold, diamonds and radioactive substances—which no one knew were there before. The radar maps show that some of the Amazon's tributaries and mountains—which have been routinely marked in on globes and atlases all over the world for years—actually are miles away from where mapmakers thought they were.

The survey maps also tell which parts of the Amazon jungle may be best suited for farm settlements and highways, which parts should be used for large-scale timber and cattle raising, and which parts for ecological or economic reasons—would best be left alone. Detailed reports accompanying the maps note that much of the development in the region so far has been the wrong kind in the wrong place.

"People have spoken of the Amazon jungle as everything from a green hell to the breadbasket of the world," says Otto Bittencourt Netto, technical director of the project. "But we who have been working there all this time don't dare to make a single affirmative statement about that region yet."

The radar maps are compiled from images collected by a Caravelle jet airliner that has been methodically crisscrossing the Amazonian skies at 32,000 feet, at a speed of 530 miles per hour.

The radar information is then checked on the ground by technicians who are lowered into the otherwise inaccessible jungle by Brazilian air force helicoters. More than 40 people have been killed during the mapping project, most of them in helicopter crashes.

To date, 960,000 square miles of Brazil's Amazon region have been charted with radar maps—comparable to an aerial survey stretching from the tip of Maine to the tip of Florida and extending westward a bit past the Mississippi River.

Some of the survey's findings have been classified by the Brazilian armed forces—such as maps of Brazil's borders with French Guiana, Surinam, Guyana and Venezuela. This could aggravate fears that Brazil harbors inperialistic designs on the rest of the continent, although Brazil insists that it has no dreams of expansion.

Much of the radar survey information is available to the public and some has even been distributed overseas. Report No. 10, which has just released, is typical. It covers a rectangular section of jungle measuring 113,500 square miles—equal in size of the

state of Arizona—which includes the important cities of Manaus and Santarem, long stretches of the Amazon and Tapajos rivers and a major part of the new and much-ballyhooed Transamazon Highway.

A look at highlights of the report shows the region's potential richness as well as the bad planning and lack of coordination that has occurred there already:

The radar has picked up indications of nearly 25 important minerals in this section, including what appear to be commercially exploitable deposits of bauxite, iron ore, gypsum and rock salt. Several mining companies, foreign as well as Brazilian, are actively interested in starting up projects, the report says.

Large expanses of land beneath the jungle foliage in this section are swampy and "do not offer favorable conditions for the planning and execution of highway projects."

Yet this is precisely where an important part of the multimillion-dollar Transamazon Highway—rushed into construction several years ago during a euphoric period of nationalism—goes through and frequently suffers major washouts.

Much of the soil in the section is, according to Report No. 10, "acidic and of low nutrient content, which seriously limits its productivity." Yet this is where Brazil tried to get millions of homesteaders and small farmers to settle and make new lives. The radar survey explains, in part, why the Amazon homesteading drive flopped.

The aerial survey did detect one large strip of fertile farmland in this section, but the report noted that and this is now being cleared for grazing. This, it predicted, will cause erosion and permanently ruin the land for farming—and possibly bring about the frequently theorized "Amazon desert."

On the other hand, the radar spotted large areas in the section that seem of little use for farming but apparently would sustain cattle ranches. The report said there are no cattle on these lands now.

Many of the tributaries of the Amazon River that run through the section are navigable all year and serve as the cheapest and most efficient means of transportation and commerce in the region, as opposed to highways, the report said. But it added that few of the towns and settlements along these tributaries have bothered to build river ports, docks or even rudimentary stairways for loading and unloading boats.

The Brazilian government now seems willing to try to correct past mistakes. The radar project grew from a minor geological survey in the Ministry of Mines and Energy because federal officials were impressed with its early work. Now the government has told the project's directors to extend the radar aerial mapping and reporting to the rest of the country.

FINANCIAL STATEMENT OF SENATOR PEARSON

Mr. PEARSON. Mr. President, today I am placing in the CONGRESSIONAL RECORD a schedule of the 1975 income and taxes of my wife and myself, along with a balance sheet of our assets and liabilities as of December 31, 1976.

I am taking this action, because I believe it is in the public interest that all high-level Government officials in the legislative, executive, and judicial branches make a complete public financial disclosure.

The Senate passed legislation in the last Congress which would have required a comprehensive public financial disclosure by all high-ranking Government officials. I supported that legislation. Unfortunately, the bill died in the House. However, I am hopeful that a similar proposal will be enacted promptly by the 95th Congress.

I ask unanimous consent that the schedule of income and taxes and the balance sheet referred to above be printed in the RECORD.

There being no objection, the financial statement was ordered to be printed in the RECORD, as follows:

HON. JAMES B. AND MARTHA M. PEARSON FINANCIAL REPORT, DECEMBER 31, 1976

ASSETS

Cash & investments:	
Cash in Checking Accounts	$8,100
Cash in Savings Accounts	28,600

SOLAR ENERGY AND NATURAL GAS

Mr. CRANSTON. Mr. President, California and the Nation appear to be entering a new and critical period with regard to our energy supply and air pollution problems. Industrial and automobile-caused air pollution presents a serious problem not only in California's major urban areas, but also in many rural regions where trees and some agricultural crops are now showing undeniable signs of pollution-induced discoloration and disease.

Unfortunately, California is also facing another problem of serious short-range economic consequences. The natural gas which fuels industry and provides homes with much of their power is in short supply. At the same time, the seriousness of the air pollution situation means that fuels such as oil and coal cannot be substituted for natural gas without violating air pollution standards and increasing the hazards to human—as well as agricultural—health.

In a recent article in the Los Angeles Times, Dr. Barry Commoner of Washington University examined this problem in some detail. Dr. Commoner contends that the removal of oil price controls will not be an economically viable means of providing a replacement fuel for natural gas. By using National Petroleum Council and Federal Energy Administration statistics, Dr. Commoner projects that the increase in oil production made possible by allowing the price of oil to rise from $7 per barrel to $11 would be only 10 billion barrels of oil in the period between 1975 and 1988. The marginal cost of this oil, however, would be $390 billion, or $39 per extra barrel.

Dr. Commoner's comments may be of interest not only to Californians, but to all of us who are concerned about the future role of energy in our economy. Therefore, Mr. President, I ask unanimous consent that the article, "Solar Energy Could Avert Crisis in Southern California," which appeared in the February 6 issue of the Los Angeles Times, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOLAR ENERGY COULD AVERT CRISIS IN SOUTHERN CALIFORNIA

(By Barry Commoner)

Even with their thermostats set at 65 degrees to help conserve natural gas for shivering Easterners, people in California have difficulty visualizing the extent of the energy crisis. But energy problems will increasingly affect the economy of the state, particularly in Southern California.

A report prepared recently by TRW, Inc., for the California Energy Resources Conservation and Development Commission paints a grim picture for Southern California:

Industry, most commercial establishments and homes depend heavily on natural gas.

The supply is dwindling, so that by 1980 natural gas will be denied to some industries and curtailed for residential users.

Any feasible substitute for natural gas, chiefly oil, would worsen the already serious air pollution problem in Southern California. The choices open to industrial managers facing the loss of their essential natural gas supply in the next few years therefore depend on whether they can expect relaxation or stringent enforcement of air quality standards.

If air pollution enforcement is relaxed to allow substitution of a more polluting fuel, the industrial manager will find that the cost of that fuel will determine whether his

operation is still profitable. If the industry cannot afford to replace natural gas or to modify its operation, the only alternative is to shut down.

If air pollution enforcement is maintained, the only alternative is to delay action, presumably in the hope that the standards will eventually be relaxed as the threatened shutdown of the industry approaches.

This is a picture of the strategy that industrial management hopes to use to meet the expected depletion of natural gas supplies. The message of industry is clear: Relax pollution standards, or by 1980 industry in Southern California—and a few years later in the rest of the state—will be forced to go elsewhere.

When you examine all the facts about the energy problem, it becomes clear that we do not need to choose between jobs and environmental quality. There is a way to get the needed energy that will protect both the environment and the economy. In fact, a new energy policy that is guided by a proper understanding of efficient energy production and environmental quality is the one sure way to stabilize the economy, to reduce inflation and to increase employment.

The present natural gas supply for Southern California comes by pipeline from fields in Texas and California. It is a limited amount which will eventually "run out." And it is cetrainly true that substitution of oil for natural gas would worsen pollution; compared to natural gas, oil produces about 15 times more nitrogen oxides, 50 times more particulates, and 1,000 times more sulfur oxides.

With both oil and natural gas, the real problem is the eventual reality of "running out." But what does "running out" of an energy supply really mean? What determines the amount of oil and natural gas that will be produced and how long these supplies will last?

"The U.S. Energy Outlook," published by the National Petroleum Council in 1971, and subsequent Federal Energy Administration studies that were largely based on it, examined the cost of finding and producing the dwindling domestic supplies of oil and natural gas, their selling prices, and profitability.

These reports show that if the price of domestic oil were held to $7 per barrel (in 1973 dollars), U.S. ccmpanies would be expected to produce about 70 billion barrels between 1975 and 1988. If the price were allowed to reach $11, the companies could afford to invest in more intensive exploration efforts and more costly production techniques and could then produce about 80 billion barrels in that period. Thus, the country could have an additional 10 billion barrels of oil—if we were willing to finance the extra production by paying an additional $390 billion for it. This amounts to $39 per barrel for the extra oil.

All these calculations are based on meeting the companies' need for profit, usually an expected 15% return on assets. When the price is too low to yield this profit, the companies lack the incentive to find and produce larger amounts of oil and natural gas. In other words, we are not so much running out of gas and oil as we are running out of the corporations' willingness to accept a declining profit, or the country's willingness to accept a higher price.

All this means that the industries of Southern California will "run out" of natural gas and face shutdowns when the price is higher than they are willing to pay. It also means that their willingness to substitute oil or some other fuel, rather than shut down, will depend on the cost of the alternative supply.

Switching to oil cannot solve the economic crisis resulting from the declining supply of natural gas—because oil too is a dwindling resource. Thus, the switch to oil would only worsen the environmental situation, without improving the economic problem—the rising price of fuel—which is the real measure of the economic crisis.

Another possible solution appears at first glance to solve the energy problem in Southern California without worsening air pollution—importing liquefied natural gas (LNG) from Alaska or Indonesia. Again, we must examine the *cost* of the alternative to decide its feasibility.

The estimated price of LNG delivered to the Los Angeles area is considerably higher than the expected price of domestic natural gas. Moreover, because of its technological immaturity and the anticipated costs of minimizing the huge dangers involved in handling and using it, LNG will become an *increasingly costly* alternative to domestic natural gas. Like the oil alternative, LNG is not a viable solution.

To see a way out of this dilemma, we must return to the fundamentals of energy production: What we need is energy at a *stable* cost, and to accomplish this, the source must be *renewable* (and therefore not subject to diminishing returns) and the technology *mature* (and therefore not vulnerable to unexpected increasing costs).

There is, of course, only one renewable energy source available to us—the sun. Can solar energy substitute for the intense use of natural gas in Southern California? Are the available technologies economically competitive and mature?

The answer is yes. Two solar technologies which are economically competitive with the expected price of natural gas in Southern California and which are technologically mature can already take care of most of the natural gas demand in the area.

The first is the production of methane (the essential ingredient of natural gas) from organic wastes. This is a solar technology because the sunlight that falls on California is photosynthetically transformed by plants into various kinds of organic compounds—cellulose and other constituents of wood, the sugars in fruit and other foods, the protein and fat of meat. All of these materials are easily and efficiently converted to methane, most of them by biological processes that have little or no environmental impact.

The advantages of methane production are many. It would help to reestablish ecological balance in California agriculture, and at the same time reduce agricultural costs, since the residual sludge from this process is an excellent, inexpensive nitrogen-rich fertilizer —which could reduce the present high rate of consumption of inorganic nitrogen fertilizer. Since this fertilizer is made from natural gas, the production of methane would help to relieve the demand for natural gas. Similarly, methane generation is an ideal, ecologically sound way to cope with two major urban problems—disposal of garbage and sewage.

Thet most important factor, however, is that the methane derived from all these materials, as well as sewage and manure, will constitute a *renewable* fuel. It will be availabe in about the same amounts from year to year.

How large are the potential resources for methane production in California? I estimate from the most recent report by J. A. Alich of the Stanford Research Institute that organic wastes now produced annually in California can yield about 200 billion cubic feet of methane. In 1975 this amount of methane would have supplied the needs met by natural gas for all electric power production in California and all of the major industrial uses of natural gas in the Los Angeles metropolitan area.

But even if the price of solar methane were stable, might it be so high that it would be uncompetitive with the nonrenewable sources, such as LNG (with all the necessary precautions built in, and paid for) for a long time?

Cost figures worked out by the RAND Corp. for the production of methane from available organic wastes are in the range of $1–2 per 1,000 cubic feet. This compares quite favorably with the expected cost of Alaskan LNG, which RAND predicts to be $1.50–2.25. What about the large capital investment? Methane technologies are simple and mature.

The second method of meeting the coming natural gas crisis in California is the direct use of solar energy for heating now, and for cooling in the not-so-distant future.

One of the unfortunate myths about solar energy is that the necessary technologies are yet to be developed, and are simply too expensive to be practical. But the fact is that solar technology can help significantly and immediately to solve California's natural gas crisis. The simple solar collector, a metal or glass-covered box painted black inside, traps sunlight and converts it to heat, which can then be readily transferred to a moving stream of water or air and used for space heat, or hot water.

A few weeks ago the Energy Resource and Development Administration, which has been no great booster of solar energy, announced the results of a study showing that solar heat is, today, economically competitive with electric heat in a number of cities, including Los Angeles.

What would the widespread use of solar collectors mean for Southern California and the entire state? About 30 percent of the present use of natural gas in California are for space heat and hot water, 60–70 percent of which can be handled by ordinary solar collectors. Therefore, substitution of solar heaters would reduce overall demand for natural gas significantly—by about 20 percent of the present total demand. The main problem to be solved is in financing the initial investment at reasonable interest rates.

Methane production from wastes could meet about 30 percent of the present natural gas demand, 55 percent using special fast-growing hardwood crops. Solar collectors for space heat and hot water could meet 20 percent of the demand. Together, these solar techniques could meet about 75 percent of the present demand for natural gas. With the addition of fairly simple energy conservation practices, the solar alternative could free California from the threat of economic catastrophe that is inherent in its present dependence on natural gas.

If the serious energy problems of Southern California could be solved by development of solar energy sources, why hasn't this alternative been pursued more vigorously? This is the same question that arises in connection with the absence of a sensible national energy policy.

Until now energy policy has been determined by industrial management. Industrial managers are motivated in the choice of product, the design of production technology, or the choice of fuel, by profitability. The present policies, which are characterized by the rising price of energy, have thus far yielded good profits to management. But these policies are shortsighted. While they have been profitable in the short run, they have led to the economically catastrophic escalation of energy prices. They have left industry, and the workers who depend on it, vulnerable to the disruptive effects of uncertainties in the future supply and price of energy.

It is perhaps not very surprising that industry has so badly mismanaged the energy problem. We already know how poorly industry has handled the environment problem—creating products and production methods that ignored the effects on the environment in the workplace and outside of it. In the terminology of the "free market" these are all considered "externalities." Such externalities affect workers, consumers, and society as a whole, but do not enter into the computation of profit, "the bottom line,"

until the damage is done and penalties mandated by legislation must be paid.

In this sense, the energy crisis is itself an externality—a fault imposed on society by the failure of the famous "invisible hand" of the free market to govern successfully the national production and use of energy.

Should we expect Washington to do the job? The federal government is accustomed to solutions to externalities—whether unemployment, environmental degradation or energy problems—that only try to soften the worst symptoms—for example, regulations that attempt to "control" workplace hazards, long after the boardroom decisions that created these hazards in the first place have been made and built into the factory. But there is no way to patch up the energy crisis. It will rapidly turn into an economic disaster unless *fundamental* steps are taken.

I am convinced that the opportunity for a solar solution is not only technologically and economically sound; it is also politically realistic. President Carter has already emphasized the importance of solar energy and conservation and has been critical of excessive dependence on nuclear power. He has reminded us that we would do better to rely less on highly centralized, federal attempts to solve our problems and more on our own creative efforts and initiative.

The energy problem is a unique and enormously important opportunity to move in this new direction. And one place to start this new movement is right here in Southern California.

THE AMERICAN SPIRIT—AS LAWRENCE WELK SEES IT

Mr. YOUNG. Mr. President, I was very pleased to read in the January 24 issue of U.S. News & World Report an article entitled "The American Spirit—As Lawrence Welk Sees It."

This article, in a condensed way, gives some of Lawrence Welk's ideas of how to help our young people and how to preserve and strengthen our free enterprise system.

As a band leader, Lawrence Welk is undoubtedly one of the greatest and most successful of all big band leaders. What is unique about him is that his whole band is really what he terms "his musical family."

Lawrence Welk has a tremendous interest in these young people. They work hard to become perfectionists and they achieve great success. Mr. Welk, I note from this article, believes that learning how to work and become a success can and should start at a very early age and his ideas have proven successful.

Through the profit system Mr. Welk so strongly believes in, members of his band share Lawrence Welk's band profits.

I, along with every North Dakotan, am very proud of Lawrence Welk. He is our most admired and respected native son. As indicated in this article, he started work at an early age. He was raised on a farm and when he was very young he had to work extremely hard to make ends meet.

I know personally that his great ambition is to save the free enterprise system and one of the best ways to accomplish this is with his own profit sharing idea with all of his employees.

Lawrence Welk's television programs have been most successful with a huge viewing audience. Untold millions of people like his kind of musical entertainment.

Mr. President, I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AMERICAN SPIRIT—AS LAWRENCE WELK SEES IT

(Lawrence Welk, who started out in 1927 with a four-piece band in Yankton, S.D., has been a television entertainer for more than two decades. In a conversation with *U.S. News & World Report,* he discusses his concerns about this country and reflects on the public's changing tastes in music:)

"A LOT OF INFLUENCE IS EXERTED BY SMALL TOWNS"

One of the greatest things about this country is that there is a lot of influence exerted on all of us by small towns. There is an honesty and faith about people from rural areas that has had an effect on the entire country, including the cities. Many of the people who live in the cities came from small towns.

I grew up on a farm outside a small town in North Dakota, and I remember the feeling of freedom we had there. You learn to rely on yourself, and it is this same spirit that has made this country great.

FARMERS GAVE US OUR BACKBONE

There is also an underlying toughness about Americans that comes from our farming experience. It can be very hard to try to keep a farm going—I know very well. I grew up on one, and there were years when we had no rain and we had no crops.

When I was a litle boy, prairie fires would come and burn up all the crops, and it was all we could do to plow around the house and save our home. Under those conditions, you have to make the best of a bad situation, and that's what farmers have been doing for centuries.

We owe a lot to the values our farmers have given us.

AMERICANS HAVE LOST SOME OF THEIR "WILL TO WIN"

Unfortunately, over the years, some of our will to win has slipped away from us.

Part of the problem is that lots of young people never have to work or even get the opportunity to work. It's too bad that the child-labor laws, which originally were passed to stop employers from taking unfair advantage of working children, have helped to produce a society in which so few people seem to know how to put in a full day of work.

We need some new kind of education to teach young people how important it is to them and their country to work hard.

TOO MUCH INTERFERENCE FROM WASHINGTON

If we don't change before long, we're going to have a country controlled from Washington, D.C. There will be more people on the public payroll operating out of Washington than are really working and paying taxes out here in the rest of the country.

This is one thing that worries me about the future of America. The biggest danger in this trend is that we'll end up surrendering a lot of our freedoms to the bureaucrats.

FREE-ENTERPRISE SYSTEM IN DANGER

We are still operating under the free-enterprise system, but it is not as effective as it used to be. And that is too bad, because it helped provide the vitality which made this country strong. Now it's under attack, partly because the unions are so powerful.

I have been able to come from poverty to the wonderful position I'm in today because of the free-enterprise system, but it is questionable whether anyone could follow in that same path today because of all the obstacles that have been set up.

"SENSIBLE MUSIC WILL LAST"

The kind of music that will last in America is sensible music: songs that have a melody and harmony that everybody understands. Rock and roll already has tamed down somewhat, and the type of music we play on my television program is attracting more and more young people.

America doesn't like extremes for very long, and our music reflects this.

CUTTING GOVERNMENT PAPERWORK

Mr. McINTYRE. Mr. President, since October 1975 I have served as Cochairman of the Commission on Federal Paperwork, established by Congress. This Commission provides invaluable service to the Members of the Senate, the House of Representatives, and the agencies in the Federal Government. Its work should have a lasting impact.

Recently the magazine, Government Executive, published a lengthy article on the operation of the Commission. I ask unanimous consent that this article, "Ripping Paperwork Out by the Roots," by John F. Judge, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIPPING PAPERWORK OUT BY THE ROOTS

(By John F. Judge)

How about a Congressionally-created Commission that hit the ground running from the moment of birth, caused legislation to be created (directly and through amendments), earned the respect and cooperation of the Senate, House, Executive Branch, State, and Local governments, and business and industry yet still has almost 10 months to go in its two-year life.

That is an accurate description of the Commission on Federal Paperwork—created by Congress in October, 1975 and, incredibly misnamed from its conception.

For one thing, the term paperwork goes far beyond what is normally assumed to be paper. The involvement is paper, of course, but also data processing, and all of the microform technology—the gathering, storage, retrieval and use of information. It means contracting, procurement and all of the many functions of government other than salaries, pensions and some hard goods.

It is not merely forms management, although this is a critical element.

REVOLUTION COMING

Instead, the Commission, and its Director, Warren Buhler, are convinced that the solution to the paperwork problem will fundamentally change the way Congress and the entire Executive Branch operates.

Because that is the only effective method to eliminate existing, and block the creation of new paperwork obstacles.

For paperwork is the one single obstacle to a responsive government. It is what happens when Government tries to work for and with the citizens, businesses, and state and local governing bodies. And paperwork has so clogged this crucial relationship that a growing number of its victims are now convinced that the Federal Government is a failure. That it is not working.

This is nothing new. It is the growth of the disease that frightens. Rep. Frank Horton, (R-N.Y.), Commission chairman, says that Federal redtape and paperwork has increased by a factor of five in the last 10 years—without checking and coordination.

Buhler has uncovered more ammunition. Defense and Space agency officials readily admit that their contracting procedures gen-

erate 10 percent more paperwork than exists in normal commercial contracting.

Governors are on the record as being perfectly happy with 10 percent less Federal funding if the onerous paperwork could be removed. (Some states and cities have turned Federal aid back because the administrative costs—including paperwork—exceed the funding involved or take such a bite that the programs are all but destroyed.)

State Highway experts all across the U.S. have told the Commission that Federal paperwork is 25 percent of their program costs.

"We have been using the General Services Administration's estimate that Federal paperwork costs are about $40 billion," says Buhler. But a strong case can be made that the true amount is considerably higher."

NO MORE FILE CABINETS?

Last October, the Commission brought together more than 100 career Federal employees who hold management awards for suggestions that cut more than $1.4 billion from the cost of running government.

Their conclusion, after a two-day brainstorming session; more than 30 percent of the current Federal paperwork should be eliminated.

A good portion of the Commission's success to date stems from the fact that *everyone* in Government—Congress and the bureaucracy—fully realize that there is a growing problem, and something must be done.

An indication of the depth of this awareness is that no one at the brainstorming sessions thought a suggestion involving a moratorium on the purchase of new filing cabinets was facetious.

Buhler saw no reason to emulate other past Federal commissions by studying the problem and issuing a report—instead he took a highly activist approach. "We moved out into the agencies, to the affected individuals, businesses and local governments at once. We work with all of them, using their capabilities to resolve specific problems and then learn from these operations what the root causes really are."

And it is this learning curve that is leading to the conviction that the cure will involve basic changes in both the organization and the process of Government.

CONGRESSIONAL MIDWIFERY

The Commission has, from the start, sought to thoroughly define what is meant by paperwork—and found that, in addition to the reports obviously needed by Government, the concept includes record-keeping requirements and information dissemination, and Acts such as the new pension reform program and new credits programs.

In the case of pension reform, the legislation was created because of abuses of the pension rights of employees. "Congress," says Buhler, "set up standards and evolved an administration to carefully monitor pension activities.

"What happened?

"The administration of the program became so difficult and embroiled in paperwork that people were refusing to continue pension plans already in existence and even refusing to set up new ones.

"So the rights of employees were again being harmed, but for a different reason."

The classic approach is still being followed, but with a vengeance. A problem comes to Washington, D.C.; the Government throws money at it and thinks everything is solved. All that really happens is that the problem has been driven back across the D.C. city line.

"Congress has to go beyond just passing legislation and take the next step. The legislature has to ask if the program is really delivering the intended services. That is the step we at the Commission focus on."

Buhler drives one more nail in here. "If you think about it, Government, today, is not focusing on this step and is really not equipped to manage it."

The Commission expects to reach solutions by closing in on this step—seeking effective techniques to deal with the problems that arise in the relationship between the Government and the citizens.

Buhler is doing this by concentrating on specific problems with all comers—government agencies, states, local governments, industry and private individuals.

In so doing, the Commission defines the relationships, learns the costs (bit by bit) and keeps building routes through the paperwork clog. Buhler is not trying to eliminate all paperwork, just the wrong kind.

In dealing with its sources, the Commission listens and works with the source to define and then alleviate the burden. "There is very little resistance to us because government people want to get rid of the paperwork problem themselves."

LEAPING OFF THE EDGE

One example is the Federal Power Commission. The agency is instituting a new computer system which has a "terrific potential for cutting costs and improving their information network.

"But the FPC went at it without giving consumer groups, the industry it regulates and the various state public utility bodies full opportunity to work in the development of the system.

"So industry is up in arms claiming that some of the requested data is far too costly to gather. (The FPC, in one instance, wants to know the locations of all the sales meters in the U.S. down to the minute in geographical coordinates.)

"Another element is that some of the information is not kept by the firms in the manner desired by the FPC system. And the consumer groups have no idea as to what the information system of the FPC will be in a few years and they are worried—because the FPC decisions will be based on this manipulated data out of their huge computer system.

"We are meeting with all of the affected parties and talking about the data bits involved. Is this mundane? Of course it is. Is it necessary? It is everything. It is what the FPC will be basing its decisions on and the involved costs to the public are fantastic."

One of the issues the Commission wants to develop with the FPC is that the regulatory body is using formal rule-making processes to develop the information system.

"When you talk to the data managers and comptrollers being affected you find that they do not know what a formal rule making process is—they are caught up in an overcomplicated legalistic system when what they want to do is sit down with the FPC and try to work out the information structure.

"The FPC is heading into a big mess in the next few years."

There is a big problem in energy. So many different government bodies are all after the same information but asking for it in different ways so that they get back a "slew of different numbers."

"Then the industry is accused of lying. I don't know about that, but I do know that you cannont expect the same answers if you ask different questions."

WRONG ASSUMPTIONS

The Commission has uncovered some fairly fascinating aspects of the government's insatiable appetite for information. The vast majority of such requests do not carry civil or criminal compliance penalties. But Buhler has found that the victims—the taxpayer, the businessman, the professional man, the citizen—all think that the requests are demands with the full force of the Federal Government behind them.

"They get the idea that if they don't fill out and return some Commerce Department survey that the Army, Navy, Marines and the IRS will descend on them."

And, Buhler notes, "there are so many instances where we have found information flowing into Washington and into warehouses."

Paperwork clogging is not unique to the Federal complex. It also clogs local government—but they are within easy reach of the victim.

"Someone," says Buhler, "estimated that paperwork costs business upwards of $124 billion a year—and a large part of this is driven by Federal requirements."

It is not all bad—the Commission singles out the Environmental Protection Agency as now going through a zero-based analysis of their paperwork and "they are handling it well."

Social Security is aonther gleam of light in the darkness. That agency is working with the Commission in structuring their computer system so that re-creation of the file is not necessary—as it is now—when benefits are claimed in one region while the individual entered the system years ago in a distant region. "This is one area where complicated and confusing paperwork hits those least able to handle it."

The Commission has been busy. "We have made, to date, some 236 recommendations and about 220 are actual paperwork savings while others are more a case of encouraging someone to look at a problem.

"Quantifying is difficult but one group has already documented more than $100 million and the City of San Diego expects to cut 40% from their administrative costs."

And the Commission is involved with about 130 of the Fortune "500" companies in paperwork studies. A number of these firms had never looked at the problem before.

Buhler has no plans to ask for any extension of the Commissions statutory life. "We will go out of business as planned in October, 1977."

But the same high-powered legislation that created the Commission also binds the Office of Management and Budget to report every six months for two more years, on exactly what has been done with the Commission recommendations.

"We cannot depend on this," says Buhler, "we have to prove that things can be done about this morass. We have to give people the tools and put pressure on them to use them."

What Buhler and the Commission are doing is treating information as a resource and showing that, once identified, the normal management tools of budget, appropriation and other controls can be brought to bear to end, finally, the burden.

In so doing, the Commission should point the way for a Federal Government to once again start doing things for the people—instead of to them.

THE UNITED STATES AND SOUTHERN AFRICA

Mr. PERCY. Mr. President, the people of southern Africa are watching for signs of whether the United States will pursue and strengthen the initiatives that were begun last year in regard to Rhodesia, Namibia, and South Africa.

The New York Times points out how—

Secretary Kissinger committed American diplomacy in favor of black rule in Rhodesia, in favor of independence for Namibia and firmly against the hateful and suicidal policies of "apartheid" and "homelands" by which South Africa has tried to keep blacks segregated, disfranchised and impoverished for all time.

The Times continues—

That exercise now seems to have faltered and white and black throughout the region are looking to Washington for a way out. The black nationalists of Rhodesia and neighboring nations have stoked up a guerrilla war that the white Government of Ian Smith may be containing militarily but is clearly losing economically. The blacks are also keeping alive the threat of greater Soviet involvement.

Ian Smith has stated that the five points put to him by Secretary Kissinger last fall were a basis of discussion and not a firm commitment on anyone's part. The Geneva Conference and Ambassador Ivor Richards round of meetings have since shown that new proposals are needed.

The Times' editorial concludes that—

If the counsel of peaceful change is still to be heeded, the United States must now match deeds to hopes and buttress the British intervention in Rhodesia . . . American action must be orchestrated . . . if even more painful choices are to be averted.

Mr. President, so far only a few modest steps have been taken. The State Department has criticized Ian Smith's approach to negotiations. Senator HUMPHREY and Senator CLARK have introduced a bill, which I strongly support, to repeal the Byrd amendment. We must also continue to find ways to use our economic influence in South Africa to persuade that government that it is in its deepest self-interest to put further pressure on Ian Smith. It must also be impressed on the Government of South Africa, for its own sake as well as every moral consideration, that the time has come to reform its own internal racial policies as a matter of national interest in stability, harmony, and peace. Ambassador Andrew Young is in southern Africa now to emphasize the high priority the Carter administration plans on finding a just and lasting solution.

Mr. President, I ask unanimous consent to include in the RECORD the full text of the January 27, 1977 editorial, "Southern Africa Begs to Know."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH AFRICA BEGS TO KNOW

Even while we debate the range of our concern—and stake in—human rights abroad, events crowd in upon us, most poignantly this week from southern Africa. The United States has now been cast as the last hope of moderate forces throughout that region as they seek to avoid a vicious racial conflict whose poison would quickly spread to our own multiracial society. The struggle touches our humanity and our domestic harmony, interests that far transcend the objectives of also containing Soviet influence.

The world has failed, through years of moral pressure and some economic sanctions, to persuade the Government of Rhodesia, representing 275,000 whites, to yield political power to its six million blacks. It has failed to persuade the white Government of South Africa to yield clean political and economic control over South-West Africa—the large region it governed as "trustee"—to 900,000 indigenous blacks who wish to become independent Namibia. And it has largely failed to persuade the Government elected by four million white South Africans to begin to share power with 16 million blacks and riches that are historically theirs.

We have been adjusting our official posture toward these conflicts in recent months, but all sides wonder now whether the Carter Administration has the courage of the evolving American conviction.

As the Portuguese grip in southern Africa suddenly collapsed in 1974–75, the tides of black power and nationalism spilled inevitably southward. Henry Kissinger's abortive attempt to resist Soviet—and Cuban—interference in Angola and to shape its black government was the first recognition of danger ahead. When that failed in a Vietnam-weary Congress, Mr. Kissinger last turned the American position in a few short weeks to a path from which there is no longer any escape.

He committed American diplomacy in favor of black rule in Rhodesia, in favor of independence for Namibia and firmly against the hateful and suicidal policies of "apartheid" and "homelands" by which South Africa has tried to keep blacks segregated, disfranchised and impoverished for all time. With great skill—and perhaps too many vague promises—he brought black and white Rhodesians into negotiations so as to avoid war and gain time. It was a devilishly difficult game because it required pressuring South Africa on the one hand while also enlisting South African pressure on the white Rhodesians. It depended on everyone's desire to find a transition to black rule and willingness to let the British manage the transition.

That exercise now seems to have faltered and white and black throughout the region are looking to Washington for a way out. The black nationalists of Rhodesia and neighboring nations have stoked up a guerrilla war that the white Government of Ian Smith may be containing militarily but is clearly losing economically. The blacks are also keeping alive the threat of greater Soviet involvement. The embattled white regimes of Rhodesia and South Africa, meanwhile, cannot wholly believe that in the end the United States would undermine their outposts of "Western" and "anti-Communist" civilization.

If the counsel of peaceful change is still to be heeded, the United States must now match deeds to hopes and buttress the British intervention in Rhodesia. Discouraging Mr. Smith from a deal with relatively tame black leaders was a proper start yesterday. Rejoining the United Nations embargo by halting purchases of Rhodesian chrome would be a further step, well worth the fight it would take in Congress. Pressing further on sensitive economic nerves in South Africa, badly wanting Western investment now, should bring the double benefit of additional threat against Rhodesia and incentive for more rapid domestic change.

Andrew Young, President Carter's friend and new representative to the United Nations, will tour the area next week. He knows the pressure points and his moderate, black voice will carry enormous weight. But American action must be orchestrated in his support if even more painful choices are to be averted.

PROTECTING AMERICA'S FOOD AND FIBER

Mr. HUMPHREY. Mr. President, last Friday my colleague, Senator JOHN CULVER, of Iowa, presented testimony to the Committee on Agriculture and Forestry during field hearings in Iowa on the upcoming farm bill. Iowa, like my own State of Minnesota, faces growing uncertainty over next year's production prospects in the face of the continuing drought. Senator CULVER's testimony focused on two programs which are of great importance in light of this condition, the Federal Crop Insurance Corporation and the agricultural conservation program. I ask unanimous consent that Senator CULVER's statement be printed in the RECORD so that we might all benefit from his views as we prepare for this important farm and food legislation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JOHN C. CULVER

Mr. Chairman, S. 272, the Food and Agriculture Act of 1977, promises to be one of the most important pieces of legislation to come before the Congress this year. I am glad to have the opportunity to present these comments to the Committee as we begin the process of shaping new legislation to meet the needs of the nation's farmers and consumers.

The bill, as it is, incorporates in its provisions what I consider a very positive change in policy by basing commodity loan rates and target prices on farmer costs of production. I was also very pleased to see the attention given to our agricultural research system. While I have reservations about some of the specific provisions of this title (Title VIII) of the bill, a comprehensive review of Federal policy for agricultural research is long overdue. The last such review took place over twenty years ago, in 1955, when numerous fragmented programs were consolidated under amendments to the Hatch Act of 1887. I hope that the proposals in S. 272 will stimulate as positive a contribution to our agricultural research needs as did that act of twenty-two years ago.

There are two issues, however, which I consider of vital importance to Iowa and to the nation which are not sufficiently addressed by this bill as it stands. These are disaster assistance and soil conservation. Senator Talmadge, Chairman of the Committee on Agriculture and Forestry and author of the Food and Agriculture Act of 1977, mentioned the need of action in both of these areas when he introduced S. 272. I would like to urge the entire Committee to pursue these areas vigorously and incorporate the needed changes into the Food and Agriculture Act of 1977.

The need for quick action in these areas is accentuated by the current drought conditions in the Midwest and by the accelerated pace of soil erosion in recent years. At a time when there is still considerable uncertainty over the world's ability to produce enough food to meet its needs, we cannot afford either to leave today's farmer unprotected in the face of natural disasters or to leave tomorrow's farmers and consumers unprotected in the face of a diminishing supply of topsoil.

About a month ago I submitted testimony before the House Agriculture Committee's Subcommittee on Conservation and Credit which was chaired by then Representative, now Secretary of Agriculture Bob Bergland. The Subcommittee was examining the need for new legislation in the area of disaster relief. I would like to reiterate one point that I made in that testimony: that this nation cannot afford to lay on the farmer the full burden of carrying the risks of natural disasters in agriculture. The lost income consequent to such disasters undermines the farmer's ability to invest in both the conservation practices and the machinery and equipment necessary to insure ample food supplies in the future. In addition, I believe that our society has a responsibility to help alleviate undue hardships suffered by victims of natural disasters, farmers or nonfarmers.

The Federal Crop Insurance Corporation has been providing just such assistance since 1939. The Corporation has operated since that time out of an original authorization of $100 million in capital stock. In addition to this original authorization, $6 million annually from 1939 to 1941 and $12

million annually from 1941 to present have been appropriated to help cover the administrative costs of the program. Annual administrative expenses above these levels have been paid out of capital stock. All insurance losses over the years have been paid out of participating farmers' insurance premiums.

At present the Federal Crop Insurance Corporation has $2 billion in coverage on crops grown by farmers in 1,467 counties. The participation rate in those counties, based on eligible acreage, was 13 percent in 1976. This percentage would have gone higher had the Corporation not been forced to cease accepting new applications for insurance in much of the drought affected area of the Midwest in August and September of 1976. Had new policies been issued at the time, substantial losses would have been a near certainty. The Corporation would then have been forced to raise the premiums for all policy holders in order to cover the expected losses. This would have been unfair to those farmers who had carried crop insurance and paid their premiums throughout both the good years and the bad.

A portion of the blame for this action also falls on the Congress. The $12 million annual appropriation for administrative expenses has long been insufficient to cover the actual administrative expenses of the program. Operating expenses for the Federal Crop Insurance Corporation in 1976 were about 20 million dollars, or about 22 percent of total outlays. This compares favorably to private insurance companies where administrative expenses average 33 to 35 percent of total outlays. Because the annual Federal contribution to program operating expenses has not been raised above the $12 million authorized in 1941, the Corporation has almost depleted the original $100 million in capital stock. At this time there is only $10 million of that $100 million left, and if projected administrative expenses for 1977 ($22.5 million) are accurate, that $10 million will not be sufficient to meet the Corporation's needs. Without swift action this year the program's service to the nation and to the farmers covered and desiring to be covered by crop insurance will be seriously jeopardized.

A related program is the Disaster Payments Program authorized by the Agriculture and Consumer Protection Act of 1973. I urge the Committee to reassess the equity considerations involved in this program. Currently the program is rife with inequities both between different farmers and between different crops, arising from inconsistent and ill-designed eligibility criteria. Archaic acreage allotments have undermined eligibility for many of the nation's most productive farmers. Cotton producers who are prevented from planting cotton may qualify for disaster payments, then proceed to plant and harvest another cash crop, whereas corn and wheat producers are restricted, and I think rightly so, to replanting a noncash conserving crop in order to remain eligible for disaster payments. Soybeans, the third largest cash crop in the country, are not even eligible for disaster payments.

On the other hand, crop insurance is available on a broad range of crops, including soybeans, and is both a more effective and more equitable means of providing protection to the nation's farmers. Federal Crop Insurance Coverage provides payments which approximate a farmer's direct costs plus overhead. Disaster payments provide much less protection and at a much greater cost to the taxpayer. If we took only a portion of the money spent in the Disaster Payments Program and put it into the Federal Crop Insurance Corporation, we could not only vastly increase the protection afforded American farmers, but also substantially reduce the inequitable treatment inherent in our present disaster relief programs. Perhaps then the Corporation could reopen its doors to those farmers who are presently unprotected without penalizing those who have long subscribed to crop insurance.

On the topic of soil conservation, several members of this Committee have expressed their support for a bill which would limit the Agricultural Conservation Program's cost-sharing assistance to "enduring" conservation measures and eliminate support for annual practices. The need for long-term conservation measures is undisputed. In Iowa alone two-thirds of the state's 27 million acres of cropland are not sufficiently protected against erosion. Much of this unprotected land desperately needs to be laid out on the contour and terraced.

Still, such long-term measures alone will not do the job. Mr. Bill Greiner, the Iowa Director of the Department of Soil Conservation, has pointed out that contouring a field with a two to five percent slope will double the life of its topsoil. Building terraces on the contour will add another 42 years to a topsoil life of 72 years without terraces. But if a farmer contours, terraces, and uses the best-known tillage and soil management practices, that original topsoil will last over 2,000 years, long enough to make new topsoil to replace that which is lost.

If we should take any lesson from these figures it is that soil conservation is more than permanent structures. It is more than long-term agreements. Soil conservation is a way of farming that includes both enduring structures and annual practices. Some of these practices impose costs on the farmer year after year while providing him with little or no return in the short run. If this Congress bans cost-sharing on all annual conservation practices, benefits from the investment in "enduring" measures would also be substantially undermined. In the end we would spend more money for less protection than we have now.

In response, many argue that the annual practices being made ineligible for cost-sharing are primarily production practices, and as such the farmer should pay for them. To the extent that this is true, I am in full agreement. But such is not the case with many of the practices currently supported by the Agricultural Conservation Program on an annual basis. Even in cases where the farmer derives some contribution to this annual production, that contribution is often insufficient to cover his costs of implementing the practice. The Agricultural Conservation program is a cost-sharing program, not one in which the government covers the full cost. If the farmer derives immediate benefits from the practices on which the government has cost-shared, I hope that the Committee, in its deliberations, will assess those benefits in light of the contribution to cost that the farmer has made. More important, I hope that the Committee will assess the Agricultural Conservation Program primarily in light of the contribution its activities make to the conservation of the soil. Practices which do not make meaningful contributions to soil and water conservation should not be eligible for assistance under this program. But we must be careful not to disqualify practices which are vital to the preservation of the nation's soil and water resources solely because they must be repeated each year.

There is one final point that I would like to make on this issue which reaches beyond soil conservation alone to the broader set of programs for agriculture. Soil conserving structures on the land are expensive. They are often beyond the means of the small farmers even with government cost-sharing on 50 percent of the cost. Yet, with assistance, the small farmer can afford to implement some of the less expensive annual soil conserving practices. Eliminating eligibility for cost-sharing on annual soil conserving practices effectively eliminates the small farmer from participation in the program. Eliminating any farmer's opportunity to cooperate in this important program is neither in the interest of soil conservation nor in the interest of America's farm families.

Mr. Chairman, I thank you again for this opportunity to present my views on these important issues, and I commend you for insuring, by these hearings, that the views of many other Iowans will also be available to the Committee and the full Congress in their deliberations on the Food and Agriculture Act of 1977.

PERMANENT JOBS FOR AMERICA'S FUTURE—THE REPUBLICAN ECONOMIC PACKAGE

Mr. HEINZ. Mr. President, as a cosponsor of the economic recovery program developed by Senate Republicans, I want to emphasize my strong support for this legislation. The development of this compassionate and sensible approach was a cooperative effort among all the Republican Members of the Senate, and I particularly want to compliment my colleagues for their hard work and superb work product.

It is apparent that our economy has begun a natural and broadly based economic rcovery which must be sustained. It is equally apparent that we need both long- and short-term economic packages to maintain this recovery and to provide for continued improvement in the unemployment rate. The net cost of the economic package which we are introducing is $21.1 billion over a 2-year period, versus the $27 billion price tag of President Carter's economic program. The returns of this package are calculated to produce employment and growth rates at better than the 6-percent unemployment rate and the 6-percent growth rate suggested by President Carter and others as appropriate economic goals for the same period of time.

The Republican program directly addresses what is the core of our economic problem—hard core unemployment—while the President's program is less specifically targeted at this most difficult problem. It is relatively easy to propose measures to deal with recession-caused unemployment, but that represents only the surface of our economic difficulties. Permanent recovery demands permanent—as well as carefully targeted—programs, such as those we are proposing today.

First, the reduction in corporate tax rates included in our program would have the particular impact of stimulating small business, while at the same time giving some form of tax relief to all corporations. Since most service-oriented businesses are relatively small and labor intensive, this proposal would have an especially favorable impact on the rate of unemployment.

Second, our proposal to give credits for employers who hire the hard-core unemployed is another specific incentive to reduce joblessness. Approximately 3 percent of the currently unemployed population consists of persons facing particular difficulties in finding a job and acquiring marketable skills and experience. A tax credit focused on in-

dividuals who have been unemployed for 26 weeks or longer, such as that proposed by Mr. BAKER, would channel benefits directly to those most in need of work experience and earned income, precisely the groups that need the most special attentions but are shortchanged by the President's proposal.

Third, it is important that a tax cut be a permanent one, rather than the temporary rebate suggested by President Carter. Studies have been done which show that temporary rebates do not provide stimulus to sales of major durables or nondurables.

Fourth, another specific proposal to reduce unemployment is our bill providing accelerated depreciation for investment in high unemployment areas. Such an incentive would encourage businesses to increase activity in particularly impacted areas. Again, benefits would be funneled directly to those most in need of work experience and earned income.

Fifth, we have talked frequently about the disproportionate share of the unemployed represented by youths between the ages of 16 and 24. The Republican proposal provides for a comprehensive program of manpower services for youth, including work experience, on-the-job training, classroom training, and public service employment, under a newly introduced CETA title VII, the Youth Employment Act.

Sixth, this program also introduces a stock ownership proposal, designed to stimulate stock purchases by lower- and middle-income investors. Maximum tax benefits in this proposal would focus on persons earning less than $20,000, but would also benefit those people in the $20,000 to $40,0000 income bracket.

Finally, this legislation provides for a tax credit designed to encourage residential insulation—specifically, for a refundable credit of 30 percent of the first $750 insulation expenditure, including thermal windows and storm doors. Such a proposal not only has economic implications, but also takes a long-overdue step toward a Federal response to the problem of energy conservation. Legislation similar to this was approved by both House and Senate at different times during the 94th Congress. The proposal has wide acceptance, and we should act on it soon.

There are two other aspects of the proposed program I feel are not high priority at this time. They are the increase in the tax exclusion for dividends and the exclusion from income for some interest earned on savings accounts.

With respect to the exclusion for dividends, it is my view that such a move will neither significantly increase investment nor make our total tax burden more equitable. It is true that the double taxation of dividends at the corporate and personal levels is a serious problem, but that should be dealt with comprehensively, not in a piecemeal fashion as part of a jobs/economic stimulus program. We should carefully look into the dividend problem by itself and develop a permanent solution for it.

With respect to the interest exclusion, I feel it would be counterproductive at this time to encourage this form of consumer saving when we are simultaneously trying to stimulate consumer spending in order to boost production. This is not a consistent policy approach, although at another time an interest exclusion might well be an appropriate policy tool.

In summary, the Republican economic recovery package provides, at a lower cost to the American taxpayer, more jobs to the American people than does the package submitted by President Carter, and it does that by dealing comprehensively with structural unemployment through narrowly targeted programs. Solving structural problems is much more difficult than a broader policy of stimulus, but it is an approach more in line with the Nation's real needs and it is one which will provide more permanent economic recovery in all sectors at a lower cost.

JOHN W. HUNTINGTON

Mr. RIBICOFF. Mr. President, John W. Huntington, a former Mayor of West Hartford, Conn., died Thursday, December 23, 1976, in the Hartford Hospital after a long illness. He was 66.

John Huntington was a close and longtime friend of mine and he will be deeply missed by all of us who knew him and benefited from his wisdom, judgment, and companionship. Mrs. Ribicoff and I extend our most heartfelt sympathies to John's widow, Patricia Shaffer Huntington, and to other members of his family.

John Huntington was an architect—a much respected and brilliant architect with the Hartford firm of Huntington and Darbee—and a dedicated and resourceful patron of the arts. In both these pursuits, he distinguished himself, bringing to these efforts rare ability and excellent taste. Be it in the design of a building or arrangements for an exhibit of paintings, if John Huntington was involved all of us knew that the public interest would be served—and that the project would be reflective of John's grace and good manners and decency.

John Huntington, architect and patron of the arts, was also active in local politics. He was that unique blend of person who, while engaged in a career outside government, works unselfishly at the local level to make our democratic system work. It is such a combination of citizen-politician who breathes new life and vigor and idealism into American Government and politics. Without such men and women, our system could not succeed.

John Huntington was a Democrat. As a member of the Connecticut House of Representatives, as a Congressman, as Governor and as a U.S. Senator, I turned to John many times for advice and support. As the saying goes, John Huntington was a good Democrat, loyal to his party, a source of strength to his party's candidates and officeholders. John himself, a councilman in West Hartford for 10 years, was only the second Democratic mayor in his town's history.

But the lesson of John Huntington's life as a citizen-politician was not his party affiliation—for the John Huntingtons of this democracy serve in both the Republican and Democratic Parties, and they are found in great numbers among political independents as well. The legacy John Huntington leaves us is not one of party or partisanship but rather one of dedication to public service, dedication to the noble principle that all Americans, no matter what their views, or walk of life or vocation, have the opportunity to serve and the responsibility to exercise their talents for their community.

West Hartford and my State of Connecticut have lost a rare public servant. John Huntington will be missed by all of us.

Mr. President, I ask unanimous consent that John Huntington's obituary from the December 24, 1976, Hartford Courant; letters to the editor in the December 30, 1976, West Hartford News from Harry D. Kleinman, West Hartford Democratic town chairman; a resolution in commemoration of John Huntington adopted January 27, 1977, by the West Hartford Democratic town committee; and an article from the Hartford Courant of February 4, 1977, concerning the town committee's resolution be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Hartford (Conn.) Courant, Dec. 24, 1976]

J. W. HUNTINGTON, ARCHITECT, 66, DIES

Architect John W. Huntington, a lifelong arts patron, and politically active Democrat and former mayor of West Hartford, died Thursday at Hartford Hospital after a long illness. He was 66.

A senior partner in the former Hartford architecture firm of Huntington and Darbee, he was elected in 1971 to the College of Fellows of the American Institute of Architects (AIA)—the second highest honor the professional organization bestows.

Huntington retired from political office that same year after serving a decade on the West Hartford Town Council, including two years—1967–1969—as mayor. He was only the second Democratic mayor in the town's history.

"It his been a rewarding, usually interesting, sometime exciting experience," Huntington said of his council career on retirement, "but after 10 years the rewards and excitements seem to lessen. Unless one can do a job with passion, one isn't doing it well. This is the case with me."

During his council tenure, Huntington helped win approval of plans for the new Hall High School. He was in the minority with Democrats who unsuccessfully opposed plans to build the Westfarms Mall shopping center, claiming it would destroy residential lands.

Although he had bowed out of personal political campaigning, Huntington remained active in the Democratic party. Just three months ago, he and his wife were hosts of a fund-raiser at their 159 Bloomfield Ave. home for Secretary of the State Gloria Schaffer's U.S. Senate campaign against incumbent Lowell P. Weicker.

Huntington demonstrated great personal interest in the arts and owned a collection of contemporary paintings, drawings and graphics. He was a fellow in perpetuity of the Wadsworth Atheneum, having donated money and, with other family members, a pair of portraits by the artist John Trumbull to the museum's collection.

Huntington was a member of the Atheneum's board of directors from 1949 until his death and once served as president, from 1972 to 1974.

He was a founding director of the Hartford Stage Company and its first president, having served from 1964 to 1968. Since 1968, he had been chairman of the company's board of directors.

AS ARTISTIC FORCE

Paul Weidner, the company's producing director, credits Huntington as a major force in establishing the stage group financially and artistically. Huntington took special pains to insure the board did not interfere in the artistic policy of the theater, said Weidner, who termed Huntington's death "the passing of an era."

Huntington, the son of the late Robert W. Huntington, a former president of Connecticut General Life Insurance Co., was graduated from Kingswood School, from Yale University in 1932 and from Columbia University School of Architecture in 1936. He began his professional career with the architectural firm of Harrison and Fouilhoux and later worked as an associate architect with the U.S. War Department on the design of the Pentagon and as chief engineer in the Signal Corps.

At the end of World War II, he established a practice in Hartford, his birthplace. His major architectural projects include St. Mark's Chapel at the University of Connecticut, for which he received the AIA's bronze medal in 1956, renovations to the Wadsworth Atheneum in 1967–69, Hartford College for Women, the Children's Museum in West Hartford and the Suffield Academy gymnasium.

He was a past president of the Children's Museum, a patron of the Hartford Symphony Orchestra, trustee of the Noah Webster Foundation, the Hartford Art School and the Horace Bushnell Memorial, former vice president of the Connecticut Commission on the Arts, member of the Hartford Club and corporator of Hartford Hospital and the Institute of Living.

He leaves his wife, Mrs. Patricia Shaffer Huntington, two sons, John W. Huntington Jr. of Chicago and Derek U. Huntington of Cambridge, Mass.; a daughter, Mrs. Sara Ohly of New Haven, and a grandson.

A memorial service will be conducted Thursday at 2 p.m. at Trinity Church, Sigourney Street, Hartford. Pratt Funeral Home, Hartford, is in charge of arrangements. Memorial contributions may be sent to the Wadsworth Atheneum or the Hartford Stage Company.

RESOLUTION

Whereas, John W. Huntington of West Hartford, Connecticut died on December 23, 1976; and

Whereas, John W. Huntington for almost his entire adult life was a towering symbol of integrity, intelligence and devotion in political service to his community; and

Whereas, John W. Huntington took his positions on the significant issues of his time with care and with concern, and then never retreated from seeking to achieve those high goals he set for himself and his party; and

Whereas, John W. Huntington was known as a gentleman by ally and opponent alike no matter how heated a political battle became, and one whose sound thinking and enthusiastic support for public education were of the greatest significance at a crucial time in the history of the development of West Hartford; and

Whereas, John W. Huntington unstintingly and continuously used his enormous talents to help those less fortunate than himself, and as only the second Democratic mayor in the history of West Hartford, honored the Democratic Party by his record of achievement;

Now, therefore, be it resolved by the Town Committee of the Democratic Party of West Hartford that this Committee express its deepest sympathy to the family of John W. Huntington and that it also express the appreciation of all members of the West Hartford Democratic Party for his countless meaningful contributions for a better life to be shared by all the people.

[From the West Hartford (Conn.) News, Dec. 30, 1976]

OUR TOWN IS BETTER BECAUSE HE SERVED

To the Editor:

John Huntington was a rare person whose passing at the height of an outstanding life and career leaves a void in our community and our state.

Every facet of our lives has been the beneficiary of his creative activity.

In politics he identified himself with the Democratic Party in West Hartford when it was not expedient to do so. He served as councilman and mayor of West Hartford—where he brought integrity, dedication and compassion to West Hartford.

His accomplishments as an architect are seen in the beauty of the structures that he so skillfully designed.

His vigorous identification and leadership with the entire spectrum of the cultural and civic life of our community do not have to be restated.

But with all that he did—and did so well—he was in the truest meaning a gentleman, courteous and considerate and concerned about the welfare of his fellow citizens.

He represented the type of person whom we too rarely see, but whom we sorely need—pro bono publico.

Our community is the better because John Huntington was one of us.

HARRY H. KLEINMAN.

[From the Hartford (Conn.) Courant, Feb. 4, 1977]

TRIBUTE PAID BY DEMOCRATS TO HUNTINGTON'S MEMORY

WEST HARTFORD.—The Democratic Town Committee has adopted a resolution praising former Mayor John W. Huntington, who recently died after a long illness.

The resolution was unanimously adopted by the committee. It was drafted by former Town Councilman Robert Krechevsky, said Committee Chairman Harry H. Kleinman.

It states Huntington, "was a towering symbol of integrity, intelligence and devotion of public service to his community."

"John W. Huntington unstingily and continuously used his enormous talents to help those less fortunate than himself," it says.

Huntington was praised for work he did for the Democratic Party in town.

UNDERSTANDING OIL PRICE RESTRAINT

Mr. PERCY. Mr. President, the Washington Star on January 7 carried an excellent article by Charles Bartlett entitled "More to Saudi Strategy Than Deference to U.S." The article presents an astute analysis of the recent effort by Sheikh Yamani of Saudi Arabia to hold down oil price increases.

The Saudi's position must be interpreted not only as a friendly gesture toward the West but also as a new and active interest in the health of both industrialized and developing economies. Arab investments in Western nations make it advantageous for them, as well as for us, to insure financial stability.

Mr. Bartlett also points out that now is the time for demagoguery to end on the energy issue. The Nation needs courageous and foresighted leadership if we are to deal wisely with energy concerns. We vitally need to practice energy conservation. Effective leadership in this field must come from both the Congress and the White House.

Mr. President, I commend Mr. Bartlett for his cogent editorial, and ask unanimous consent that it may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE TO SAUDI STRATEGY THAN DEFERENCE TO U.S.

(By Charles Bartlett)

A serious miscalculation will result if the Carter administration misreads the OPEC split on oil prices as a deferential gesture instead of as an act of concern for the West's economic weakness.

This point is being strongly made by Sheikh Yamani, the Saudi Arabian petroleum minister, in the wake of his lonely stand against the 10 per cent price rise. He is candid in conceding that his strategy was partly aimed at influencing Washington's negotiating positions in regard to the Middle East and the developing nations. But there was more to it.

All agree that Yamani was sincerely anxious to avoid disrupting the fragile recovery of the Western industrial nations. "We are extremely alarmed" by the possibility of another recession, he has been saying, and worried by the Communists' potential in France, Italy and Spain. The Saudis do not want different regimes to come to power in those countries.

In a New Year's message to his people, West German Chancellor Helmut Schmidt chided them for their apprehensions when the Arabs began investing in German industry. "Today we consider it an advantage," he said, "that our most important oil suppliers can pragmatically learn through their participation in our industry what the tightening of the oil-price screw means for us and our economy." Schmidt contends that nothing will again be as it was before the oil price crisis of 1973 launched "a profound process of change."

The new president of the European Commission, Roy Jenkins, recalls that four years ago the small nations of Europe feared the dominance of four large nations: Italy, France, Great Britain and West Germany. Two years later they had only Germany and France to fear. Now, as Jenkins puts it, "Germany is alone in a condition quite different than the others."

As Yamani points out, the industrial states have not made "any tangible progress" in saving energy despite the erosion of their economic power since 1973. Outgoing Secretary of the Treasury William Simon says his greatest regret of the past four years is that American oil policy is still shaped more by political demagoguery than by economic principles.

He does not disagree with Yamani who attributes the West's failure to "a lack of effective political leadership."

Jimmy Carter's urgent need to embrace a responsible energy policy will severely test his penchant for politically popular positions. Ford aides were annoyed during the campaign to discover that a major piece of Carter's energy policy had been lifted intact from unreleased papers of Ford's Energy Resources Council. And even then, Carter limited his advocacy to the moves that would not pinch the public.

The impending hassle to induce Congress to consolidate energy activities into one agency is an important reform. The fragmentation of the legislators' responsibility for energy policy is one reason why Congress has never attained a responsible posture. But as

Frank Zarb, the outgoing energy chief, points out, reorganization will not produce more oil or solve the energy problem.

Zarb and Elliot Richardson, who chairs the ERC, have produced a paper which details the administration's proposals in conservation and energy development. They did this to illuminate the issues as well as to discourage the Democrats from putting Carter labels on Ford proposals.

The galling act is that "effective leadership" on the energy front will oblige Carter to concede the validity of Ford initiatives which were rejected by the previous Democratic Congress. This is an awkward step for a new President, but the fragility of the Western economies makes it crucial. The time for political games on the energy front is past.

AMERICA'S FARM POLICY: A FARMER'S PERSPECTIVE

Mr. CHURCH. Mr. President, a recent issue of the Idaho Statesman contained an article written by John Hiler, a Mountain Home farmer and businessman. Mr. Hiler presents a very interesting view of our Nation's agricultural policies. Inasmuch as Congress will soon be called upon to deal with the farm programs which are scheduled to expire this year, I commend this article to my colleagues as a valuable source of insight into the farmer's perspective.

I ask unanimous consent that the article by Mr. Hiler be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Idaho Statesman]

SURVIVAL MAY DEPEND ON DEFINITE FARM POLICY

(By John Hiler)

MOUNTAIN HOME.—Across Idaho and across the nation, the food producers (farmers) of America are on the move. Moving off the land and into town, which is the direct result of a national policy to disregard six per cent of the population and place them at the mercy of the wolves of exploitation and bureaucracy.

In Idaho, the farm auction companies are booked solid through March, 1977, as agriculture suffers the consequences of a request by the people of America and the world to produce great amounts of food so others could afford to live. The call was answered by American agriculture with a tremendous outpouring of produce never before seen in our history, and now John Q. Farmer will be made to pay for his mistake—the mistake of listening to the appeal of a secretary of Agriculture who said, "Plant more because we can use it all"; of listening to the appeal of a hungry world, and most of all to his own inborn American desire to do the job which once and for all puts his business on a paying basis without bureaucratic influence and control. And when he had done the job he was asked to do—the Russians had been fed, the import oil bill had been paid and there was plenty for all—he is told, "We all have what we want—oil, big profit percentages, higher wages. Now you find your way out of the dilemma of over production."

More is involved here than whether a few or many American farmers survive or fall by the wayside. The real question is whether or not American agriculture remains as this nation's "ace in the hole" for the future. The simple growth of world population through the next 24 years foresees a shortfall of food by the year 2000, and that is with agricultural production at a pace comparable with present expansion. The whole series of recent events gives one the uneasy feeling that someone, somewhere knows more than we do about the future of food and what its real power in the world will be.

As finite world resources are used and become more valuable because of scarcity, the use of these resources will be channeled into the areas of definite need for human survival. Those who control the basic means of survival will have the power that money cannot buy. This places money not as the ultimate goal but only as a tool to reach the final control and power, any government or known force notwithstanding. A scary theory and hopefully only imaginative, but possibly food for thought.

Here in our own state, agriculture fills the roll of primary industry helping to stabilize our economy through times of national recession and only recently providing us with a sure buffer from national unemployment and related economic misadventures. But, day by day, we see and hear stories of people losing jobs because of no snow or motel closures.

If 100 farmer-food producers are forced to leave the land because of low prices received for products sold and high prices for products purchased, the overall effect will be formidable.

Idaho's agriculture has lost approximately $100 million this year. There is no other industry in the state which could stand this loss and there is no real assurance that agriculture can stand it. The bitter frustration is knowing it is all so unnecessary. A farmer-food producer can stand the chances he must take with the weather and acts of God and make do with what is left. But, when he knows that he has been and is being used, his frustration knows no bounds. The price of wheat drops by half, but the price of bread doesn't decrease. The price of beef drops by one-third or more, but where is the comparable drop at the local supermarket? In fact, some of these prices have risen as the middleman gets his "pound of flesh."

While we are on the subject of food production and agriculture, we should clarify an important point. Food is produced by men and women who till the soil and grow the crops. Food processors are merely collection points, cleaners, packers. Their job is important but if no food arrived at their front door, they would be out of business.

The ultimate consumer could survive without them, though maybe not so nicely. Unfortunately, without those who work and till the six inches or so of dust covering the surface of this planet, survival for billions would be impossible.

The American farmer-food producer asks for no more than an opportunity to produce his products and receive a fair share of its real value on the market. The problem is complex, but a nation which can spend a billion dollars to place a man and a golf ball on the moon and a television camera on Mars should be able to come up with some answers here on Earth.

A definite agriculture policy and plan must be developed and this matter must have national priority. To say it is not "that" important is foolish talk. We will all see the importance of American agripower in the near future.

If America loses this battle we may have lost our last real means of our independence. For as we become more and more dependent on the rest of the world for other raw materials—and we are becoming more dependent as our own nonreclaimable resources are used up—we become more susceptible to outside influence. The recent oil embargo is sure proof of our dependence. If we would place agriculture exports in the priority with arms exports, I think we would be a long way down the road to solving the problem.

And if the problem is not solved or is swept under the table, or is left in the hands of bureaucrats to bungle, it is just possible that when America and the world again call on American agriculture to produce because we must have it, a feeble voice will answer out of some dark corner—"We can't, our life blood is gone—taken away by a nation more concerned with toys than truth."

Or the other answer from those in a position of power, "Yes, we have the food, but what will you give us for it? Money is not acceptable."

Possibly the question will soon be at hand.

ETHICS, SUGAR-PILLS AND PAY RAISES

Mr. PERCY. Mr. President, the recent proposal for a pay raise for Members of Congress, Federal judges, and other top-level Government officials has created the usual swirl of controversy among the public and a round of editorials by the press. Emotions run high as arguments such as "public service should be its own reward" to threats of a large-scale exodus of public officials are offered for consumption. The real issues here, unfortunately, have been clouded by a general feeling of anger on the part of average citizens that the pay raise will go through automatically, without a vote in the Congress to approve it. I regret that this is the case. I support the pay raise and I have no hesitation about standing up in the Senate to vote for it. The salary recommendations of President Ford in his last budget, endorsed by President Carter, were based on the fact that the officials covered in the proposal have had a pay increase of only 5 percent in the last 8 years, during which time the cost of living went up by 60 percent—a decrease of 35 percent in real wages.

There are many reasons why people seek public office and high-level Government appointments but few of them are money. I can say with a high degree of certainty that no one in this body, for example, ran for the Senate because of the income. But, no one should be penalized financially because he has chosen a career such as this, which involves the maintenance of two homes and the cost of family travel between them just for starters. We would not want to have a situation where well-qualified people of modest means—particularly younger ones—are precluded from running for office because of the financial burden.

I am deeply cocerned about the situation of our Federal judges. Some of our best have resigned to resume private practice because judicial salaries do not keep up with the cost of living. It is becoming increasingly difficult to find well-qualified candidates to replace them because of the often substantial salary cuts that occur upon leaving private life.

Mr. President, it is important to the quality of the judiciary and of the top policy and management positions in Government that this pay increase take place. More importantly, however, is the fact that the pay proposal has been coupled with a strong recommendation for a new core of public conduct for these officials, which would restrict outside earned income and require disclosure of financial data. The Senate has al-

ready responded to this recommendation by ordering a special committee to draft a code of public conduct for Members, officers, and employees of the Senate in time for consideration by the full Senate on March 1. I strongly support the adoption by the Senate of a Code of Ethics at the earliest possible time.

At this point, I would like to commend the Chairman, Mr. Peter Peterson, and members of the Commission on Executive, Legislative, and Judicial Salaries for their thorough examination of Federal salary problems and for their outstanding suggestions for a code of public conduct. Chairman Peter G. Peterson tackled a difficult situation and has presented us with a set of recommendations that should be followed in all three branches of Government.

The Washington Post recently published an editorial entitled "Taking the Sugar Without the Pill" in which some doubt is expressed about the likelihood of an ethics proposal actually being enacted. I am more optimistic. The Government Operations Committee, on which I serve as ranking Republican, will be working on S. 555, the Public Officials Integrity Act which states that it is the policy of the United States to have uniform requirements for public financial disclosure applicable to high-level officials in all three branches of Government. I think we have before us a genuine opportunity to clean up our own house and help restore to the American people their faith in their own Government.

Mr. President, I ask unanimous consent that the Post editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 6, 1977]

TAKING THE SUGAR WITHOUT THE PILL

News stories seldom fit together as well as two that appeared on page A3 of this paper last Friday. One story said that, according to a Louis Harris poll, the public rated Congress' ethical standards as lower than those of any other public officials, consumer groups or—so help us—the press. Next to that was a story that showed one reason why: It told how the House leadership, by artful scheduling, has pretty well foreclosed a floor vote on the pending $12,400 congressional pay raise before it takes effect automatically on Feb. 20. The congressional raise is part of a package that would also increase the salaries of federal judges and top officials of the executive branch. Legislators who oppose an increase for themselves, and any who are willing to endorse it, may do so at a hearing. But no congressman is going to be required to vote himself 29 per cent more pay and take the heat from his constituents.

The Senate has behaved almost as shabbily. Sen. James B. Allen (D-Ala.) did bring up a disapproval motion on Wednesday, but it was tabled by a 56–42 vote. By doing that, those 56 senators did all that was needed to keep their raise on track without the embarrassment of actually voting for it. If braced by their constituents, they can take refuge in parliamentary double-talk: Wednesday, they can say, was not quite the right time to debate the issue. Oddly enough, if members of both houses play this game carefully, the right time for an honest yes-or-no vote will never be found.

This is of a piece with the recent news about House Ethics Committee Chairman John J. Flynt's resistance to removing Rep. F. L. Sikes (D-Fla.) from a powerful chairmanship despite his reprimand for conflict-of-interest violations last year. And then there are the tales about the murky finances of House Majority Leader Jim Wright (D-Tex.), who has used thousands of dollars in campaign contributions to pay off personal debts—apparently without technically violating any law. All this perpetuates the impression of cynicism as a way of congressional life.

Ironically, all this is happening just as that impression is getting a little out of date. A large majority of House Democrats did vote to take away Mr. Sikes' chairmanship. Far more significantly, a special House commission led by Rep. David R. Obey (D-Wis.) is finishing work on tough ethics rules that would, among other things, require full financial disclosure by representatives and their spouses, put strict curbs on outside earned income and abolish private office accounts. Speaker Thomas P. O'Neill Jr. (D-Mass.), whose style often seems reminiscent of "The Last Hurrah," is nonetheless said to be fully committed to a strong new code and has already bolstered the ethics committee's membership. Over in the Senate, a special panel chaired by Sen. Gaylord Nelson (D-Wis.) has also started to devise new rules.

These initiatives are just what the independent Peterson commission had in mind when it concluded that members of Congress could most effectively justify a reasonable pay increase for themselves by coupling it with full disclosure and real curbs on corrupt and questionable practices. The pay raise, so the theory went, would make the ethics code more palatable, like a sugar-coated pill. The ways things are going now, however, the members are going to get the sugar *without* having to swallow the pill. We would like to believe that solid majorities for real reforms do now exist, and that House and Senate leaders are determined enough to overcome all the resistance that remains. But there is only one way for Congress to convince anybody on that score—and that is for it to swallow a strict ethics code.

COLD WEATHER EMPTIES LOW-INCOME POCKETS

Mr. HUMPHREY. Mr. President, the cold weather has cast an economic chill over the eastern half of the United States. Businesses have been closed, schools shutdown, and hundreds of thousands thrown out of work. Discomforting to much of the Nation, the cold has meant economic tragedy for low-income Americans. With average fuel bills running 50 percent ahead of last year, there is an urgent—often desperate—need to get more money into low-income hands. Last week I and a number of other Senators sent a letter to President Carter asking him to speed funds directly to many local communities.

According to a Library of Congress study prepared at my request, the harsh winter will take an extra $139 from the pocketbook of every American household. Where the winter has been most severe, expenses will run well ahead of average. Heating bills of over $100 a month are not uncommon. Compare that to the $225 average payment for a social security recipient. A married couple on social security will average around $338. But that is cold comfort when food, fuel, shelter, and other bills have to be met.

Or take a family of four trying to survive on the minimum wage. At the current $2.30 per hour minimum wage, that family would have a gross annual salary of $4,784. Even if the proposed earned income tax credit were to be included, this would raise the gross figure to only $425 per month. Two weeks out of work, four mouths to feed, fuel bills taking an extra jump—I can tell you right now I would not want to be in a Minnesota winter in those circumstances.

Not everyone lives on social security or minimum wage incomes, but millions of Americans do. The Government has got to step in and get money to the communities and the individuals that need it most. As things stand now, we are counting on local merchants, grocery stores and small oil dealers to meet urgent needs with credit they do not have. They should not be asked to do a job they are ill prepared to handle.

Nor will the bad news end with the first breath of warm weather. The unusual shift in winter weather has affected agriculture all across the country. Frost in the South and drought in the Midwest and California promise to drive up food prices for the rest of the year. For millions of Americans, the bad news has just begun. The Government can move quickly to put funds into the right hands through existing community agencies, the Social Security Administration, and the Internal Revenue Service. The time to move is right now.

LAX NUCLEAR CONTROLS

Mr. PERCY. Mr. President, recent attempts by foreign governments to obtain a paper describing a workable nuclear device are alarming. Even more alarming is the fact that this paper was written by a Princeton engineering student, John Aristotle Phillips, that Phillips received vital information over the phone, and that the Energy Research and Development Administration, ERDA, referred at least one foreign embassy official to Phillips.

For a paper last spring, Phillips decided to see if he could design an atomic bomb from unclassified information. With the help of an employee of the E. I. duPont de Nemours Co., who gave him necessary information over the phone, Phillips succeeded. Astounded, his professor sent the paper to several nuclear experts who labeled the proposed device workable. The story was widely reported in the press, and until recently the paper—which had been distributed to a number of people—was unclassified.

Both Pakistan and France have tried unsuccessfully to obtain copies of Phillips' paper. The Pakistani Embassy contacted ERDA, which suggested that Phillips be approached directly. ERDA asserts that they make no attempt to control any studies not done by their agency, and that they had referred the Pakistanis to Phillips since "no law was broken." The Pakistanis asked Phillips for a copy of his paper, suggesting that it would be worthwhile, but were denied. Iqvas Butt, a Pakistani information minister, admitted that his Government is pursuing nuclear development, but said it was for peaceful purposes. When asked how the Pakistanis would use a nuclear bomb design for peaceful purposes,

Butt asserted that Pakistan is "not interested in making the bomb."

It seems likely now that Phillips' paper will not fall into the wrong hands. But what if this student had been less responsible, or the paper had been found and copied without his knowledge? What if a sophisticated terrorist group had set out to obtain the details of Phillips' design? Significant amounts of the deadly plutonium are unaccounted for in the United States alone, and it has been estimated that Phillips' device could be built for only a few thousand dollars.

But the failure to carefully guard Phillips' paper is only part of the problem. The fact that an amateur was able to design a workable nuclear device with the use of unclassified information obtained from public documents and a casual telephone conversation is the real danger. As Phillips told a New York Times reporter:

I think I've demonstrated that it doesn't do any good to prevent dissemination of information, because it's already out. The only way to stop proliferation of nuclear weapons now is to restrict the distribution of plutonium and uranium.

As extensive hearings before the Senate Government Operations Committee and other congressional forums during the 94th Congress revealed, existing controls are far short of adequate, and little time remains to fashion effective international restraints.

John Phillips hopes that his work "will cause people to stop and think, and then do something about the dangers of nuclear proliferation." I sincerely hope so, too.

GOVERNMENT AND THE NATION'S RESOURCES

Mr. CRANSTON. Mr. President, the National Commission on Supplies and Shortages recently issued a report entitled "Government and the Nation's Resources" based upon its 2-year study of the adequacy of our national raw material resources.

Created in 1974 by Public Law 93–426, the Commission set forth to study four major sets of concerns related to our growing apprehension about the economic impact of severe materials interruptions or shortages. These major concerns focused on: First, the extent of resource exhaustion; second, the ramifications of our growing dependence on imported materials; third, the adequacy of Government mechanisms to deal with materials shortages; and fourth, the adequacy of the private market mechanism to cope with shortages or supply interruptions.

The Commission consisted of two Members of the U.S. Senate, two Members of the House of Representatives, four senior administration officials, and five private citizens. The Chairman is a Californian—Dr. Donald Rice, president of the Rand Corp. The two Senate Members are my former colleagues, Senators Tunney and Brock.

Mr. President, I believe the findings and recommendations of the Commission are worthy of review by the Congress and the public. Accordingly, I ask unanimous consent to have printed in the RECORD the executive summary of the Commission's report, which contains its principal recommendations, together with a list of the Commission membership.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXECUTIVE SUMMARY

The National Commission on Supplies and Shortages, created by Public Law 93–426, was directed to report to the President and the Congress on a variety of issues. Four sets of concerns prompted the establishment of the Commission:

Concerns about resource exhaustion spawned by the continuing debate over how much of various raw materials lie within the earth's crust and how much of that stock can be extracted without irreparable damage to the planet;

Concerns about this country's growing dependence upon imported materials, coupled with uncertainty that we will be able to obtain adequate supplies of raw materials at reasonable prices in the face of the demonstrated ability of certain foreign producer nations to restrict supply and raise price;

Concerns about the adequacy of current mechanisms within the Government for dealing with materials problems and for assuring that such issues are adequately integrated into broader national and international policies;

Concerns about the ability of market mechanisms to deal with shortages and incipient shortage situations without causing undue hardship.

The Commission has addressed all four areas.

With regard to the first, our review of the evidence convinces us that resource exhaustion is not a serious possibility within the foreseeable future. Though estimates of world resources of most commodities seem to indicate that only a few years supply is on hand, those figures should be viewed in their proper context. To the mining industry, reserves are like food in the pantry. They no more represent the ultimate stock of raw materials available to them than does the stock of food in a pantry represent the ultimate quantity available to a family. However, we should not be unconcerned about the world resource picture. If population growth is not checked and if our energy supplies are not made more adequate and more secure, serious problems will eventually result. Issues such as these, not worries about the current quantity of raw materials in our "pantry," should occupy our attention.

With regard to import dependence, the Commission believes that the growth in petroleum imports has helped to foster a misconception. Except for petroleum, our dependence has increased only modestly. Unless we decide for environmental reasons to limit the growth of mineral production in this country or to increase our self-sufficiency through major Government support programs (a policy this Commission does *not* favor), the outlook is for a continued gradual growth in our imports. It should be pointed out, however, that this country's level of dependence presently is substantially below that of most other industrialized countries.

Rather than become overly worried about dependence, we should consider the issues recently raised by the Third World countries concerning the production and sale of raw materials and work with them toward viable solutions. And we must also be prepared to protect ourselves against the effects of actual or threatened supply disruptions. The Commission believes that limited economic stockpiles are an appropriate tool for this purpose.

Our evaluation of the current adequacy of Government institutions led us to conclude that improvements are both warranted and feasible in several areas. Materials data collection, data analysis, and policy analysis capabilities must be strengthened at the departmental level and integrated with broader policy concerns. A sectoral analysis capability must be established within the Executive Office of the President. Finally, the amount of long-range, comprehensive policy planning must be increased. The latter should be accomplished by increasing the volume and quality of such work now done within existing governmental units, by finding innovative ways to tap the substantial capabilities of private sector institutions, and through experimentation with new institutional forms.

A more detailed summary of our major findings, conclusions, and recommendations follows.*

THE WORLD'S RESOURCE BASE

The controversy persists about how long the world's natural resources will last. While "catastrophists" forecast doom within the next century unless economic growth is halted, the "cornucopians" insist that the earth can support increasing affluence if we use our resources efficiently, control population growth, and secure adequate energy.

The geologic, economic, and demographic evidence indicates that no physical lack of resources will seriously strain our economic growth for the next quarter century and probably for generations thereafter. Judging by past trends, the estimates of most reserves will increase; for the few cases in which crustal exhaustion is remotely likely, there will be sufficient warning for adjustments. It is important that no public or private action inhibit the adjustment process.

However, such problems as population control, the North-South confrontation, and energy supplies require closer monitoring of trends in resource availability. In the past, markets have been relied on to generate the signals for a desired pattern of resource development. But longer lead times and larger capital requirements for plant construction and product development, and the possibility of unexpected events in an increasingly interdependent world may require a more sophisticated, more responsible role for Government in interpreting and supplementing market signals.

INTERNATIONAL MARKET CONSIDERATION

A review of nonfuel mineral consumption and import data does not show that import dependence in general has taken on an alarming dimension or character. Neither embargoes nor OPEC-like cartels of nonfuel minerals producers effectively threaten the American economy.

Collusion can be effective for few, if any, nonfuel minerals; its economic impact would be transitory and light in comparison with the effects of OPEC.

It does not appear that either this Nation or the world is in any immediate danger of undergoing a squeeze on nonfuel minerals comparable to the oil crisis of 1973–74. Rather, any concern should be about smaller and more specific risks and vulnerabilities. Aside from keeping national security in mind, we need to ask whether undue or unnecessary costs may in particular instances be imposed on the United States by foreign suppliers, or by events otherwise beyond this country's control. Although many materials markets are not fully competitive, monopoly pricing of most minerals is limited by various market forces. Our policies on international trade and investment and on domestic competition offer opportunities to strengthen these forces.

One way to quiet the concerns generated by import dependence is to negotiate interna-

* Not all recommendations are supported in every detail by all Commissioners. See the body of the main report for supplementary views.

tional rules covering export agreements. We believe that an international convention on export controls is a worthwhile negotiating objective.

Commodity agreements between producers and consumers have been made for some commodities and contemplated for others in order to protect both groups. The Commission doubts that many more such agreements can be successfully negotiated. The desire of producers for higher prices would be opposed by consumer countries; negotiations would be time-consuming.

Obstacles to international investment could lead to permanently higher real costs for minerals. Public policies that minimize such obstacles deserve close attention. The objective of those policies would not be to reduce dependence on imports; rather it would seek to avoid misallocation of resources and added costs resulting from uneconomical investment patterns.

A number of policies would reduce noncommercial risks facing investors in foreign enterprises. The Commission favors multilateral investment guarantees against political and currency risks for investments in the production of natural resources. The Commission also supports attempts to codify internationally acceptable investment behavior and guidelines for Government policies toward foreign and multinational investors. The Commission favors an increase in the capital of the International Finance Corporation of the World Bank.

THE EXPERIENCE OF 1973–74

The shortages of 1973–74 were both widespread and severe. Our examination of the period reveals three major causes of those shortages. First was the worldwide surge in demand that began in 1972. Although the causes of that boom have not been satisfactorily explained, U.S. inflation, balance of payments deficits, and fluctuations in currency exchange rates surely must be given weight. The consequences of the boom are more visible. When resource supplies became tight in the United States, this country could not relieve the pinch with relatively cheap imports as it had done in the past, because imports had become a very expensive safety valve.

The second major cause of the shortages was insufficient productive capacity in the materials industries. Evidence on the growth of our gross capital stock reveals a dramatic decline in growth rates for the materials-processing industries during 1966–73 relative to previous periods. In addition, capital formation in the materials-processing industries was much below growth rates in all other industries. One reason for this sluggish growth was that industry was still working off excess capacity that had been built up during the period from the Korean War to the mid-1960s. Other factors which made domestic investment in capacity expansion unattractive were an overvalued dollar, uncertainty about compliance with newly enacted environmental legislation, and uncertainty surrounding changes in the price control regulations.

The third factor contributing to the severity of the shortages during this period was a "shortage mentality." People became convinced that shortages were going to occur and, by their efforts to protect themselves or profit from expected price increases, helped create them, domestically, the shortage mentality manifested itself in inventory buildups. This hypersensitivity to materials supplies was caused in part by some spot shortages which arose due to price controls, and also by knowledge that the economy was reaching full capacity, by the events in the oil industry in late 1973, and by uncertainty surrounding floating exchange rates. The shortage mentality occurred not only in the United States, but in many foreign countries as well—the phenomenon was international. The shortage mentality and the behavior it generated helped create the shortages that were observed during 1973–74, artificially extended the economic boom that accompanied them, and contributed substantially to the severity of the recession that followed.

Our analysis of the period shows that the magnitude of the Government's influence over the materials industries—sometimes subtle, sometimes direct—was not fully appreciated. It is essential that Government policies be consistent and exert a stabilizing influence on the economy. This cannot happen unless the Government understands the effects of its actions, not only on the economy as a whole, but on important segments of it.

IMPROVING MATERIALS DATA AND ANALYSIS

The Government needs improved food and materials information systems to manage intelligently its increasing economic and social role and to respond to our growing international interdependence. The Commission believes that the Government must enhance its understanding of the role of materials in our economy by sectors and industries, and must upgrade its food and materials data and analysis systems.

Data must be more accurate, explicit, and objective; better early warning of impending problems must be developed; the relation between information and policy must be strengthened; an integrated overview of food and materials issues must be developed; and a better understanding of the relationships between commodities, energy, and the environment must be fostered.

The Commission offers a set of guidelines for improving data and analysis in the Federal Government:

"Data collection and data analysis should be separated from programmatic and promotional responsibilities and be placed in separate high-level organizations of comparable status (preferably Bureaus); their credibility should be fostered through open access, frequent reporting, and other institutional safeguards; they should respond to the needs of users; statistical standards should be upgraded; and the limitations of the data (including sampling errors, uncertainty, and assumptions) published with the data.

"Policy analysis should be separated from data collection and data analysis, and from programmatic and promotional responsibilities; it should be made public whenever possible; it should be encouraged at various levels within line departments; policy analysts should work from comparable and consistent data; and policy analysts at higher levels should reconcile conflicting analyses."

The Commission favors the upgrading of data and analysis capabilities for food and materials in the line agencies and in the Executive Office of the President, with primary emphasis on the line agencies. The Commission believes that approach preferable to creating an independent agency for data and analysis and preferable to improvements only within the line agencies or only within the Executive Office of the President.

The Commission reviewed in detail the data collection, data analysis, and policy analysis activities within the key food and materials agencies. The following observations and recommendations are made:

Department of Agriculture. The basic domestic data and analysis activities are strong and serve as a model to other agencies. But the growing role played by foreign developments is inadequately reflected in the Department's data collection, data analysis, and policy analysis activities. Foreign agricultural data are collected by agricultural attaches to U.S. embassies who combine data collection and analysis with export promotion activities. This jeopardizes the objectivity of both the data and analysis. *The Commission recommends* that the Foreign Commodity Analysis Unit be transferred out of the Foreign Agricultural Service and made a part of the Economic Research Service. *The Commission also recommends* that the policy analysis function in Agriculture—the Office of Planning and Evaluation—be restored to the Office of the Secretary or established at an Assistant Secretary level.

Department of Commerce. The Department does excellent macroeconomic forecasting in its Bureau of Economic Analysis, but is less proficient in forecasts for individual industries. In the Office of Business Research and Analysis (OBRA), commodity specialists collect and analyze data and make forecasts. The same Office is an integral part of the Bureau of Domestic Commerce, which has important program and promotional responsibilities. *The Commission recommends* a more complete separation of functions. This objective could be achieved by creating a third bureau, in addition to the Bureau of the Census and the Bureau of Economic Analysis, which might be called the Bureau of Industry Affairs, under the Office of the Chief Economist. The industry analysis and forecasting functions now performed by OBRA should be transferred to this new Bureau.

Department of the Interior. The Bureau of Mines, located within Interior, is the Government's prime source of data and analysis on mineral reserves, production, and use, and on domestic and foreign mineral industries. The Bureau's commodity specialists collect, tabulate, and analyze data, and prepare forecasts. Past steps to separate data collection from analysis and to elevate supply-demand forecasting have proved inadequate.

The Commission recommends a more complete separation of data collection and data analysis. This could be achieved by creating a new bureau, tentatively called the Bureau of Resources Data and Analysis, to consolidate Interior's data collection and analysis for minerals and materials. This Bureau would include relevant parts of the Bureau of Mines, Bureau of Land Management, and the Geological Survey. Its sole responsibility would be to serve as the Government's primary source of data and analysis on natural resources, including estimates of resources and reserves.

It has become increasingly vital that we know in detail about foreign mineral demand, production, and reserves. Only with such information can domestic policies be formed intelligently. The Department of the Interior's current effort in this regard is inadequate. The most important of the Commission's recommendations calls for a substantial strengthening and restructuring of the minerals attache program.

Department of Natural Resources. The Commission believes that the creation of a Department of Natural Resources (or Department of Energy and Natural Resources) would be sound and sensible and that the Nation should move toward its eventual establishment. But this will take time. Our recommendations for improving the Department of Commerce and the Department of the Interior are intended as interim steps in this direction.

Office of Management and Budget. The Statistical Policy Division (SPD) administers the Federal Statistical Program, including setting of standards for data collection and analysis in the non-regulatory agencies. *The Commission recommends* that the SPD should assure that needed time series are not discontinued through the action of any single agency maintaining them; that statistical standards are improved for program data, for analysis and for forecasting; that the statistical errors and data limitations are published; that published data not adhering to Federal statistical standards state so clearly; and that a program be set up to analyze the accuracy and comprehensiveness of data collected under the Federal Statistical Pro-

gram. The SPD already has sufficient authority to carry out these improvements.

General Accounting Office. The Regulatory Reports Review Group reviews the reporting forms for the regulatory agencies, but lacks the authority for approving forms or ensuring the quality and comparability of data. *The Commission recommends* that P.L. 93–153 be amended to give GAO analogous authority standards, approve reporting forms, approve new data requests, and reduce data redundancy.

GAO should coordinate its standards with OMB for Government-wide compatibility and comparability of statistics for commodities and materials.

Organizations Outside the Federal Government. It is a proper function of the Government to encourage its own intellectual competition. *The Commission recommends* that the research and policy analysis arms of the Departments concerned with materials provide ongoing support to nongovernmental analytical research groups.

The Need for Adequate Funding for Departmental Statistical Activities. The Commission recommends that both Congress and the President assure adequate funds for effective food and materials data and analysis. Such funding is critical to attracting quality people. In the final analysis, it is the quality of the people within the information system that determines the quality of its performance.

BRINGING A BROADER PERSPECTIVE TO GOVERNMENT POLICY

Government policies developed without an understanding of their effect on specific industries and on other policies often create serious problems. This is particularly true of policies affecting the key materials-producing industries.

The recommendations pertaining to the line agencies and departments should increase the quantity and quality of information for private and public decisionmaking. More is needed. The improved information must be integrated into a comprehensive picture of how Government policies combine to affect basic industry and the broad national interest.

The Commission recommends that a small group of industry and sectoral specialists be created within the Office of Management and Budget to monitor industries and sectors; develop a framework for analyzing the comprehensive effects of proposed major Federal policy actions; and monitor basic data collection, data analysis, and policy analysis activities of the line agencies and departments. *The Commission also recommends* that the Council of Economic Advisers build up its industry and sectoral analysis capabilities.

The Commission believes that the Government must do more longer-term comprehensive policy planning, but that its current structure is ill-adapted to such planning. *The Commission recommends* that the President and the Congress work together to devise and implement procedures for multi-year budgeting. *The Commission strongly endorses* efforts to restructure the committees of the Congress to permit more effective consideration of complex and interrelated policy issues. In order to try out an institutional form favorable to comprehensive long-term planning, the Commission's Advisory Committee proposes an independent entity within the executive branch, which might be called the National Growth and Development Commission, to select intermediate or long-range policy issues of national significance for comprehensive analysis. *The Commission recommends* that the Advisory Committee's proposal be seriously considered, but only if undertaken as part of a broader effort to draw also on the important skills of the private sector and to increase the quantity and quality of policy analysis performed within existing Government agencies.

ECONOMIC STOCKPILING

Recent threats of commodity market disruptions, which followed the oil embargo and oil price increases by foreign producers, have stimulated discussions of and proposals for economic stockpiling. The Commission examined the potential for stockpiles which could protect the United States economy from short-run imbalances of three kinds:

Sudden and severe disruptions in materials supply;

Sharp price increases by foreign cartels or monopolies;

Cyclical fluctuations in demand or supply.

The Commission was primarily concerned with defining the conditions under which stockpiling is an effective instrument of policy. It found that the objectives of stockpiling must be precisely determined; and that the interaction between public stockpiles and private inventories, a phenomenon usually ignored, is complex and has important policy implications.

The Commission found that a public stockpile of certain imported critical materials is a worthwhile insurance against sudden and severe supply disruptions and that domestic economic stockpiles held in cooperation with major consuming nations could deter cartels of foreign producers. *The Commission recommends* that stockpiles not be used to stabilize domestic prices.

The Government maintains a Strategic and Critical Materials Stockpile for defense-related purposes. That stockpile has recently been slated for substantial expansion. If this expansion is carried out, *the Commission recommends* that the Strategic and Critical Materials Stock Piling Act be amended to permit the use of the Strategic Stockpile in the event of a severe disruption in the supply of a critical material, and that the President be required to issue rules for such contingencies. The present policy of using the Strategic Stockpile as a *de facto* economic stockpile, subject only to the vaguest guidance and control, is unwise and should be discontinued.

Should the Strategic Stockpile not be built up, *the Commission recommends* establishing a separate, limited economic stockpile. *The Commission recommends* that Congress explicitly prohibit the use of any public stockpile to subsidize a domestic industry or to influence domestic prices in the absence of an actual or threatened severe supply disruption.

The Commission also examined issues related to grain stockpiling. We *recommend* that the United States should actively promote international discussions leading to negotiation of a multilateral grain stockpiling agreement.

RECYCLING

Use of recycling as a source of supply can reduce the escalating capital requirements and environmental degradation which accompany the exploitation of lower-grade virgin resources. It can also reduce energy demands and import dependence. Sizable amounts of some major materials are already recycled, but as a percentage of total consumption recycling has been static or declining in America, and only a small portion of post-consumer waste is recycled. Not all of the materials that the Nation consumes can be economically recycled, but present rates of recycling can be increased substantially to supply a limited, but important, fraction of our total needs for materials.

The term "urban ore" has been applied to the materials used up and discarded by consumers. Some economic considerations discourage the recycling of "urban ore" in much the same way that similar considerations discourage the exploitation of virgin ore deposits. In addition, a number of Government practices deviate from the principle that the rate of recycling should reflect informed decisions made on the basis of the true cost of materials. The 94th Congress acted to eliminate such practices as discrimination against recycled materials in procurement specifications, possible discrimination against recyclables in regulated freight rates, and a variety of institutional barriers which cause localities to miss recycling opportunities. *The Commission recommends* that Congress take further action to implement the true-cost-of-materials principle. It should internalize the cost of disposing of materials by means such as mandatory deposits on beverage containers, excise taxes on non-returnable containers, and product disposal charges on other consumer packaging and on paper. Due to the absence of compelling evidence for its continuation, *the Commission recommends* repeal of the percentage depletion allowance for minerals. *The Commission recommends* that Congress avoid actions that are contrary to the true-cost-of-materials principle—such as new tax subsidies to the consumption of recycled materials, or extensive Federal funding of systems to recover resources from waste.

MATERIALS RESEARCH AND DEVELOPMENT

The Commission examined the current national effort to support materials research and development. We found that the dimensions of this effort are poorly understood at present and that it is severely hampered by the lack of an effective mechanism for viewing the numerous existing and proposed Federal activities as a coherent whole. Consequently, it is impossible to determine whether the national materials R&D effort and the Federal activities within it are appropriate to the Nation's needs.

Given this, the Commission believes that priority should go to improving the management of the current Federal materials R&D program. Limited, though encouraging, progress has recently been made in this direction. Additional efforts are needed. The missing mechanism described above must be developed, not just for materials, but for all aspects of Federal R&D that cut across major institutional lines. The newly-created Office of Science and Technology Policy (OSTP) should take the lead in developing this mechanism (probably as part of the budget process). It must also develop a better linkage between Federal applied research efforts and the needs of the ultimate consumers of the output of this research—materials producers and materials users. In doing this, we believe that OSTP should develop a close working relationship with, and draw heavily upon, the capabilities of the groups of industry and sectoral specialists whose establishment we have proposed. Finally, the Commission believes that a more active United States role internationally in providing a sharper focus for analysis and assessment work now being carried on through the Organization for Economic Cooperation and Development would be appropriate; steps should also be taken wherever possible to encourage the international coordination of actual research and development activities.

NATIONAL COMMISSION ON SUPPLIES AND SHORTAGES, WASHINGTON, D.C.

Donald B. Rice, President, The Rand Corporation (Chairman).

Bill Brock, United States Senator (Tennessee).

Alan Greenspan, Chairman, Council of Economic Advisers.

Hendrik S. Houthakker, Professor of Economics, Harvard University.

George Kozmetsky, Dean, College of Business Administration and Graduate School of Business, University of Texas.

James T. Lynn, Director, Office of Management and Budget.

Thomas M. Rees, Member, U.S. House of Representatives (23rd District, California).

L. William Seidman, Assistant to the President for Economic Affairs.

William E. Simon, Secretary of the Treasury (Vice Chairman).

J. William Stanton, Member, U.S. House of Representatives (11th District, Ohio).

Phillip H. Trezise, Senior Fellow, The Brookings Institution.

John V. Tunney, United States Senator (California).

Nat Weinberg, Director, Special Projects, UAW (Retired).

AN INDEPENDENT JURIST

Mr. PERCY. Mr. President, Lesley Oelsner of the New York Times wrote an article on February 5, entitled "Stevens Is Proving To Be a 'Wild Card' on High Court." Ms. Oelsner writes perceptively concerning Supreme Court Justice John Paul Stevens.

Justice Stevens is an independent jurist. He neither adheres to nor is described by easy labels. He is neither "conservative" nor "liberal," "reactionary" nor "radical." Rather, he studies the law and the cases, and votes his conscience. Can we ask more of a Supreme Court Justice?

As Ms. Oelsner points out, Justice Stevens is sometimes unpredictable. But this is because the issues facing the High Court are complex; there are no easy answers. Fidelity to American jurisprudence requires diverse responses to diverse problems.

When Justice Stevens was sworn in on December 19, 1975, we from Illinois were proud of him and confident that he would do an outstanding job. We have every reason to remain proud of him today.

Mr. Chairman, I thank Ms. Oelsner for her fine essay on Justice Stevens, and ask unanimous consent that it may be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

STEVENS IS PROVING TO BE A "WILD CARD" ON HIGH COURT

(By Lesley Oelsner)

WASHINGTON, February 5.—At the Supreme Court one day, in the chambers of one of the nine Justices, the talk turned to a pending case and then to its possible outcome.

One Justice guessed how eight of the nine votes would go. Then he gave up guessing. It was impossible to predict, he said, because, "it's four to four, and we're down to the wild card."

"The wild card" was John Paul Stevens, the Court's newest justice, and by most counts, its least predictable member.

Justice Stevens was sworn in at the Court on Dec. 19, 1975, President Ford's choice to fill the vacancy left when William O. Douglas retired for poor health; he began hearing cases the next month, January 1976.

EMERGED AS MARKEDLY INDEPENDENT

In his first year on the Court, Justice Stevens has emerged as a markedly independent Justice, unaligned to any particular bloc or ideology. He has voted sometimes with the Justices considered to be the Court's most conservative, other times with those regarded as the most liberal.

He has emerged, as well, as somewhat more willing than some of his colleagues to be an activist judge, both in terms of being willing to consider novel cases and issues, and in terms of his reading of certain constitutional guarantees.

And he has turned out to be not at all hesitant to make his views known. He has written numerous opinions, both dissenting and concurring, that various experts analyze as reflecting a "case by case" approach rather than a single articulated theory. The experts also consider them somewhat uneven, being often very craftsmanlike and persuasive but sometimes notably less so.

It is too early to predict what caliber Justice he will ultimately be and what influence he will eventually have, or even where he is heading on some specific issues.

But his opinions and votes so far give some hints. He is already widely regarded as one of the more able Justices.

His independent and individualistic approach sharply contrasts with that of several of his colleagues. At the same time, and even though some find him unpredictable, he already has considerable sway on the Court.

Essentially, Justice Stevens is a nondoctrinaire member of a Court that is marked by several Justices who either often seem result-oriented or who appear to espouse some noticeable legal ideologies.

The current Court is conservative leaning, with the thrust sparked by the four Justices appointed by Richard M. Nixon: Chief Justice Warren E. Burger, Harry A. Blackmun, Lewis F. Powell Jr. and William Rehnquist.

On the other end, there are two relatively liberal-leaning Justices, William J. Brennan Jr. and Thurgood Marshall.

NOT RESULT-ORIENTED

Justice Stevens has stood out because, like two other Justices, Potter Stewart and Byron R. White, he cannot be identified with either side; he has not espoused a clear legal or political ideology; and, unlike the four Nixon appointees, he was not selected for the Court because of his political views.

Noted as a "judge's judge" when he served on the United States Court of Appeals for the Seventh Circuit in Chicago, he was chosen by President Ford as a safe appointment that would have no trouble being confirmed by the Senate.

The voting blocks at the Court, however, are not absolute. The four Nixon appointees, for example, differ in degree and do not always vote together. There is thus a broad middle range, composed of everybody between Justices Rehnquist and Burger on the one side and Justices Brennan and Marshall on the other.

Also, there is not at the moment any one noticeable intellectual leader on the Court. As a result, according to one Court insider, leadership, to the extent that there is any, rests generally within the middle range, of which Justice Stevens is considered a part.

VOTED TO UPHOLD DEATH PENALTY

Justice Stevens's opinions and votes seem a decidedly mixed bag. He voted to uphold the death penalty as a constitutionally permissible penalty at least for murder. He voted with the majority to limit the power of Federal courts to review allegations of Fourth Amendment violations by inmates who have been convicted in state court trials.

However, he dissented from the majority's decision last fall that pregnancy can be excluded from employee disability insurance plans, and from last year's decision upholding a statute that made homosexual conduct a crime, saying that the Court should have heard arguments on the issue.

Some broad themes do emerge, however. In criminal cases, for example, Justice Stevens tends to vote with the current conservative majority on search and seizure issues.

On racial questions, there also seems to be a pattern, though not so strong. The current major Supreme Court case on race, Washington v. Davis, decided last year, concluded that a statute or official act that had a disproportionate burden on blacks was not necessarily unconstitutional; that to be unconstitutional, there had to be proof of discriminatory purpose.

Justice Stevens concurred in that opinion but wrote a separate opinion in which he said, in effect, that the line between discriminatory effect and discriminatory purpose was not so clear as the majority opinion might indicate. In some areas, his opinions and votes have been so contradictory that it is impossible to say at the moment where Justice Stevens is headed. The First Amendment is one such area.

BIENNIAL SENATORIAL SUITE-SELECTION PROCESS ENDS

Mr. CANNON. Mr. President, at 2:30 Tuesday afternoon, February 8, the biennial Senatorial suite-selection process came to an end, 3 months to the day after it began.

I am pleased this complicated job has been completed in record time. The Rules Committee and its staff had the full cooperation from Senators in making their choices, despite the arduous details involved.

The actual moves into suites will take more time, owing to our extremely tight space situation. Each suite must be painted and made ready for its new occupant, and we do not have spare suites which Senators may occupy while permanent quarters are being put in shape. This is why several Senators are occupying less than their full entitlement of rooms while the moves are under way. I know it is inconvenient for them and their staffs and we are doing all we can to speed the process. Ten moves are now complete. Thirty-seven lie ahead, and a schedule for their dates is being furnished by the Superintendent's office to those affected.

MOVING FORWARD ON ENERGY POLICY

Mr. PERCY. Mr. President, the New York Times carried two excellent articles by C. L. Sulzberger on November 11, 1976, and December 12, 1976. The articles wisely point out that we must decrease energy demand in this country.

Conservation, as Mr. Sulzberger knows, is our best hope. We must redesign cars, buildings, and indeed the very basic elements of our lifestyle using the most efficient technology available. Conservation requires both a short- and long-term effort. Unfortunately, it is too easy to become complacent concerning the energy situation after an immediate crisis passes.

We cannot allow ourselves to forget the harsh experiences of the 1973 oil embargo or the 1977 natural gas shortage. The Nation is doomed to further bouts of unemployment, discomfort, and confusion which an energy shortage brings unless we curb our excessive demands for energy by utilizing it more efficiently.

Mr. President, these articles are very worthwhile reading, and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CAN THE WORLD EXIST UNTIL 1984?

(By C. L. Sulzberger)

PARIS.—The insouciant insanity with which the industralized countries of the West regard the worsening energy crisis, which can

quite easily undermine and destroy the entire fabric of free society, is possibly the most frightening problem—both long-range and short-range—to face what we happily refer to as democratic civilization.

I happened to be in Inner Mongolia when the Arab oil-producing cartel first applied its petroleum embargo in 1973, hoping thereby to assist in the Egyptian-Syrian war against Israel. On learning about this abrupt but by no means unexpected move, my first reaction in Huhehot, that Chinese province's capital, was:

"Thank heavens. Now for the first time, because of *force majeure*, the ridiculously overdeveloped world will have to cease manufacturing millions of outsized automobiles that drink gasoline like thirsty dinosaurs and use less than 10 percent of that fuel for purposes of propulsion.

"Now there will be smaller, more efficiently powered automobiles so that our cities will become less polluted and more habitable. And architects will be condemned to design buildings whose windows open and shut so that one isn't doomed to be overcooled in summer and overheated in winter according to the exaggerated and economically wasteful eccentricities of temperature dictators."

How wrong I was. Within a remarkably short time, after the nations of the "developed" world had accepted the demands of OPEC (the Organization of Petroleum Exporting Countries) and more than tripled the price they paid for black gold, they were restructuring their foreign trade and inflation programs to accept this new "fact of life."

Not long afterward another optimistic glow shimmered off visions of vast new resources expected from the fossilized fuels of Alaska and British-Norwegian North Sea wells. Meanwhile, such suddenly over-affluent producing countries as Saudi Arabia and Kuwait couldn't even start to approach sensible planning on investment or utilization of unimaginably large sums of money flowing in, thus wrecking their own economies with incalculable inflation and corruption.

At the same time, excess fabrication and use of motor vehicles in oil-consuming lands—mostly oversized vehicles with impracticably greedy engines—continue to make life increasingly unbearable. Political leaders lack the wisdom, courage and determination to alter a way of life that is already more outmoded than the horse-and-buggy was when is vanished.

Nobody is quite sure of the probable results of the next producer-consumer confrontation when OPEC meets this winter and decides on future prices. It certainly has the whip hand because, apart from military equipment, most of its members are overstocked with goods unbalanced populations are not yet ready to consume.

Emile van Lennep, Dutch Secretary-General of the O.E.C.D. (Organization for Economic Cooperation and Development, representing the world's 24 leading consumers including the U.S.A.) assures me:

"By 1984, no matter what happens, we will be back in a more serious crisis than ever before—unless really major conservation efforts are made. Hitherto we have been inclined to see the problem in terms of more energy production. The reality is that there should be more conservation."

He outlines this in terms of avoiding meaningless waste of fuel on antiquated types of vehicles, traffic-paralyzed cities, buildings unnecessarily and artificially isolated from nature's normal seasons (which prevail in most developed lands). Governments fail to lead their countries to sensible solutions in time.

"Already there is an accepted habit of distinguishing between 'merit' goods like energy sources or food and 'demerit' goods like tobacco or alcohol, which are relatively more highly taxed," he says, "It wouldn't hurt, as a starter, to begin thinking of gasoline as a demerit product subject to special levies.

"Within less than a decade—whatever happens, in terms of Alaskan, North Sea or other production sources—we are going to be hit harder than ever. It is going to take time to develop new transportation means like public vehicles, special aircraft, rapid trains, vast car parks outside cities, railway stations at airports instead of metropolitan centers.

"We have to plan for this entire social revolution in a series of interlinking phases: (1) how to keep things going until 1984; (2) then, the years after that date when there is less oil and when environmental and pollution problems are immensely worse; (3) then the time when we can make do with new technological methods requiring less fuel consumption; (4) and, finally, the more distant future when brand new energy sources like the sun become economically practicable."

POWER, POLLUTION, AND PARALYSIS
(By C. L. Sulzberger)

LONDON.—The most dire and inescapable problem facing the contemporary world concerns allocation, use and price of energy. Moreover, its ridiculous aspect is that enough time remains for every nation involved—developed, industrial, consuming lands; developing oil-rich lands; underdeveloped lands, poor in both petroleum and industry—to agree on formulas for sharing available resources and needs.

Right now everyone seems to be moving along once again as if the 1973 OPEC petroleum embargo had never occurred. Adjustments have been made to price increases of between 300 and 500 percent, even if these have had such extraneous effects as to put the supersonic Concorde aircraft virtually out of business because of the unanticipated exorbitant price of fuel.

The United States and other Western countries have done nothing worth mentioning about improving automobile engines so that more than 10 percent of their fuel produces motion while the rest blows off in waste or pollution. They continue to manufacture cars too large to squeeze into their burgeoning cities.

They install in these monsters motors so powerful that only fear of the law induces their drivers to observe imposed speed limits. They design and construct vast skyscrapers whose windows don't open so that they must depend on energy-consuming air conditioning, freezing occupants in summer, baking them in winter, according to dictatorial thermostats.

I recently discussed this in Brussels with various concerned persons including Viscount Etienne Davignon, Belgian chairman of a special European Community committee; Sir Christopher Soames, External Relations Commissioner of the Community, and Joseph Luns, Secretary General of NATO. All are alarmed.

Viscount Davignon says: "Until 1973 we lived in a dream world based on low-cost energy over which we had no control. What would we have done with statesmen who allowed us to depend for our military security on weapons over more than half of which we had no control? The 1973 oil crisis should have shaken us up but it was a missed opportunity for sane, coordinated reaction."

It produced, instead, hysterical competition among nations dependent on energy imports, regardless of price. Finally, in 1975, there was an accord to conserve fuel by decreasing consumption. But what happened? Sir Christopher comments: "It is disappointing that the brave words of the United States on energy conservation now seem to have been forgotten and have led to nothing. Both the U.S. and Europe should have come up with more effective programs."

The United States is unquestionably No. 1 on the list of offenders. Almost self-sustaining in petroleum a decade ago, its imports are leaping up together with its profligate overconsumption on frequently useless projects. Viscount Davignon says: "Americans, on a per capita basis, use twice the energy of Europeans and at half the price"—largely because of Washington's insistence on holding down fuel taxes.

Mr. Luns adds glumly: "NATO is worried about the energy position. The allies don't seem to realize how imperative it is to conserve fuel. Although some of our partners, like France and Holland, have taken steps, far from enough is being done. This is immensely grave. Until there is a settlement, we can always be subject to price blackmail by producers."

Such a move is not expected right away. An imminent OPEC meeting is counted on to keep the next price rise moderate. But for how long? And, as far as that goes, do even producer-countries benefit from the sudden multiplication of their wealth?

Saudi Arabia is swamped in so much money that it cannot even budget short-term or long-term use of billions in a dollar inflow not even dreamed of when the 1970's began. Why can't some of this idle wealth be loaned at cheap interest rates to industrial users of oil (who supply producers with manufacturing equipment) and at least partly donated in grants to the impoverished, undeveloped lands?

Meanwhile, the West is in a position to help Saudi Arabia solve its major short-term problems of importing fresh water in empty supertankers to store in reservoirs and educating a new technological class to start sharing in the industrial growth of their own country and perhaps in joint administration of user concerns abroad—provided these are not politically subverted.

Yet none of these dreams and projects—urgent as they are—can or will be solved without active American participation and a forward-looking, imaginative U.S. energy policy. Therefore, as Viscount Davignon says (and here he speaks for much of the world): "We hope a top priority of the Carter Administration will be this."

WORKER INCENTIVES: HIGHER WAGES WITHOUT INFLATION

Mr. HUMPHREY. Mr. President, the record shows my longstanding concern with unemployment in the United States. But too often, people forget that I also am on the frontlines in the battle against inflation. And a big part of that battle can be won in individual businesses and factories by increasing labor productivity. When productivity rises fast enough, wages can go up and prices down at the same time.

A recent Wall Street Journal article reported on some experiences in tying wage increases directly to gains in productivity. Before introducing the incentive program, the companies involved had to work out a satisfactory definition of a fair day's work and the base pay. Beyond the base pay, raises came out as a result of increased productivity.

In six different plants scattered around the country, the experiment resulted in an average productivity gain of 57 percent. On the average, wages went up by 21 percent, prices down by 33 percent.

The idea of incentive wages frightens lots of people. Not that they shun work,

but they remember the sweat shops that ran on piece rates and thrived on rate breakers. But incentive pay does not have to take that course. With union guidance and participation, the incentive plans can benefit the workers without turning the clock back to the 19th century.

Mr. President, I do not know if wage incentives can be easily designed for all types of work. But they appear to be one more promising avenue in our fight against inflation.

Mr. President, I ask unanimous consent that an article on "Worker Incentives," by Emanuel Weintraub be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORKER INCENTIVES

(By Emanuel Weintraub)

If you mention incentives, bonuses, stock options or any other similar terms to the average corporate executive he'll have no difficulty understanding their value to the upper levels of management. They somehow make the adrenalin flow quicker, they motivate managers to greater levels of achievement and productivity.

But what about the rank and file? The relentless struggle against inflation by industry as well as state and municipal government, clearly underscores the need for a serious new look at productivity incentives at that level.

As President Ford pointed out in his economic report to Congress this month, productivity since 1966 has risen only 2.1 percent a year, compared with an annual average of 3.3 percent in the postwar years until 1966. That shrinkage in growth of output per man hour, the report warned, means reduced potential for economic growth.

But evidence exists that substantial productivity gain can be achieved by workers through the use of incentives.

The key is to use incentives as a non-inflationary wage increase, linking them squarely to productivity improvement, which has the effect of actually driving down costs.

Just a few years ago we were told that workers were unproductive because of "Blue Collar Blues"—the result of dull, boring and repetitive jobs. But an ensuing rash of strikes among teachers, nurses, policemen and other civil servants—hardly engaged in repetitive assembly line jobs—put a crimp in that theory.

During that period of labor strife, a survey of several thousand blue collar workers in tightly structured jobs showed that workers ranked their needs in the following order: more job security; equality of pay; more and different fringe benefits and more leisure time.

Their needs and motivation follow the laws of human nature. But how can the economic expectations of the work force be met without adding fuel to the fire of inflation? Higher wages. Higher productivity. Lower direct labor costs. Are they impossible dreams?

To show that the dream is possible, take a few examples of recent productivity improvement programs designed and implemented in the private sector. Much like their counterpart at the corporate level, financial rewards at the rank-and-file level proved to be a substantial motivating element.

Workers somehow found a "second wind" and became more productive when they knew that there was a direct link between compensation and performance. In two of the six installations at which programs were instituted the work force was non-union. In the remainder they were covered by union contracts.

[In percent]

Location	Wages	Productivity	Labor Costs*
East Tennessee	+15	+43	−28
Philadelphia	+29	+48	−26
South Georgia	+16	+75	−53
Metropolitan N.Y.	+21	+51	−21
Central Tennessee	+13	+60	−47
Central Virginia	+3	+66	−25
Average	+21	+57	−33

*Per unit.

What unlocks or triggers the average 57 percent of hidden productivity found in the six cases? What factors must be taken into consideration before attempting to take such steps?

First, a productivity standard must be established that defines just what is a fair day's work. Conceptually, this is the performance that can be achieved by an individual who is properly trained and performing at a normal pace. This takes into consideration unavoidable delays and interruptions, and the need for personal and fatigue time during the work day. It is usually accomplished by using an organized system of standards development.

Second, one must answer the question: Is there a consensus in management that reasons as follows—if a worker produces more than a fair day's work, should he be entitled to more than a fair day's pay?

Third, does management recognize that higher productivity levels are really attainable? Performance standards are historic. The traditional rationale focuses on what has been done, rather than on how much could be done.

The crucial elements, therefore, are like the legs of a stool that give support to each other.

Once standards are developed and quantified, and agreed upon by various levels of management as fair and equitable, a reward must be developed for those who meet the standards. At this point the workers become involved—they have a right to know how the standards were established and to agree that the reward for extra performance is equitable.

The key is more money, or its equivalent, for more productivity. In some instances the reward or increased productivity is more time time off while still earning the same, or more, pay.

As an example, one company sought to install a productivity incentive program at a warehouse and distribution center. A major producer of consumer goods (boxed apparel), the company was seeking to reduce costs and increase productivity at its 150,000 square foot facility.

Several factors contributed to management's decision to install incentives. Direct labor costs per unit were being driven up by mandated union contract increases. This was coupled with individual raises given to certain employees who felt their productivity levels entitled them to more compensation.

Because of the cyclical nature of the workload in the warehouse and distribution center, periodic shipping peaks had to be met, or orders would be cancelled. Extra performance was required from the work force during the peak periods. But the work force did not feel it shared in any of the gains generated by extra effort, except through overtime pay.

Even overtime has its complications. As cancellation dates came closer, a percentage of the work force was uninterested in putting in extra hours for more money. Yet management would gladly pay the price to avoid cancellations, complaints from customers, and resultant loss of profits due to nonshipment.

Against this backdrop, an incentive was devised for the functions of receiving and inspecting, stock put-away, order pick, check and pack, and ship. Standards were developed that reflected the work content for each category of work.

In receive and inspect, workers were put on a group incentive because the group had more than one function to perform. In put-away, pick and check and pack, workers were all compensated by individual incentive because their output could be so monitored. In ship, which involved a number of interchangeable functions, workers were also paid on a group incentive because of the interdependence of the functions. Clerical, computer and supervisory personnel were not included in this plan.

As a result of the program, the 40 employees involved raised unit productivity to 91 uints an hour from 60. Average hourly earnings rose by $1.05, to $4.995 an hour, but the average cost to process a unit through these functions fell to 13.6 cents from 17.2 cents a unit.

During the implementation period the additional incentive of peer pressure was added in as some workers tended to outpace, and thus earn more than, others.

Will incentives work in any kind of job? Chances are they will, whether in the typing or clerical pool or in the factory or warehouse. Performance bonuses can be linked to reduction of scrap and improvement of quality. Similarly, incentives can drive down costs in our hospitals, which employ an extensive labor force performing such nonmedical functions as food services and housekeeping.

Undoubtedly functions performed by municipal employees can be more productive. In fact, this area may well require it even more than the private sector, as its growth has been more rapid than that of the private sector.

Since 1974, state and local government employment rose 7.76 percent while that of the private sector rose 1.24 percent. Federal employment increased by less than 1 percent. State and local governments alone added more employees than the entire private sector between 1974 and 1976—889,000 versus 821,000.

If we were to establish realistic performance standards and create adequate performance incentives, there is no doubt that substantial improvements in services could be achieved. Additionally, major reductions in costs could be accomplished while offering participating employees substantial increases in wages.

An average 57 percent increase in productivity in the private and public sectors generated by incentives could enable us to cut the work week or increase wages and output, or both, without fueling inflation.

Workers are protected by Federal and state social programs, as well as unions. But clearly, the time for a new and careful look at productivity-related incentives has arrived.

THE DEPARTMENT OF JUSTICE: THE LEVI LEGACY

Mr. PERCY. Mr. President, recently former Attorney General Edward H. Levi spoke before the Los Angeles County Bar Association. In his address he outlined some of his accomplishments as well as some unfinished business of his term as Attorney General. After what was in my view a superb performance as Attorney General, Mr. Levi has left an agenda for his successor. I would like to share some of his thoughts with my distinguished colleagues.

Mr. Levi's concern for individual liber-

ties has been an integral part of his personal and professional life and was perhaps the hallmark of his stewardship at the Department of Justice. His stance regarding surveillance in foreign intelligence cases is as good an example as any of his attitudes in this regard. As Attorney General, he personally reviewed all applications for wiretaps that were not supported by judicial warrants. Mr. Levi did not consider this process a mere formal exercise, but rather studied each request carefully in order to weigh the Government's need for the information it might receive against the degree of intrusion into the privacy of an individual. Speaking of his 23 months as Attorney General, Mr. Levi stated that—

> Under no circumstances are warrantless wiretaps or electronic surveillance directed against any individual without probable cause to believe he is a conscious agent or collaborator of a foreign power. . . . A year and one-half ago I publicly stated that there were no outstanding instances of warrantless taps or electronic surveillance directed against American citizens. There are still none today.

During his tenure, Mr. Levi attempted to articulate guidelines for investigative activities of the Federal Bureau of Investigation. He reports that—

> The Bureau is now operating under detailed guidelines in its domestic security and foreign intelligence and counter-intelligence investigations.

These guidelines have brought a significant drop in the number of domestic security investigations. One should note that in July 1973, the FBI had over 21,000 open domestic security cases. By September 1976, the caseload—and corresponding expenditure of resources and intrusions into individual privacy—was down to 626.

Mr. Levi also expressed his concern for defining the discretionary authority of Federal prosecutors. As he accurately pointed out in his speech, the decisions of Federal prosecutors regarding when they will prosecute and grant immunity is often as important as the statutes they enforce. To insure consistency, Mr. Levi directed the Justice Department to undertake the first complete revision in over 20 years of the U.S. Attorneys' Manual. This effort will doubtless lead to a substantial improvement in the quality of Federal prosecution and decisionmaking.

Attorney General Levi squarely faced the problems of racial integration, especially in our schools. His approach was thoughtful and reasoned. He firmly believes in the necessity of removing State-supported segregation in any form. Whether analyzing school desegregation, employment discrimination, or related issues, Attorney General Levi has contributed a calm and scholarly voice to the discussion in an emotion-packed area of the law.

At this point, I would like to highlight Mr. Levi's views on the issue of whether busing of schoolchildren is an appropriate legal tool for breaking down segregated public education patterns. While he agrees that it is a necessary and legitimate means for integrating education, he also asks us to look at the effect busing has on communities and the children it most clearly affects. In his Los Angeles County Bar Association speech, Mr. Levi urged us to recognize that—

> Our society cannot in the long run rely on artificial arrangements created and maintained only by judicial decree. The drastic remedies necessary in this area must be designed to allow a transition . . . to more permanent and natural arrangements.

Mr. President, I would like to mention here several areas in which Mr. Levi performed great service, but which he does not discuss in his speech. Mr. Levi was responsible for changing a Justice Department policy which I felt was particularly offensive to commonsense standards of decency. Over a year ago I read a story in the Washington Post which reported that Federal agents broke down the door of the wrong apartment looking for narcotics. Then realizing their mistake, they broke down the door of the "right" apartment, but found no drugs. The agents paid to replace the first door, but not the second, despite the fact that there was no evidence of crime in the second apartment.

I was shocked to find that this decision was based on a long-standing Justice Department policy. When Federal agents made a mistake those harmed were automatically reimbursed for their losses. But when misinformation, possibly passed on by dishonest or vindictive informants, led the police to make a mistake, the Department would deny responsibility and refuse any reimbursement. After I wrote to Mr. Levi and he undertook a review of Department of Justice rules on this question, the policy was changed. Federal agents will now repair the damage they do in carrying out a legal search in all those cases where no evidence of criminal activity is found. To my mind the new policy enunciated by the Department of Justice is in line with the simple principles of fairness understandable to all Americans.

The resolution of this problem indicates a great deal about Ed Levi. It shows that he is receptive to change, unlike many lawyers who cling so doggedly to precedent. It shows that he concerns himself with the nuts-and-bolts problems of the operation of our criminal justice system as well as grand long-range ideas for reform. It also demonstrates that Ed Levi cares about people and their problems in a very profound way.

Mr. President, the Permanent Subcommittee on Investigations, on which I am the ranking Republican, has oversight in the drug enforcement field. The Senators on the subcommittee have long sought to change the focus of the efforts of the Drug Enforcement Administration—DEA—from minor street operations to the major dealers. Attorney General Levi and DEA Administrator Peter Bensinger joined us in this effort. The cooperation in this area between the executive and legislative branches in many ways sets an example for others in Government. I commend Mr. Levi for his important role.

Finally, as Attorney General, Ed Levi was personally very helpful to me when I recommended the names of individuals to the President for appointment to the Federal bench. His counsel and advice were invaluable. In this way, he helped me immeasurably in my effort to refer only individuals of the highest quality to the President.

Mr. President, I have known Ed Levi for many years and I have only the greatest admiration for his performance as Attorney General. During his term, he consistently chose the high road, never allowing himself to be accused of playing politics with his sensitive and powerful office. Much like President Ford, Ed Levi helped restore public faith in official institutions at a time when that was desperately needed.

I also have the highest personal regard for my friend Ed Levi. In public and private life, he continues to show his compassion, insight, dedication, and well-intentioned concern for his fellow man. All America owes him thanks for what he has done.

Mr. President, I ask unanimous consent that the text of Edward Levi's address before the Los Angeles County Bar Association of November 18, 1976, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE EDWARD H. LEVI

I welcome the opportunity to talk with you briefly about some unfinished items on the Department of Justice agenda. It is the nature of a living system of law that there always is an unfinished agenda. The items change, of course; some problems do get solved; others perhaps always will remain. Reviewing the agenda—something we do in one sense every day in the Department—is a way of thinking about priorities for the future. In this talk I will be able to touch upon only a few such items, such as the development of electronic surveillance policy, the formulation of FBI guidelines, the reconsideration of prosecutorial discretion and the clarification of anti-discrimination law. There are many facets of these and other important items I will have to ignore. In my view one paramount concern must always guide our way. This is the keeping of the faith in the essential decency and even-handedness in the law, a faith which is the strength of the law and which must be continually renewed or else it is lost. This has been a central principle which my colleagues and I have kept as our first concern. In a society that too easily accepts the notion that everything can be manipulated, it is important to make clear that the administration of federal justice seeks to be impartial and fair and that these qualities are not inconsistent with being effective. Related to this is a willingness to confront hard problems. Some of these problems relate to questions of administration of the law where discretionary limits have been inadequately defined or enforced. Others involve the evolution of a guiding legal theory where conflicting legal doctrines, ambiguously stated, respond inadequately to the solution of social problems. Still others may raise issues which must be explored in depth if our constitutional system is to receive the care it deserves. With respect to this last kind of issue, the Department, as you will recall, in the *Buckley* v. *Valeo* election case went to the extreme of filing in the United States Supreme Court two briefs—one which we termed a pure amicus brief discussing the issues on both sides. This move was not exactly unprecedented, but it was highly unusual. I like to think, however, that it was

highly proper and in our best traditions, even in our adversary system.

One area in which the process of rethinking began very early concerns the standards and procedures by which intelligence agencies should operate. I vividly recall that quite late in the afternoon on my first day as Attorney General this issue arose immediately. Just as I was settling into my chair and observing the handsome wood paneling of the office, an FBI agent appeared at my door without announcement. He put before me a piece of paper asking my authorization for the installation of a wiretap without court order and he waited for my approval. For close to 40 years the Department of Justice had been called upon to undertake electronic surveillance in certain cases without prior judicial approval. But I thought it was a bit unusual that I was expected to sign so automatically, if that really was the expectation. I asked the agent to leave the request with me—I think, perhaps, to his surprise—so that I could consult other officials in the Department.

This experience was one of many that led us to explore immediately the question of how procedures could be perfected in this world of inevitable secrecy. Important steps in the process of reconsidering electronic surveillance and other intrusions in foreign intelligence cases had already been taken before I became Attorney General. I want to stress that. But it has received a great deal of our attention ever since.

The Department of Justice undertakes electronic surveillance in this kind of case without a prior judicial warrant because the curious shape of the law as it reacted to necessities of our time includes an assumption that it will. The statute providing for judicial warrants for electronic surveillance in criminal cases—the Omnibus Crime Control and Safe Streets Act of 1938—expressly reserves from its requirements surveillances conducted pursuant to the constitutional power of the President to collect foreign intelligence information. The Supreme Court and the United States Courts of Appeals which have considered the matter have either held that the Fourth Amendment does not require a warrant for electronic surveillance instituted to collect foreign intelligence or have reserved the question. In the leading Supreme Court case—the *Keith* case decided in 1972, which held that the Fourth Amendment required a warrant in cases in which there was no significant foreign involvement—Justice Powell emphasized that "this case involved only the domestic aspects of national security. We have expressed no opinion as to the issues which may be involved with respect to the activities of foreign powers or their agents." Justice Powell's statement was set against a background in which such surveillances were undertaken, were known—I would say expected—to have taken place over many years. Shortly after the *Keith* decision Attorney General Elliot Richardson reaffirmed the practice. In a September 12, 1973, letter to Chairman J. W. Fulbright of the Senate Foreign Relations Committee, Attorney General Richardson wrote: "I believe there will continue to be situations which justify the conduct of electronic surveillance for the purposes of national security. This surveillance is carried out to meet the obligations of the President as both Commander-in-Chief and as the Nation's instrument for foreign affairs. I will continue to attempt to ensure that a genuine national security interest is, in fact, involved whenever we invoke this power and that we operate within the limits set by Congress and the courts."

Foreign intelligence warrantless electronic surveillance has been a matter touched upon by legislation, passed upon or avoided by courts, and has been the responsibility of the Executive. Our belief was that a more coherent policy, expressed in judicial decisions, legislation, executive regulation or some better combination of these elements, was required. An understanding of the use of Presidential power in this area and the development of procedures to direct its use have been made more difficult because of the secrecy which has prevailed about the practice for 35 years. Open and informed public discussion has been difficult. Much of the secrecy is necessary. Against this background we consciously took every available opportunity to the extent proper to discuss publicly our policies with respect to electronic surveillance. It may be useful to reiterate them now. Under the standards and procedures established by President Ford, the personal approval of the Attorney General is required before any non-consensual electronic surveillance may be instituted within the United States without a judicial warrant. All requests for surveillance must be made in writing by the Director of the FBI and must set forth the relevant justifying circumstances. Both the agency and the Presidential appointee initiating the request must be identified. It is the policy of the Department that all requests now come to the attention of the Attorney General only after they have been extensively reviewed by the FBI, an official in the Criminal Division, and a special review group established within the Office of the Attorney General. In addition, a committee composed of four Presidential appointees in the Department is consulted on cases which present new factual situations. Each request, before authorization or denial, receives my personal attention. Under no circumstances are warrantless wiretaps or electronic surveillance directed against any individual without probable cause to believe he is a conscious agent or collaborator of a foreign power. The probable cause must exist before the electronic surveillance is used. A year and one-half ago I publicly stated that there were no outstanding instances of warrantless taps or electronic surveillance directed against American citizens. There is still none today, although if the proper showing were made such a surveillance would be possible.

As discussions with interested congressional committees continued and as our own thinking developed, it was determined that legislation providing a warrant mechanism shaped to meet the particular problems of foreign intelligence, fitting constitutional standards and offering a measure of reassurance to the public could be drafted. The President, after consultation with members of Congress, proposed legislation early this year to provide a procedure for the issuance of warrants for foreign intelligence electronic surveillance. This legislation, after considerable negotiation and alteration by the Department of Justice and Senate leaders, overwhelmingly passed both the Senate Judiciary Committee and the Senate Intelligence Committee. The Congress adjourned before enacting this significant legislation. Of course I don't know whether it will ever be enacted or not.

There is not time today to describe the bill in detail, but let me sketch briefly its basic features. It provides a mechanism by which the Attorney General can apply for an electronic surveillance warrant to one of seven district court judges designated by the Chief Justice. The judge may grant the order if he finds first that there is probable cause to believe the target of the surveillance is a foreign power or an agent of a foreign power and second that a named Presidential appointee confirmed by the Senate has certified that the information sought is foreign intelligence information that cannot feasibly be obtained by less intrusive techniques. The judge must also be satisfied with minimization procedures, and the surveillance can continue no longer than 90 days without his renewed approval.

During the course of negotiations between the Department and the two Senate Committees and between the Department and intelligence agencies in the executive branch, several specific concerns were worked out by revision of the bill. While it had been argued that no electronic surveillance of citizens or permanent resident aliens should be undertaken without a showing of probable cause of a criminal violation, the committees ultimately recognized that this notion was unworkable. Foreign spying such as espionage to obtain trade secrets or information about industrial processes may not be a federal criminal violation under the espionage law. Foreign terrorism directed at private individuals or property might not, under current law, be federal crimes. Yet these acts vitally affect the nation's interests when they are undertaken here pursuant to the direction of a foreign power.

The ultimate form of the bill, like its original draft, follows the implied suggestions of Justice Powell in the Almeida-Sanchez and Keith cases that special procedures and probable cause standards can be fashioned to meet unique circumstances. The judge is given the responsibility for determining whether there is probable cause to believe the subject of the surveillance is a foreign power or agent. The appropriate executive official is given the responsibility of certifying that the information sought is foreign intelligence information. This distinction is based on a regard for whether a judge or an executive official with responsibility for foreign relations or foreign intelligence ought to be held accountable for the decision. The bill provides for executive accountability where judicial determination would be inappropriate, but it gives the judge the duty to determine whether the executive certification has been given, and it always places upon the judge the determination that there is probable cause to find the existence of the requisite foreign agency.

In the version which was reported to the Senate, the bill contained provisions which come very close to requiring probable cause of a crime before electronic surveillance can be directed against an American citizen or permanent resident alien. But the standard adopted avoids the risk to basic human liberties that would exist if the espionage laws were broadened to meet the need for electronic surveillance.

The development of the legislation has, I believe, helped to clarify the Department's own policy. By its safeguards, the legislation would give to our citizens the assurance that electronic surveillance activities in the United States would not be conducted unless an independent magistrate were to find that the application submitted by executive officials met strict legislative standards. I hope another legislative effort will go forward.

In a different area there is under way, as you know, a unique effort to articulate guidelines for the investigative activities of the Federal Bureau of Investigation. This is a major effort, to which Director Kelley and the Bureau have given the utmost cooperation, to guide investigative conduct, to be realistic about the exercise of discretion and to impose special controls to guide sensitive decisions. As a consequence, the Bureau is now operating under detailed guidelines in its domestic security and foreign intelligence and counter-intelligence investigations. As a result of the guidelines and of the Bureau's own reassessments, the number of domestic security investigations has dramatically dropped in the past few years. In July, 1973, the FBI had more than 21,000 open domestic security cases. By September of this year that number had been reduced to 626.

Guidelines concerning background employment investigations done at the request of the White House and at the request of congressional committees and judges have not yet been formally put into effect, but are already being substantially followed by the Bureau. As a protection against abuses of the past, these guidelines require that the person investigated must give his permission. Currently, a committee within the department is working on guidelines concerning cooperation with foreign police and other overseas aspects of the Bureau's work, organized crime, the handling of informants, and the government loyalty-security or, as it is sometimes called, employment suitability program. Because of the unprecedented nature of this effort to establish articulate standards to shape such crucial decisions as under what circumstances an investigation may be opened, the process has taken a great deal of time and work. But I hope that this important task will continue to move forward within the Department and in cooperation with Congress as it begins to attempt to clarify the Bureau's intelligence jurisdiction.

Like the important decisions about when and how to investigate a criminal allegation, prosecutorial decisions such as when to charge an accused, when to bargain for a guilty plea, when the federal government will prosecute an individual already prosecuted in state court for a related offense, and when to grant immunity in exchange for testimony have been largely uncontrolled by articulated standards and procedures. It is, I believe, time for a reconsideration of the practice in these areas. It is a highly controversial area subject to considerable misunderstanding. The Department, through task forces, has begun to look into this issue. A thorough revision of the U.S. Attorneys' Manual, the first complete revision in more than 20 years, is nearing completion. The manual sets forth the allocation of duties between U.S. Attorneys' offices and the Department's litigating divisions and describes the procedures that control the federal prosecutor's work. The revision of the manual will soon be completed and is a major achievement. But much remains to be done before the reformulation of policy is completed.

I turn now to a different area of the Department's concern, one in which the Department shares with other legal institutions and the society as a whole the most difficult responsibility. The law against discrimination has matured in a period marked by recognition of scarcity and complexity as the dominant economic and social facts. Some have perceived in its evolution a movement from the principle of equality of opportunity to a requirement of equality of result. This, like all capsule descriptions, distorts a complicated reality.

In principle the law demands, not equality of result, but equality of treatment, without regard to race, color, religion, national origin and sex. This I take to be the point of the Supreme Court's continued adherence to the de jure-de facto distinction in Keyes and other school desegregation cases; of its statements in those cases that the existence of schools attended predominantly by persons of one race is not in itself unconstitutional racial discrimination; and of the Court's recent holding in Washington v. Davis that intent to discriminate remains a necessary element to a claim of unconstitutional employment discrimination by government. Indeed, although the Court in Davis suggested the possibility of a distinction between constitutional and statutory claims, this also appears to be the point of the language of the Civil Rights Act. Title VII, for example, makes it an "unlawful employment practice . . . to discriminate against any individual . . . because of . . . race, color, or national origin . . .," a form of language that looks, in its ultimate legal standard, to causation and purpose, and not to effect alone.

But this seemingly fixed principle rides in both theory and practice on a world of ambiguity. On the point of principle itself, on the one side, some courts have held, both as a constitutional and statutory matter, that persons cannot be given preferences, simply because they are members of a minority group that has suffered injustices in the past, over others who are not. On the other side, there are those who have argued with the greatest conviction that neutral action, against a background of injustice in the past, can itself be a form of discrimination—that the Constitution and laws can recognize no distinction between action purposefully designed to achieve and enforce discrimination, and ostensibly neutral action that knows, accepts, and fails to act to avoid the consequences in the operation of the schools or in the granting of jobs, of a long history of discrimination by all parts of our society.

The confusion on principle is fueled by the reality of the law in practice. Justice Stevens made the point in his concurring opinion in the Davis case that the continued insistence on the element of intent could, in practice, have no consequence at all, that everything would depend on the proof required to establish the forbidden purpose. He was speaking to a problem pervasive in this area of the law. Thus, in the Keyes case, the Supreme Court held that, once the plaintiff in a school desegregation suit proves that there has been intentional discrimination as to some schools in a district, a rebuttable presumption arises that it has affected the district as a whole.

In litigation under Title VII, concerning unlawful discrimination in employment, the plaintiff makes out a prima facie case by showing that the proportion of minority persons hired varies from their proportion in the work force, or that employment tests have a disproportionate effect on minority members, thus casting on the defendant the burden of proving absence of discrimination or that tests are job-related, burdens that, in fact, are seldom overcome. The result can be, in practice, that to avoid a prima facie case, the employer must seek to attain a statistical parity that Title VII expressly states it does not require, by means of preferences that Title VII itself forbids. As Justice Stevens pointed out, these evidentiary rules derive from the difficulty, common in the law, of proving intent and purpose directly, rather than by inference from effect. But the willingness to infer intent rests as well, I think, on a suspicion that discriminatory purpose often may be concealed by appearances of neutrality, and a conviction that indifference to effect and discriminatory purpose are not very far apart.

The same problems have operated in the efforts to remedy school segregation. In the *Swann* case, the Supreme Court stated the goal: "The objective today remains to eliminate from the public schools all vestiges of *state-imposed* segregation." The command is addressed to the necessity not only of preventing present acts of discrimination but also of eliminating present consequences of past discrimination—the patterns of racially identifiable schools that resulted from past unlawful acts. The problem, however, is complicated by the recognition that, to some extent and in some, particularly urban, areas, such patterns may have stimulated the growth of racially identifiable neighborhoods; use of the neutral principle of neighborhood school assignment—the national norm—would, where discrimination had been practiced, merely perpetuate its effects for some indefinite future time. Moreover, there is the conviction that if the segregation that exists was not entirely caused by official acts with respect to the schools, it is in any event the product in major part of the whole history of public and private acts that have occurred in our society, and that the impact on the schools, whatever its origin, requires remedy. This complex of factors has led a number of courts to cut through the knot, to convert the Keyes presumption as to intent into an assumption that all racial imbalance among the schools in a district is the consequence of unlawful acts and to order, as a remedy, that all schools reflect the racial balance of the district as a whole.

This form of remedy, like the remedy of goals or quotas in the employment discrimination context, has attractions: it necessarily ensures that all vestiges of discrimination have been removed, and that, for the duration of the order, discrimination will be impossible. But it also has costs—in the operation of the schools, in the disruption of neighborhood responsibilities and community building, and in the view of the child as a member of a group rather than as an individual.

In the past two years, the Department of Justice has attempted, through both litigation and proposed legislation, to address this disunion between principle and practical effect. The positions taken in the litigation and in the central design of the legislation are identical. If the purpose of a school desegregation decree, as the Court repeatedly has said, is to remove the consequences of official acts intended to achieve and to enforce segregation in the schools, then the effort must be made to determine as precisely as possible what these effects have been. The assumption is that, in the separation of races, other factors may have been at work that may or may not have been illegal, and if illegal, perhaps can be better dealt with through remedies directed specifically at them. In particular, to the extent that separation results from discrimination in housing, remedies must be provided to deal with that problem directly. As the Supreme Court said, schools cannot bear the burden of remedying all of the racial injustice in our society. Instead, the remedy in school desegregation cases must be to recreate, as nearly as possible, the situation that would have existed had unlawful segregation of the schools not occurred.

In both litigation and the legislative proposal, the Department has tried to suggest procedures of adjudication and review to ensure that the remedy will at once be rightly limited to the violation found and yet, within the limitation, be effective. The Department's position recognizes that transportation of students to schools distant from their homes can be proper and, in some instances, a constitutionally mandated remedy for unlawful acts. But the legislation and the Department's brief in Pasadena also make the point that our society cannot in the long run rely on artificial arrangements created and maintained only by judicial decree. The drastic remedies necessary in this area must be designed to allow a transition, as soon as possible, to more permanent and natural arrangements, and the decree should provide necessary minimum standards that give as much room as possible to voluntary action.

The purpose of these efforts has been, not a reversal in the law, but its elaboration and clarification. No one in the Department believes that its approach is an easy, or easily implemented, answer for a problem that continues after two decades. Its presentation at least gives a focus to thought and discussion about the reality of what we are doing as a society and about what we want to do. A thinking society, struggling for racial justice, requires that that effort be made. In the short and in the long run community involvement and understanding are the most important ingredients to a solution.

There are other unfinished items that deserve attention. Our criminal justice system

cannot be truly strong, effective and just until we rebuild the foundation on which it rests—the panel law itself. Our present federal criminal law is riddled with inconsistencies and uncertainties. Similar conduct is often treated with gross disparity, offending the precept of fairness and equality. To cite but one example, robbery of a post office carries a maximum term of 10 years while robbery of the federally insured bank next door renders the offender liable to a 20-year maximum sentence. Many of the most important features of our penal law are not adequately codified; for example, the law of defenses, the requisite state of mind for culpability and for conspiracy offenses. These gaps in the code assume the existence of a kind of common law. But the development of this common law has never been complete. The inevitable result is that our penal law is defined by the discretion of the prosecutor. The treatment can be uneven and uncertain. As Professor Wechsler has written, the promise of the penal law "as an instrument of safety is matched only by its power to destroy. . . . The law that carriers such responsibilities should surely be as rational and just as law can be. Nowhere in the entire legal field is more at stake for the community, for the individual."

The significant effort to codify the federal criminal code made progress during the last session of Congress. We have frequently expressed the view that the provisions relating to the disclosure of government information were too restrictive. Compromises were reached on this and other issues which had caused controversy. We must not assume that this project of restatement of law, which is in one of the most important traditions in the evolution of our law, is an impossible task. It is, instead, an opportunity for testing and reevaluating those elements of the criminal law that trouble us and in some instances recodifying existing law where our efforts to improve it are stymied either by our lack of knowledge or our philosophical differences. In this spirit, I believe, with the continuel cooperation of the organized bar, the project can be completed to the lasting benefit of our society and its legal system.

Similarly, the question of sentencing practices and the device of parole need to be reconsidered. The element of chance must, to the extent it is possible, be removed from the system both because our sense of decency demands it and because the deterrent force of the criminal justice system depends upon such a reform. The deterrent theory of punishment does not require severe punishment. It requires a certainty that punishment will follow the crime, a certainty that has been greatly eroded. It has also been argued that the rehabilitative function of imprisonment will be enhanced by a sense of certainty about the term to be served. In such a situation entry into rehabilitative programs would truly be voluntary and the chances of success increased. In the past year the Department of Justice has taken the first step toward sentence reform by suggesting the creation of a sentencing commission to draft standards to control the discretion of judges in the sentencing decision. We have also proposed the imposition of mandatory minimum sentences for certain heinous crimes, with exceptions from the requirement made in certain mitigating circumstances. We have also suggested that it is time to discuss whether the parole device has outlived its usefulness.

Other serious problems confront us, such as the strategy for controlling illegal immigration while at the same time protecting the rights of individuals in our richly multiethnic society. I know this has been an issue of considerable importance to your association. As we proceed in reformulating our policy we must recognize that there is some limit to the number of immigrants we should accept and, above all, as your report on the subject emphasizes, that our immigration law should be fair and enforceable. The emphasis should be placed upon prevention of illegal entries rather than on finding and expelling those who have already entered and made a life in this country. The integrity of the immigration law depends upon strong and decent preventive measures. We must remember that we face the problem of unlawful immigration because we remain the world's best hope. Unauthorized immigrants are responding to the same human impulses that motivated each of our forebears. We must address the illegal alien issue in a manner compatible with our democratic values and our tradition as a nation of nations.

As the agenda of the Department is inevitably unfinished, I suppose it is also always boundless. There are so many other issues—the problem of gun violence, terrorism, the overloaded criminal justice system—that demand attention. And there are other imperfections that will take their place on the agenda in the future.

As I have indicated we have felt that part of the restoration of faith in the administration of federal justice involves the willingness to confront difficult problems, both of administration and of law, and to seek out for discussion and resolution those areas in which the law was ambiguous or in conflict. The preservation and renewal of our basic national values requires of all of us this openness to discussion and this duty of inquiry as well as impartiality of administration. It is the responsibility and joy of the Bar, of all of us as lawyers, to continue the essential work of the evolving unfinished agenda of the law.

CALIFORNIA'S WATER CRISIS: A RUINOUS DISASTER

Mr. CRANSTON. Mr. President, the immediacy of the disaster wrought by extreme cold weather in the Eastern half of the Nation has obscured the severe hardship caused by the same capricious weather pattern in the Western part of the United States. I speak of the drought.

The year 1976 was the third driest for California in this century, drastically depleting California's water reserves. To date, 1977 has proved drier and is predicted by many to end as the driest in the century. California's water resource experts now estimate that even if an unusual amount of rain falls in California during the remainder of our rainy season, the lack of snow buildup and the ability of the ground to absorb water at only a limited rate—not to mention the already low levels of stored water—it will not add up to a supply sufficient to sustain California's agricultural and municipal needs.

The State of California is already hard at work on water conservation measures and on location of new water supplies.

Already being contemplated are reductions of municipal water supply by 25 percent to the East Bay region and 10 percent to San Francisco and by 75 percent to agricultural users. Since much of California's electricity is drawn from waterpower, rolling blackouts are already being contemplated for the months ahead.

While crop losses have already amounted to some $250 million and livestock losses have already amounted to between $350 and $400 million, already existing agricultural stabilization and conservation service programs will help to alleviate some of the economic pressure that poor crop yield and crop loss will cause.

However, other Federal programs either do not exist or are not being interpreted by the Federal agencies in a manner which will provide sufficient—if any—relief to California victims.

Thus, I am particularly concerned that during both executive and legislative consideration of relief measures for victims of the Eastern freeze, we should place equal emphasis on California's drought, a disaster the effects of which will persist and will affect most Americans long after the East has thawed out.

The full impact has yet to hit California—and the Nation—in terms of food shortages and increased food prices and unemployment. California officials are currently at work making quantitive projections on these ramifications.

We must bear carefully in mind that the financial ruin that drought can cause may well be as great as that caused by the more sudden and spectacular physical ruin caused by storm, fire, earthquake, and flood.

California Governor Brown has made application for several assistance programs to alleviate some of the hardship caused by this drought.

The first application went to the Federal Disaster Assistance Administration on January 12, 1977, for an agricultural stabilization and conservation service program for the emergency livestock feed program and the agricultural transport assistance program for the following 23 counties: Amador, Butte, Calaveras, Colusa, El Dorado, Glenn, Lassen, Mariposa, Mendocino, Merced, Nevada, Placer, Plumas, Sacramento, San Joaquin, Shasta, Stanislaus, Sutter, Tehama, Trinity, Tuolumne, Yolo, and Yuba. The FDAA authorized money on January 20 for the feed subsidy only. This subsidy program covers less than half of the actual cost of feeding cattle. It also assumes a surplus of feed supply. Since the request for livestock and feed transport money was not approved, the lack of an alternative coupled with a feed shortage has meant an increase in the price of feed. For purposes of keeping feed costs down and salvaging the foundation herds, I believe that the transport subsidy should be approved. The State of California is attempting to win this approval and is in the process of collecting additional supporting data.

Subsequent to the application for the 23 counties listed above, the State of California requested emergency assistance on January 24, 1977, for another 17 counties. These counties are: Alameda, Contra Costa, Fresno, Inyo, Los Angeles, Madera, Marin, Mono, Napa, San Benito, San Bernardino, San Mateo, Santa Clara, Sierra, Solano, Sonora, and Tulare. The application was approved by the FDAA and the ASCS on February 2 for 14 of the 17 counties: Los Angeles, San Bernardino, and Mono Counties had rain after the application was made. Once again, the request was approved for the feed subsidy only.

Very severe economic loss for California's recreation industry has resulted from the drought. Mostly small businesses are affected, with ski resorts especially hard hit by the lack of snow. On January 24, the State of California made application to the Small Business Administration for low-interest loans for resort hotels and supporting businesses which are facing severe economic hardship and even bankruptcy as a result of the drought. The 15 counties included in this application are: Alpine, Amador, Calaveras, El Dorado, Lassen, Mono, Napa, Nevada, Placer, Plumas, San Bernardino, San Joaquin, Shasta, Tehama, and Tuolumne. Since their financial losses are as real as they would have been had disaster resulted in a loss of fiscal facilities. I strongly support speedy approval of this urgent request.

On the question of long-term solution, I believe we must urgently seek alternative water resources as strongly as I believe we must search for alternative energy solutions. If we develop the capacity to reclaim water from the sea and brakish water at reasonable cost, drought would be minimized. California's experimental desalinization program in Orange County was discontinued by shortsighted budget considerations under the Nixon-Ford administrations. Equipment for California's project remains in place. This and similar programs should be revitalized and provided with continuous funding until a system has been perfected which will be able to provide water supplies that make drought a catastrophe of the past.

Water conservation must also be pursued. A $500,000 California State application to the Environmental Protection Agency for an experimental conservation program was approved in the amount of only $50,000. This kind of shortsightedness simply will not do.

Future solutions notwithstanding, the Federal Government must have the proper mechanisms for compensating drought's victims until drought no longer poses threat of disaster.

On January 10, 1977, the Senator from South Dakota (Mr. ABOUREZK) introduced S. 120, legislation to extend assistance under the Disaster Relief Act to individuals, business and local governments which have been severely adversely affected by drought. Some of the highlights of this bill include conservation assistance, water transportation assistance, individual and family grants, mortgage and rental assistance, school district relief and low interest Small Business Administration loans.

I am pleased to have cosponsored this legislation. I hope that the Senate will move expeditiously to enact this measure which will help provide relief not only to California but to the many other Western States which have been so devastated by drought.

COMPULSORY RETIREMENT

Mr. BROOKE. Mr. President, in this country we are faced by an ever-increasing number of older Americans who want to work past the standard retirement age of 65, and are more than physically and mentally able to do so. It has been forcefully argued that to continue to force them into retirement when they still want or need to work is cruel and discriminatory. This is an issue which Congress should and must give attention to. I would like now to draw the attention of my colleagues to an article on this subject which appeared in the New York Times Magazine of February 6 and ask unanimous consent to have it printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO NOT GO GENTLY . . .

(By Harvey D. Shapiro)

"It just doesn't make any sense to me," Mike Shapiro says bitterly over his afternoon cup of coffee at Chef's Cafe. "The Social Security Administration says it's running out of money and has to keep raising payroll taxes to support all the old folks. Meanwhile, there's plenty of us old-timers hanging around who'd like to earn our own living, and they won't let us keep on working. . . . It just doesn't make any sense," he says again, pausing to let his coffee cool.

For years Mike Shapiro was the kind of employee who came to work early and went home late without putting in for overtime. When he turned 65, he was forced to retire. "It's an awful thing to do to a person," he says. Still vigorous and active at 76, Shapiro lives modestly on his Social Security and a small pension in Superior, Wis. Although he once took peculiar pride in being the first one up on his block weekday mornings, in recent years he has learned to sleep late. "Otherwise," he says wistfully, "the days seem too long."

Like hundreds of thousands of other older Americans, Mike Shapiro considers himself more a victim than a beneficiary of compulsory retirement, the practice of making employees retire when they reach some predetermined age, regardless of whether they are willing and able to continue working. The retirement age varies—it's 55 for New York City firefighters, 56 for air traffic controllers, 70 for Harvard professors, and 65 for most people. According to a 1975 survey by Louis Harris & Associates, for 61 percent of those working, age rather than ability will dictate when they must retire. And for many older people, their later years are like their earliest ones: they find society unwilling to entrust them with any meaningful tasks.

Several forces have come together to make compulsory retirement a common employer policy. Because older workers often receive higher wages and more benefits than younger workers doing the same job, companies are eager to oust them when times are tough. Then, too, many employers are convinced they couldn't keep talented employees without the prospect of promotions guaranteed by scheduled retirements.

This generational conflict is especially intense these days because members of the post-war baby boom are now in the labor force, dramatically swelling the ranks of younger workers eager to move up. Moreover, the women's movement has brought more and more women into the job market. While the female population of the United States has climbed 52 percent since 1947, the number of working women has risen 123 percent. Finally, minorities and women who were once restricted to dead-end jobs now have court-supported access to promotions. But as Illinois State Representative Alan Greiman notes, "They all see their paths blocked by 63-year-old white males who, they think, will keep on working forever if they're not forced to retire."

Because the issue of mandatory retirement cuts across the generations, the labor movement has had enormous trouble in dealing with it. In September 1975, the AFL–CIO Executive Council declared that "organized labor has opposed and will continue to oppose unilateral imposition of compulsory retirement by employers." But "unilateral" is a crucial word. Many union leaders have signed contracts permitting employers to retire high-salaried older workers in order to provide more jobs for younger workers.

Until this century, older people often kept on working as long as they could, and many never completely retired. But by the 1920's the growth of corporate employers first permitted and then required everyone to quit working at the same time. Adapting the rules to fit individual situations became too troublesome for the bookkeepers. Creation of the Social Security system in 1935 enshrined mandatory retirement at 65—a figure the United States Social Security Administration is reported to have borrowed from Germany, where Otto von Bismarck arbitrarily chose 65 as the age of eligibility for that country's first social welfare system in 1889. As a result, the proportion of men and women over 65 still working has dropped from 68 percent in 1890 to 22 percent in 1974.

Not only has compulsory retirement become widespread, says Carin Clauss, associate solicitor of the United States Department of Labor, "there is a growing trend toward compelling retirement prior to 65." Currently, more than 11 million Americans are locked into pension plans allowing them to be retired as early as age 55 at the employer's discretion.

Those who have thought about forced retirement recognize that it flies in the face of overwhelming scientific evidence about the increasing vigor and longevity of older Americans. There is no evidence that an average person's skills decline abruptly, nor is there proof that everyone ages at the same rate. There is no way of telling how long a person can do good work—or even when he or she will do it. When Prof. Ben Duggar retired from the University of Wisconsin at age 70, for example, he had a mildly distinguished academic career. After retirement, however, he became a consultant to Lederle Laboratories, where, at the age of 73, he isolated an antibiotic he called Aureomycin and then another called tetracycline, which has become the world's most widely prescribed antibiotic.

Most government and university research shows that employees from 65 to 70 and even up to 75 generally perform as well as younger workers in jobs not requiring heavy physical labor. While younger workers usually have more education and learn more rapidly, older employees are more likely to display better judgment and have stable work habits. "Most of the handicaps of oldness in our society are social, conventional and imaginary," says Dr. Alex Comfort, a gerontologist. "The physical changes are trifling by comparison."

The idea that retirement is necessary so that older people can take it "easy" in their twilight years is increasingly irrelevant in this era of desk jobs. Furthermore, says the American Medical Association, which has opposed mandatory retirement at 65 on health grounds, "There is ample clinical evidence that physical and emotional problems can be precipitated or exacerbated by denial of employment opportunities." According to the National Center for Career Life Planning, forced early retirement ranks ninth—after the deaths of various family members and divorce—among 40 major stress-producing events in life.

Supporters of compulsory retirement point out that that rule allows elderly employees whose work has not been satisfactory to leave in dignity. "It means nobody has to face saying, 'You can't cut it anymore,' " says Donald J. Povejsil, vice president of personnel and administration at Westinghouse Electric Company. He adds, "Any other method of

retiring people would be extremely difficult to manage."

Dr. Arthur S. Flemming, United States Commissioner on Aging and chairman of the Commission on Civil Rights, contends that mandatory retirement is simply a "lazy person's device for dealing with difficult personnel decisions." He goes on: "Certainly a manager would have to make some difficult decisions without compulsory retirement, but a good manager should always be making those kinds of decisions as he tries to raise the quality of his work force."

As for employers' fears that they would face endless legal wrangling if they had to establish standards to determine when each older worker should retire, Commissioner Flemming says that this will not happen. "It's much easier to apply tests at that end of a career," he says, "since the employer knows the person and his or her work. While hiring always involves some guesswork, termination can be based on actual performance on the job."

Flemming's convictions have been borne out by a number of firms without mandatory retirement rules. At Paddock Publications in Arlington Heights, Ill., which employs 300 people, "it is working out very well," says executive vice president Robert Y. Paddock Sr. "Most of the time an employee feels ready to retire just about when we begin to think they're ready." He cites the case of an advertising salesman in his early 60's whose track record seemed to be worsening. Before the advertising manager could say anything, Paddock notes, "The man kind of lost interest in his work and retired." Paddock, which publishes nine daily and six weekly newspapers for Chicago suburbs, has several employees in their 70's, including some who were hired at 65 after retiring from jobs elsewhere. Robert Paddock, who is in his late 50's, says, "When I retire at about 80, maybe things will change, but I like the way we do it right now."

Most of the jobs not subject to mandatory retirement rules are at small organizations like Paddock, where the boss knows everybody and can respond humanely to individual situations. But big companies can also get along without mandatory retirement. At United States Steel, for example, compulsory retirement rules affect only 19,000 office workers out of a total work force of 172,000. The bulk of the firm's employees can keep on working as long as they can pass annual medical examinations geared to the nature of their job, says C. T. Spivey, vice president of personnel.

Even if an employee's medical examination raises questions, Spivey says, "We get the union and find another job for him if he wants to keep working." At one of the company's plants near Pittsburgh, for example, an older worker recently moved from "second helper" in the open hearth department to the more sedentary job of "weigher" because of medical problems. Similarly, a worker who operated a bulldozer outdoors found his arthritis was bothering him more as he got older, but he didn't want to retire, so he transferred to an indoor job as a repairman.

Spivey says the bulk of United States Steel's employees retire as soon as they put in 30 years and are eligible for a pension, but the firm has no problems in finding work for those who want to stay on. The record-holder is Henry Baude, who retired as a price clerk on August 31, 1973, at the age of 77, after completing 61 years with the company. But United States Steel has had several other 60-year veterans.

An absence of mandatory retirement rules not only works successfully throughout the steel industry, but also at such varid large companies as Walt Disney Productions, the Bankers Life and Casualty Insurance Company, as well as the state government of Illinois and Pennsylvania. Says John B. Martin, legislative counsel to the American Association of Retired Persons and its affiliate, the National Association of Retired Teachers, "We're not arguing against early retirement. We say an employee ought to have some options. If he wants to retire early—fine. If he wants to continue working—fine. What we're dealing with essentially is the concept of freedom of choice."

The current lack of flexibility in work schedules is hardly a necessity. When they have to, employers can adapt on a massive scale. In retailing, for example, as stores have begun to remain open 12 hours a day or seven days a week in an era of 40-hour workweeks, store managements have been receptive to varied schedules permitting some people to work full time, some part time and some over-time. There's no reason why other employers couldn't adapt in a similar fashion. The automakers, for example, who are plagued with absenteeism on Mondays and Fridays, could bring in retirees to work on those days. Allowing older workers who remain fit and productive to make adjustments in their workdays, workweeks or workyears could lengthen their working career.

There is increasing organization and militancy among the elderly opposed to mandatory retirement. "Because of inflation, more and more older people are realizing that without employment they're just not going to make it economically," says John B. Martin. "Retirement will mean a descent into near poverty." But the complaint goes beyond economics. "This is really a moral issue," says Dr. Flemming, "because personnel policies requiring retirement at a given age without regard to an individual's abilities are in direct conflict with our Judeo-Christian concept of the dignity and worth of each human being."

Persons over 65 make up 14.8 percent of the registered voters and politicians are becoming attuned to "senior power." Major battles over retirement policies are beginning to be played out in courthouses and legislative bodies as well as offices across the country. Since the courts have been the cutting edge in overturning employment practices that discriminated against minorities and women, some senior citizens have hoped local action would aid them as well. But last spring, the United States Supreme Court dismissed an age discrimination suit filed by Lt. Col. Robert Murgia, who was forced to resign from the Massachusetts State Police when he reached the mandatory retirement age of 50, even though a rigorous medical examination had shown him to be in excellent health. The Murgia case was the latest of several unsuccessful attempts to challenge the constitutionality of compulsory retirement in the courts. Thus, Carin Clauss says, "The only way to get rid of compulsory retirement rules altogether would seem to be through legislation."

Several bills to end compulsory retirement were introduced in the United States Congress in the last few years. Representative Paul Findley, Republican of Illinois, first introduced a bill to end mandatory retirement in 1974; it disappeared rather quickly after it was introduced, but when he offered a similar bill in 1976, it gained 99 co-sponsors, ranging from liberal Democrats like Bella Abzug to conservative Republicans like John Rousselot of California. Moreover, Findley's bill was endorsed by Dr. Arthur S. Flemming and former Secretary of Labor Willard Wirtz. Although the bill didn't get out of committee, Representative Findley says he was encouraged by the increasing support and introduced the bill on the first day of the 95th Congress in January.

There are similar stories at the state level. In Illinois, a bill to abolish compulsory retirement passed the House of Representatives by a vote of 117 to 21 before it was killed in the upper house. Illinois Representative Alan Greiman introduced his bill again this year, and he reports increasing interest in such legislation in California, Pennsylvania and other states.

In New York, a bipartisan group of 52 Assemblymen and 21 State Senators introduced a similar bill last spring. That bill disappeared in committee, but was introduced last month. In a statement explaining the bill, Assemblyman Thomas R. Fortune, the chairman of the State Assembly committee on the aging, described mandatory retirement as unjust and economically unsound. He noted that such restrictions contradicted the principle behind prohibitions against sex and race discrimination in employment. "A person should only be forced to leave a job if that a person cannot perform the assigned tasks," he said. "Under no circumstances should a person be removed because of physical characteristics that are irrelevant to job performance."

A Department of Labor official is not optimistic about legislative changes on compulsory retirement, however. Business and labor leaders can be expected to support the status quo, he says, and "there is strong unreasoned opposition on Capitol Hill to any tinkering with retirement right now because of ERISA." ERISA—the Employee Retirement Income Security Act of 1974—reformed the rules governing pension plans to help retirees, but it also increased the costs and complexity of maintaining pensions and was followed by a record number of plan liquidations. Thus, the Department of Labor official says older Americans don't have enough supporters at the present time to pass legislation banning compulsory retirement, although there's a good chance of passing a law to increase the mandatory retirement age from 65 to 68 or 70.

Ironically, the growing conviction that change is not far off is based on the plight of the young rather than the old. Though younger workers have generally assumed their interest lay in getting older workers to retire, the economics of the situation are working in the other direction now. As the retired elderly population grows in size, the balance between workers and retirees is tilting precariously. While there were seven workers paying Social Security taxes for every person collecting benefits in 1955, there were only four in 1960 and less than three in 1975. Within 50 years, there will be less than two Americans working for each Social Security beneficiary.

Since those working support those who are retired under Social Security, to raise enough money to pay all those retirees. Social Security taxes will have to rise to 25 percent of average incomes in a few years unless some changes are made. By the same token, private pensions are devouring huge sums that might have been available for wages. United States Steel spent over $200 million on its pension fund last year, and like many employers it is now supporting more people through its pension plans than its payrolls.

In November, former Treasury Secretary William Simon recommended raising the age at which people can retire and claim benefits in order to ward off bankruptcy of the Social Security system. If enough people think about the whopping deductions Social Security and pension costs are already taking out of their paychecks, they will conclude it is costing too much to discriminate against older workers. That may turn out to be a very persuasive argument for letting older people keep on working as long as they can. There's an even more persuasive reason for improving the treatment of the elderly. The elderly are the only outcast group all of us can expect to join.

THE MIDDLE EAST AND IRAN

Mr. RIBICOFF. Mr. President, Senator HOWARD H. BAKER, JR., Senators CANNON,

EAGLETON, GLENN, FORD, CULVER, BUMPERS, PEARSON, GRIFFIN, BELLMON, LAXALT, and myself were members of a delegation to Austria, Israel, Jordan, Egypt, Iran, and Great Britain as provided by Senate Resolution 523. The purpose of the mission was to study and report on foreign policy and security issues with particular attention to problems of nuclear proliferation.

In light of the forthcoming trip to the Middle East by Secretary of State Vance, the delegation has decided to issue the first part of our report on the Middle East and Iran ahead of the second part concerning nuclear energy and proliferation. Secretary Vance's mission comes at an important time. Both Arab countries and Israel are looking to the United States for leadershrip to find peaceful solutions to the problems of the Middle East.

Mr. President, I ask unanimous consent to have the first part of our delegation report printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DELEGATION REPORT TO THE SENATE ON SECURITY AND FOREIGN POLICY INTERESTS PER SENATE RESOLUTION 523

I. INTRODUCTION

Senate Resolution 523 of August 26, 1976 authorized a special delegation of Members of the Senate to visit the Middle East and Europe to conduct a study of security and foreign policy interests with particular emphasis on worldwide nuclear proliferation. Co-chairmen of the delegation were Senator Abraham Ribicoff and Senator Howard H. Baker, Jr. The delegation included Senators Cannon, Eagleton, Glenn, Ford, Culver, and Bumpers; and Senators Pearson, Griffin, Bellmon, and Laxalt. The group left Washington on November 5th and returned on November 23rd 1976. The itinerary provided working sessions in Austria, with the International Atomic Energy Agency, and in Israel, Jordan, Egypt, Iran, and the United Kingdom.

II. THE PROSPECTS FOR PEACE IN THE MIDDLE EAST

Israel

The Senate delegation spent from November 7th to 11th in Israel. Ambassador Toon provided a briefing upon arrival and supported the delegation throughout its stay. Meetings were held with Prime Minister Rabin, Foreign Minister Allon, Defense Minister Peres, former Prime Minister Golda Meir, Commerce and Industry Minister Bar-Lev, Armed Forces Chief of Staff Mordechai Gur, Members of the Knesset, professors at Hebrew University, and many other Israeli officials. The group visited the Golan Heights and visited a kibbutz as well as seeing parts of Jerusalem and the surrounding area.

The prospects for a Middle East peace settlement

The predominant apprehension in Israel is a sense of insecurity and fear of continued hostility and attack from terrorists or from Israel's neighbors. In the context of the World War II holocaust and Israeli involvement in four wars since then, insecurity is a fact of life. Israeli officials repeat in different ways that Arab nations are not prepared to recognize Israel's right to exist as a nation. Terrorist attacks and statements that Israel should be destroyed contribute to an outlook skeptical of compromise and lowering the guard. Saul Bellow described that sense of insecurity in his recent book *To Jerusalem and Back:* "The subject of all this talk is, ultimately, survival . . . one fact of Jewish life unchanged by the creation of a Jewish state: you cannot take your right to live for granted. . . ."

The delegation had several discussions about possible movements towards a peace settlement in 1977. Prime Minister Rabin described Israeli policy as having two parts. The first is to move to peace through negotiations. The second is to reach intermediate goals—some steps toward peace—if real peace cannot be achieved. Rabin did not see the step-by-step approach and the general Geneva conference approach as mutually exclusive; both could be tried at the same time. The Prime Minister paid tribute to Secretary of State Kissinger's peace efforts in the Middle East and expressed readiness to work with the new Carter Administration. He thought that 1977 would bring a peace initiative and said that Israel was willing to cooperate.

More important than the various models for eventual settlement, according to the Prime Minister, is the necessity of agreeing to the purpose of the exercise. The danger of negotiating without agreement on the meaning of the world "peace" and on the desired end of negotiations is that unfulfilled expectations could be created which might lead to another war. Rabin stated that an impediment to beneficial negotiations is that no Arab country will deal directly with Israel. In respect of the Palestinian issue, Prime Minister Rabin thought that reconciliation was necessary for peace. He said that one could not make a third country out of Jordan and Israel.

Prime Minister Rabin described the peace process as one of giving up land and receiving in return papers and words. For such an exchange to work, it must be translated into action on the ground supporting a peace settlement. Rabin amplified his concept of "peace" in the Middle East by noting that Israel has never had boundaries accepted by its neighbors. Equally important to the legal structure of a peace settlement are the practical implications involved. And key to the practical implications are that once boundaries have been agreed upon, they should be open boundaries between Israel and Arab countries allowing for the free movement of people and goods. In contrast to this concept of peace Rabin observed that the Arab concept frequently included total withdrawal of troops from occupied territories without a settlement, and agreement to co-exist without reconciliation. Rabin said that not all territories would be returned; Jerusalem would never revert to Arab control. In response to a question regarding settlements in occupied territories, the Prime Minister said that settlements were confined to deserts and strategic belts. He stated that it was "indispensable" to integrate settlements into Israel's strategic system.

Foreign Minister Allon listed three main obstacles to peace in the Middle East:

(1) The Arab refusal to recognize Israel's right to exist;

(2) Recognition by Arab countries that Israel should be able to defend itself;

(3) The Palestinian question, which must be solved through negotiations.

Nonetheless, he expressed confidence that if negotiations could be started, progress could be made.

Problems of Nonproliferation

Before leaving Washington some members of the delegation asked Israeli authorities if it would be possible to visit the Dimona research facility in Israel. The Government of Israel denied the request. The reasons for the denial were that Dimona is a national security facility, that Israeli policy is to restrict access to Dimona and that no American has been admitted since 1969, and that the facility has neither been built nor assisted by the United States. After arriving in Israel the request was repeated on behalf of some members of the delegation and again denied. This denial was dramatized, by the press far beyond its actual significance. Most of the delegation did not wish to visit Dimona because they lacked the technical expertise to make such a visit worthwhile. The delegation received no information as to whether Israel has nuclear weapons or not.

Prime Minister Rabin discussed the link between nuclear energy and the danger of nuclear weapons proliferation. He told the delegation that Israel "would not be the first to introduce atomic weapons in an Arab/Israeli conflict" and stated that Israel was not now reprocessing uranium.

Technical level discussions produced no response to the question whether Israel has ever reprocessed uranium. The Prime Minister cited a series of reasons for his belief that there are no effective controls against proliferation: India has exploded a bomb; France is cooperating with Iraq, Iran, and Pakistan on technology which could produce bombs; Libya was irresponsible and would try to obtain nuclear weapons; centrifuge enrichment will be possible in about ten years, thereby enabling completely hidden weapons production. Rabin was not confident that Arab countries which have signed the Non-Proliferation Treaty would abide by it. Although the NPT was signed without conditions, according to Rabin certain Arab countries have stated that their adherence does not apply to their relations with Israel. Furthermore, Rabin said he was skeptical that the International Atomic Energy Agency could be effective at controlling proliferation. Foreign Minister Allon cited the presence of the Soviet Union and the PLO at the IAEA as reasons for his lack of confidence.

Relations With the United States

Prime Minister Rabin reviewed a series of points concerning American aid to Israel and the role of the United States in the Middle East. He saw American military support for Israel as a stabilizing factor in that it demonstrates to Arab countries that the use of armed force is not productive. Foreign Minister Allon urged the delegation to consider U.S. aid an investment for the United States in the Middle East. He said that the United States is unable to act in its own interests and relied on Israel in various instances, citing Israeli efforts to prevent a PLO takeover of Jordan in 1970 and the recent defense of Christians in Lebanon as examples. Allon informed the delegation that Israel will request $1.5 billion in military aid and $800 million in economic assistance for fiscal year 1978.

Foreign Minister Allon expressed apprehension about the wisdom of sales of substantial numbers of highly sophisticated weapons to Arab countries. Asked specifically about sales of arms to Saudia Arabia and the presence of Americans to help Saudi economic development, Allon worried that the build-up of military equipment might eventually be used for the wrong purposes either because of a change of government or transfer to another country.

Relations With South Africa

The delegation asked what the dangers are of closer Israeli-South African relations, and whether Americans might be more reluctant to support Israel should those ties become closer. Foreign Minister Allon replied that as Jews, Israelis opposed apartheid. Of South Africa's total trade, the Israeli share has been less than half of one percent. With respect to diplomatic relations and commerce, the Israeli role is insignificant compared to Western Europe and North America, he said.

Moreover, there is extensive, it covert, trade between Black Africa and South Africa. Israel had been criticized for its military relations with South Africa. Thus far the largest equipment sold has been artillery units and patrol boats. Allon pointed out

that Western countries have sold tanks, destroyers, and fighter aircraft; but he agreed that relations with South Africa are a problem for Israel in the United States and Europe.

Domestic and Economic Affairs

There is a significant gap between what Israel produces and what it spends. With a Gross National Product of between $10 and $11 billion in 1976, the gap will be about $4½ billion. Over half of the deficit is to be filled by aid from the United States and another quarter by contributions from Jewish communities abroad. Financing the shortfall provides short-term relief, but Israeli officials are trying to cut consumption and lower living standards to reduce the significant dependence on external aid.

There is disagreement among both American and Israeli economists on the health of Israel's economy. Since 1973, Israel's GNP has been relatively stable. Because external receipts enter the budget but not the Gross National Product, Israel is in the peculiar position of having a national budget larger than its GNP. Forty percent of the 1976 budget was defense and twenty percent was debt payment. Disagreement centers on the size of the defense budget, the little room left for productive investment, and how well the economy is progressing absent the unusual proportion of defense costs and the relatively high percentage of foreign funds mainly used for defense and debt service.

Israel's development strategy concentrates on the industrial sector because most of the available land and water already are being used (1.6 billion cubic meters of water are produced each year by desalting from the sea.) The local market is small—less than 4 million people—so industrial ventures must export right from the start. Athough regional marketing is a problem, Europe and Africa are potential markets. Israel has a preferential agreement with the European Common Market, and about 75 percent of its exports go to Europe. In 1975 84 percent of exports were industrial products. In an effort to boost exports, Israel has paid premiums in productive jobs related to exported goods. Simultaneously, the salaries of 20,000 top public service employees have been cut. Prime Minister Rabin said that Israel has not done enough to get rid of unemployment, but that progress has been made—at the cost of a 35 percent inflation rate.

Israeli officials told the delegation that Israel is making efforts to attract foreign capital. Investments from foreign sources are evaluated according to the contribution in capital, the amount of technological transfer, and the potential for marketing outlets implied by the venture. Israel assured the right to repatriate products and to maintain the dollar value of investment in relation to devaluations of the Israeli Pound.

Israel's energy demand grows about 1½ times the GNP growth rate, a fact explained by the abundance of processing industries. Today Israel is almost completely dependent on oil and natural gas as energy sources. The Abu Rudeis oil fields seized in 1967 produced about 50,000 barrels per day in 1967 and, according to the Israeli Government, about 100,000 barrels per day in 1975 when the fields were returned to Egypt as part of the Sinai Agreements. Israel estimates that the Abu Rudeis fields produced about 55 percent of Israel's oil consumption during the period they were held. The cost of the oil from these fields when they were returned was about $185 million per year. Oil imports now are at the rate of 150,000 barrels per day, costing about $650 million per year. Local production accounts for only about 1 percent of total consumption. The energy strategy is to import coal and to construct nuclear power stations. A possible projection of energy sources in 1986 offered by the Minister of Commerce and Industry was 70 percent oil and natural gas; 17 percent coal; 9 percent nuclear power; and 4 percent other sources. The coal would be imported from the United States, South Africa, and Australia. The nine percent of total energy produced by nuclear power assumes that Israel's first nuclear power plants will be constructed at Nizamin, on the coast of the Mediterranean Sea.

The delegation asked Prime Minister Rabin what the volumes of immigration and emigration were. He replied that from 1970 to 1973 about 30,000 people entered Israel as immigrants each year. At present the immigration rate is about 12,000 a year. Emigration rates were not given.

Jordan

The Senate delegation flew directly from Tel Aviv to Amman, Jordan on November 11th for lunch and discussions with King Hussein. The flight took only 25 minutes, rather than the more than three hours required for the normal route via Cyprus: a reminder of one of the benefits which could result from peace in the Middle East. Ambassador Thomas R. Pickering briefed the delegation. Talks with the King covered a wide range of mutual interests.

The Middle East

King Hussein reviewed a number of issues concerning the prospects for peace in the Middle East, relations among Arab nations, and Lebanon. A basic point was that at the Cairo and Riyadh meetings Arab leaders realized that their people expect progress towards peace after the American elections, and that they will need to be ready. The new relationship between Cairo and Damascus is of great importance, and the King hoped that it would grow stronger. Jordan's relations with Syria have evolved to a state of beneficial cooperation in several areas, including development planning, water use, education, sharing a possible common power grid, and closer military ties. Politically, the Syrians and Jordanians had frequent meetings and almost daily contacts.

The King described hardships facing Syria including pressure from the Soviet Union: cutting off spare parts and new equipment, refusing to overhaul engines, and withdrawing advisers. Syria's role in Lebanon was costly in economic terms. King Hussein praised Syria for having prevented the formation of a radical tier of states in the Middle East including Iraq, Lebanon, and possibly Syria itself (had the regime in Damascus changed hands because of involvement in Lebanon). King Hussein expressed confidence in President Sarkis of Lebanon, described him as an able man, and hoped that Sarkis could draw on the strength of Lebanon's younger people.

King Hussein said that Jordan's relations with Egypt, Saudi Arabia, and Syria are excellent. All four countries are looking ahead to renewal of the Geneva talks. The step-by-step approach to peace has reached its end with Sinai II, and at Cairo the participating countries talked of moving toward a full settlement. The basic formula of the talks would be territory for peace. Jordan is eager to reclaim the territory it lost in 1967. If peace is approached in terms of the return of territory along the lines of Resolutions 242 and 338 with the political recognition of Israel, there would be no limit to what could be agreed. The King suggested that the question of face-to-face or indirect talks could be resolved.

The Arab countries were all prepared to sit down at Geneva with Israel, starting out in face-to-face negotiations with the United States involved in the process. He judged that the Soviets would probably like to be a party to the talks and that Soviet participation probably is unavoidable.

Since the Rabat conference the Palestine Liberation Organization and not Jordan could negotiate the status or the West Bank. Only the PLO could make concessions. King Hussein said that if Jordan were to recover the West Bank it would place the area under international auspices and hold a referendum. The King believed that there are still strong links between Jordan and the West Bank and that the people would want some relationship to Jordan.

King Hussein said that the PLO had become involved in the Lebanese conflict—one which had no relation to the PLO or its cause. PLO involvement became a source of new suspicion and questioning about the PLO's future intentions. Perhaps some Palestinians now hope that a more representative leadership will emerge in the phase to come. The King said that Palestinians now question the conduct of the PLO and how it relates to the problems of the Palestinian people. He saw the future leadership of the PLO as an open question.

Jordan's Military Development

King Hussein set forth two problems facing the Jordanian military: the need to reorganize armed forces, and the need to upgrade equipment to compensate for the sophisticated weapons Jordan's neighbors have received.

Regarding reorganization of Jordan's armed forces, King Hussein informed the delegation that a study was underway to improve the use of manpower. One possibility to enhance efficiency would be formation of a standing army consistent with national manpower requirements with a larger reserve force to be called up in an emergency. Jordan has started a national service system and has experimented with training people in frontier areas in basic defense skills.

Jordan will carry out its planned Hawk anti-aircraft missile program and make some other, limited equipment changes. The Air Force plans to add some interceptors such as the F–5 to replace older F–104 aircraft. The M–48 tanks and the Centurions would be converted to diesel power systems, and 105mm guns would replace the present 90mm. There may be some other minor changes such as the addition of helicopters to the Jordanian special forces.

Domestic Affairs and Economic Development

In reviewing the development of Jordan, King Hussein stressed the importance of the five-year development plan and the need to use scarce manpower for productive purposes.

He discussed the growth of the Jordan Valley and the contribution of American aid to its progress. The service sector of the economy, education, health, natural resource development, agriculture, and small industries were all priority areas of attention. King Hussein stressed the need to spread the benefits of development and avoid having one segment of society benefit from the Government's efforts. In response to a question regarding the possible use of nuclear power for desalinization purposes, King Hussein affirmed that the Arab nations support developing a nuclear-free zone in the Middle East.

Egypt

The delegation arrived in Egypt on November 11th and departed on the 15th. The Senators had extensive discussions with President Sadat and with Deputy Prime Minister and Minister of Foreign Affairs Fahmy. Working sessions were held with Deputy Prime Minister and Minister of Electricity Ahmad Sultan, Minister of State for Scientific Research and Atomic Energy Abd Al-Mabud Gubeili, and other Egyptian officials. Throughout the stay Ambassador Eilts was available for consultations with the delegation, and was extremely helpful in sharing his extensive knowledge of Egypt.

THE PROSPECTS FOR A MIDDLE EAST PEACE SETTLEMENT

President Sadat foresaw friendly and productive relations between Egypt and the United States during the Carter Administration. Having read of President Carter's approach to foreign policy as being based on the concept of world order and the same moral principles as characterized the American people, Sadat was optimistic that the excellent relations presently existing between our two countries would continue. He asked the delegation to tell President Carter that 1977 must be the year to reach a peace settlement. Both President Sadat and Foreign Minister Fahmy made the same point stressed by the Israelis: the United States would have a key role in any future peace process.

But Sadat emphasized the need to move quickly towards peace now that there is a serious chance for progress. He asked that the United States consult Egypt as well as Israel in whatever steps it takes.

The Egyptians said that all parties on the Arab side—Syria, Jordan, Egypt, and the PLO—are prepared to go to Geneva to discuss peace. There appeared to be a willingness to blur the position of the PLO: rather than accord it a status as government in exile, the Arabs were prepared to consider it part of an overall "umbrella" delegation or negotiating group.
